We in America are slow to learn, or maybe never learn, that efforts to maintain honest relations with dictators and mass murderers of the type of Stalin and Tito have never resulted in anything but sorrow and setbacks for the people of high ideals and integrity. It was ever thus, we thought the other day, while reading the first volume of Winston Churchill's History of the English Speaking Peoples, with its accounts of mass slayers of the early days.

Anyway, there is no more striking example of present-day international political stupidity, based on wishful thinking and good intentions, than the events which have happened between the great burden bearer of the world and international philanthropist, Uncle Sam, and the schemer Tito. It all began when Tito stabbed the patriot general, Draja Mihailovich, in the back after a phony trial in a phony people's court, and then turned upon and slaughtered several thousands of loyal Yugoslavians.

General Mihailovich, it is remembered, had the support of Winston Churchill and the government in London, plus the support of the United States and of France. Also, he was favored by the leaders of Greece and Turkey. However, Uncle Sam executed what amounted to a tailspin or an aboutface, and began pushing good American dollars into Tito's lap.

Now that Tito is in Russia's lap, it causes a lot of people to wonder how we expected to gain anything from Tito in the first place—Tito who now professes undying love

for the Russian people and rulers and undying faith in the eventual triumph of communism over the whole world?

The man in the street, the guy who pays all the bills and furnishes all the soldiers, wonders how we can hope to survive, even, when we persist in an effort to be the world's biggest big shot, moneywise, while at the same time dissipating our own resources in a suicidal effort to make our potential enemies stronger and stronger.

Now that Tito has made it crystal clear that he is a true Communist and an ally of Russia, the few legislators in Washington who saw through the Tito fraud from the start and who have opposed aid to him all along could, with good reason, cry from the Capitol dome "we told you so." And those who rallied to the give-away-American-dollars cry are bound to wonder how bitter crow can be, now that they are given a good chance to taste it.

It is too late to do anything about the Tito blunder now, of course, but it certainly is not too late to look carefully over our aid of the future—especially aid of a military nature—lest we repeat, in our dealing with other questionable regimes and dictators, our great mistakes of the past.

A hundred and fifteen billions and what do we get? Not even secure bases in Iceland, it now appears, and not even the friendship of the Greeks.

Liberalism

EXTENSION OF REMARKS
OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, July 2, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an illuminating speech delivered by the Honorable Adlai E. Stevenson at the town hall luncheon, Biltmore Hotel, Los Angeles, Calif., on May 31, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXCERPTS OF REMARKS BY ADLAI E. STEVENSON AT THE TOWN HALL LUNCHEON, BILTMORE HOTEL, LOS ANGELES, CALIF., MAY 31, 1956

I'd like to talk particularly about the continuing, yes, I think the increasing importance of what has been of the deepest of democracy's taproots. I mean the idea, the concept, the attitude we have called "liberalism." Great and proper concern is expressed in these political campaigns about conserving our natural resources, about developing water and air and atomic power. I venture the belief that the natural resource we should today be most concerned about, the source of our most essential and infinite power, is a militant, effective and responsible liberalism.

What do we mean by "liberalism"?

Perhaps you recall that a few years ago a national magazine had great fun when it posed the question: "What is a liberal?" Its letters columns were filled with a rich variety of answers: Answers from reactionaries saying that liberals were people who had formed a blood pact with the devil; answers from the liberals also, each one choosing his own terms of definition. This filled the editors with great glee, and they drew the conclusion that a modern liberal didn't know who he was, or what he was, and hence was a vague, confused and ineffectual zombie wandering from point to point in a world he never made, and couldn't run.

Now I had always thought that variety of opinion was supposed to be the great hallmark of the American way—the unafraid and unfettered freedom to possess one's own political thoughts; not dictated by a party line, not cast in bronze, not chiseled in marble, not demanded from some obergruppenfeuhrer or commissar. But no, this magazine seemed to think the variety of voices with which liberals spoke made liberalism a mockery, and that a variety of opinion was somehow either funny, or silly.

If anyone had thought to ask the editors, "What is a reactionary?" there would, of course, have been no such variety of opinion. The voice that answered would have said in a hoarse monotone: "See what the boys in the back room will have."

I have my own feeling about what is a liberal in today's protean world. I offer them to persuade, not to coerce. If someone else has different views, well, we might both be right.

First, he believes in the existence of the future, and believes that it can be made a good future. If he is my age he may often think of the past, and he may think of it with affection and nostalgia. But he rejects the idea that it was either better or simpler than what we face now. In answer to the conservative's classic question, "Whither are we drifting?" the liberal says: "We cannot drift, we must go." Although he respects the past, he has no desire to tinker with the clock or turn it back. He does not try to force it ahead. But he does wind the clock.

He has never seen from on high any slightest indication that heaven itself wishes to return to the good old days—and so he walks ahead, in courage and steadfastness, and with a minimum of backward glances, into the perpetually obscure, the perpetually dangerous, the perpetually unknown future. No wonder he cannot always tell where he is going. In contrast to this, the reactionary can always tell you where he has been, so he has an air of authority. What he doesn't know is that the political house of his fathers, which he perpetually talks about but hasn't seen for 40 years, has now been condemned or torn down.

A second major belief of the liberal today is that people are all that is important and that all people are equally important, and that such ideas as property and corporate business are only means, not ends.

You will recall that John Locke listed the inalienable rights of man as "life, liberty, and property," and he went so far as to state that "Government has no other end than the preservation of property." But when the Founding Fathers were at their desks drafting our Constitution they amended Locke's classical formula to read "life, liberty, and the pursuit of happiness"; and Jefferson wrote that "the care of human life and happiness is the first and only legitimate object of good government."

I think of a third element that gives the liberal faith, its integrity, and sets it apart. It requires no commitment to particular conclusions, but it demands of its adherents that they bring courage to their convictions. I am sure there are liberal Republicans as well as liberal Democrats. I am sure that true liberals can be in complete disagreement on any given point, that liberalism is a process for approaching answers rather than any given set of answers, that it never indulges itself the soft luxury of being absolutely sure the other fellow is wrong, that it is marked by tolerance, yes, and that its besetting sin is intolerance of tolerance.

But I am sure at the same time that the effective liberal is essentially characterized too by a commitment, something within him, which makes his restless and unsatisfied unless he can be doing something to advance that cause.

Woodrow Wilson spoke of a "fighting ardor for mankind." HERBERT LEHMAN was talking about the same quality when he spoke in Washington last month not just for freedom, but, as he put it, of a "passion for full freedom." There is no connection at all between extremism and liberalism. But every really effective liberal I know is a dedicated person—who can be convinced, even converted, but who won't ever admit he's licked and therefore never is.

I'm sure there's much more than these superficial reflections to the anatomy of modern liberalism. But this is enough to let us ask now what these elements of the liberal faith mean in terms of today's more immediate political issues.

There is time to touch only one aspect, in this conection, of the infinitely important and central manner of the conduct of our foreign affairs.

I realize that a great many liberals, like a great many others who would disclaim this label, hold firmly to the simple belief that the heart of a better, wiser foreign policy would be simply a new address for John Foster Dulles.

There is, of course, much more to it than this. I have said that it is a part of the liberal tradition that conviction be coupled with courage. I think the most significant fact in world affairs today is that the administration of the Nation which should be exercising leadership in those affairs is inherently unable to bring courage and consistency to the support of its convictions.

Why is this? What lies behind this aimless, erratic drift—which now disturbs every thoughful American as much as it has disturbed America's allies for years?

Why, the explanation is simply that this administration has failed in its effort to unite behind it the two wings of the political party upon which it must depend for its support. America's drfit is the inevitable consequence of a basic conflict, actual, factual, and philosophic, that has divided the Republican Party probably for half a century, since the tariff struggles, and certainly for 35 years since the League of Nations struggle.

Even this week perhaps you noticed stories about the President's so far unexplained decision not to put his support politically behind Republican Senator WILEY, of Wisconsin, who has "based his political future on support of the administration's foreign policy." Why? The stories suggest some connection with Vice President NIXON's reports of the unpopularity in the Middle West of the foreign aid program—the one policy, incidentally, upon which the President has appeared to show the greatest determination.

But this is only this week's illustration of the internal contradictions within the party and the administration and the course of the past years is strewn with the wreckage of the efforts to reconcile the irreconciliable, too often at a painful price in allied unity and mutual understanding.

When Mr. Eisenhower appeared on the scene in 1952, it was hoped that the isolationists' old guard wing of the Republican Party could disappear once and for all as a major political influence. At the Republican Convention of 1952, the more modern-minded forces behind the General seemed to have won a clear victory for control. Yet the old guard remained strong in the councils of the party. Political realism dictated a compromise and the price of that compromise was congressional domination by Senator Taft. The international-minded President was forced to trim his sails to the obsolete foreign policy concepts of the majority leaders of the Republican Party in Congress.

The political power of Mr. Taft as majortiy leader was great. And before his death, his authority was sufficient to pass the mantle of party leadership to Senator KNOWLAND, so the internal struggle has continued. And now, since the President's illness last Sep-

tember, there have been recurring signs that their influence is ascending.

The result is profoundly serious and it must be bluntly faced. At this critical juncture in our history, when the Soviet Union is employing its most formidable tactics in ideological, economic and political warfare, the United States Government remains frozen on dead center. There it sits, mired in the negative and the uncreative. There it sits, incapacitated by internal divisions. There it sits, unable to seize the international initiative.

And this inability is due to one single, overpowering reason: a positive program adequate to cope with the new Soviet tactics would split the Republican Party wide open.

* * * * * * *

Today there is general agreement that while security is obviously essential it can be achieved without resort to those unfortunate extremes. And yet there is all too much evidence that the administration cares little whether this wound on democracy's face is closed or not.

I shall not review the "numbers game" and all the abuses of the innocent. But just this month a member of the Subversive Activities Control Board, a Republican and an appointee of the President, has called public attention to the continuing injustices in the Government's personnel-security program and has condemned the political distortion by the administration of the actual facts regarding the hiring and dismissal of Government personnel. He has called for the very honesty in Government and the regard for human values which the President has repeatedly extolled. Yet the newspapers now predict that the response will be to get rid of board member Cain.

And the President, when he was asked about the most recent case of abuse in the name of security, said he was not familiar with it because, as he puts it, "they bring before me what has been going on, usually not in terms of names but in terms of numbers." I shall resist the temptation to comment on that—to you "numbers."

I suspect that perhaps one of the most serious affronts to the liberal tradition today is in the suggestion of the Republican leadership that we have just about arrived at where we want to go as a people, and in the almost complete lack of realization—certainly of any enthusiasm—about the frontiers of human betterment this Nation now faces. To really believe in the future and to have an ardor for mankind is to be driven by the feeling that we are wasting precious time as a nation in not doing the things which are possible now for the first time in our history.

Why aren't we fighting cancer and arthitis and diseases of the heart and the mind the way we fight our enemies?

Why aren't we going after the slums which weaken our whole social structure the way we go after anything that threatens our economy?

Why aren't we attacking the problems of making atomic energy and these new electronic machines the servants of men instead of their masters?

Why aren't we doing something to develop the programs which we need and which we will eventually have to have to meet the problems of our old age?

I suggest that the only reason for this lassitude is that there is all too little today, in the administration of this Nation's affairs, of the ardor for mankind Woodrow Wilson spoke of.

Surely, no one can suppose that even in our blessed land we have reached the limits of human welfare, or harnessed our abundance. Nor can we in a world undergoing revolutionary change hope to prosper by standing still. The most urgent need for new thinking springs from the fact that we are constantly by our science, our techniques and our inventions, altering out of recognition the contours of the human scene. The old landmarks are going. We need new roadmaps in a world that is, whether we like it or not, being remade every day.

In America today the quantity of goods and services available to ordinary families has banished, for the great majority, the oldest, grimmest specters of human misery. The ancient struggle for just food and raiment and shelter is about over, in this fortunate section of the world at least.

But free society cannot be content with a goal of mere life without want. It has always had within it a visionary spark, a dream that man, liberated from crushing work, aching hunger and constant insecurity, would discover wider interests and nobler aims. If quantity comes first so that men may eat, quality comes next so that they may not live by bread alone. Free society in the West has brought most of its citizens to that great divide. The next frontier is the quality, the moral, intellectual and aesthetic standards of the free way of life.

Of all the challenges faced by our new society of leisure, none equals that of education. It strikes at the central problem. In a community where at last we have time to ourselves, and where the social order is designed to give us a free range of choice, what sort of people do we want to be? What aims do we seek to fulfill ourselves, what ideals do we set before our children? We have come to the point at which, as a nation, we are beginning to recognize the inadequacy of our physical apparatus of education. Both political parties are agreed that, while State authorities shall bear the main responsibility for expanding our schools, Federal aid can and must supplement the program. This is a great gain but does it touch more than the fringe? The great questions of education are not only answered in the public mind, they are hardly even formulated.

Given new and better classrooms and lunchrooms and playgrounds—an ample educational environment in physical terms—what will we teach in the new schools? Above all, who and how many can we persuade to do the teaching? We are only on the outer margins of educational quality if all we can agree on is physical plant.

In these two great fields—the content of education and the recruiting of teachers—we urgently need a new sense of direction. We have to realize that the kind of technological and scientific society that lies ahead demands hard early training in the grasp of facts and the use of reason. Acquiring social skills or achieving group adjustment will not give us tomorrow's mathematicians and nuclear physicists. The Russians are outpacing us in tough basic training. We cannot afford to lag. But, unlike the Russians, we cannot be content with technological skill. Ours is a humane society and the disciplines of science need to be balanced by that profound respect for human values which can come only from history, literature, and thought.

But nothing can be taught without teachers. The best in education has always come from the ability of great and gifted men and women to communicate their love of learn- and love of truth. In absolute terms, we lack over 150,000 teachers. But in relative terms, do we give those who volunteer the respect, the status, the opportunity and the reward in any measure equal to their vast responsibility? What must be said of our priorities in a society in which the latest movie starlet can earn in a week more than a devoted teacher can earn in a year dedicated to training tomorrow's citizens?

I see so many new tasks for this free, powerful, rich society of ours. It seems to me we sometimes get so concerned about our problems that we miss our opportunities. The shaping of a new society is not the function of Government. And yet Government is at the same time our only instrument for carrying out some of our common purposes, for realizing some of our common hopes, for reaping, if you will, some of the fruits of our abundance in this period of unparalleled plenty. And I suggest that it calls for the faith of the liberal, a faith in the future, a consuming passion for the interests of people, if these opportunities are to be seized.

I have talked too long and I'm afraid I may have imposed upon you. My days recently have been very long and very crowded, and there has been too little opportunity for the thought about my remarks here today which would have permitted more precise utterance. I can testify to the accuracy of a line in Froude's life of Bunyan to the effect that the exercise of perpetual speaking is not conducive to the highest thought.

It is hard, frankly, for a politician to concentrate, in the last week of 4 months' campaigning, on a nonpolitical speech. And perhaps you will in this connection permit me to add one note. I have leaned heavily today on a phrase of Woodrow Wilson. Its broader frame, which I now quote, is this: "You will observe that whenever the Government loses its ardor for mankind it is time to elect a Democratic President.

Can't Anyone Tell Us What Our Foreign Policy Is?

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 29, 1956

Mr. MULTER. Mr. Speaker, the following article by Joseph Alsop which appeared in the New York Herald Tribune of June 29, 1956, is most illuminating:

MATTER OF FACT

(By Joseph Alsop)

LETTING THE DUST SETTLE

WASHINGTON.—The most important single fact revealed by a long Middle Eastern journey is the simple fact that the United States of America has not the shadow, or even the beginning of a shadow of a Middle Eastern policy.

The Middle East has considerably greater strategic and economic significance than the Far East. A Middle Eastern convulsion now looms ahead, on the scale of the Far Eastern convulsion that began with the loss of China.

If this Middle Eastern convulsion is not averted or controlled, the effects on the Western Alliance can make the after-effects of the Far Eastern convulsion seem downright coy.

But in their dealings with the Middle East, the American policymakers are now imitating the unfortunate example of Dean G. Acheson, in the famous period when he was "letting the dust settle" in the Far East.

To be sure, this administration is always very conscious of its public relations. All sorts of meaningless activities and purely temporary expedients are made to look like parts of a larger policy-design, that does not in fact exist.

For example, the Middle Eastern mission of U. N. Secretary General Dag Hammerskjold had no visible result whatever except the momentary prevention of an actual outbreak of war between the Arabs and Israel. Yet this was grandiosely portrayed as a brilliant triumph of American policy.

It was like claiming every successful foray of the fire brigade as a triumph for the municipal housing program, on the ground that even although houses are not getting built, at least they are not being burned down.

Meanwhile, the vacuum of American Middle Eastern policy approaches the point of being ludicrous. We have able diplomatic representatives in the area, but when you ask them what our policy is, they throw up their hands in amusement or despair.

Almost every American Embassy in the Middle East sees the problem utterly differently from all the other embassies, so that you wonder if they all belong to the same country. The Operations Coordinating Board, that mysterious adjunct of the National Security Council, has even sent an able young staff member to the Middle East to rush about from embassy to embassy in order to synthesize viewpoints. But this has little visible effect.

This utter vacuum of American policy cannot be too strongly stressed, because it is the least understood of the four cardinal factors in the ugly and dangerous Middle Eastern crisis. The other three factors are:

First, the rise of Arab nationalism, with its threat to all Western positions in the area including the oil interests that provide the lifeblood of most of the Western Allies.

Second, the unceasing and increasing Arab-Israel tension, with its constant threat of renewed fighting.

Third, the Soviet intrusion in the area, which has greatly encouraged the Arab nationalists both in their anti-Westernism and in their determination to wreak vengeance upon Israel.

These three forces are immensely powerful. They have combined to produce a rancid, rising ferment of a really frightening kind. The British, the people most directly threatened by this ferment, no longer have either the prestige or the power to control it effectively. They can talk of moving troops to the head of the Persian Gulf, if this is needful to safeguard their most important oil sources. But this is really about the best they can do; and it is a very poor best.

Therefore, the utter vacuum of American policy in the Middle East means that the only power, the only influence that might be used to pacify and control the situation is not being used for any purpose whatever. We do not wish to take the risk, or accept the commitments, or even make the distasteful choices that are essential for a serious Middle Eastern policy. So we are just letting things rip.

They have ripped pretty far already. Action on many fronts, from London to Bagdad and from Moscow to Ryadh, is urgently demanded. Much of this action must initially take the form of the most secret kind of secret diplomacy.

None but the administration policymakers, with their access to all the complex nuances of the intelligence, can tell just which policy choices are most likely to lessen the Arab-Israeli tension and prevent the Arab nationalists from attempting a final onslaught upon really vital Western interests.

But in Cairo and in Bagdad, in Damascus and Jerusalem, one always heard the same weary, desperate, pleading refrain—"Any American policy, even a bad policy, is better than none at all. You must at least try to prevent catastrophe, even although you cannot be absolutely sure of success."

The true criticism of the Truman administration's handling of the rise of Chinese communism was not that they did not prevent the Communist success. No one could guarantee the defeat of the Chinese Communists. The true criticism was that the Truman administration did not even try. The same can be said of the Eisenhower administration's dealings with the Middle Eastern crisis to date.

Resolution Opposing Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. JENSEN. Mr. Speaker, the annual convention of the American Legion held at Miami, Fla., in October 1955, adopted a resolution opposing Federal aid to education such as is proposed in the bill H. R. 7535 now under consideration by this House of Congress. The education of the youth of the United States has been a matter of deep interest and continuous study by the American Legion since its organization in 1919. The American Legion keeps close contact with our public and private schools through its 17,000 posts in all our 48 States, our Territories and in the District of Columbia. No organization in America has taken a keener interest or is better qualified to speak out on this important question than is the American Legion and they have spoken out in no uncertain terms; here is what they say:

The American Legion is of the opinion that sound judgment indicates that the only effective solution to our educational shortages is prompt and incisive action by the States and the local school districts.

What are the reasons for the policy stand of the American Legion? In summary outline they are set forth as follows:

1. The respective States have the financial capacity to meet their educational requirements if they wish to do so.

2. Federal aid is not the way to get good schools; under any moderate program of aid, the amount going to individual States would not be large enough to count effectively. And Federal aid in an amount sufficient to mitigate the problem significantly could result in such undermining of the State and local responsibility as to seriously endanger the kind of educational system that has served us so well since the founding of our country.

3. If substantial financial support is provided to local public schools by the Federal Government, local community interest and responsibility will diminish.

4. The wealth of the Nation is to be found in the States. In most instances, this wealth is as available to the States as to the National Government. Generally speaking, all taxes come from the same pocket. Sending tax dollars to Washington, which are intended for local use merely increases overhead and administrative costs and adds to the size of the Federal bureaucracy.

5. If a reappraisal of tax values on taxable property in the various communities and States is conducted in order to equalize tax responsibility on all types of property and education given its proper recognition in the reappraisal, there would be no need for Federal aid to general education.

6. There are serious dangers in creating a powerful centralized authority. It could lead to attempts at thought control and might invite infiltration by the Communist conspiracy.

7. It would seem impossible to have Federal aid to general education without the minimum of Federal control. Education certainly should be left up to the communities and the States and not to the Federal Government.

8. Local and State ability and willingness to deal with school problems is impaired by injecting a third level of government. The task of school administration will become even more difficult and complicated. Administrative differences with respect to controls or agreements as to division of funds will make for delays and inequities.

9. If you have Federal aid to education and a minimum of Federal control over this Federal aid, then there is great danger that the Federal Government will want to prescribe the curricula, textbooks, and other instructional materials. All of this should be left up to the community and State.

10. Federal aid whether by grants-in-aid or other forms cannot be provided without Congress imposing legal and accounting safeguards or formula or criteria of distribution. Some type of control or supervision, whether large or small, direct or indirect, is an essential ingredient of Federal action. The mere fact that Congress could discontinue the funds in future appropriations is a potent factor in itself.

11. History indicates that once Federal appropriations are made for any purpose the tendency is for the affected groups to lobby for their continuation and enlargement.

12. Approximately 12 percent of the schoolchildren in the United States are educated in private or religious schools. The exclusion of these schools raises difficult problems. Their inclusion would raise even more difficult legal questions and policy issues.

13. There are about 62,000 separate public school districts or systems in the United States. If the National Government dealt directly with these local school organizations, it would seriously conflict with State educational responsibility and control. If the National Government dealt with only the States, it could not achieve the objectives sought by Federal grants or funds without imposing important and unwanted conditions.

14. The general public already feels that Federal taxes are too high. There is great pressure for reduction of Federal taxes. Certainly sound national policy should require that serious consideration should be given to the balancing of the Federal budget and a planned and consistent reduction of the Federal debt before the National Government embarks upon a new and tremendous program of Federal expenditures for general public education in our elementary and secondary schools.

15. The usual purpose of Federal grant-in-aid is to stimulate State and local activities. There is no need for this in the field of public education since expenditures by States and local governments for education are already the largest and most expensive of any of their activities.

16. There is no need for Federal leadership in setting minimum educational standards. These are already well defined and administered. There is a strong desire on all sides to avoid Federal control or supervision or the imposition of Federal standards or conditions. There is a widespread feeling that any degree of Federal control over education would be dangerous. No one has ever enunciated any practical method of providing Federal funds without some scintilla of authority or administration.

17. There are other well-defined responsibilities and activities of the Federal Government, such as national defense, the Post Office Department, and the Immigration and Naturalization Service, to name but a few which require all of the foreseeable Federal funds that are likely to be available.

18. If Federal aid is predicated on the determination of necessity of local school districts or systems, who will establish the criteria of need and formulas of distribution? What agency will determine which are needy and who gets what? What weight will be

given to the relationship between those districts which have for years taxed themselves to the bone to meet their requirements and those which have the resources but do not choose to impose the local taxes? What equalization assistance will be required of the respective States before the Federal Government lends a hand?

19. Federal funds could place in the hands of those in political authority the power to transform our whole way of life. The opportunity which would be opened up for the imposition of requirements as to what would be taught is frightening.

20. The creation of a system of Federal educational assistance, nationwide in scope, would destroy the traditional role of the State and local governments in the field of educational activity and would represent an unnecessary and radical expansion of the functions of the National Government beyond anything envisioned by Thomas Jefferson and the other architects of our Federal system.

21. This is not the kind of governmental functions which has to be done by the National Government or which it can do best. In fact, efficiency, economy, forthrightness, cultural experimentation, opportunity for differences of approach and educational pioneering and programs will be sacrificed if the Congress should embark the National Government upon a program of Federal aid to education.

To prevent any confusion or misconceptions about the extent of the position of the American Legion on this subject, it should be stated that the policy as set forth herein is confined to the matter of across-the-board, general Federal financial aid to public education in the primary and secondary schools (first grade through high school) and should be strictly construed.

Atomic Roadblock

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. SAYLOR. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial from the Boswell (Pa.) News entitled "Atomic Roadblock."

Articles such as this one will go a long way toward alerting the American people to the impracticability and economic danger in some of the proposals regarding peacetime application of atomic energy. Although metropolitan newspapers have become accessible to practically every town in the Nation through the medium of improved transportation facilities, and although television has now replaced or supplanted the radio in most homes in the populated areas, rural America looks also to the smalltown press for factual and interpretive information on all issues—national and local. The printed word of the sincere smalltime editor remains one of the most effective devices for forging individual curiosity into public opinion.

Recognizing as ludicrous the proposed reactor program to set up an atomic powerplant in practically every area where there is a Good Humor truck is only to be expected of the smalltown editor. He has never been taken in by the profligates who persist in planning to invest money that we do not have in projects that we do not need. Such exposes as the Boswell News' report are going to defeat the atomic TVA program. My hope is that the intrinsic fallacies of the reactor program will be given sufficient publicity in the coming weeks as to forestall any appropriations of this nature that advocates of the program may attempt to force through Congress in the closing days of this session. A delay of any kind will be beneficial. It will give Members of Congress and the general public time to make a rational analysis of the plans of the atomic bureaucrats, thus making the legislation more difficult—if not impossible—to get through in ensuing sessions.

I am particularly pleased to know that publishers in coal areas are taking an active part in the crusade to prevent the irresponsible crash reactor program from going into effect. Those behind the reactor program are following the usual procedure; that is, first it is recommended that these reactors be built in areas where power generated by nuclear materials will not compete with coal-fired steam plants. That theory is in itself misleading and dishonest. Every coal-burning electric power plant in the country—regardless of its location—is at this very moment capable of generating electricity at costs far below the most optimistic estimates for atomic plants. If, however, the United States Government provides the funds for construction of the plants, buys the fuel, and, finally, underwrites the risks involved in the operation of the plant, then it may be possible to produce electricity cheaper than it can come through coal. The same standard would apply in the heart of coal regions.

The National Coal Association Convention for 1956 got under way yesterday and is continuing through today. One of the reasons for the optimism prevailing at the convention is the expected increase in coal demand by electric power companies. During hearings of the Coal Research Subcommittee, of which I am a member, witnesses invariably emphasized the projected rise in consumption of coal by the electric utilities as a premise on which long-range plans can be formulated.

Assuming that the principal dangers involved in the operation of an atomic power plant can ultimately be minimized and the disposal problems settled, Government-built and subsidized electric facilities would be directly responsible for the loss of thousands of jobs in the coal industry, and among railroaders as well. Residents of coal-producing States cannot afford to permit such an eventuality to take place. Now is the time for opposition to be made known. The editor of the Boswell News is to be congratulated for his efforts in this direction and I hope that an increasing number of voices will be heard in this regard. The editorial follows:

ATOMIC ROADBLOCK

Washington is accustomed to words—especially in an election year. But Elmer Lindseth, president of the Cleveland Electric Illuminating Co., has said a few that not only make uncommon good sense but contain worthwhile news for the American people.

The Joint Congressional Committee on Atomic Energy was told by Mr. Lindseth that the United States now has 89 atomic reactors completed, planned, or applied for, compared with 63 for all the other nations of the world combined and five times as many as Communist Russia. This is atomic leadership with a capital L.

Mr. Lindseth was speaking for the Edison Electric Institute, the industry's statistical authority, in apposition to a bill by Senator GORE, of Tennessee, which would put the Atomic Energy Commission in the electric business by ordering it, against its will, to build six large-scale atomic power reactors.

This atomic TVA program would cost taxpayers an estimated $2 billion on top of the $10 billion which the Federal Government has either spent or is planning to spend on power facilities in competition with United States electric companies. The point is, there is just no need for Federal spending in this field. America already is head and shoulders above the rest of the world in atomic power progress. Private industry is moving forward rapidly with its own program to build nine atomic powerplants. The proposed program would do nothing but duplicate projects underway, wasting manpower, materials, and tax dollars in the process.

With taxes as high as they are today, it makes no sense to waste taxpayers' money simply to produce a carbon copy of a job already being done by private enterprise in cooperation with AEC. We suggest that Senator Gore voluntarily remove his roadblock to progress and let the AEC get on with its job.

Secretary Wilson and the Veterinary Corps

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. BYRD. Mr. Speaker, Secretary of Defense Wilson on May 15, 1956, directed the Secretaries of the Army, Navy, and Air Force jointly to develop and submit for his consideration appropriate plans to implement his little personal venture to eliminate the Veterinary Corps in the armed services. In this regard, permit me to direct the attention of our colleagues to the letter which I addressed to Secretary of Defense Wilson on June 18 and the reply thereto, forwarded to me on June 29 by Assistant Secretary of Defense Robert Tripp Ross.

The correspondence follows:

JUNE 18, 1956.

The Honorable CHARLES E. WILSON,
Secretary of Defense,
Department of Defense,
Washington, D. C.

DEAR MR. WILSON: My attention has been directed to the memorandum issued by you on May 15, 1956, addressed to the Secretaries of the Army, the Navy, and the Air Force, on the subject of Utilization of Veterinary Personnel in the Armed Services. I have also read your recent testimony in hearings before the Subcommittee on Department of Defense Appropriations of the House Committee on Appropriations. At that time you made the following remarks, among others, concerning the position of the Veterinary Corps in the Army and in the Air Force:

"I have a couple of little personal ventures where I think ultimately we are going to save some money.

"I think it is about time we eliminated the Veterinary Corps in the Army and in the Air Force. I think that is a holdover from the old cavalry days.

"I know they have a nice lobby down here, and they are trying to bring themselves up with the doctors and dentists, but it is time that one is finally washed out although there is not a great deal of money left in it.

* * * * *

That is just one of my projects which is used as an example of how hard it is to get people out of the old rut, and to face the new. In other words, there are people with fixed interests in what is going on and they do not want to step up to the new programs."

The printed record of the same hearings contains a statement classifying the functions and responsibilities of the Veterinary Corps, which include the inspection of food products of animal origin and the sources thereof, the investigation and control of diseases common to man and animals, the care and treatment of military animals, and research and development in chemical and biological warfare and in radiation hazards.

If the above statement presented a proper description of the Veterinary Corps, then an injustice has been committed in not bringing these facts to your attention during the long period over which you have nursed this little personal venture. After reading an article that appeared in the May 21, 1956, issue of the New York Times, one wonders if there exists on your part a prejudice against accepting such facts. Over and above all this, I am distressed by the contumelious treatment you have shown toward the individuals who make up the strength of our Veterinary Corps. It is evident that your remarks could have a demoralizing effect on the vital role which the Veterinary Corps performs in protecting the health of our military personnel here and abroad, as well as that of American service families scattered abroad.

Mr. Secretary, I am not taking this occasion to bring a formal expression of my views to your attention simply to point up what might have been an unhappy choice of words or action resulting from a lack of information. What I am interested in, however, is the fact that throughout World War II, and since then, the health of our troops has been peerless—credit therefor going to the Veterinary Corps. In substantiating my position, permit me to cite the Army milk program on the continent which has not only benefited our military personnel abroad, but has also been helpful to foreign countries themselves. The Army Times (Europe) for June 21, 1955, delineated the worthy activities of the Army veterinarians in Denmark, Holland, Yugoslavia, Belgium, Norway, and Sweden. Veterinarian units in those countries check all food products purchased by the forces for sale to Americans in commissaries, post and base exchanges, clubs, and messes throughout Europe and North Africa. In this regard, the article states "they test animals before and after they are slaughtered; candle eggs by the millions; and run all tests known to man before letting milk and its by-products flow into Army and Air Force run facilities." It is a known fact that the Veterinary Corps in the Armed Forces performs an admirable research task in comparative pathology and in exotic diseases. The fact that the military operates anywhere in the world enables veterinary personnel to carry on research programs in foreign areas when appropriate and necessary. It should be noted that, should an emergency arise, it is unlikely that civilian technicians would be available for assignment in any part of the world.

I sincerely trust that the important functions of the Veterinary Corps and the position of such technicians in our Armed Forces will be given full and serious consideration before any decision is reached to transfer, reassign, or abolish this group which is so vital in safeguarding the health of our military personnel.

Sincerely yours,

ROBERT C. BYRD,
Member of Congress.

Hon. ROBERT C. BYRD,
House of Representatives.

DEAR MR. BYRD: Secretary Wilson has asked me to reply to your recent letter concerning changes contemplated by the Department of Defense with respect to the utilization of veterinarians in the Armed Services.

The Secretary long has had the greatest respect personally for the veterinarians in tihs country. He fully recognizes and is most appreciative of the considerable contribution which these personnel have made to our defense effort over a period of many years.

He is of the opinion, however, that a further unification of these functions among the agencies of the Federal Government is desirable in the interest of effecting increased economy and efficiency. With this objective in mind, on May 15, 1956, following detailed study of the problem and personal consultation with these officials, he directed the Secretaries of the Army, the Navy, and the Air Force jointly to develop and submit for his consideration appropriate plans which would generally provide for the following:

1. Further utilization, where possible, of facilities and services available within the Department of Agriculture for the inspection and grading of subsistence items required for the Department of Defense as well as for such research as may be required on food-borne diseases and animal disease control.

2. The utilization of civilian veterinarians to provide medical care for public animals wherever possible.

3. The discontinuance of the current practice of providing, at Government expense, veterinary care for the private pets of military personnel except in emergencies.

4. Equitable disposition to be made of all veterinary personnel presently performing functions to be reassigned, discontinued, and/or obtained by contractual arrangements in accordance with the above.

Future action to be taken by the Secretary of Defense, upon submission of these plans, will be based on the needs and best interests of the Department of Defense as a whole, with due regard to the rights and equities of all personnel involved. Matters of significant interest to the Congress and particularly requirements for legislation will be promptly referred for their consideration.

Sincerely yours,

ROBERT TRIPP ROSS.

Who Scuttled the Merchant Marine Naval Reserve?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. MULTER. Mr. Speaker, the following editorial from the July 1956 issue of Marine News is startling, to say the least:

NATIONAL DEFENSE—WHO SCUTTLED THE MERCHANT MARINE NAVAL RESERVE?

Now that the United States Merchant Marine Academy at Kings Point has been made permanent by act of Congress, it has been discovered that not only its own cadets but also those of the four Federal-aided State maritime academies at New York, Massachusetts, Maine, and California can be inducted into the Army at any time due to the action of the Department of Defense. To add insult to injury, it has also been learned that the Department of Defense has prevented the graduates of these Federal and State maritime academies from being granted commissions as ensigns as heretofore.

Congress may well inquire into the acts of the Department of Defense in these matters. Congress should, at the same time, inquire into and expose the individual or clique in the Department of Defense who slipped in a repealer of the Merchant Marine Act of 1936 and previous acts of Congress whereby the Merchant Marine Naval Reserve and the status of cadet midshipmen at the Federal and State academies was scuttled or sabotaged by the Armed Forces Reserve Act of 1952 which was drawn up by the Department of Defense in a large measure. In fact, this slick repealing clause was not even noticed until the Department of Defense prevented the Navy from commissioning these graduates. The repealing clause was apparently kept under wraps until wholesale damage could be inflicted. Thus, the Naval Reserve is deprived of a hard core of well-trained, loyal, patriotic Americans.

We know that frantic efforts are being made to recruit officers and men for the Reserve forces of the United States, yet it appears that the Department of Defense is preventing success of the recruitment campaign by overt discrimination against the American merchant marine, its officers and men.

The Armed Forces Committee of the House of Representatives has recently conducted hearings to reestablish the status of cadet midshipman and Naval Reserve commissions for graduates of the Federal and State academies, but again the Department of Defense has been negative. Congress should smoke out the ill-advised or subversive elements who are thwarting the Naval Reserve. It is now only too obvious that something is rotten in the Defense Department.

On May 22, 1956, the Honorable Charles S. Thomas, Secretary of the Navy, delivered a stirring address as the keynote speaker at the National Maritime Day ceremonies at New York's Rockefeller Plaza. To quote his excellent remarks in part: "Twice in our memory we have been unprepared. Twice our failure to have a strong merchant marine has brought our country to the brink of disaster. A third failure could be fatal."

The graduates of the Federal and State Maritime academies are trained in naval science by Regular Navy officers. They are licensed as officers by the United States Coast Guard after examination. Yet we find that the Department of Defense prefers to let them be drafted as foot soldiers in the Army. Again we ask, "What goes on in the Department of Defense?" In this connection the Senate of the United States has previously passed enabling legislation in behalf of the Naval Reserve, but the Department of Defense seems to be staging a last-ditch campaign to "scuttle the ship." In so doing it is scuttling our merchant marine in time of national emergency and our national defense. It is impairing the Navy.

The circumstances which necessitate the prompt passage of S. 1748, which concerns the restoration of Naval Reserve status to the cadets and graduates of Kings Point and the State maritime academy, warrants a full and immediate congressional investigation both from the standpoint of possible ill-considered and unpatriotic actions of a few individuals in the Armed Forces, and also what might be tantamount to an act of subversion which threatens to dissipate and demoralize a Regular corps of officers.

For the naval reservist: "Individual preparedness is national preparedness."

Labor Racketeering

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. ANFUSO. Mr. Speaker, in connection with my statement in today's RECORD and the resolution I have introduced for a full-scale investigation of labor racketeering, I wish to insert an article by Victor Riesel "None So Blind as Those Who Blink at Rackets," published in the New York Daily Mirror, Friday, June 29, 1956:

NONE SO BLIND AS THOSE WHO BLINK AT RACKETS

(By Victor Riesel)

I have been blinded by a thug who stalked for a moment out of the underworld shadows—but I can still see more clearly than those who so fantastically champion labor that they denounce automatically all crusades against the mob inside labor.

It is these decent but overzealous defenders of labor who are blind. It is they who identify all labor with the mob. It is the public crusader who carefully etches the sharp line between the underworld invaders and the honest union leaders.

What the disturbed champions of labor don't see is the danger of their outcries. Unwittingly, these men become, in effect, the secret weapon of the mob. By blasting all outside forces which fight the labor underworld, they frighten off public officials, Senators, Congressmen, and even governors in some States. For no ambitious political figure is willing to jeopardize his career by pushing for an investigation only to find himself later smeared as "antilabor."

Just look at the record of State and Federal probes. I charge that at least four major congressional investigations have been dropped like hot coals because of political pressure. I have been told by investigators that they had been directed not to get too tough or bring in evidence which would force indictments.

Look at this Congress. How many probes into any cobwebbed corner of the underworld has it launched?

Why, after Illinois Senator PAUL DOUGLAS found a score of union officials using welfare and pension funds as "their own moneys," was his investigation permitted to die? It had one of America's top investigators, Frank Plant, a former FBI agent. Its chief counsel, Paul Cotter, was raring to dig deeper. They turned out a searing 365-page indictmen of the crime cartel inside labor. The AFL-CIO executive counsel went through it. AFL-CIO chief George Meany sent it on to the Ethical Practices Committee for action.

Yet nowhere in the Government was there $100,000 to keep the Douglas committee alive. Why?

There must be congressional probes. Otherwise the ball falls between two outfielders. The Government finds that it can't handle clever criminals on any charges except income-tax evasion. So some of the worst hoods get away with sentences as short as 8 months on tax raps. There just are no laws to deal with the subtleties of the crime cartel and to jug men like Frank Costello.

And we find district attorneys with no power to prosecute because they are hamstrung by local laws. Only the spotlight of a properly conducted congressional investigation can light up the murky corners.

But an even greater obstacle than ineffective laws is local political pressure. Here is where the honest union leaders can move boldly. They can make it known that they would not regard an honest investigation into labor rackets as an attack on all labor.

They can say publicly that they welcome such a probe. Then, perhaps, the automatic deplorers of probes might agree that there are honest men outside labor as well as inside.

The fault is not all on the conditional reflex champions of labor. The fault lies, too, on the shoulders of the public defenders, the law-and-order forces of State, county, and municipal governments—and in Washington, as well.

If they have been listening as carefully as did the President of the United States before he became ill they would have heard stentorian voices shouting out a call for Government help.

Violence, corruption, and betrayal of trust by labor officials have been loudly denounced by David Dubinsky and George Meany at the recent International Ladies' Garment Workers Union convention in Atlantic City. Walter Reuther struck out at the hoods before the Textile Workers Union's sessions in Washington.

Scores of unions have passed resolutions on my behalf, offering help, deploring mob action, and even increasing the reward for apprehension of the ghoul-for-hire who wiped out my sight with a concentration of acid so strong it bleached the sidewalk.

Furthermore, at the most recent session of the AFL–CIO executive council, labor's high command, George Meany brought in a resolution giving real police power to its ethical practices committee.

O. K., let's go. The committee, led by the truly crusading Al Hayes, of the Machinists, and manned by equally courageous and honest men—Dave Dubinsky, Jack Potofsky (Amalgamated Clothing Workers), Joe Curran (National Maritime Union), and George Harrison (Railway Clerks)—now has the power to hire a staff and become labor's FBI. And it has President Eisenhower's personal promise that it can utilize every Government facility to help it.

It can look into the 15 national unions and scores of local unions which have been muscled. The committee can hire lawyers, investigators, and researchers. It can go to any police force. It can recommend that a union be thrown out of the AFL–CIO.

It can stand up and fight. It can right the wrongs of a thousand martyrs. It can prove what so many of us believe—that regardless of our agreement or disagreement with such men as George Meany and Walter Reuther—there are honest men atop the labor movement ready to apply the same fervor and genius they use in collective bargaining, strikes and organizing drives to clean up that part of the underworld which is making a patsy out of sections of labor.

This Ethical Practices Committee has the power to work out a code of ethics for all labor. It can demand that all union leaders maintain honor and decency in their unions.

To draw up this code so that it can be hammered into philosophical shape, the committee has the Bernard Baruch of American labor, Washington attorney Arthur Goldberg, who believes that labor should conduct itself so ethically that it can live in a giant fish bowl. This isn't guaranteed to win him popularity in certain circles. But what price popularity? What price votes? What price compromise?

This is no fight on juvenile delinquents. This is no fight on other labor men who simply want to live by their own code. This is a fight on men who are really not of labor, who buy and sell unions just as real estate men unload parcels of land.

This is a fight on terror. Let no one think I wanted to be blinded for life. Let no one think I did not know the risk involved in this kind of fight I've been making. But how could it have been otherwise? Men don't live by bread alone—or cake, or lush apartments or gourmet's food in $12-a-steak restaurants. After all, how many more rolls can one eat at breakfast? How many more suits can one wear?

How could I have done otherwise then a woman and her daughterd came to me, weeping, to say a squad of goons from a union had just ripped up their little shop? How could I have done otherwise when the owner of a small chain of stores came to me, gun in pocket, saying he was ready to shoot it out with muscle men who had harassed him for months—though he really didn't know the gun butt from the barrel.

How could it have been different when strong men, ex-GI's and former prisoners of war, who fought fascism and nazism and communism, came to me and told me how they were caught in a union headquarters and surrounded by a strong-arm squad, which attempted to provoke the two reformers into swinging at them by calling them and their mothers foul names of an unprintable nature.

If these two men had swung out in defense of the honor of their mothers, they would have been beaten to a pulp. They had to stand there, weeping with frustration, so they'd be able to walk out unharmed and earn a living for their people. In their own union, they were told that day they'd never get work. They were told never to come back. Can you stand by unmoved by such men and women who cry out—literally—for help? I couldn't. So the crime cartel hurled its acid.

I'm not important. You are. The people are. Labor's decent traditions are. The memory of Samuel Gompers, at the top, and of my father, the little fellow away down on labor's line of command, is important.

Crusade, anybody?

Hoover Commission Recommendations on Budget and Accounting Should Be Enacted by the Congress

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. LIPSCOMB. Mr. Speaker, during June 1955 the Commission on Organization of the Executive Branch of the Government—Hoover Commission—transmitted to the Congress its report on budget and accounting in the Federal Government. This report recommended many long-overdue reforms in our Federal budgeting and accounting systems which could lead to significant savings for the taxpayers by making possible the more efficient and economical conduct of the Federal Government's many vast operations involving annual expenditures of billions of dollars.

On May 10, 1956, President Eisenhower, in a special message to the Congress—House Document No. 401—urged that the Congress seek the early enactment of appropriate legislative provisions to support the major objectives of the Hoover Commission's recommendations on budget and accounting. In this message the President reviewed briefly the administrative action already taken partially implementing the Hoover Com-

mission's recommendations on budget and accounting, and said:

The actions being taken by the executive branch to put many of the Commission's proposals into effect will require close coordination with the legislative branch and merit the support which the Congress should and can provide. I urge that the Congress seek the early enactment of appropriate legislative provisions to support the main objectives of the Commission's recommendations.

The Senate has already passed a bill which would put into effect the majority of the recommendations of the Hoover Commission on budget and accounting.

The House Committee on Government Operations has concluded hearings on bills which would likewise put into effect the majority of the recommendations of the Hoover Commission on budget and accounting, including a bill, H. R. 9402, which I introduced on February 20, 1956.

I sincerely hope and urge that the House take timely steps to consider seriously and approve before adjournment legislation of this type in order that these most important Hoover Commission recommendations can be enacted into law during the 84th Congress.

I would commend to the attention of the members the following article entitled "Ledger Legerdemain?—Congress Mulls Hoover Commission's Plan To Save Billions Through Bulget Reforms," by John Chamberlain, which appeared in the Wall Street Journal on Tuesday, June 19, 1956:

LEDGER LEGERDEMAIN?—CONGRESS MULLS HOOVER COMMISSION'S PLAN TO SAVE BILLIONS THROUGH BUDGET REFORMS

(By John Chamberlain)

WASHINGTON.—Can $4 billion in savings on the annual cost of Government be conjured out of a different way of entering figures in ledgers?

Since men do not eat, drink, or wear black (or red) ink, or feed it into airplane engines or the firing chambers of big guns, the question smacks of legerdemain. Yet it is being seriously asked these days by Members of Senate and House subcommittees who are considering legislation to put Hoover Commission budgetary and accounting reforms into operation. According to friends of the Commission, there is a 50–50 chance of the reforms becoming law before Congress adjourns this summer.

The $4 billion figure is based on the informed opinion of J. Harold Stewart, former head of the American Institute of Accountants who bossed the Hoover Commission task force on budget studies. Magical though the sum may seem, a comparable magic has been worked in private industries which have applied close accrual accounting to the so-called controllable items of expense. Accrual accounting has saved as much as 8 percent or 10 percent on costs in private industry.

There is nothing mysterious about an accrued expenditure system of budgeting—it simply consists of keeping an accurate record of the charges for goods and services received in a given year and using that record as the basis for budgeting for the year ahead. Industry is used to doing this; Government is not.

In the old days, when Government expenditures went largely into salaries and routine purchases that could be easily prophesied on an annual basis, accounting and budgeting methods did not matter very much. But with the introduction of long lead time appropriations by Government for big bombers, big generators, big atomic installations and big foreign programs, vast sums accumulated from year to year.

Thus when President Eisenhower asked for new obligational authority of $66.3 billion in appropriations for the 1957 fiscal year beginning July 1, he was, in effect, asking for money that might not be spent in its entirety for some time to come. Similarly, his budgetary figure of $65.9 billion for actual fiscal 1957 spending included money left over from previous periods. When obligated sums outpace actual annual disbursements for goods and services, the pipelines of future spending become clogged. The figure for unexpended appropriations this June 30, the end of fiscal 1956, has been estimated at $53.9 billion.

THE SPORT OF SQUIRRELING

With such a carryover, Congress has little control over the amount of money spent in any given year. Nor does it get any informed review of how Government agencies run their businesses. The agencies merely tell Congress how much of their past funds have been obligated, and how much is needed for obligations in the fulture. Obligational budgeting does not keep Congress abreast of the state of Government-owned inventories, or declining or increasing costs, or the condition of capital equipment, or the "squirreling"—i. e., hiding away—of funds already received.

To take an example that is not in the least hypothetical: In June 1952, the Army had $9.8 billion available for the purchase of guided missiles, tanks, and ammunition. Since this money represented obligated sums—money the Army had already been authorized to spend—the Army felt no compunctions about going to Congress for $2.7 billion more, making a total of some $12.5 billion available for the fiscal year ending June 30, 1953.

During that fiscal period, however, the Army actually paid out only $600 million for guided missiles, ammunition, and such. Almost $12 billion was thus carried over into fiscal 1954. Even with Korea lapsing into quiescence, the Army got $3 billion more for 1954, which upped the grand total to some $15 billion. At the end of the year it still had $11 billion in the kitty for guided missiles, tanks, and ammunition.

Since the carry-over could hardly be hidden even by the most antiquated methods of accounting Congress eventually stopped granting new funds for ammunition. And the Army, no longer faced with the problem of shooting at Red Chinese, canceled a number of the contracts it had placed when the Korean war was on. The funds saved by the cancellation, however, still remained with the Army, a prime example of agency "squirreling."

Plainly, under the "obligation" system of budgeting, lax practices and large wastes could creep in. A sample of "obligation" accounting of aid to Pakistan, for example, would show $20.3 million "obligated" in 1954. Actually, only $2.6 million of this had been spent by June 30 of that year. Yet the accounting records of the Foreign Operations Administration (as it was known then) listed the difference of $17.7 million in unspent funds as "costs."

A system of "accrued expenditure" budgeting would change the system of counting unspent money as "costs" and, in the estimation of the Hoover budget experts, account for half of the projected annual Hoover Commission savings of $8 billion in one fell swoop.

MORE THAN ENOUGH

Under "accrued expenditure" budgeting, the Army would have gone to Congress in June of 1953 with a detailed statement of what it had spent for tanks, ammunition and guided missiles during the past year. Congress would have seen that expenses had suddenly dropped from Korean war heights to a mere $600 million. It would also have seen that $12 billion remained in Army coffers to be spent on tanks, missiles and so on. At this point it could have said to the Army: "Stop. You've got more than you can spend on missiles and tanks this next year. If you think you need more a year from now, come back to us then."

Since subsequent "accrued expenditure" reports to Congress would have disclosed that $1.5 billion in 1954 and $1.1 billion in 1955 had reverted to the Army because of contract cancellations, the Pentagon would have had to work hard to justify future claims for funds. Instances like this, when multiplied over the whole area of Government, would naturally increase the skepticism of Congress—and it is quite probable that substantial savings would result.

The proposed accrued expenditure system of budgeting, concentrating on "accrued" costs for the year just past and accrued expectations for the year ahead, would result in a close-meshed relationship between appropriations and spending. Since only enough would be appropriated at a time to cover a single fiscal year, and since all unexpended funds would revert automatically to Congress for reallocation every June 30, carryovers would disappear.

Enemies of the accrued expenditure system argue that it does not reckon adequately with items such as big bombers—things that need a long lead-time period for the placing of contracts. But even though this may be true in theory, the Hoover Commission people argue that Congress would never be so irresponsible as to leave a battleship or a big dam in a half-completed state. They point to the fact that the Bureau of Reclamation is already budgeting on the accrued expenditure system. The Bureau of Reclamation lists its requirements on a year-to-year basis, even when it is planning for such long-lead-time things as the Palisades Dam project in Idaho.

A SHAKY ANALOGY

Meanwhile, the Bureau of Reclamation books show when it spends less in a given year on a generator than it has originally expected to spend. Congress can see this, and take it into account when appropriating for the following year.

Whether $4 billion could be trimmed from the annual cost of Government by accrual budgeting is anybody's guess. Government, after all, is not entirely analogous to private industry, which has the whip if competition to force it to save once accrual methods have indicated a way. But even if only half of the $4 billion were to become a reality the taxpayer would obviously be well ahead of the game.

And regardless of savings it also seems obvious to many that Congress should be supplied with better tools for keeping close tabs on the biggest annual business in the world.

As We Prepare To Celebrate Independence Day, What Would Be More Fitting Than To Make the Capitol Dome an All-Night Beacon of Freedom's Light?

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the project for which I rise to speak is minor in and of itself for the

agenda of the Congress of the United States in this crowded hour of crisis and the concentrated pressure of the public business. Yet it has a symbolic value that in my judgment can be said to have intense meaning for America and considerable global significance, particularly as we prepare to celebrate Independence Day this year. Without being either too boastful or too obtrusive, I like to think of the Capitol of the United States as a kind of beacon of freedom for all mankind—a light that should never be permitted to go out—both figuratively and actually. It is symbolic of that meaning that I recommend this House take steps, through official channels, to provide that this Capitol's exterior be illuminated, not only up to the hour of midnight, but all night long.

What I ask this House to remember is that the Capitol of the United States has come to be a magnet for the 166 million people who own it, as well as for visitors from all corners of the earth. We must begin to think of it not only as the workshop of the greatest democracy in the annals of free government, but also as a monument to freedom for all peoples. This calls for exhausting every avenue of appeal, of propaganda—in the best sense of the term—of acceptability, to intensify the patriotic feelings of our own people, and win the mind of mankind. Thus it seems to me almost rude in a Capitol representative of so much magnificence in the rise of man, that, promptly at midnight, as if life and freedom ceased at that hour, the lights over the Capitol go out and a deadly pall hangs over the area, as if freedom had fallen victim to its enemies and was now become a corpse.

Eyes that are not used to the light of freedom are disturbed and uncomfortable in its harsh, merciless light. The hundreds of millions of human beings dominated by communism today are like those pitiful creatures in Plato's cave, looking at shadows and listening to echoes all of their lives.

> At first, when any of them is liberated and compelled suddenly to stand up and turn his neck round and walk and look toward the light, he will suffer sharp pains—

Socrates said, and added that—

> the glare will distress him, and he will be unable to see the realities of which in his former state he had seen the shadows.

The background story of the illumination of the Capitol may be told in a word: There was no exterior illumination of the Capitol at night even as recently as the first Woodrow Wilson administration. It was during the second Woodrow Wilson inaugural that the lights were turned on—how appropriate when we think of the history of that hour—and our people began to see a significance in the lights that transcended in the imagination and mere measurement of candlepower and kilowatts and wattage. Consequently, the lighting that had been intended merely for the inaugural ceremonies was continued. It was then decided that the lights should be on every night of the year up to midnight.

That is the status as of now, except for one additional item: In 1922, at the request of the Department of Commerce and as a safety factor for aviation, which was then rising to prominence, it was decided to keep lighted all night the figure of Freedom, which tops the Capitol dome. Thus 4 searchlights, 1 at each point of the compass, illuminate this sculptural mass all through the night. These are synchronized to the timing of the city's street lights, depending upon the length of the night. Of course, this is indispensable and, of course, this is all to the good. But I cannot forebear the observation that it is rather a pity we should think of the statute of Freedom not for its immense cultural and psychological meaning for ourselves and all the world, but only as a traffic light in the night to keep our aviators from peril. My proposition for the full illumination after midnight of the Capitol as it is now illuminated only up to that hour, amplifies this element of safety for aviation and combines with it the much broader and more profound task of serving as a sort of eternal pillar of fire to the passion for freedom that stirs men's hearts everywhere.

In assigning myself to the responsibility for suggesting this project I had a cursory investigation instituted to determine the cost. For we are all conscious of Government waste and we are all determined to avoid expense where the fruits fail to justify it. I find that—roughly speaking—the cost of illuminating the Capitol of the United States for a few additional hours from midnight to dawn would come to something between five and ten dollars an hour. This would provide bathing the Capitol in light by the warm illumination of 100 1,000-watt floodlamps and eight 1,000-watt searchlights. The cost therefore would be—say for 4 hours—$40 per night, or something like $14,200 annually.

Judged by the advertising rates, shall we say, of the enthusiastic and enterprising entrepeneurs of New York's Madison Avenue, this annual outlay for this form of displaying the American dream, is a price so cheap for a cause so magnificant that it would be extravagance in its stupidest form not to seize the bargain. Oh, yes, I am aware, as we all are, that the period from midnight to dawn is not as rich in audience attraction as the earlier period. But my studies show that 10,000 people visit the Capitol of the United States every day—2 million a year. It is inconceivable to me, that this vast motoring and traveling and sightseeing public, to say nothing of the permanent population, hungry for a vision of their living Government, all drop off to slumber promptly on the stroke of midnight. It is inconceivable to me that we should deny to travelers after midnight—whether Americans or visitors from far countries—the inspiration of the sight of the Capitol from the air.

It is a vision that we should not deny ourselves.

Nor does it sound reasonable to me that a Nation with a gross national product of upward of $400 billion, with an annual budget running into the sixty billions and more, a nation which has given out billions in foreign aid, should start counting petty pennies when it comes to dressing up its own Capitol in the light that should by that much help win the affectionate patriotism of its own people and the heart-warming respect of the foreign visitor. Other capitols of the world—perhaps with the help of money we give them in the form of foreign aid, directly or indirectly—show their pride in their nationhood by all-night illumination of their capitols.

The greatest Nation since the Roman Empire, the greatest Nation in the world and in all time, certainly owes itself that much self-regard. I hope the Congress of the United States will join me in saying: "Let there be light." I hope we shall have it soon, a signal to the world and a symbol of man's success at last that where this light burns there is the heartbeat of free government and a happy people.

Record Proves Ike's Need for a Republican 85th Congress

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. HOSMER. Mr. Speaker, if a person likes President Eisenhower, trust and respect for the man are part and parcel of it. Also part and parcel of it is an approval of what he does as President. For like and trust alone could never account for the consistently high popularity the President has enjoyed throughout his service in this White House. If the people also did not like what he has done as President, he would never have enjoyed this popularity.

It thus follows as night after day, that those who like Ike and will vote him a second term in the White House, to be consistent and logical, must give him a Republican 85th Congress to enable him to do those things the people approve his doing.

Raymond Moley, one of ex-President Franklin D. Roosevelt's braintrusters, in a recent column strikingly shows the necessity of a Republican 85th Congress to support President Eisenhower by comparing the number of times the ranking Democrat and Republican Members of Senate and House Committees supported the President with their votes on issues. On the record, Democrats in this important group cast 126 votes supporting the President, while Republicans were casting 570 votes supporting him.

Mr. Moley's column details this comparison as follows:

> There are already appearing expressions of the opinion, presumably inspired by Democratic sources, that it will be just as helpful to President Eisenhower, if elected, to have a Democratic majority as a Republican majority in the 85th Congress. A study of the voting records of Members, together with a consideration of who will be chairmen of the committees in the 85th Congress, completely disproves this contention.
>
> Whatever wishful thinking there may be to the contrary, party government prevails in Congress. Democrats, with very, very few exceptions, are anxious to help their

own party. On the other side, President Eisenhower is a Republican, and Republicans will for many reasons give him support.

In proving this point, let us first note the many changes among the ranking members of committees that will be seen in 1957. Senator GEORGE and Representative RICHARDS, top Democrats in Foreign Relations and Foreign Affairs, respectively, are retiring. So are Representative DONDERO, ranking Republican on the Public Works Committee, and Representatives WOLCOTT and GAMBLE, top Republicans on Banking and Currency. Representative REED, ranking Republican on Judiciary, died recently. TOLLEFSON, ranking Republican on Merchant Marine and Fisheries, is leaving Congress to run for the Washington Governorship. Representative VELDE, ranking Republican on the Un-American Affairs Committee, is retiring, and so is Representative HOPE, ranking Republican on Agriculture.

Taking these retirements into consideration, let us see how President Eisenhower might fare with either of the two prospective ranking members of the committees in the new Congress. Twenty-four issues in the 84th Congress on which the Democratic and Republican leadership were on opposite sides were used in compiling the following tabulation of Senate committees. Twenty-three isues were used in the House tabulations.

The figure following each name is the number of times that the member voted in support of Republican measures, which in practically all cases meant support of President Eisenhower.

SENATE

Agriculture: ELLENDER, Democrat, 9; AIKEN, Republican, 18.

Appropriations: HAYDEN, Democrat, 1; BRIDGES, Republican, 19.

Armed Services: RUSSELL, Democrat, 4; SALTONSTALL, Republican, 23.

Banking and Currency: FULBRIGHT, Democrat, 1; CAPEHART, Republican, 19.

District of Columbia: NEELY, Democrat, 2; BEALL, Republican, 19.

Finance: BYRD, Democrat, 15; MILLIKIN, Republican, 21.

Foreign Relations: MCCLELLAN, Democrat, 4; MCCARTHY, Republican, 15.

Interior and Insular Affairs: MURRAY, Democrat, 4; MALONE, Republican, 16.

Interstate and Foreign Commerce: MAGNUSON, Democrat, 2; BRICKER, Republican, 21.

Judiciary: EASTLAND, Democrat, 6; LANGER, Republican, 3.

Labor and Public Welfare: HILL, Democrat, 1; SMITH of New Jersey, Republican, 24.

PostOffice and Civil Service: JOHNSTON of South Carolina, Democrat, 1; CARLSON, Republican, 22.

Public Works: CHAVEZ, Democrat, 2; MARTIN of Pennsylvania, Republican, 22.

Rules and Administration: HENNINGS, Democrat, 1; JENNER, Republican, 15.

HOUSE

Agriculture: COOLEY, Democrat, 4; ANDRESEN, Republican, 17.

Appropriations: CANNON, Democrat, 1; TABER, Republican, 23.

Armed Services: VINSON, Democrat, 5; SHORT, Republican, 16.

Banking and Currency: SPENCE, Democrat, 1; TALLE, Republican, 17.

District of Columbia: MCMILLAN, Democrat, 8; SIMPSON of Illinois, Republican, 15.

Education and Labor: BARDEN, Democrat, 7; MCCONNELL, Republican, 20.

Foreign Affairs: GORDON, Democrat, 0; CHIPERFIELD, Republican, 16.

Government Operations: DAWSON of Illinois, Democrat, 1; HOFFMAN of Michigan, Republican, 22.

House Administration: BURLESON, Democrat, 7; LECOMPTE, Republican, 18.

Interior and Insular Affairs: ENGLE, Democrat, 3; MILLER of Nebraska, Republican, 20.

Interstate and Foreign Commerce: PRIEST, Democrat, 2; WOLVERTON, Republican, 13.

Judiciary: CELLER, Democrat, 0; KEATING, Republican, 18.

Merchant Marine and Fisheries: BONNER, Democrat, 9; ALLEN of California, Republican, 16.

Public Works: BUCKLEY, Democrat, 0; MCGREGOR, Republican, 20.

Rules: SMITH of Virginia, Democrat, 13; ALLEN of Illinois, Republican, 23.

Un-American Activities: WALTER, Democrat, 3; KEARNEY, Republican, 14.

Veterans' Affairs: TEAGUE of Texas, Democrat, 6; ROGERS of Massachusetts, Republican, 9.

Ways and Means: COOPER, Democrat, 3; REED of New York, Republican, 14.

Party control of the committees is very important. Chairmen decide when hearings are held and select committee majority staffs. Those staff members for the most part draft the reports and to a large degree select witnesses. On some deplorable cases they also leak information to sympathetic newspapermen. The chairman also has great power with his party colleagues on the committees.

The record of the Members shown above should indicate why a voter, if he prefers President Eisenhower, should also prefer candidates for Congress on the Republican side, and if he prefers the Democratic candidate for President he should support Democratic candidates for Congress.

Liberalize Railroad Retirement Benefits Now

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. BLATNIK. Mr. Speaker, the employees of the rail industry and retired railroad employees are looking for some relief from this Congress on the many inequities and inadequacies existing under the existing Railroad Retirement System.

The Committee on Interstate and Foreign Commerce has reported out a bill, H. R. 9065, which is designed to liberalize the existing Railroad Retirement System by increasing pensions and annuities by 15 percent. As originally introduced the bill contained a tax-exempt feature which provided that railroad employees would pay withholding taxes on their take-home pay only and not on their gross earnings. This provision, contained in section 5 of the bill, was eliminated in committee and as reported H. R. 9065 contains no comparable provision today. In other words, the bill due to come to the floor of the House increases the employees' taxes by 1 percent without any corresponding relief. As a result railroad employees will be forced to pay 7¼ percent of their earnings up to $350 a month which makes this the highest pension rate in the country. Fortunately, the Committee on Ways and Means has decided to hold hearings on legislation similar to the provisions of section 5 of the original bill.

Now railroad employees do not mind paying additional taxes if they can obtain additional benefits. The question is whether H. R. 9065 actually provides for a more liberal and equitable pension program for the Nation's railroad employees who number over 1 million today. Of course, H. R. 9065 does provide for a 15-percent increase in benefits, with extensive limitations. In the first place, the 15-percent increase in no way increases benefits for those in the lower paid brackets who are today operating under the social-security guaranty and are actually receiving social-security benefits although at no time did they pay less than 3 times more in taxes than did their counterpart under social security.

For instance, 65 percent of the aged widows and widowers presently under railroad retirement would receive no additional benefits under H. R. 9065. Only a very limited number of spouses would receive any additional benefits. Combining all types of beneficiaries under the present system, we find that 27 percent of them would receive no additional benefits whatsoever. The inequity of such a bill is apparent on its face. It should be amended to provide increased benefits to all retired railroad employees and their families across the board.

I firmly believe, Mr. Speaker, that we take a long, close look at this bill which is soon due to come before the House in an effort to write into law amendments truly designed to benefit the hard-working and loyal railroad employees throughout the Nation.

A number of amendments are badly needed to modernize and improve the existing railroad retirement system. For instance, the test period, 1924–31, should be eliminated and the 5 highest years substituted in lieu thereof. This would bring the Railroad Retirement Act up to the standards now enjoyed by the postal people, the civil servants, and even the social-security beneficiaries. Why discriminate against railroad workers, Mr. Speaker? Why must their retirement system be based on an obsolete and antique formula not used by any other pension system in the country and, at the same time, ask these people to pay a higher contribution than any of the other systems? This striking inequity in the law should be repealed and a new test period comprising the 5 highest years substituted in its stead.

Another very necessary change is the elimination of the so-called dual restriction insofar as spouses are concerned. Under existing law, spouses who help the family budget by working find now that the social security they qualify for in their own right is deducted from their spouse benefit check under railroad retirement. This application is so harsh that many spouse benefits are wiped out entirely because the social security produces higher benefits. Spouses today are the only group to which this dual restriction applies.

In 1954 Public Law 398 was enacted removing the dual restriction insofar as employees were concerned. Again in 1955 Public Law 383 was approved which eliminated the dual restriction insofar as survivors were concerned. Under Public Law 383 widows who had social security benefits in their own right would receive such benefits in addition to sur-

vivor benefits under railroad retirement. This provision applied mostly to widows, widowers, and parents, but the railroad worker's spouse still suffers from this restriction and any benefit awarded to her under social security is deducted from her spouse benefit check under railroad retirement. We are actually penalizing these wives of railroad workers who find it necessary to go out and work to help the family budget. We are discouraging thrift and the desire of people to better their station in life. We are discriminating against women who work. This is especially unfair when many railroad employees find themselves working a short week with no overtime to supplement earnings. In short, Mr. Speaker, the dual restriction on spouses should in justice be eliminated if we are to have a truly effective and beneficial railroad retirement system.

Another important improvement that can be made in existing law is the elimination of the "last employer" clause. At the present time, a large number of employees, while they work for the railroads, have side jobs in building and loan associations, fraternal organizations, and so on, where they receive a little additional income. Most of these jobs pay only very small wages, yet the individuals must resign from these positions before they can qualify for railroad retirement benefits. This restriction should be removed so that it will not be mandatory to resign from other than a railroad to qualify for retirement benefits under the act.

In conclusion, Mr. Speaker, I urge all the Members of the House to give serious thought and consideration to the question of railroad retirement improvements. While H. R. 9065, which has been reported out of committee, is an improvement, it does not go far enough toward correcting the inequities in existing law. So while we have this very serious problem of so great importance under consideration we should exert every effort to work out a sound, yet adequate bill. There is no question but that this is a deep, involved and complex problem, but I do hope we will be able to make some basic and fundamental improvements in the railroad retirement system. I believe we should act now. Any further delay would be an injustice to hundreds of thousands of railroad workers and their dependents.

Notable Career of Attorney William P. Brewster

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Times Leader Evening News on Saturday, June 30, 1956, calling attention to the fact that attorney William P. Brewster has tendered his resignation as solicitor of the Kingston (Pa.) School District after more than a half century of outstanding service:

When a man has been on the job for 54 years, he writes his own valedictory. Such is the case with Attorney William P. Brewster, who has resigned as solicitor for Kingston School District after a half century. He also was on the board of education 4 years, making his a remarkable career of public service and a notable contribution to education.

Attorney Brewster, known as a scholar and historian, as well as a lawyer, has seen the public schools of Kingston grow from a small beginning into one of the finest systems in the Commonwealth. Moreover, he has been a part of the development. School directors, principals, and teachers have come and gone, but he continued until his decision to sever official ties was announced yesterday.

Such a career must afford tremendous satisfaction, for this is the principal reward of long and distinguished service in a field like education. Attorney Brewster, in his letter of resignation, had many nice things to say about colleagues and they were in a position to return the compliment. The west side borough was singularly fortunate to have the services of a man of his caliber at its disposal so long.

Crime: Racial, North, South

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Journal and Guide of June 30, 1956:

[From the Journal and Guide of June 30, 1956]

CRIME: RACIAL, NORTH, SOUTH

On our editorial page we are reprinting an editorial from the Richmond Times-Dispatch, which supports a statement by Representative JOHN BELL WILLIAMS, of Mississippi, purporting to show that States in which there is school integration "show a substantially higher incidence of Negro crime in proportion to Negro population than in segregated States."

We do not know the source of Mr. WILLIAMS' statistics, and would say that the source would be very important in their bearing upon the truth.

Furthermore, when statistics are used to prove one side of a case, one is led to take a look at statistics which have an important bearing on the other side of the case.

ORIGIN OF POPULATION STUDIED

We would grant, on the basis of Representative WILLIAMS' claims, that a great many half-educated, unadjusted former southern Negroes now in the North fall into the toils of the law. The North has only partially assimilated these millions of ignorant migrants in the economic fabric of the section.

It must be remembered—according to United States census reports—that more than 2 million Negroes from the farms of the Deep South have migrated to the North during the past decade and a half.

It must also be remembered that any student of sociology or penology knows that the detection and prosecution of crimes committed by Negroes in the South depend largely upon whether these crimes affect the property or persons of white people. Another way of stating it is to say what is common knowledge: That crimes committed by Negroes against Negroes in the South are frequently not apprehended and punished, but in a general way are taken for granted, unless they are serious crimes, or unless they occur in an urban community with an adequate police department.

DIFFERENT IN THE NORTH

In the North, both the law and public opinion treat crime as crime, whether the offense is by Negroes against Negroes, or by Negroes against white people. There are also many offenses, which in the South would be tacitly excused or disposed of by very light punishment if committed by Negroes, but which would be crime in the North and treated as such. In the South many of the offenders never reach the State prisons. In the North they do.

It is well known to all students of crime and delinquency, that in many areas in the South—and it happens in Norfolk and Richmond—a Negro may locate in a good Negro residential area, and from that point he may engage in the sale of alcoholic beverages, numbers writing, prostitution, partnerships with bootleggers of untaxed liquor, receiving and disposing of stolen good plus nightly affrays, without fear of being molested by the police—until white persons beging to frequent his establishment. This statement can be supported by an array of reputable witnesses, who have complained to the police in efforts to break up this kind of thing which brings into good Negro neighborhoods criminal traffic from the outside.

OBJECT OF THE STATISTICS

Statistics are usually brought forward and manipulated in these days of slander of Negroes by large staffs of propagandists employed by the numerous political underground organizations in the South, which are engaged in whipping up hate against Negroes by any means possible, and against anybody who is disposed to hold that Negroes should enjoy civil rights in the South. The matter does not have to be pinned down to school desegregation. The issue has now been resolved into a campaign of hate against all minorities. It has also been resolved into a campaign of hate against the North to confuse the whole issue, to the end that the Congress will enact laws limiting the powers of the United States Supreme Court; making the limitations retroactive to January 1954, so as to nullify the High Court's ruling in the school cases, and to amend the 14th and 15th amendments to the United States Constitution. There is no secret about that.

THE WHITE CRIME RATE

Congressman WILLIAMS and the editors of the Richmond Times-Dispatch could find some interesting facts about crime among Southern white people if they took time to do a little research.

It is a fact that if Negroes living in the North are more criminal than those living in the South, white people living in the South are more criminal than those of the same race living in the North. That phenomenon probably never occurred to many in the South.

We find no pleasure in pointing this out. Neither do we find any pleasure in pointing a finger at Virginia. We believe that white Virginians are more law-abiding than white Mississippians, or Alabamians, or South Carolinians. But we do not have immediately at hand any statistics on the latter deep Southern States. So, we will cite an instance in which white commitments to State prison in Virginia were compared with white commitments in Wisconsin.

THE UNDISPUTED RECORD

Mr. Rice M. Youell, former commissioner, Virginia Department of Corrections, is the author of a crime study which was published May 7, 1947, in the University of Virginia News Letter.

Mr. Youell found that 108 persons out of every 100,000 in Virginia were committed to the State prison as compared with 35 of every 100,000 committed in Wisconsin.

He found also, that only eight States and the District of Columbia had a higher crime rate than Virginia. As if anticipating the usual answer (presence of Negroes) Mr. Youell said:

"Lest someone should attempt to blame the increase of commitments in Virginia, over Wisconsin, on the colored population, it might be well to point out that the white commitments in Virginia were almost three times greater than the white commitment rate in Wisconsin."

FIGURES IN 1953

On the same question the results of a crime study in Virginia made by Dr. R. Wayne Kernodle, chairman, and Dr. John F. Kantnor, of the department of sociology and anthropology, College of William and Mary, and published in the University News Letter, March 15, 1953, contained the following comment:

"Generally speaking, a high incidence of crime would indicate the lack of moral order or integration of a community. That is, positively stated, the more people of a community are knit together in a real moral order, the less they will violate one another's persons or property. It will be seen from the foregoing data (a table of statistics) if taken per se, that Virginians tend to violate each other's persons and property more frequently than persons in most of the other States of our Nation. It would further indicate a low degree of integration and suggest that the Commonwealth is seriously threatened with moral disintegration."

Granting that although Virginia is in the low forties among the States, in the matter of education, we are higher than Georgia and Mississippi, and some other Deep Southern States. It would appear that the Times-Dispatch would look homeward, rather than joining a southern Congressman in trying to show that Negroes in the North—most of whom went there from the South in recent years—have a higher incidence of criminality than those who remain in the South.

By expert testimony of southerners who are competent sociologists and penologists, the incidence of crime among white people in the South is much higher—almost three times higher—than the incidence of crime among white people in the North.

It does no good to the South, especially the white South, to recite this, but to do so is pertinent to the facts of life when an unfair relation to criminality is fastened upon Negroes for political propaganda purposes by southern Congressmen and certain southern newspapers.

[From the Richmond Times-Dispatch]

THAT DIXIE REIGN OF TERROR

The "reign of terror" in the South against southern Negroes is often described by our "liberal" northern and western friends. It is interesting, therefore, to note some extremely interesting figures concerning the number of Negroes in the penitentiaries of the two sections.

Representative JOHN BELL WILLIAMS, of Mississippi, using official record of the Federal and State Governments, compares the 13 non-Southern States with over 100,000 Negro population (except Michigan) with the 10 Southern States (except Georgia, there being no 1950 statistics for Georgia and Michigan). He finds the following:

The integrated States show a substantially higher incidence of Negro crime in proportion to Negro population than the segregated States. In fact, the per capita crime rate among Negroes in the integrated States is 199 percent or double the rate—in the segregated States. The cases enumerated are convicted felony cases, and the figures do not reflect arrests or misdemeanor convictions.

Representative WILLIAMS goes on to note that these figures prove "either that Negroes are more law abiding in a segregated society or Southern courts are far more lenient with Negro defendants." He inquires, with much justice, where a reign of terror is to be found in all this.

The tables in question show that integrated Ohio sent more Negroes to prison in 1950 than the segregated States of Arkansas, Tennessee, and South Carolina combined, although their total Negro population is 1,266,247 greater than that of Ohio.

Similarly, New York courts in 1950 sent more Negroes to the penitentiary than the courts of Arkansas, Mississippi, and South Carolina combined, although the total Negro population of those three States exceeds that of New York by 1,317,019.

Many of the most pointed sermons directed at the benighted South come from New York. Yet New York has five times more Negroes per capita in prison than Mississippi.

Just what explanation does the Reverend ADAM CLAYTON POWELL, of Harlem, have for this phenomenon? If New York Negroes, living under the blessings of integration, are five times as felonious as Mississippi Negroes, it's a bit difficult to find that much talked about reign of terror in Dixie, or to see wherein the lot of New York Negroes is so much better than that of their fellows in the deep South.

Ignace Jan Paderewski: The 15th Anniversary of His Death, June 30, 1956

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. RODINO. Mr. Speaker, in 1860 there was born in Poland a man destined to become one of her greatest artists and statesmen. This man was Ignace Jan Paderewski. We are proud today to commemorate the anniversary of his death and to review briefly some of his inspiring and noble achievements.

Ignace Jan Paderewski had a long musical career filled with satisfying experiences and stimulating work. A true genius in the field of music he finally channeled his great talents and energies into the fight for Polish freedom, thus advancing the cause of liberty and democracy everywhere in the world. Someone once said: "The Polish race breeds patriot artists; their patriotism is not enervated by their art, neither is their art vulgarized by their patriotism." This can certainly be applied to Paderewski. He gladly put aside his music in order to contribute his time for Polish independence and freedom. Although it is not uncommon for great creative artists to offer their services when their nation's liberty is imperiled, it is unusual for them to play the outstanding political role that Paderewski did in reviving the independence of his native land.

During the First World War Ignace Paderewski became aware of the need for championing the restoration of Poland to the European community. Many Poles were enlisted in the campaign to help regain their former liberties and national integrity, and the task of alerting America to the Polish cause fell to Ignace Paderewski. Being well known in the United States as a pianist and very highly regarded as both an artist and a humanitarian, he was an excellent choice for an unofficial ambassador to America. He particularly gained the confidence of Col. Edward M. House, personal adviser to President Woodrow Wilson, and later Wilson himself acknowledged that he had been won over to the Polish cause by Paderewski. There were also countless other statesmen and leaders in the United States who shared Wilson's esteem for Paderewski. Charles Evans Hughes remarked about Paderewski that "creative power has rarely had such an opportunity, and rarely has opportunity been so nobly used." Robert Lansing, in his writings on world war leadership, stated that Paderewski:

Was an able and tactful leader of his countrymen and a sagacious diplomat, and that his emotional temperament, while it intensified his patriotic zeal and his spirit of self-sacrifice, never controlled or adversely affected the soundness of his judgment or his practical point of view.

It is a fact that Paderewski gave his whole life over to benefit and improve his fellowmen.

The steady and untiring efforts by Paderewski for a free Poland still are clear in the minds and hearts of Poles today. And as the vision of an independent Poland was the lodestar of his existence, so must the liberation and revival of Poland become a goal for the democratic world. We gladly commemorate the anniversary of this noble and dedicated Polish statesman and artist.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

Appendix

Atomic Power for Profit

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, July 3, 1956

Mr. IVES. Mr. President, these days all of us are vitally interested in the peaceful uses of atomic energy. Recently, Gen. Walter Bedell Smith delivered an excellent address before the Brooklyn Chamber of Commerce dealing with atomic power as a source of industrial energy.

I ask unanimous consent to have the text of this speech printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ATOMIC POWER FOR PROFIT

(Address by Gen. Walter Bedell Smith, vice chairman of the board of directors, American Machine & Foundry Co., before the Brooklyn Chamber of Commerce, Brooklyn, N. Y., May 28, 1956)

Mr. President, members, and guests of the Brooklyn Chamber of Commerce, here in this city, which has taken the lead in making so much business and industrial history, the immediate and future prospects for the atomic powerplant seems to me to be a very appropriate subject for our consideration.

Today every businessman in Brooklyn has a personal stake in this new form of industrial energy. Its implications are so vast, its potentials are of such interest to our free economy, that no enterprise can afford to ignore them.

Yet only a decade ago it would have been impossible for a group such as this even to discuss the subject of atomic power in its application to industry. The reason has nothing to do with national security; the atomic powerplant simply did not exist as far back as 10 years ago.

A little over two decades ago, in fact, the mere idea of extracting useful energy from the atom was publicly scorned by a great nuclear physicist in Britain. "Anyone who expects a source of power from the transformation of these atoms," said Lord Rutherford as late as 1933, "is talking moonshine."

It happens that—as I glanced through a recent magazine article quoting this remembered remark—there lay on the desk before me the design for an atomic powerplant by AMF Atomics, a subsidiary of our firm, which will build the reactor for it.

This particular atomic powerplant is planned to produce electric current at a cost of less than 8 mills per kilowatt for the area around Elk River, Minn., where present cost of generating current due to the high price of coal is about 9 mills per kilowatt.

All of you know, I am sure, that West Milton, N. Y., is to be electrified from General Electric's power reactor. You read the announcement this month that Consolidated Edison is building a $55 million atomic powerplant at Indian Point, N. Y., about 40 miles north of here, which will supply 236,000 kilowatts—enough to service the home electric needs of 1 million New Yorkers—and will be in full production by 1960.

I could go on at length, but these examples alone are enough to make one smile now at the pessimistic predictions of only a few years ago and justify the predictions of today's experts, who do not hesitate to say that atomic powerplants will eventually produce power below the cost of even our most efficient conventionally fueled plants.

However, as Hugh Walpole once wrote to his brother, "Prognostics do not always prove to be prophecies." And, he added cautiously, "At least the wisest prophets make sure of the event first." With Walpole's words in mind, I hesitate to play the role of prophet. It is enough to say that even today the atom is a source of industrial power that, under certain conditions, is competitive with fossil fuels and that there is no doubt that engineering ingenuity will rapidly broaden the field of this competition.

I think it might be interesting to review today some of the growing pains and accomplishments of this new source of industrial energy. You will then be free to draw your own conclusions as to the outlook for its profitable development.

To begin with, there is nothing different or distinctive about the electricity produced by an atomic powerplant. A nuclear reactor merely replaces the conventional firebox and boiler used to generate steam. The combustion of coal or oil is suppplanted by heat produced in a fission chain reaction. The resulting steam then drives a generator to produce electricity, as in the more familiar power complexes.

The principal advantage of atomic fuel, as compared with conventional fuels, is the large amount of heat which can be derived from it in relation to its weight. The fission of 1 pound of uranium-235 in an atomic reactor will produce the same amount of energy as the burning of 1,300 tons of coal, or 6,000 barrels of fuel oil.

The TVA's new Kingston steam plant to serve Oak Ridge requires 15,000 tons of coal a day for its normal operation. The equivalent amount of uranium-235 required to produce the same amount of energy would be about 10 pounds. Theoretically, the entire world's energy demands for a whole year could be supplied by a single 8-foot cube of nuclear fuel weighing only 300 tons.

However, as every manufacturer knows, power is being consumed at an ever-rising rate by our industrial economy. Projections of electric power demand in the United States indicate that we will be using 1,400 billion kilowatt-hours a year by 1975—an increase of neary 150 percent above present levels.

At the same time our known reserves of conventional fuels are being depleted rather rapidly. Dr. Palmer C. Putnam, an authority on the subject, characterize our burnup rate as unbelievable. In the United States, for example, one-half of all the coal ever consumed has been burned since 1920. Nearly one-half of all the coal and gas ever consumed has been burned since 1940. The burnup rate is 10 times faster now than it was a century ago.

By 1975 the largest sources of conventional fuels may be depleted to the point where the recovery of lower grade reserves or less easily available reserves, may up their cost. Or, the miracles of the modern test tube may create new markets for fossil-fuel products, increasing their value. It is easy to foresee a day when we may want to save our coal and other below-ground fuels for the manufacture of synthetic organic chemicals.

In any case the fossil fuels are characterized by extreme bulk and weight. In places where these fuels must be hauled long distances for conversion to power, their costs rise sharply. We are all aware of the tremendous quantities of conventional fuels that must be transported by rail, barge, truck or pipeline to supply our domestic powerplants from sources close at hand and we are more fortunate than most other nations. Elsewhere, these supplies either are not available or are prohibitive in price. I was astonished a few weeks ago when the managing director of our British associate told me of the amount of railroad coal that South Africa imports from the United States. There are many areas where industrialization cannot go forward without nuclear powerplants.

On the basis of these considerations, the case for atomic power would seem to be an open-and-shut one. Nuclear fuels are compact and readily portable. They generate tremendous amounts of energy in proportion to their weight. They can be made available at points where conventional fuels are all but unobtainable. They have a longer productive life in comparison with other fuels, which are rapidly consumed in the generation of power and must be replaced with equal rapidity. Their price is stable and will be decreased as new skills are applied to their recovery; wheraes, new uses and demands for the available supply of other fuels threaten to increase their cost.

Finally, our known reserves of nuclear fuels, which are steadily growing, are not in danger of exhaustion in the foreseeable future. In fact, it is estimated that they already contain 25 times as much usable energy as do our established sources of coal, oil, or gas—which are diminishing and can never be replaced.

On the other hand, a highly competitive and cost-conscious power industry cannot be expected to switch over to the use of nuclear fuels just to be different. There is a tremendous investment in the production of power through the use of conventional fuels, and an equally enormous facility for recovering them from the earth, shipping them, and handling them. Our American skills in all those directions are the marvel of industrialists everywhere, and rightly so.

The cost of nuclear fuel is still high by comparison (usually about twice the current figure for other sources of power). Potentially it is a cheap form of energy, weight for weight, but a great many things must be done to it first. It must be discovered, it must be mined, it must be transported, it must be refined to a very high degree of purity, and sometimes it must be enriched with uranium 235. Then your fissionable material must be fabricated and assembled very carefully into fuel elements for the reactors.

As these elements undergo fission, they produce highly radioactive waste products and must eventually be replaced. The used elements are then reprocessed to rid them of undesirable substances, and to recover the unburned uranium. They can then be reenriched and refabricated into fuel elements, ready to be used again. In addition to the expense of refining and fabrication, there is the quite serious problem of waste disposal.

Obviously, these technical problems and many others must be dealt with—or at least reduced—before atomic power can make its way everywhere on equal terms with power-producing systems that are generations old. All this was forecast in the first Report on the International Control of Atomic Energy, dated March 16, 1946—only 10 years ago. This report declared, in what I consider something of an understatement, "Anything constructive in relation to atomic energy must inevitably be novel and immensely difficult."

You will be interested in some of the steps our Government has taken to help resolve these difficulties. For one thing, a 5-year program of power-reactor development, on which $200 million will be spent, has been launched by the Atomic Energy Commission.

By 1960, the most promising of several possible approaches to the economical uses of nuclear fuels should be fairly well established. This is by no means the first effort by the Atomic Energy Commission to advance the peacetime uses of atomic energy, of course. The Commission's scientists must already be credited with much of the basic development of reactor techniques during the past 5 years.

The Atomic Energy Commission's contributions to this field are perhaps all the more remarkable for having been made in a period when much time and attention necessarily had to be devoted to other uses for the atom. In what President Eisenhower once called "this age of peril," many top physicists who were engaged in defense work had to pass up, for the time being, very attractive avenues of scientific approach that had enormous peacetime possibilities. In addition, of course, there was and continues to be a chronic shortage of professional talent capable of doing exploratory and follow-up work in these directions.

These handicaps are now being eased; first by drawing the research facilities of the great research institutes and universities into the atomic development picture; and, second by enlisting the scientific resources of private industry. As a result there has been a very marked increase in both academic and business interest in the atom during recent months, though the former remains a great national problem that must be overcome.

As designers and builders of nuclear reactors and related equipment, my firm has played its part in the encouragement of these interests. For instance, we are constructing a research reactor for Battelle Memorial Institute in Columbus, Ohio. Two research institutes have completed such reactors, or nearly so, and four others that I know of are actively interested in similar projects.

We have been retained by the University of Buffalo to assist in its plans to build a research reactor on the campus, and we know of other universities with similar plans. Two, North Carolina and Pennsylvania State, already have reactors in operation. A third, at the University of Michigan, is nearing completion.

All this, of course, is immensely important to the future development of atomic energy for peacetime. Without opportunities for training, we cannot hope for the continuous enlistment of young technical brains, skill, and know-how that are necessary for its expansion. There is no other way in which this Nation can hope to keep pace with new atomic discoveries, much less put them to work for us.

Nor has industry been remiss in this respect. My firm (and I refer to it because I know what it is doing) is preparing to design and construct at Plainsboro, N. J., the first nuclear reactor to be owned and operated for mutual benefit by a group of large private companies. The Industrial Reactor Laboratories, as they will be called, will be used to conduct atomic research in industrial and humanitarian fields. Our own organization will be among the participating companies, incidentally, and all of the other member companies are well known here in Brooklyn.

Altogether, there are now some 29 nuclear reactors operating in the United States, plus 3 national laboratories in full production. One of these last, the laboratory at Oak Ridge, uses about one and one-half times as much electricity as all the rest of the State of Tennessee put together. In fact, it consumes about three times as much power as is used by all of the highly industrialized city of Detroit.

This power demand, which literally did not exist before 1943, is an example of the stepped-up energy needs which must be met in this country, and soon. After 1960, when the 5-year reactor research program will be completed, this Nation, will have only 15 years in which to build something like $8 billion worth of nuclear powerplants to meet the 1975 demand.

These will produce about 45 million kilowatts of electric power, in places and at prices where atomic power is competitive. This would represent only about 15 percent of the total United States power demand at that time—about a billion dollars worth per year. The industrial and technological advancement thus represented, however, would be a major contribution to our American standard of living.

It is hardly necessary to mention to this audience the overriding importance of national prestige in this field; of economic well-being; and of continued peace, progress and prosperity. Those are the things we live by in the Western world—they are the very embodiments of our way of life.

The same things are true of our great neighbor to the north, where vast resources await industrial development that can come only from atomic power. Canada is fortunate in more ways than one; in addition to her other natural wealth she has at least five times more proven reserves of nuclear fuel than we have. I need not tell you what her prospects are, in the atomic development of the future, and the Canadians are very alert to these prospects. There, as in our own country, remote regions beyond reach of conventional fuel supplies—and regions too rough or distant for the easy transmittal of existing power—can now be opened to industrialization through "packaged" atomic powerplants.

As we range over the map of the British Commonwealth, as over the maps of our own Territories and possessions, we find countless places that fit this description. The same is true of friendly lands in South America, and in other parts of the world.

Therefore, if I were asked to sum up the possibilities of atomic power for profit, my appraisal would run something like this: I would say that in the present state of the art, no man can declare as yet, dogmatically, that one form of its application is more efficient under every given circumstance than another form; or that his is the only and infallible solution to every problem to be faced.

The principle of "breeding" fuel, for example, has been pretty well established. One type of breeding reactor converts nonfissionable U–238 to fissionable plutonium at a rate faster than its U–235 is consumed. Another converts nonfissionable thorium to fissionable U–233. In both cases the reactor ends up with more fuel than it started with, which promises a vast increase in our potential nuclear reserves. But no one knows as yet which is the better.

Chemical processing methods are constantly being improved. This is important because, with the prospect of breeding new fuels and thus keeping the cost down, the separation and purifying of waste and contamination becomes vital to efficiency. No one knows as yet whether running a chemical plant in connection with a power producer will be an asset or a liability. As in the case of some of the other questions I have raised, there simply has not been time to find out.

Of one thing we can be sure. Atomic reactors, which once were inherently dangerous to operate or be around, are now inherently safe. They can be and are being set up close to large centers of population. This one point alone makes a great difference in transmission costs.

We can be sure of another thing, too. No organization, public or private, industrial or academic, can help but enrich its own prospects by its research in the nuclear field. Never has it been more true today that, as President Eisenhower told the Parliament at Ottawa 3 years ago, "Beyond the shadow of the atomic cloud the horizon is bright with promise."

There has been a tendency of late to compare American scientific achievements in this field somewhat unfavorably with those of a lesser social and economic order and by that I mean the Soviet Union. I am not one of those who would be inclined to sell our native genius short but we must deal with realities. Our technical training systems need to be enlarged and improved to supply greater numbers of scientists. They must certainly be enlarged and improved though there is nothing wrong with the quality of our American performance in the atomic arena. It is and has been superb from the beginning. As far as I know today, our position is dominant. Further improvements will come at the hands of industry, the universities, the great research centers and the Government, working together in the traditional American way.

I am confident that in the future, as in the past, our national genius will meet every challenge from without, and that our industrial achievements, which have always been the symbols of American strength, will continue to react effectively to what Mr. Jay Hopkins has described so accurately as "the dynamics of the market place." The job will not be easy, but it must be done.

Appreciation Banquet for Senator Warren G. Magnuson

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 3, 1956

Mr. JACKSON. Mr. President, some time ago, leaders and advocates of intensive Pacific Northwest developments held an appreciation banquet honoring the senior Senator from Washington, WARREN G. MAGNUSON, in recognition of the work he has done in this regard.

The main speaker for the occasion was our colleague, Senator ROBERT KERR, of Oklahoma.

I ask unanimous consent that the address by Senator KERR, as of the broadcast from the banquet, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR KERR

It is wonderful to be in the State of Washington. When Oklahoma came into the Sovereign Union of States she did so with

a constitution that had been drafted by a constitutional convention of many of her greatest sons.

It is a well-known fact that she took more points and more provisions from the constitution of what was then the young State of Washington than from any other source. And we have always been grateful that this great and sovereign State of Washington had produced such a progressive and worth while constitution that could serve as so much of a pattern for our own constitutional convention.

There's a lot in common between Washington State and Oklahoma.

I'm very happy to participate in this occasion honoring my Senate colleague.

There is nothing that a politician appreciates as much as appreciation. In fact, an ounce of appreciation is worth a pound of criticism.

It has been said that a statesman is a dead politician. I don't subscribe to that statement. I resent it.

A statesman is an appreciated politician. And politicians go where invited and stay where appreciated. You know, appreciation at home, MAGGY, is wonderful.

When I first went to Washington and became acquainted with Senator WARREN G. MAGNUSON, and when I learned of his stature and reputation so justly earned, I heard them calling him "MAGGY," and I wondered how that started. Then it became apparent as I became acquainted with him that it was because of his having such a magnetic personality.

You know, WARREN, appreciation at home is wonderful. A man just can't stay in office without it. But, also, I want to say to you that appreciation of his colleagues in the United States Senate, and their respect for him, is also a wonderful thing for your Senator WARREN MAGNUSON.

You know, a man can't stay in Washington as a Senator unless he has the appreciation of the folks at home.

And he'd just as well not be there, so far as the folks at home are concerned, unless he has the appreciation of his colleagues. Because, great as your State is, and outstanding as your Senators are, there are just 2 of them in the 96 down there, and it takes teamwork there, just as it does here, to be effective.

A Senator's effectiveness for his constituents at home is in direct proportion to the respect and appreciation in which he is held by his colleagues.

I'm happy to tell you tonight that no man in the United States Senate (notice I didn't say "no woman" because there is a great lady in the United States Senate and I want you to know I'm excepting her from this statement) that no man in the United States Senate is more accepted and more appreciated by Senators than is WARREN MAGNUSON, of Washington.

A fellow in public office is greatly desirous of living up to the responsibility and opportunity of the office he occupies.

I was impressed by the invocation that we heard a little while ago from the fine voice of the Christian leader who spoke those words of reverence in the invocation. I listened as he asked for guidance from the Deity who has that place in the heart and mind of the American people, that on every coin now minted by the Government of the United States, you find inscribed these words, "In God we trust."

I'm glad that I live in a country where that sentiment is evident not alone on the coin in the pocket, but also in the hearts of the people. And I'm grateful for the fact that He who founded the Christian religion, gave not only to the disciples about Him and to His day and generation but also to us, the exact recipe whereby man can be appreciated and respected by his fellow men.

It was He who said, "Let him who would be first among you, be the servant of all."

Therein is the priceless secret of His own omnipotent personality, Grace and power. In those words He laid down the only formula whereby we who proclaim His name and prescribe His faith, can walk in His footsteps.

"Let him who would be first among you, be the servant of all."

The great thing about WARREN MAGNUSON is that in his public life he has exemplified that great admonition in seeking to be the servant of his people.

He has more position in the United States Senate and more seniority than any other man of his age in the Senate of the United States.

Under his leadership, and by reason of the sum total of effort which he and those who work with him—and certainly he's made the greatest contribution to that effort—the most extensive program of Federal development of the natural resources of any State in the Union has taken place here in the State of Washington.

It's wonderful to fly over this great State; it's wonderful to fly over our country with its magnificient forests, broad streams, fertile valleys, and glorious mountains. We get the picture of the abundance with which Providence has blessed up, and no State has been more richly blessed than yours. Nor have the resources of any State been further brought along in development than yours, with you great reservoirs for the conservation and the storage of that priceless resource, water.

For the creation of power.

For the development of navigation.

For the building of recreational facilities.

For industrial and municipal water supply.

For use in bringing the breath of life to your fertile soil through irrigation.

WARREN MAGNUSON has walked in the front ranks of those who have brought the development of the Nation's resources to such an advanced stage.

No State has fared better than yours.

Not only have these projects contributed to the security and prosperity of the State of Washington—made the Nation more prosperous in peace and stronger in war—brought your State to such a high degree of development; but every single one of them either has brought revenue which has reimbursed the Federal Government for its cost, or is in the process of doing so.

Long after the Government has received back every dollar invested in them through decades, yes, through centuries of future progress, they will serve to reinforce the economy and strength of your State and the security of your country.

When I think about Grand Coulee—the greatest engineering accomplishment man has brought about upon the face of the earth, Ice Harbor Dam, Chief Joseph Dam, the McNary Dam, Kennewick Irrigation project, Roza powerplant, development of the great Bonneville power grid, I am aware that each is in part and some of them in toto—a monument to the genius, the service, and the labors of your great senior Senator, WARREN MAGNUSON.

By his service, this year and hereafter, he will play a prominent part in the development of that, yet another, tremendous hydroelectric power—water conservation project—Hells Canyon.

One of the things that I have respected Senator MAGNUSON for the most, has been his stanch service to agriculture. He shares with me the conviction that a nation which has developed the most outstanding industrial economy on the earth despite only 7 percent of the earth's surface, and 7 percent of the earth's population, yet produced an industrial structure that produces half of the manufactured products in the world—can still say our greatest national industry is agriculture.

The second largest industry in our country is the public utility.

The third largest industry is the oil and gas industry.

The fourth largest industry is our railroads.

Yet, the total investment in all three of those—the second, third, and fourth industries in our country—their combined investment is less than is the total investment in agriculture.

So there can be no doubt but what it is our greatest industry. MAGNUSON has recognized these facts in being a stanch friend and champion of agriculture, of the farm people of his State and our country.

He has fought to prevent increases in freight rates on his cattle producers.

He has fought for market for the fruit, the wheat, the livestock producers, and those who produce other agricultural commodities.

Today he's recognized by his colleagues in the Senate as one of the outstanding champions of agriculture in the Congress of the United States.

MAGNUSON has always been a stanch friend of the common man. He has championed social legislation—social security—laws that guarantee better wages and working conditions for labor, and he has devoted himself in a high degree to programs that have been devoted to improving the health of all the people.

There are many people in Washington, D. C., who regard WARREN MAGNUSON as the greatest authority in the Nation's Capitol, on the development of adequate research to prevent and bring about control of cancer and of heart disease.

Programs of your government to which he has made as great a contribution as any, and much greater than most in the field of research against these killers of humanity, has resulted, so I am told by health authorities, in increasing the life-span of the average citizen, a minimum of 12 years, in the last 15 years of the history of these great programs.

I don't see any women here tonight old enough to be concerned about getting twelve more years of life yet, but I see a lot of men here who are in my shape and to whom the comforting though of 12 more years than had previously been the average life span, is a matter of no little comfort.

MAGGY, I want to pay my contribution and tribute to you for your great work in that field of public service.

Yes, I'm happy to pay tribute to WARREN MAGNUSON.

He has built many monuments to himself in his unselfish public service.

The evidence at this meeting tonight reminds me that the greatest monument that he has built to himself is in the affection and love of the people of the State he loves.

It has been said by the great order in whose hall we meet tonight: "The faults of our friends we write upon the sands; their virtues we carve in the stone of love and memory."

Therein is man's greatest monument—therein is man's greatest achievement.

The few halting words that I have spoken and the matters to which I have referred, significant and as important as they are, will all sink into relative insignificance when compared with the tremendous reservoir of good will, affection, esteem, respect, and appreciation in the hearts and minds of the people of the great State of Washington, for this, her distinguished son and public servant.

It gives me great pleasure tonight to be here with you and him.

Appraisal of American Foreign Policy

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, July 3, 1956

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Daniel J. Riesner, Esq., of New York, president of the National Republican Club. Mr. Riesner's address, appraising American foreign policy in recent years, was delivered by him at a meeting of the National Council of Business and Professional Men, Inc., in New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am proud indeed to have been invited to speak before the membership of the National Council of Business and Professional Men, Inc., which means so much in the field of civic and philanthropic endeavor and which is so representative of progress and private thinking in business and professional endeavors. It is a very great personal pleasure for me to meet this evening with the members and friends of this organization, particularly your president, the Honorable Chauncey H. Levy, who is a member of my fraternity, a graduate of Columbia with me many years ago and we have been close personal friends for over 35 years; the Honorable Frank Zuckerbrot, chairman of the immigration committee, executive member of the Central Queens Republican Club of Kew Garden Hills, Long Island, Borough of Queens, N. Y., and my very efficient political colleague from that area whose career and political background has been similar to my own for the last 25 years.

I know of your work and your purpose and I am very grateful for this opportunity to exchange views with one of the most alert and civic-conscious groups in our community.

I will attempt to give tonight an impartial appraisal of American foreign policy based on events which took place from 1953 to 1956.

When President Eisenhower took office on January 20, 1953, the Korean stalemate was sapping the nerves and energy of the country and threatening once more to throw the shroud of war over the shoulders of our Nation. There was nothing but bitter frustration resulting from our efforts to secure peace. The Iranian war bubble was ready to burst and the Communists were threatening to engulf all of Indochina. Trieste was boiling over and all efforts to get Soviet Russia to live up to her commitments and get out of Austria were unavailing. These were just a few of the trouble spots in the world engulfed by the despairing gloom attendant upon a so-called cold war which kept erupting in volcano fashion with grim threats to light the fuse to a worldwide war of annihiliation.

Between 1945 and 1952, the Communists, propelled by the seven-league boots of totalitarian authority, built up by ruthless force and underwritten by the broken bodies of beaten and betrayed peoples, acquired more millions of square miles of territory and more millions of people under their sway than was ever taken by any conquering horde in any period of time since the beginning of recorded history.

Thus was the stage of foreign policy set when the Eisenhower administration took office in 1953. Let me make this clear. My present appraisal of the foreign policy accomplishments of the present administration is based on its affirmative acts rather than on a criticism of the acts of the previous administration. Suffice it to say that tremendous world problems faced the Nation from 1945 to 1953. International crises arose in rapid succession and continued to exist when President Eisenhower took office. Let us consider what has happened since, as American accomplishments in the field of foreign policy, rather than as partisan achievements.

The first accomplishment of our President was to set the wheels in motion which resulted in a real truce and settlement of the Korean war. In rapid succession came the settlement of the Iranian oil dispute—with the aftermath of Mossadegh's fall from power—the truce in Indochina which prevented that Nation from being swallowed up entirely by the militarily successful Communist armies—and left half the country to fight against further encroachments of communism; the making of a formal peace treaty with Russia and the withdrawal of Communist troops from Austria, and the Paris agreements which resulted in West German consent to rearm and participate actively in NATO. There also followed the implementation of SEATO and the Formosa resolution, which put the entire Congress and country squarely behind the President in his countering of Chinese Communist threats to invade Formosa.

And let us not forget that after the death of Stalin—the cause of which event is still the subject of much international speculation—and the accession of Malenkov, neither soft words failed to swerve this Nation from its resolve to arm to the limit of practicality, nor did angry words weaken our purpose to go forward with strengthening NATO and our resolve not to yield one iota in any other phase of our mutual security program. Criticism did not alter our program to continue to help militarily and economically those countries of the world which needed our help and might be relied on to stop the spread of communism.

Then came the shelving of Malenkov and the accession of the present clique headed by Khrushchev and Bulganin. For a time the smiling Russian faces at Geneva gave some hope to the world that a formula for coexistence might be found. President Eisenhower, though thoroughly wary of Russian duplicity, nevertheless gave the world every chance for a lasting peace by his expressed willingness to cooperate with Russian leaders and by making his famous open-skies proposal. Obviously this threw the Russians off balance, because it took weeks after the Geneva Conference for the Russians to give their equivocal answer.

The events of history are clear. The overall direction of our Nation's foreign policy under the Eisenhower administration has been strong and firm and steady. The change of pace has come from Russia and has had to be countered by us. It is easy for a dictatorship to switch its policies from day to day because there is no accountability to the people for its actions. But a democracy, accountable almost on a daily basis to the pressures of an alert public opinion, has greater difficulties, Russian leaders, recognizing the strength of the American position, have changed rapidly from a smiling to a threatening diplomacy and back again as the occasion warranted.

Of course, great tensions exist in the world today—notably unrest in colonial Africa—and among the Arab nations of the Near East and in Israel. As in all previous crises, the United States has thrown its power and strength and prestige behind the United Nations in the attempt to quiet these situations, here again we see the hop-scotch tactics of Russia, so clearly intended to throw the United States off balance, and to create added confusion and uncertainty. While previously severely critizinging the United States for allegedly attempting to influence smaller nations by offering economic and military aid, Russia is now in major competition with the United States in this same field, and is offering to outbid us for the friendship of the Near East Arab nations. Russia has already sent arms and munitions to some of these nations, thus creating graver tensions. The Soviet is also wooing India with kid gloves and soft voices.

These problems are indeed delicate and critical. But our administration is handling them. We're learning how to live with the peoples of the Far East, to have a greater responsiveness to their ideas and their need, to realize that they don't react to Russian tactics with the same alacrity as the people of this nation. And we have come to understand that this doesn't necessarily mean that they will fall prey to the beguilements of communism. As to the Near East, the administration evidently doesn't think that sending arms to Israel at this moment will clarify the tensions in that area, but believes the reverse might be true. Meanwhile, the United Nations as well as this country has made it abundantly clear that it will not tolerate aggression in the Near East from any source. That assurance, publicly expressed, means much more than the shipment of any amount of arms.

In appraising effects of our foreign policy over a period of years, it is more important to examine the overall effect of that policy, rather than a day by day account of tensions. The incontrovertible facts are apparent that since 1953 no American boy has been shot at by an enemy, that the Communists have not added 1 inch of territory as a result of any aggression started after January 1, 1953. Likewise, Ex-President Truman, in accounts published in yesterday's newspapers during the last leg of his European travels, said he found the prestige of the United States abroad to be "very, very good indeed." It is notable that the American people today, along with that prestige, are enjoying an overall prosperity which is unprecedented in our peacetime history.

Yes; tensions will exist in the world for a long time to come. When they're solved in the present trouble spots they'll crop up in others. The strategy that our nation as the leader of the free world will employ will be a continuation of its present course, with a smart mobile diplomatic defense and a position of military strength second to none in the world. Let us hope this policy will enable us to avoid the pitfalls of war and will maintain the peace.

Woodrow Wilson—Address by Governor of Maryland, Preceding Preview of Motion Picture, Woodrow Wilson: Spokesman for Democracy

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, July 3, 1956

Mr. BEALL. Mr. President, on June 28, Gov. Theodore R. McKeldin, of Maryland, delivered an address in the Coolidge Auditorium of the Library of Congress. I ask unanimous consent that it be printed in the Appendix of today's RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF THEODORE R. MCKELDIN, GOVERNOR OF MARYLAND, PRECEDING PREVIEW OF MOTION PICTURE, WOODROW WILSON: SPOKESMAN FOR DEMOCRACY, WOODROW WILSON CENTENNIAL CELEBRATION COMMISSION, COOLIDGE AUDITORIUM, LIBRARY OF CONGRESS, WASHINGTON, D. C.

The Prince of Wales bears on his coat of arms the German words, Ich diem which, rendered into English, mean I serve. It seems to me that the State of Maryland could well adopt Wales' motto with reference to the Presidents of the United States. It is a proud and happy motto, expressive of a proud and happy service. When the President can snatch a moment from the duties of his office to drive out into the country, or to cruise down the Potomac, it gives us pleasure and pride to remember that it is Maryland waters and the green hills of Maryland that are privileged to give some refreshment to his tired eye.

But with reference to one President it has been our good fortune to serve him twice. Twenty years before Woodrow Wilson came to the White House he received the last of his formal schooling at the Johns Hopkins University, in Maryland. There his mind, like a fine swordblade, received its forging and tempering. Obviously, it was an extraordinary mind to begin with; but in Maryland we like to believe that under the hammering of such powerful teachers as Adams and Ely and through close association with such scholars as Gilman and Gildersleeve, it acquired a polish and keenness that it had not had before.

On account of this double association Maryland has a peculiar interest in this particular President; and I do not deny that we take a quiet pride in the fact that the President whom we served twice was a very great President. To be associated with greatness is, to be sure, not a virtue, it is merely a privilege; but it is a privilege in which one may rejoice with reason.

The greater the man the longer it takes for the world to pass anything like a final judgment on his true place in history. Thirty-two years after his death we are still trying to determine exactly where Wilson stands in the list of the Presidents; two new books on him have been published within the last month. But if his place is still undetermined after thirty-two years we may rest assured that it is a very high one. Small men are disposed of in much less time than a whole generation.

There is no doubt in my mind, however, that we know the essential Wilson better today than we knew him when he died in 1924. In the dust and smoke of battle it is impossible to obtain a true perspective on anything. In the murky atmosphere of conflict a ditch-bank may look like Mount Atlas, while on the other hand, an immense but gradual elevation may be mistaken for a flat surface. Only distance and clear air enable us to take measurements that are relatively true.

After the lapse of thirty-two years we can see that much to which men attached the utmost importance at the time was really trivial, while other things, that passed almost unnoticed, were of tremendous import.

The domestic policies of Woodrow Wilson are commonly associated with the series of reforms he effected in our political and economic system. It is not to be denied that the Federal Reserve System, the reduction of tariff barriers, antimonopoly legislation and the establishment of the eight-hour day for labor do constitute an admirable record. The soundness of the legislation is proved by the fact that no serious attempt has been made to reverse it.

But that same fact is evidence that all these things were, so to speak, in the cards. They had to come, if not under one leadership, then under some other. Wilson's credit in connection with them is rather that he hastened the arrival of the inevitable than that he introduced any genuine novelty into the American system of Government. Please do not assume that I am denying the credit; any political leader who can perceive the trend of events and aline his policy with it is due credit, but for foresight rather than for innovation.

I suggest that the essential Wilson, the Wilson long to be remembered, is less evident in any of his legislative reforms than in one move that was not legislative at all, but took the form of a mere obiter dictum that at the moment aroused no more than a mild and rather perfunctory interest. It was his proclamation on assuming office that he proposed to be not only the constitutional President of the United States, but also the extra-constitutional leader of his own party, that is to say, an unofficial prime minister.

There was some comment, but not much. Whether critical or approving it took the line that since he was the leader anyhow, his saying so did not make much difference. After all, Theodore Roosevelt had acted as party leader without saying anything about it; what else could you expect?

But in putting the statement on record Wilson regularized what Roosevelt did; and in regularizing it he established a precedent that has grown steadily more binding as the years have passed.

Wilson's enemies instantly saw that it was a grasp of power, and denounced it accordingly; but even his friends were slow to perceive the other side of it, that it was a centering of responsibility that enormously enhanced the importance of the presidential office, whether for good or for ill. It was a practical application of the political maxim that he announced later: "Put all your eggs in one basket—and watch the basket".

If you wish to take the measure of the change this has effected in American politics, consider this one fact: today, a President's enemies are delighted if they can bring against him the charge that he is not leading his party. It is true that every strong President has in fact led his party, but as late as Grover Cleveland's day few of them admitted it publicly, and none felt obligated to apologize for not doing so. In making a virtue of party leadership Wilson introduced what lawyers call "a change in procedure" that may be longer lasting and more significant than any of his legislative enactments. At the moment, I am not interested in discussing its quality, whether good or bad; I am merely pointing out that, although it has been largely ignored, it was tremendously important.

Nevertheless it is true that the essential Wilson, the man that the world will remember whenever the name is mentioned, did not begin to appear until August 4, 1914. That was the day on which England declared war and the European conflict became world-wide. Even then the quality of the man was not clearly apparent.

There is a curious parallel between Wilson, from August 1914 to April 1917, and Lincoln, from November 1860 to April 1861. Both men were denied the right to assume that war was inevitable and both had to exhaust every resource to shore up a peace that obviously was crumbling. As a result both were charged with duplicity, cowardice and hopeless incompetence; and both made mistakes that became plain enough after the fact.

The difference is that Lincoln's ordeal lasted less than 6 months, Wilson's more than 2 years. But today the name of Lincoln brings to no mind, the harried, uncertain, desperately anxious man of the weeks before the firing on Sumter. So the name of Wilson reminds ever fewer people of the overwhelmed President crying "Peace" when there was no peace. In each case the war President, as most of us believe, is to be judged by his conduct of the war, and not by what went before.

The final, irreversible judgment of Wilson as a war leader can be summed up in two words: he won. Everything else is subject to argument, but not this. You can say that if he had done this, or not done that, he might have won earlier, or might not have won at all; yet whatever you say about details, there will always be someone to take the opposite view, and the debate is endless. But there is no denying the fact that he won, and a war leader who wins is a success, as a war leader.

Yet it has been repeated so often that it has become a sort of axiom, that Woodrow Wilson failed. If you stop to give it a moment's thought, this is remarkable. Here is the man who won the greatest war in which the United States had ever engaged up to that time, yet some people account him a failure. This alone is enough to mark him as an extraordinary man, for it implies that he had undertaken a task more tremendous than a war that convulsed the world, that he played a game in which the stakes were so enormous that the destiny of the United States constituted only a part of them.

To defeat and destroy three great empires, and to bring his country to a position of such dominance that for 20 years none would be so rash as to challenge it, is a record of achievement matched by few of the world's statesmen and they among the greatest. Yet in the estimation of millions all that was mere failure for Woodrow Wilson. What a tribute to the man it is when we account a record that was the everlasting glory of Bismarck to be only a minor credit to Wilson. Consciously or unconsciously, we do not judge him by ordinary standards; our logic holds that what would be a magnificent feat of strength for a man is but a small success for a Titan, and we are persuaded that Wilson was among the Titans.

As a matter of fact, he himself persuaded us. In the old Greek myths, you remember, the Titans were giants who made war against the gods and who heaped up the mountains, piling Pelion upon Ossa, to scale the heights of heaven. Wilson imitated them. From the very beginning he insisted that not the German people, nor even the imperial German Government constituted the real foe. He was making war upon the great god Mars. He called it a "war to end war" and set as its goal not victory, not conquest, but nothing less than a world safe for democracy, which is to say, peace on earth and good will to men. He himself counted the triumphs he did achieve as of no importance except as preliminaries to the victory over war itself and he neither expected nor desired tribute until that victory should be won.

Well, as men are accustomed to judge success, he failed, but not until his assault had shaken the very foundations of the war god's throne. He did not cast down the old idol, but he did bring it into such disrepute that since his time only madmen, the Hitlers and Mussolinis, have had the termerity to praise war for its own sake. Today, even the Communist imperialism is obliged to pay lip-service to the ideal of peace. Its protests may be utterly insincere, but at least they are an acknowledgment that the world will no longer tolerate open and unblushing worship of Mars.

So who dare assert with assurance that Woodrow Wilson really failed? In my State one of our proud traditions is the stand of the Maryland line at Guilford Courthouse in the Revolutionary War. That battle was a technical defeat for Gen. Nathanael Greene, because he was forced back and the enemy held the field; but the British Army was so terribly mauled that Lord Cornwallis acknowledged that it could not stand another

such action and from that point began the slow retreat that ended at Yorktown.

It was General Greene's destiny to serve as the pivot on which the whole war turned but far from calling him a failure, we have enshrined him among our national heroes. I see Woodrow Wilson in a similar light. It was not for him to receive the submission of the enemy. Indeed, that enemy has not submitted yet. But I have faith to believe that his technical defeat was the beginning of a long, slow retreat that is destined to culminate in a greater Yorktown that will signalize the end of tyranny, not merely on this continent, but everywhere in the world.

For Wilson's great battle was not fought with fire and steel against the German army; it was fought with weapons of the mind and spirit against the old and powerfully entrenched idolatry of the strong arm. To destroy the German empire was in his mind merely an unfortunate necessity incidental to the destruction of a far more dangerous and a far more evil thing, namely, men's faith in the doctrine that might makes right.

He did not kill that dragon outright, but he dealt it a blow that we believe in God's good time will prove mortal. Though it may writhe until sundown, yet never again will it ravage the hearts and souls of men as it did before the Crusader's terrible sword fell upon it.

All that was mortal of Woodrow Wilson was consigned to the tomb 32 years ago. I submit that the time is at hand when we may well afford to dispose of all the rest that mattered only for the moment if at all. All that may have been weak, all that may have been mistaken, all that may have been unsound or unwise may well be buried in the shades of oblivion, but the immortal part we must preserve—

"Let his ashes rest
At home, afar, or in the wave,
But keep his great heart with us, lest
Our Nation's greatness find its grave."

The only visible remains of the war that Wilson won are its scars and its monuments; but the greater war that he did not win still rages and the heirs of Wilson are committed to its prosecution to a triumphant end. The ancient evils still survive, the false gods are still enthroned; but the evils survive furtively and in disguise, the pedestals on which the idols stand are battered and weakened. Hope for the establishment of the reign of justice throughout the earth was never brighter, provided the successors to Wilson prove worthy to come after him.

His memory is a call to battle, but not to the hateful service of the War Lord. It is the age-old struggle for the minds of men, the incessant combat against falsehood and evil, the only service in which a manful man may find, not death, but the more abundant life. It is the one form of warfare to which an intelligent man may march out exultantly, for it is the one form in which victory is not only possible but, once attained, will endure from generation to generation.

It is also the form of warfare in which America must take the lead for the simple reason that there is none to replace her. Wilson say this clearly and it is the essence of his greatness that he saw it more clearly than any other leader of his generation. It was the vision that nerved him for the struggle of blood and iron, which he hated with his whole soul, but which he accepted because it was the unavoidable prelude to the other. We, at this moment, are faced with no such bitter necessity. It is our good fortune to be already on the field of the larger warfare, and we should therefore be able to march blithely, not as men dragooned into arduous and probably futile combat, but as happy men who see the radiant hope of victory, not against the world, but for the world.

In this spirit let us accept the challenge of our times, counting ourselves as privileged to be in the ranks. That word "privileged" is one that Wilson used at a great moment, when he was facing a war that he know would be long and stern. If the contest that faces us also bids fair to be long and stern, let us accept it, not lamenting, but, as he did, "with the pride of those who know that the day has come when America is privileged to spend her blood and her might for the principles that gave her birth and happiness and the peace which she has treasured."

Malheur, Oreg., Soil Conservation District Essay and Speech Contest

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 3, 1956

Mr. NEUBERGER. Mr. President, it is always a pleasure to be able to call attention to the good work being done throughout the country by our many soil conservation districts. The Malheur Soil Conservation District with headquarters at Vale, Oreg., has done at extremely able job of informing the public about its program, accomplishments, and objectives. This district makes consistent use of the press, radio, and farm organizations to educate the public on the importance of its program.

One of the district's excellent projects, of an educational nature, features an annual essay contest and an annual speech contest.

Mr. President, I ask unanimous consent to have printed in the Appnedix of the RECORD the winning essay, entitled "The Job Ahead in My Soil Conservation District," written by eighth-grader Holly Thorstad, route 1, box 86–A, Vale, Oreg., and also the winning speech entitled "Conservation Is Everybody's Problem," delivered by Norman Murray, of Ontario, Oreg.

There being no objection, the essay and speech were ordered to be printed in the RECORD, as follows:

THE JOB AHEAD IN MY SOIL CONSERVATION DISTRICT

(By Holly Thorstad)

When the Pilgrims came to America, they thought the natural resources would never be exhausted, so they cut and burned the trees just to get rid of them. We now see that they made a mistake which had far-reaching results.

Through education by conservation experts, people are at last realizing that their very existence depends upon using the natural resouces wisely. They are beginning to understand that everyone has to do his job to conserve the soil, but the job isn't over yet. Some people don't realize that conservation is everyone's job. They destroy for their own use and profit the natural resources that belong to everyone. The lumber company that chops down trees and doesn't replant; the industrial plant that poisons the rivers with its waste, and the careless farmer are all part of this thoughtless group. They don't realize what a serious act they are committing.

If we keep letting soil erosion take such a large bite of our usable farmland, our high standard of living will drop. Some people just don't realize that under certain conditions soil is extremely unstable and not something to last until the end of time.

As you can see by a critical look, we have no more soil to lose. We are too close to the danger line as matters stand. Actually we need more good land for crops. Too many farmers are working land that should be turned back to woodland or pasture land. More waste of good land would amount to a national crime on the part of those who are responsible—meaning ourselves.

We are letting 500,000 acres of good farmland go to ruin every year. The Corn Belt is one of the areas which is being very rapidly eroded. Throughout our country 110 million acres of farmland are now being damaged at a critically severe rate. This means that yields from about a fourth of the land now used for crops will be considerably lower within 10 or 12 years if present farming methods are continued, but prompt action can prevent most of this potential damage.

Most people are either unaware or heedless of these facts. The soil conservation district works very hard to make people realize this situation.

Soil conservation is generally defined as proper use and care of the land. Many ways of cultivating the land are known as conservation. Terraces, contour farming, and strip cropping are means of soil conservation.

There are many things we can do to conserve soil. We can try to use suitable erosion control practices, but not all control practices are suitable. The district has the job of fitting methods of conservation to the types of the soil in their region.

The soil conservation district must first make a study to show what the land is fitted for. They tell the farmer what is the best means of conserving the soil they have and what land should go back into woodlands or grazing lands.

Most conservation districts have both long- and short-time plans. Some soil problems are so acute they can't wait. Work on the critical areas must be done now. Other problems can wait a few years without much danger. These serious problems are what the district works so hard to combat.

Our conservation districts are working hard to fight this foe of our land. They need more cooperation from the public to do their job effectively.

If we were invaded by a foreign nation, everyone would rise to the defense of the country we love. Yet we have just as dangerous a foe right here that is being allowed to weaken our country more every minute of every day. This foe is erosion. Let's take up arms against it.

Our soil is a base for everything we do. All we share, even whatever we amount to as a great nation begins and rests on the condition of our land and its production. Let's not leave soil erosion to be a menacing evil for the next generation to face because of our carelessness. Let's fight it now.

CONSERVATION IS EVERYBODY'S PROBLEM

(By Norman Murray)

To the American businessman, as well as the farmer, conservation is important. They may not realize it, but the prosperity of the Nation depends upon the prosperity of the farmer. A nation can survive without glass in its windows, but it cannot survive without food on its tables. And we can't grow food without soil and water.

When you buy a farm, you are actually buying a few inches of soil and a little water. The soil is too easily washed away, and the water is too easily polluted. We must take care of these two important resources on which the foundation of our Nation rests.

A nation cannot maintain a position as a world power on wornout soil and polluted

water. It is said that history repeats itself and we find in history that the downfall of Rome was brought about by its wornout soil. This could happen to us if we are not careful, for all around us we find our soil in many stages of deterioration. And it is rapidly growing worse.

Of course, there are many reasons for soil erosion. The farmer's lack of knowledge of the fact that his soil is deteriorating, or the neglect of renters and landlords on leased land are common reasons. A farmer may feel that he cannot afford conservation practices, while it can be shown that such practices can mean almost immediate money in his pocket.

A farmer realizes that his income depends upon the fertility of his soil, but many times, when he finds his soil is deteriorating, he doesn't have the money needed to practice conservation. He may then do anything to try to get himself out of a tight spot. A common thing done is that he will try to get as much produce as possible in as short a time as possible, to get money for conservation. This never helps and will bring about faster destruction of his soil.

We are learning, as the Romans learned before us, that a small family-operated farm is best from the standpoint of conservation as well as economics. The United States has the highest standard of living ever known, but our standard of living can fall into poverty if we allow our soil to go to wreck and ruin. No nation can be prosperous if it has to import its food.

But there is an even closer threat. Our city water supplies are becoming polluted, and we can't import water. Not only that, but badly polluted water is nearly impossible to purify. Any purifying that may be done would cost large amounts of money, and our national economy might not be able to stand the extra burden.

Some people may say that our water cannot get that bad, but if they would only open their eyes and look around them, they would see that that is exactly what is happening. This is shown by the decrease of gamefish and the increase of trash fish in our rivers and streams. They may say that this is brought about by too much fishing, and some of it is. But for the most part it is caused by too much silt in the water. The gamefish cannot continue to live and multiply in the silt while the trash fish can. But even the trash fish are getting fewer, and this is a definite danger sign.

We must do something to stop this. But what? Conservation is the answer, but this covers a large field. We must keep the soil from washing off our fields by better farming methods and we must keep the soil from washing off the timberland and rangeland areas by better management. We must also prevent forest and grass fires. Then with the help of our cities in sanitary sewage disposal we can halt this pollution. We may even be able to bring back the lost gamefish of yesterday.

But how are we going to encourage and promote soil and water conservation? One very good answer seems to be the soil conservation districts that are springing up all over the country.

The work of a soil conservation district can be very valuable because under the laws under which they operate, it is nearly impossible for them to injure anyone. Their purpose is to help stricken areas, halt erosion, and restore soil fertility.

Most conservation methods would cost one farmer too much money and in some cases would do little noticeable good. But with combined effort the cost would be reduced and the benefits would be much greater. What one cannot do, a community or district can accomplish. The district can buy machinery for ditching, leveling, and terracing, and its members can then get their work done at reduced cost. Cities and towns should cooperate with the districts to improve their watersheds, keep their streams clean, and educate the citizens.

The process of organizing and operating a district is simple. Everything must be passed by a majority of the people affected.

First 25 land owners must petition the State soil conservation committee for a district. Then a hearing is held to determine the need for one. If a need is shown, the committee lays out the boundaries of the district and the people vote it in or out. If passed, the committee appoints 2 supervisors who apply for a certificate of organization with the Secretary of State. When the certificate is issued, the district then elects 3 more supervisors and they begin operation under the 5-man board. Any time, after 5 years, the district may be dissolved by a majority vote of its people.

In most cases, the board of supervisors will only have to help plan a program, but in some cases it may be necessary to adopt land usage laws. If these are passed, a board must be set up to decide when these laws are to be enforced so no one can be done an injustice.

This shows how the soil conservation districts can help solve the conservation problem. As yet we do not have one in Ontario. Do we need one? We do, and as the years pass it will become more and more important and evident. Why not start a district now and avoid the problems that accumulate after years of erosion? This must be answered by the farmers, but it is of great and vital interest to everyone.

A Vast, But Vital, Road Program

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 3, 1956

Mr. MARTIN of Pennsylvania. Mr. President, in Sunday's Philadelphia Inquirer, there was a very well-written editorial on the subject A Vast, But Vital, Road Program.

The American people should give constant consideration to our road-building program. It is the greatest peacetime undertaking in the history of our Nation.

In order that its completion may be in conformity with the vision of those who have worked for the enactment of the legislation, every American must take an interest in it.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A VAST, BUT VITAL, ROAD PROGRAM

Impressive though it is in size and scope, the new Federal road program which goes into effect today will strike many Americans as no more than an appropriate answer to the challenge presented by the dizzy growth of the age of the automobile.

The bare outlines of the program as passed by Congress and signed by President Eisenhower tell part of the story.

Over a period of 13 years, $33,480,000,000 in Federal funds will be spent to bring up to date both through highways and secondary roads in every State of the Union. This sum will be augmented considerably, since matching State funds will be required in many cases. In all, it is the biggest peacetime spending program ever undertaken by the Federal Government.

But considered in relation to the need, it can be argued that the huge sums involved are not too great. For rapidly, in recent decades, and with increasing swiftness since the end of the Second World War, the United States has become a nation on wheels.

Most Americans do not need figures on the record-breaking output of automoblie companies, or statistics showing that there is 1 automobile for every 3 persons of the country's 167 million population, to tell them that this is an era when plenty of good, safe highways are essential.

The story is evident in dozens of ways every days as millions of persons drive to and from work and other millions use cars for trips to the store and other errands.

It is plain, too, in the grim figures on accidents, which show that every year the toll of those killed on the highways exceeds the number of Americans killed in the Korean war. The staggering cost in injury and property damage, of course, is piled on top of the death toll.

Narrow, worn-out, and poorly engineered highways are not the only cause of the shameful accident rate. But they are a big factor and the part they play in contributing to accidents has been growing bigger as the Nation fell further and further behind in meeting the needs of its citizens for decent roads.

Under the program enacted by Congress, about 41,000 miles of interstate highways will be modernized or completely rerouted. Over all but 7,000 miles of these up-to-date four-lane highways with limited access and crossroads will be built, linking 90 percent of the largest cities and the capitals of 42 States.

Of special interest to residents of metropolitan areas is the provision for improvements of through roads in and around cities. Expressways and belt routes will be constructed, not only to save time for the through traveler, but to decrease congestion.

Pennsylvania will share heavily in this new program. In the first 3 years it is estimated that this State will receive a total of $1,865,000,000 in Federal funds. After that time, the progress of the program, and the future needs will be reviewed.

Manifestly, this mammoth project does not relieve the States and cities from their responsibility for roads. It should spur action by local agencies to make sure that their street and highway systems are in keeping wtih the demands of the times.

In financing the unprecedented undertaking, Congress has acted wisely, we believe, in sticking to a pay-as-you-go basis, rather than mortgaging the future with more indebtedness. The added 1-cent-a-gallon Federal tax on gasoline and the additional taxes on tires will cost the average motorist about $10 a year. In return, we who depend more and more on automobiles will get smoother, more modern—and safer—roads.

Apostle of Friendship—Biographical Sketch of the Reverend Dr. Joseph F. Thorning

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, July 3, 1956

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD a biographical sketch of my good friend, the Reverend Dr. —Father—Joseph F. Thorning, associate editor of World Affairs and pastor of three churches in Maryland: St. Joseph's-on-Carrollton Manor; St. Ignatius Loyola, Urbana; and St. James, Point of Rocks. This priest-scholar, who has served as an official member of several United States special diplomatic missions, has often been described in the Congress of the United States as "the padre of the Americas." He is known as an apostle of the good neighbor policy and is a personal friend of many Members of the United States Senate. I believe that my colleagues will welcome the opportunity of having the facts about Father Thorning in permanent form.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

REV. JOSEPH F. THORNING, PH. D., S. T. D.

Joseph F. Thorning is the son of a New England mother and a Viking father. The mother came from Springfield, Mass., while the father, now hale and hearty at the age of 95, worked as a shipbuilder on the shores of Lake Michigan.

Born at Whitefish Bay, Wis., on April 25, 1896, Joseph Francis Thorning received his early education at Marquette Academy, Holy Cross College, and St. Louis University. While at St. Louis, he was invited to prepare a series of articles on international friendship for the national review, America.

This series led to his election as chairman of the Europe Committee of the Catholic Association for International Peace. His first monograph, "National Security and International Peace," was published under the auspices of this association.

In 1931, Joseph F. Thorning, now ordained to the priesthood in the Jesuit Order, was awarded a doctorate in sociology, economics, and political science by the Catholic University of America. His doctoral dissertation, Religious Liberty in Transition, is still regarded as a classic on the subject, according to Carlton J. H. Hayes, one-time Seth Low professor of history in Columbia University and wartime Ambassador to Spain.

In late 1931, Dr. Thorning, now associate editor of the quarterly, Thought, was asked to serve as European correspondent of America and special correspondent of NCWC News Service.

These assignments took Dr. Thorning to the United Kingdom, where he developed his interest in international studies under the direction of Sir Alfred Zimmern. Another of his friends at Oxford was Francis de Zulueta, regius professor of civil law. He also exchanged views with Father Martin C. D'Arcy, S. J., celebrated Thomistic scholar at the University.

Oxford University furnished a splendid headquarters for research and writing with the opportunity of making frequent excursions to European centers of learning. Among the universities which Dr. Thorning visited were the Sorbonne, the University of Salamanca, the University of Fribourg (Switzerland), Munich, Bonn, and Heidleberg. At Geneva Dr. Thorning was invited by officials of the National Broadcasting Co. to give a transatlantic address, a novelty at that time, on the so-called Disarmament Conference. In this period, Dr. Thorning also wrote articles and reviews for the Commonweal.

Returning to the United States, Dr. Thorning was appointed Special Lecturer on Sociology and acting dean of the graduate school in Georgetown University by the Very Reverend W. Coleman Nevils, S. J., one of the most famous presidents of that institution.

It was at Georgetown that Dr. Thorning began his series of conferences with Father Edmund A. Walsh, regent of the School of Foreign Service. As a result, these two intellectuals were often described as the two leaders who, for 30 years, best understood the nature of the Soviet Union and the mentality of the Soviet hierarchy.

When Father Walsh was asked by the general of the Jesuits to prepare a volume on the cause and cure of Marxism, he entrusted the pivotal first chapter of the positive phase of this scholarly study to Dr. Thorning. In this chapter Joseph F. Thorning explained, in practical terms, the celebrated Labor Encyclical, Forty Years After, by His Holiness, Pius XI.

While at Georgetown, Dr. Thorning formed his friendships with Ambassador J. H. Jefferson Caffery (first career diplomat to hold the blue-ribbon post at Paris, France); with Ambassador Walter J. Donnelly, who has had brilliant service in Colombia, Cuba, Brazil, Peru, Panama, Costa Rica, Venezuela, Austria, and Germany; and with the Honorable H. Freeman Matthews, now United States Ambassador to the Netherlands.

In 1937, by appointment from His Excellency, the Most Reverend Michael J. Curley, archbishop of Baltimore and Washington, Dr. Thorning became chairman of the Department of Social Science in Mount St. Mary's College, Maryland, and professor of ethics and church history in Mount St. Mary's Major Seminary. At this post, he wrote the monograph on Social reconstruction, a Primer of Social Justice, with a preface by Archbishop Curley.

In May 1938 at Budapest, Hungary, it was reported in the New York Times that Dr. Thorning established a world record by broadcasting, over the facilities of the National Broadcasting Co., the story of the International Eucharistic Congress, in seven languages.

Then, as in 1937, he visited all the battlefields in the Spanish civil war, interviewing leaders on both sides. When he returned to the United States, Dr. Thorning was described by Archbishop Curley as one of the greatest authorities in the Nation on Spanish affairs.

Once more in Europe in the summer of 1939, the Maryland educator traveled throughout the Balkans. World War II broke out while Dr. Thorning was a guest of the Bishop of Nice on the French Riviera. Upon his return to America, he predicted the fall of Adolf Hitler. Years previously, in a notable series of articles in America, Dr. Thorning had furnished the first systematic, scientific expose of Hitler and nazism (1931). Indeed, his piece on Five Years of Hitlerism had been featured by the Religious News Service of the National Conference of Christians and Jews in 1938. Dr. Thorning, in the early thirties, had also written the longest series ever to be published in America on the program of Soviet collectivism for the United States.

Upon the conclusion of the Spanish civil war in 1939, Dr. Thorning was awarded the rank of knight commander in the Order of Isabella the Catholic. His articles on Spain and about other European countries had been publicized from Bombay, India, to Brisbane, Australia. One result was that the Historical and Geographic Institute of Brazil, upon the death of Prof. Percy Alvin Martin, of Stanford University, unanimously elected Dr. Thorning as its one honorary fellow in the United States. At the same time, he was nominated as a director of the American Peace Society, associate editor of World Affairs, and a fellow of the American Geographic Society.

Throughout the summer of 1941, Dr. Thorning served as Director of the first Inter-America Seminar to South America, with headquarters at the University of San Marcos, Lima, Peru. The next year, he established inter-American seminars at the National University of Mexico and the University of Habana, Cuba. One result was a unique distinction: Dr. Thorning was awarded the degree, doctor of divinity, honoris causa, by the Catholic University of Chile, a pontifical institution. It was the first award of this dignity to a North American. Simultaneously, the Republic of Ecuador conferred its national decoration, the Order of Merit. This decoration was given at the hands of His Excellency Don Galo Plaza, then Ambassador and subsequently President of the Republic.

In February 1948, Dr. Thorning was a guest of the Venezuelan Republic for the inauguration of Don Romulo Gallegos in Caracas. While in Venezuela on this visit and on other occasions, he explored the archives of the National Academy of History.

In the summer of 1949, Dr. Thorning made the midshipman cruise to Europe, as a guest of the United States Secretary of the Navy, on the battleship U. S. S. *Missouri*, flagship of Task Force 61. In this capacity he was invited by Rear Adm. Allen E. Smith, commander of the task force, to preside as chairman at the daily 2-hour seminar on conditions in France, the United Kingdom, Belgium, the Netherlands, Italy, and the Iberian Peninsula.

In February 1950, as a guest of the Republic of Haiti, Dr. Thorning attended the International Exposition celebrating the 200th anniversary of the founding of the Haitian capital, Port-au-Prince. Subsequently, he was awarded the national decoration of the Republic, the Order of Honor and Merit.

In 1951, Dr. Thorning was appointed to serve as an official member of two United States special diplomatic missions: The first for the inauguration of President Getulio Vargas in Rio de Janeiro, Brazil; and the second for the inauguration of President Anastasio Somoza in Nicaragua.

Nineteen fifty-two was signalized by the publication of Dr. Thorning's most recent book, the biography of Don Francisco de Miranda, precursor of South American freedom and independence. Miranda: World Citizen had a preface by Sumner Welles and the introduction by Galo Plaza, President of Ecuador. In his preface, Sumner Welles wrote as follows:

"I regard this biography of Francisco de Miranda by Dr. Joseph F. Thorning as an immensely valuable contribution to the cause of inter-American understanding."

Twice in 1952, the editors of the New York Times Book Review described Miranda: World Citizen as one of the outstanding books of the year. This life of the fabulous Miranda, published by the University of Florida Press, is now in its second printing.

On June 19, 1950, at colorful ceremonies on Constitution Avenue, Washington, D. C., Dr. Thorning gave the invocation, dedicating the beautiful bronze figure of Jose Gervasio Artigas, champion of Uruguayan independence. This program, heard on the Voice of America, included speeches by Ambassador Jose Antonio Mora, now Secretary General of the Organization of American States, Dr. Alberto Lleras Camargo, now rector of the University of the Andes, Bogota, Colombia, and the then United States Secretary of State Dean Acheson.

In 1953, Dr. Thorning was a guest in Europe of Congressman THURMOND CHATHAM of North Carolina, a distinguished member of the Foreign Affairs Committee of the United States House of Representatives. Together they visited Spain.

In 1954, at the 10th Pan American Conference, Caracas, Venezuela, Dr. Thorning acted as special adviser to the chairman of the United States Senate Subcommittee on the American Republics, the Honorable BOURKE B. HICKENLOOPER of Iowa.

Because of the manifold services to the cause of inter-American amity, Dr. Thorning, in March 1954, was proclaimed a doctor of laws, honoris causa, by the oldest institu-

tion of learning in the Western Hemisphere, the University of Santo Domingo, founded in 1538. The entire Diplomatic Corps, including the Ambassador of the United States, William L. Pheiffer, assisted at these ceremonies.

In 1955, at the request of several leaders of both parties in the United States Congress, Dr. Thorning made a survey of social and economic conditions in all the Republics of Central America: Panama, Costa Rica, Nicaragua, Honduras, El Salvador, and Guatemala. In the meantime, he had been awarded several more high national decorations: the Order of Francisco de Miranda (Venezuela); the National Order of the Southern Cross (Brazil); the Cross of Boyaca (Colombia); and the Order of Carlos Manuel de Cespedes (Cuba).

Upon the reestablishment of full diplomatic relations between the United States and Spain, the Spanish Government awarded to Dr. Thorning two of its most coveted decorations for his "outstandingly brilliant leadership in the cause of friendship"; the Grand Cross of the Order of Isabella the Catholic and the Grand Cross of the Order of Alfonso the Wise (Spain's highest award for cultural achievement).

In 1956, with White House approval, Dr. Thorning served as an official member of the United States delegation, headed by Vice President RICHARD M. NIXON, at the inauguration of the new president of Brazil, Juscelino Kubitschek.

Two months later, Dr. Thorning was invited by His Excellency, the Most Reverend Octavio A. Beras, Archbishop Coadjutor of Santo Domingo, to be a delegate and spokesman for North America at the closing session of the International Congress on Christian Culture for the Peace of the World.

For 12 consecutive years, Dr. Thorning has been invited by the United States Congress to deliver the invocation to start Pan American Day in the Capitol. On these occasions, he has been hailed by United States Senators and Representatives as "a great American and a man of God." It was Senator MIKE MANSFIELD, one of the youngest and most respected Members of the United States Senate Foreign Relations Committee, who characterized Dr. Thorning with the title which has now become popular, "The Padre of the Americas." Few inter-American functions in Washington are complete without his presence.

United States Cold War Status

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 3, 1956

Mr. MORSE. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an article entitled "Banker Blames President For United States Cold War Status," written by Wilma Morrison, staff writer of the Oregonian, and published in the June 19, 1956, issue of that newspaper.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BANKER BLAMES PRESIDENT FOR UNITED STATES COLD WAR STATUS

(By Wilma Morrison)

It is the judgment of practically all competent observers—including many of Eisenhower's staunchest admirers—that the United States is losing the cold war, and that the major responsibility for inept international performance lies with the President.

This was the conclusion of John Nuveen, Chicago investment banker and experienced executive in the foreign field, in a Monday speech in which he said, "It is unbelievable, but it is true, that our foreign policy is being largely run by isolationists."

Nuveen, who was head of the Economic Cooperation Administration mission to Greece and Belgium at end of World War II, is a speaker at this week's Institute of International Relations in Portland. He appeared Monday noon before a businessmen's luncheon at the Aero Club.

HARRIMAN ALSO SCORED

Nuveen's documented criticism of President Eisenhower for lack of leadership and of Secretary of State John Foster Dulles for lack of administrative gumption, carried with it no retroactive bouquets for the Democratic Administration. He scored Averell Harriman for aimless nonadministration that drove nearly all the leaders of ECA missions into quitting, and compared his performance with that of General Eisenhower when he was sent over to set up NATO, and "sized up the problem in just a few months."

He found little to praise, however, in Eisenhower's administration of foreign policy since his inaugural, except his principles, which, Nuveen said, the President laid down and "left the implementation to leaders of the Republican Party."

"Today foreign policy is being run by Herbert Hoover, Jr., and Taft's law partner, John B. Hillister," Nuveen declared.

Dulles has an unusual knowledge of international relations, he said, and would be an able adviser. But running the State Department, the biggest administrative job in the world, is beyond him.

"Even if we had a President who knew how to operate politically, and a Secretary of State who was administratively efficient," he said, "improvement would be difficult without a major reorganization of the State Department."

LOYALTY FOR IKE CITED

Nuveen said there is no doubt of the deep loyalty the American people feel for the President and their support of his international goals and principles.

"If there were any hope that Eisenhower would put his hand to the plow instead of merely touching the plow, we could be very happy," he said.

Dr. Graham H. Stuart of Stanford, in his morning talk at Reed College, also said the United States has not met the Soviet challenge in foreign policy.

A Portland teacher, Ruth Widmayer, assistant professor of political science at Portland State College who took her doctorate at the Harvard Russian Research Center, shared the platform Monday morning with Dr. Stuart and Nuveen.

While Stalin is being criticized in Russia now, she said, many of the institutions that he started are not only being continued, but are being strengthened.

Sermon by Rev. Martin Luther King, Jr., of Montgomery, Ala.

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, July 3, 1956

Mr. IVES. Mr. President, on May 17 a group of ministers in New York City, organized as the Greater New York Committee for a National Day of Prayer and Thanksgiving, sponsored a special service in the Cathedral of St. John the Divine. On that occasion, the Reverend Martin Luther King, Jr., D. D., Ph. D., of Montgomery, Ala., delivered an inspiring sermon on brotherhood.

I ask unanimous consent to have the text of the sermon printed in the Appendix of the RECORD.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

THE DEATH OF EVIL UPON THE SEASHORE

"And Israel saw the Egyptians dead upon the seashore." (Exodus 14: 30.)

There is hardly anything more obvious than the fact that evil is present in the universe. It projects its nagging, prehensile tentacles into every level of human existence. We may debate over the origin of evil, but only the person victimized with an extreme superficial optimism will debate over its reality. Evil is with us as a stark, grim, and colossal reality.

The Bible affirms the reality of evil in glaring terms. It pictures it symbolically in the work of a serpent which comes to inject a discord into the beautiful, harmonious symphony of life in a garden. It sees it in nagging tares disrupting the harmonious growth of stately wheat. It sees it in a ruthless mob hanging the world's most precious character on a cross between two thieves. The Bible is crystal clear in its perception of evil.

But we need not stop with the glaring examples of the Bible to establish the reality of evil; we need only to look out into the wide arena of everyday life. We have seen evil in tragic lust and inordinate selfishness. We have seen it in high places where men are willing to sacrifice truth on the altars of their self-interest. We have seen it in imperialistic nations trampling over other nations with the iron feet of oppression. We have seen it clothed in the garments of calamitous wars which left battlefields painted with blood, filled nations with widows and orphans, and sent men home physically handicapped and psychologically wrecked. We have seen evil in all of its tragic dimensions.

So in a sense, the whole history of life is the history of a struggle between good and evil. There seems to be a tension at the very core of the universe. All the great religions have so pictured life in terms of conflict. Hinduism called it a conflict between illusion and reality; Zoroastrianism looked upon it as a a tension between the god of light and the god of darkness; Platonism called it a conflict between spirit and matter; traditional Judaism and Christianity called it a conflict between God an Satan. In the midst of the upward climb of goodness there is the down pull of evil. The Hebraic-Christian tradition is clear, however, in affirming that in the long struggle between good and evil, good eventually emerges as the victor. Evil is ultimately doomed by the powerful, insurgent forces of good. Good Friday may occupy the throne for a day, but ultimately it must give way to the triumphant beat of the drums of Easter. A mythical Satan, through the work of a conniving serpent, might gain the allegiance of man for a period, but ultimately he must give away to the magnetic redemptive power of a humble servant on an uplifted cross.

Evil may so shape events that Caesar will occupy a palace and Christ a cross, but one day that same Christ will rise up and split history into A. D. and B. C., so that even the life of Caesar must be dated by his name. Biblical religion recognized long ago what William Cullen Bryant came to see in the modern world: "Truth crushed to earth will rise again." And what Carlyle came to see: "No lie can live forever."

A graphic example of this truth is found in an incident in the early history of the Hebrew people. You will remember that at a very early stage in her history, the children of Israel were reduced to the bondage of physical slavery under the gripping yoke of Egyptian rule. Egypt was the symbol of evil in the form of humiliating oppression, ungodly exploitation and crushing domination. The Israelites symbolized goodness in the form of devotion and dedication to the God of Abraham, Isaac, and Jacob. These two forces were in a continual struggle against each other, Egypt struggling to maintain her oppressive yoke and Israel struggling to gain freedom from this yoke. Finally, however, these Israelites, through the providence of God, were able to cross the Red Sea, and thereby get out of the hands of Egyptian rule. The Egyptians, in a desperate attempt to prevent the Israelites from escaping, had their armies to go in the Red Sea behind them. But as soon as the Egyptians got into the Red Sea the parted waves swept back upon them, and the rushing waters of the sea soon drowned all of them. As the Israelites looked back all they could see was here and there a poor drowned body beaten up upon the seashore. For the Israelites, this was a great moment. It was the end of a frightful period in their history. It was a joyous daybreak that had come to end the long night of their captivity.

This story symbolizes something basic about the universe. It symbolizes something much deeper than the drowning of a few men, for no one can rejoice at the death or the defeat of a human person. This story, at bottom, symbolizes the death of evil. It was the death of inhuman oppression and ungodly exploitation.

The death of the Egyptians upon the seashore is a glaring symbol of the ultimate doom of evil in its struggle with good. There is something in the very nature of the universe which is on the side of Israel in its struggle with every Egypt. There is something in the very nature of the universe which ultimately comes to the aid of goodness in its perennial struggle with evil. There is something in this universe which justifies James Russell Lowell in saying:

"Truth forever on the scaffold,
Wrong forever on the throne,
Yet that scaffold sways the future
And behind the dim unknown
Stands God within the shadow
Keeping watch above His own."

Notice how we have seen the truth of this text revealed in the contemporary struggle between good, in the form of freedom and justice, and evil, in the form of oppression and colonialism. Gradually we have seen the forces of freedom and justice emerge victoriously out of some Red Sea, only to look back and see the forces of oppression and colonialism dead upon the seashore. There are approximately 2,400,000,000 people in the world today. The vast majority of these people are found in Africa and Asia. More than 1,400,000,000 of the peoples of the world are found on these two continents. Fifty years ago most of these people were dominated politically, exploited economically, segregated and humiliated by some foreign power. There were 400 million in India and Pakistan under the iron feet of British rule. There were in China 600 million persons under the gripping yoke of British, Dutch, and French rule. There were 100 million persons in Indonesia under the oppressive hands of Dutch rule. There were 200 million in Africa dominated and exploited by the British, the French, and the Dutch. The great struggle of the 20th century has been between these exploited masses questing for freedom and the colonial powers seeking to maintain their domination.

What we are seeing now in this struggle is the gradual victory of the forces of freedom and justice. The Red Sea has opened, and so today most of these exploited masses have won their freedom from the Egypt of colonialism and are now free to move toward the promised land of economic security and cultural development. As they look back they clearly see the evils of colonialism and imperialism dead upon the seashore.

In our own struggle for freedom and justice in this country we have gradually seen the death of evil. Many years ago the Negro was thrown into the Egypt of segregation, and his great struggle has been to free himself from the crippling restrictions and paralyzing effects of this vicious system. For years it looked like he would never get out of this Egypt. The closed Red Sea always stood before him with discouraging dimensions. There were always those Pharoahs with hardened hearts, who, despite the cries of many a Moses, refused to let these people go. But one day through a world-shaking decree by the nine Justices of the Supreme Court of America and an awakened moral conscience of many white persons of good will, backed up by the Providence of God, the Red Sea was opened, and the forces of justice marched through to the other side. As we look back we see segregation caught in the rushing waters of historical necessity. Evil in the form of injustice and exploitation cannot survive. There is a Red Sea in history that ultimately comes to carry the forces of goodness to victory, and that same Red Sea closes in to bring doom and destruction to the forces of evil.

This is our hope. This is the hope and conviction that all men of good will live by. It is at bottom the conviction that all reality hinges on moral foundations and that the whole cosmic universe has spiritual control. It is therefore fitting and proper that we assemble here, just 2 years after the Supreme Court's momentous decision on desegregation, and praise God for His power and the greatness of His purpose, and pray that we gain the vision and the will to be His coworkers in this struggle.

Let us not despair. Let us not lose faith in man and certainly not in God. We must believe that a prejudiced mind can be changed, and that man, by the grace of God, can be lifted from the valley of hate to the high mountain of love.

Let us remember that as we struggle against Egypt, we must have love, compassion and understanding good will for those against whom we struggle, helping them to realize that as we seek to defeat the evils of Egypt we are not seeking to defeat them but to help them, as well as ourselves.

God has a great plan for this world. His purpose is to achieve a world where all men will live together as brothers, and where every man recognizes the dignity and worth of all human personality. He is seeking at every moment of His existence to lift men from the bondage of some evil Egypt, carrying them through the wilderness of discipline, and finally to the promised land of personal and social integration. May it not be that this is entirely within the realm of possibility? I prefer to live by the faith that the kingdom of this world shall become the kingdom of our Lord and of His Christ, and He shall reign for ever and ever,

Hallelujah. Hallelujah.

Revival of Fisheries

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 3, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Fisheries Due for Revival?" which was published in the Gloucester (Mass.) Times of June 26, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FISHERIES DUE FOR REVIVAL

An optimistic question-and-answer interview with Thomas A. Fulham, of Fulham Bros., Inc., Boston fish firm, is headed by the Boston Herald, "Fulham Sees Fish Industry Bound for Dramatic Revival."

It makes good reading. But it's not all convincing, in the face of hard facts concerning financial troubles of Gloucester fishing boat owners, decreased earnings of fishermen, and unemployment ashore.

Mr. Fulham is quoted as saying:

The landings at the Boston Fish Pier for the first 5 months of 1955 were 63,000,000 pounds (of haddock). The landings for the first 5 months of 1956 were 68,000,000 pounds, an increase of 5,000,000 pounds. Of course, it is almost presumptuous to ascribe the total increase to this conservation measure, but there are strong indications that it may be so. (He refers to the increase in size of haddock trawl nets mesh to four and a half inches, arranged by the International Commission for the Northwest Atlantic Fisheries, in effect for 3 years.)

Asked about the Saltonstall-Kennedy Act providing for fisheries marketing and research help from the Federal Government, Mr. Fulham says:

The results have been startling and of great importance. Two discoveries which have received considerable publicity have been the extensive deposits of huge deepwater lobsters and the existence of large schools of ocean perch in depths of water which have never been fished. Of even greater importance, but not as newsworthy to the general public, has been the compilation of vast data on salinity, temperature and movement of water masses, as well as many thousands of miles of continuous plankton tows which reveal the movements of eggs and larvae of both the commercial species and the other fish on which they feed.

What is the economic importance of this research?

That it can be translated accurately into predictions of just how much fish of any given species will be available to be caught in those areas 3 and 4 years from now.

It's interesting to see how Mr. Fulham answered the big-money question, "But actually, are New England fisheries in a healthy condition?"

If the industry will follow the advice and guidance of the marine biologists, it is conservative to predict between haddock and ocean perch alone an increase in yearly availability of over 100 million pounds from nearby sources.

He goes on to remark:

The large company-owned trawler fleet is shrinking but developing rapidly is a new class of medium trawlers which are individually owned and operated. This development will need financial aid and technical assistance.

He concludes:

The marine biologists, oceanographers and related scientists have shown that the raw material is there; the country's appetite for sea products is hardly sampled; the various governmental bodies are interested and sympathetic; private as well as public capital will be available.

Mr. Fulham makes a promising case. Now if this optimism is tempered with the gloom of the Gloucester boat owners and the city of Gloucester Fisheries Commission, the Federal Government officials who have been asked for assistance might arrive at a good course. We believe in optimism, but we think the men who have to meet payrolls of Gloucester workers know what they're talking about when they say that a helping hand is needed, but quick.

State Department Needs Defenders

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 3, 1956

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "State Department Needs Defenders," which was published in the Montana Standard of June 27, 1956.

In this connection I should like to call to the attention of the Senate a statement made by President Henry M. Wriston, of Brown University, at commencement exercises at Williams College. On that occasion he told his audience: "In fact, I believe it"—the Foreign Service—"to be the very best."

Dr. Wriston made that statement on the basis of having conducted a survey of the State Department, following which he made some very worthwhile recommendations regarding how both the administration and the personnel could be improved.

The editorial published in the Montana Standard states that one of the difficulties in the State Department is that "it is timid," in that—

When some publicity-seeking Congressman displays at once his ignorance and his voice by denouncing the State Department or some of its achievements, too often the Department fails to answer back.

The editorial continues as follows:

This is understandable, considering that Congress holds the purse-strings. But the State Department ought to have many defenders in the ranks of citizens who understand and appreciate the devoted work of our foreign service.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STATE DEPARTMENT NEEDS DEFENDERS

The rule that Americans think all their institutions the best in the world has one notable exception. It is the fashion to speak ill of the State Department. To hear some comments, it would be supposed that that Department is populated by striped-pants cookie pushers and guzzlers of tea, who are hopelessly outmatched whenever they encounter a practical man. They are, according to this theory, meat for the sly and hard-boiled diplomats of other countries.

This makes a good story, but is far from the truth. President Emeritus Henry M. Wriston of Brown University told a Williams College commencement audience that the United States Foreign Service is as good as any in the world. "In fact," said Dr. Wriston, "I believe it to be in the very best."

One criticism of the State Department is legitimate. It is timid. When some publicity-seeking Congressman displays at once his ignorance and his voice by denouncing the State Department or some of its achievements, too often the Department fails to answer back.

This is understandable, considering that Congress holds the purse-strings. But the State Department ought to have many defenders in the ranks of citizens who understand and appreciate the devoted work of our Foreign Service.

Mass Desegregation in Public School System of District of Columbia

EXTENSION OF REMARKS
OF
HON. SAMUEL J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 3, 1956

Mr. ERVIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Washington's Showcase," which appeared in the Greensboro Daily News, of Greensboro, N. C., of June 30, 1956. This editorial discusses with candor and sanity what the experiment in mass desegregation has done to the public school system of the District of Columbia.

There being no objection, the editorial was ordered printed in the RECORD, as follows:

WASHINGTON'S SHOWCASE

The full impact of public school desegregation in Washington, D. C., was a long time being acknowledged, but at last the truth is out.

School Superintendent Hobard M. Corning told a Senate Appropriations Subcommittee recently that the merger of the city's white and Negro schools, begun 2 years ago, has brought teaching, disciplinary, and social problems that have put an unprecedented burden on the city's 3,700 teachers.

An exodus of white pupils from the city's interior to the suburbs continues, and while actual cases of violence and open conflict have not been widespread, the caliber of teaching in the schools is in real jeopardy. Superintendent Corning has called on Congress for more teachers in order to provide more individual attention for students (i. e., smaller classes). The main problem lies in realization that Negro students are not adequately prepared for work required of them, and cannot keep up with their white classmates.

Whether his disparity is due to the Negro's intellectual caliber or inequality of public education under separation is a question which will be widely debated; but whatever the cause, the Washington, D. C., experiment in mass desegregation substantiated grave fears in the South about carrying out the United States Supreme Court decision.

In Washington, as in many parts of the South, there are more Negro than white students, and the intensity of the crisis produced by desegregation varies largely with this ratio.

Washington's experiment occurred under mostly ideal circumstances. Most of the school officials favored an effort to make the Nation's Capital a showcase experiment for the Court decision. School appropriations in the District of Columbia come not directly from a vote of the citizens but rather through congressional committees; the hazards of strangulation of school funds (possible and highly probable in most of the South if integration moved rapidly) were not present in Washington.

Even with these favorable factors the experiment has produced a crisis of real proportions in the Washington schools. Fortunately, the crisis occurred on the level of academics rather than emotions, but it is no less a crisis thereby.

Washington desegregation has been both a scholastic failure and a human-relations nightmare, said Representative JAMES C. DAVIS, Democrat, of Georgia. Representative DAVIS is right.

The Supreme Court and the rest of the Nation should awake to the fact that the South will not willingly open the floodgates of racial emotionalism and school disintegration through forced desegregation. Where barriers of racial discrimination can be lowered voluntarily and cooperatively, they will be eliminated; elsewhere the South will set its own timetable for a grievously complex dilemma which is its 20th century double-edged sword.

The Truman Responsibility

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, July 3, 1956

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Boston Herald of Thursday, June 21, 1956, entitled "The Truman Responsbility."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE TRUMAN RESPONSIBILITY

President Truman's appointment secretary and his Assistant Attorney General in charge of the Tax Division were convicted the other day of conspiracy to fix an income-tax evasion case. In comment, the Washington Post said:

"There is no suggestion that former President Truman had anything to do with the improprieties or even knew of them at the time. Yet this is precisely the sort of petty corruption that dogged the administration and tended to diminish respect for its big accomplishments. * * * The duty to make constant checks to insure that a strict code of official morality is enforced at all levels is in the last analysis a responsibility of the President himself."

How petty a corruption it is for a Presidential secretary and an Assistant Attorney General to conspire to help a taxpayer escape the consequences of a $128,721 tax evasion can be debated. In our judgment it is not very petty.

But if this were the only case, or merely one of a few that dogged the Truman administration, it could be dismissed as an accident unavoidable in so big an institution as the Federal Government.

But there were more than a few in the tax field alone. Senator WILLIAMS, of Delaware, set off the exposure of tax scandals in 1951. Since then, he said last week, there have been 214 indictments and 101 convictions. A Commissioner and an Assistant Commissioner of Internal Revenue have been convicted. Five out of sixty-four directors of tax offices throughout the country have been convicted.

And, Senator WILLIAMS added, these scandals had to be exposed over the opposition of the Truman administration rather than through its cooperation.

These are not petty cases, for they deeply concerned the integrity of that exceedingly important operation of Government, the collection of taxes. And to say that they "dogged" Mr. Truman, implying that he was the unfortunate victim of a lot of bad luck, hardly describes the situation.

But there were also the Reconstruction Finance Commission scandals, the sales of influence, the Kansas City ballot frauds—the whole extraordinary record that has been brought together for the first time by Jules

Abels in a new book (Henry Regnery Co.) called the Truman Scandals.

Which is more charitable, to say that Mr. Truman defended his own name and that of the Democratic Party by refusing to admit the scandals, or to say that he was unaware of them and remains so, despite the mounting evidence? Yet, as the Post says, in the last analysis, the responsibility is his.

Milk Shakedown in Oregon

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 3, 1956

Mr. MORSE. Mr. President, my attention has been called to an article entitled "Milk Shakedown in Oregon," written by James Daniel, veteran Washington correspondent for Scripps-Howard newspapers, and published in the Reader's Digest for October 1955. This article refers to a campaign being conducted by Mr. Elmer Deetz, a well-known dairy farmer and legislator, and a recent candidate in the May primaries on the Republican ticket for the United States Senate.

It is with pleasure that I submit this article for the RECORD. I think it deserves the attention of my colleagues in the Senate. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MILK SHAKEDOWN IN OREGON

(By James Daniel)

Elmer Deetz sells less than 40 gallons of milk a day from his tiny dairy farm near Canby, Oreg. But because of this middle-aged man with calloused hands, Oregon has thrown off an archaic milk-control system and is saving the State's families $8 million a year in their milk bills. Oregon and Elmer Deetz have thus shown the Nation a way for people to get better milk for less money, instead of piling it up as surplus butter and cheese for the Government to buy.

Elmer did not start out to reform the dairy business. His only thought was to make a living on 24 acres of scrub land in his native Clackamas County, where he settled in 1948 after a disastrous flood wrecked a big cattle operation that he had been managing on the Columbia River. Two years later he was breeding prize-winning Jersey cows. These he sold to commercial dairy farmers who operated under State quotas permitting them to sell assigned amounts of milk to the big retail distributors.

But when Elmer asked a State official to give him a quota so he could share in this profitable business, he was told he would have to wait 3 years. In the meantime, it was suggested, he could sell to the cheese factory in his area.

Elmer knew all about the cheese factory. It is a sore subject with dairy farmers. Under the quota system—practiced in many parts of the Nation in order to limit the supply of drinking milk and thus create higher prices for it—all milk produced above the allotted quota has to be sold for other purposes for anything it will bring. Most of it goes to manufacturers who turn it into milk by-products. In Oregon, cheese-factory trucks plied the back roads, paying farmers 5 cents a quart—a price that would not cover Elmer's feed costs, much less make him a profit. But the cheese factory had no financial worries. Like the makers of butter and dried skim milk, it had an unlimited market in Uncle Sam.

One night, the Deetzes were discussing this situation with some neighbors. They agreed the milk-control system was a mess. For example, since the end of World War II the State milk-control board had jumped retail milk prices 7 times—from 14 cents to 22 cents a quart—and was soon to order another raise, to 23 cents. The board told consumers that they had to pay more, or farmers would not produce enough milk. At the same time the same board told hundreds of small farmers like Elmer that they could not sell milk to the commercial dairy distributors because this would create a surplus. The story in most other States was the same.

Carl Joehnk, a former county extension agent, commented, "To me the real tragedy is that the milk you buy these days has no taste. When you compare the rich milk you used to get with the stuff they sell today, it's small wonder many people have stopped drinking it."

"Well," said Elmer, "you haven't tasted my milk." And Mrs. Deetz fetched a plate of cookies and a pitcher of milk.

From then on, Elmer, without having planned it, was in the milk business. The visitors liked the milk so much they each asked to be allowed to buy a quart a day. Others sampled the rich, creamy milk and Elmer had new customers.

He didn't deliver. People served themselves, listing their names and purchases on a pad and making change from a cigar box of bills and silver. Elmer had no idea that his unique method of selling would disturb the State milk-control board. But in time a big retail dairy missed a customer. Tracking him to the Deetz farm, it learned that Elmer was charging only 70 cents for a gallon of milk, the top fourth of which was whipping cream. Under the State price-fixing formula, the minimum a gallon of such milk could sell for was $1.05. But of course no commercial dairy was offering consumers milk of this quality. The dairy indignantly reported that Elmer was guilty of unfair competitive practice.

One morning as he was doing chores, Elmer was visited by two State milk-control officials. Already barred from selling his milk through commercial channels, Elmer was now told he could not even let his friends and neighbors buy it unless he took out a license, agreed to be bound by the State minimum prices and installed thousands of dollars' worthy of costly automatic equipment used only by big commercial dairies. Elmer told the officials that he would not comply.

On Thanksgiving Day, 1953, as the Deetzes were having dinner, the radio blared that the State board had announced it would sue Elmer. There was a reason for the crackdown. The board had secretly determined on another statewide milk-price increase and even one independent farmer-distributor like Elmer could set an example that others might copy. Elmer had to be put out of business. The news hit the Deetzes hard.

"We may lose the farm," Elmer said. "But this thing is wrong, and it's wrong to give in to it."

Thus, the Deetz family reached a decision that was to cost them much more than a year's income, thousands of hours of anxiety, and have consequencies far beyond Oregon's borders.

The milk-control board filed suit against Elmer and, simultaneously, State sanitation agents swooped down on his farm to take samples of the milk. They swore out warrants charging him with selling dirty milk. In court they could not produce any laboratory reports to back them up. Elmer, however, had employed private laboratories to make exhaustive tests immediately after each State visit. The certified reports of these laboratories, which the State did not challenge, proved that Elmer's milk was much purer than the State's requirements.

Instead of admitting that they were wrong, the State milk-control bosses redoubled their efforts to compel Elmer to accept their authority. Frustrated and financially strapped, Elmer went to his lawyers, Norman Easley and Stewart Whipple of Portland, in January 1954, and told them he had taken just about all he could. They told him not to worry about their fee. "If you can hold out 2 years longer," they said, "we can appeal this all the way up to the State supreme court."

Elmer knew he would be broke by that time. "If the people only knew what this system was like," he said, "they'd get rid of it. By golly, let's repeal the whole milk-control law."

In Oregon, the people can change laws by direct vote during their regular elections. The next election was to be held in November 1954. To get the question of milk-control repeal on the ballot a minimum of 37,000 voters had to sign a petition.

Elmer had no funds, no organization, merely a conviction, which his lawyers shared, that the people of Oregon would do the right thing if they were shown how. Tom Gerber, editor of the weekly Canby Herald, long convinced that the small business people of his State were being strangled by bureaucracy, took up Elmer's cause and made such exciting reading of it in his paper that the press of the whole State was pulled into reporting the controversy. The press was also reporting the additional news that Elmer Deetz would be a candidate for the State legislature. Advised that this was the best way to keep milk-price repeal on the front pages, Elmer had agreed to run.

Several better-government leagues stepped forward and offered to help take over the circulation of the repeal petition. Then, with 2½ weeks to go before the deadline, it was learned that through inexperience the petition circulators had forgotten to get addresses for thousands of the names. And signatures without addresses could not be counted. Suddenly, what had been just a rollicking good news story—a fight between a citizen and the law—became a crusade. Hundreds of letters from all over the State flooded in supporting Elmer. Strangers telephoned, "Send us your petition. We'll get every name in town."

Mornings, Elmer would be up at 3 a. m. to catch the change of shifts at some distant paper mill or be down at the Portland docks to sign up stevedores. The Deetz telephone never stopped ringing. On the last day on which the State would accept petition signatures, the required total still had not been achieved. Then 5 minutes before the deadline the necessary names arrived at the statehouse by helicopter from Portland.

Now the State milk board moved into high gear. Unleashing an attack against Elmer unmatched in Oregon political history, it accused him of a sinister plot to undermine State milk-sanitation laws, although these laws remain intact and never were an issue. One hundred thousand dollars was lavished on radio, television, newspapers and billboards reiterating that a vote for Elmer was a vote for contaminated milk. Financially exhausted by the drive to circulate the petition, Elmer had only $1,100 left to fight back with.

Then, from an unexpected source came a letter which calmly and clearly set before the public the fact that not milk sanitation but milk price-fixing controls was the only issue involved. This statement was from E. G. Harlan, who had been Oregon's first

State milk-market administrator 20 years before. He wrote that the bulk of milk controls were enacted in the depression years as a temporary measure to raise the retail price of milk which had fallen as low as 5 cents a quart. Nobody expected them to last 2 years, much less 20. Harlan reproached his successors in office, telling them they should have supported Elmer's efforts to give the public high-quality milk at a moderate price.

Reason and right pointed to a victory for Elmer personally, and for the repeal of the milk-price control. But the politicians regarded Elmer as little more than an interesting gadfly. Until election night. Then as the returns piled up, it was seen that both Elmer and repeal were victorious in what Oregon papers the next day wrote up as the most surprising election upset in Oregon history.

The Portland Oregonian reported: "A little-known Canby dairyman playing the role of the underdog against the milk monopoly has accomplished in a low-pressure campaign what organized consumer groups and disaffected segments of the dairy industry, despite great expenditure of money and effort, long have tried and failed to do."

With repeal, Oregan milk prices began to fall, although nationally, milk prices have increased. The United States Department of Agriculture's survey of home-delivered milk prices for June 1955 averaged 22.7 cents a quart—a fraction higher than June 1954. Oregon prices, however, are 21½ cents for home-delivered milk, 19½ to 20 cents in stores, and down to 16 cents in some small towns and villages. United States official surveys show that Oregon's milk today has more cream in it than any other milk sold on the west coast.

For 20 years, except for a period during the war, Oregon milk consumption had been going down, while Oregon dairy surpluses went up. Now the people of Oregon are drinking their milk once again. Safeway stores alone report their sales have jumped 23 percent above 1953, and the Oregon Milk Producers Association reports that spot checks of 6 key towns and cities show consumption per capita is up from 7 to 17 percent since Elmer's victory.

Many dairy farmers found that the lower price for milk didn't hurt them, because they could sell all their milk for drinking purposes and throw none on the wasteful surplus market. Some dairy farmers report the highest incomes in their history. Federal dairy purchases in Oregon, amounting to $6 million in 2 previous years, have slacked off toward the vanishing point.

Elmer is still trying to pay off a $9,000 mortgage on his farm and that much more in other costs as the result of his repeal campaign. Would he do it all over again?

"I think so," he says slowly. "It's worth a lot to a man to know he has done what he could to make things better."

The Failing Crusade—Eisenhower Commends Crusaders Who Became Liabilities

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. PRICE. Mr. Speaker, some aspects of the great moral crusade inaugurated in 1953 have always puzzled many of us. One of the puzzles has been the unwillingness of the crusaders, including the chief crusader, to acknowledge frankly that a few of their appointments might have been bad.

Under leave to revise and extend my remarks, I offer the following editorial from the St. Louis Post-Dispatch:

PRESIDENTIAL POSIES

One of the most gracious aspects of Washington life these days is the kindly way in which officials who have become liabilities are eased out. Take Robert B. McLeaish, for example. He resigned as Farmers' Home Administrator amid charges of gross inebriation and participating in gay parties with emphasis on kissing. Yet Mr. McLeaish can display a letter from the President commending him on his "valuable assistance."

This is in a well-established pattern. After Harold E. Talbott got his post as Secretary of the Air Force mixed up with the private concerns of his business and resigned while the shot and shell were falling, he received a letter from the White House. It contained such presidential encomiums as "tireless energy," "leadership," "diligence," and "fine accomplishments."

Mrs. Oveta Culp Hobby resigned as Secretary of the Department of Health, Education, and Welfare close on the heels of her fiasco in the handling of the Salk vaccine. President Eisenhower told her: "Oveta, this is a sad day" and then praised her "calm competence in the face of every kind of difficulty."

Another who had to pack his bags was Edmund F. Mansure. He came in with the new broom as General Services Administrator. His many difficulties included the Nicaro nickel insurance deal. The President thanked him for "savings" and "improvements" and wished him "success in your future undertaking."

Peter A. Strobel resigned as Commissioner of Public Buildings after a House committee pointed out a conflict between his official post and his interest in a firm of consulting engineers. His letter of thanks came from Mr. Mansure rather than the President, but it was couched in typical White House compliments including "your fine attitude," "considerations of loyalty" and "high professional competence."

There is much to commend this fraternal spirit and the era of good feeling which it expresses. And that only makes it the more pointed that no one around the White House or in the Cabinet has found time to say so much as one good word for Senator WILEY, of Wisconsin. He deserves and really could use a presidential posy.

Needs of the Indian People

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. BERRY. Under leave to extend my remarks in the RECORD, I am inserting an address delivered by W. A. Riegert, of Kyle, S. Dak., at a meeting in that city on June 2, 1956, which I had the privilege of attending.

In his remarks, Mr. Riegert outlines some of the problems of the Indian people. He brings us up-to-date by pointing out the need for industry on the reservation now to provide employment, and thus improve the standard of living. His closing comments describe a philosophy of life we could all do well to follow.

The address by Mr. Riegert follows:

Mr. Chairman, friends, and your honor, sir, Mr. Berry, I have met most all of you individually but am now honored for the permission of speaking to you all in audience.

There are many daily examples in our lives of perfect cooperation that nature provides. Our existence and all our senses—that we awake and can walk on two legs with perfect balance, the universe and its mysterious operations, nature in its growth and blooming, that human nature multiplies, passes away, and multiplies again, and so forth.

I want to relate an example of perfect cooperation that impressed me just recently. Last Wednesday afternoon a boy on his bike, followed or led by his two rat terriers, stopped suddenly at the challenge of a rattlesnake in the way. The dogs, mother and son, had been challenged before, so that they immediately went into battle formation. The son prompting and tempting in front, the mother ducking in and out, nipping. Their strategy worked perfectly for on the third charge and fling by the mother the rattler was ducksoup for the next job, tearing the snake apart. The boy and the son dog went their way, but the mother lingered to make sure the job was complete. To me, this scene was a master performance of cooperation. This example of working together, side by side, and, hand in hand, we can and must use daily if we are interested in success.

Allow me briefly to go back into history, especially at this time, to picture progress and its justice or injustices along the way. The pilgrims coming to our shores, looking for freedom from a long demoralizing yoke of autocracy. The events that followed are most distasteful in the injustices to the American Indians. Forgetting their past, the pilgrims and those that followed, transferred the yoke of autocracy to a yoke of autocral limitations to the people they found as natives who befriended them when they really needed help, the American Indians.

Progress was inevitable, it came, it saw, and under the guise of progress it conquered. Progress was and is inevitable in all phases of human endurance and existence. Nevertheless, it should leave in its wake, justice, freedom, and peace. When those vital measures pertaining to man's welfare are missing, then, progress is irreparable aggression to the human souls and bodies trampled under. Only the generations to follow can demand reparation, that is, you and I.

Today Uncle Sam, our Government, is the greatest assembly instituted by man for the freedom of mankind the world has ever known. It is of the people, by the people, and for the people under God. Nature's boundless covenant, yet, in the preamble to our Constitution, the American Indian was classified as savages, and as such, are not entitled to full rights of the proposed Constitution, so following these vital words, to the Articles of our Constitution, I quote:

"We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish the Constitution for the United States of America."

Remember the above quotation, for it overflows with justice and welfare to qualified citizens under the Constitution. I emphasize qualified citizens for under amendment 14 (adopted July 28, 1868) under section 2, I quote in part: "Representatives shall be apportioned among the several States according to their respective numbers. Among the whole number of persons, in each State excluding Indians not taxed."

There has been some changes made, but I cannot at this time give you reference, for Indians not taxed, are voting their choice of State and congressional representatives. Regardless, there has been no change in our

Constitution, freeing the American Indian from the alleged savagery.

The contention for adverse circumstances that exist among us Indians is that our Constitution in the above quotation, holds a controlling leverage over us in the form of special legislation adopted from time to time that regulates our welfare and tranquility. You are all well aware of the controls that exist through the Bureau of Indian Affairs, a bureau set up by Congress.

Let's be mindful of the things that lead to our present predicament. Let's get down to good old reservation earth problems and circumstances we are facing each day of our lives. Don't forget my relation of the scene of the rattler and the dogs, cooperation. There are large reservations in about seven of our States. Some have oil, gas, and other minerals, and timber resources, from which they derive some or all of their livelihood. The Dakotas have millions of acres of the finest grazing land in the United States. Those acres are our motherland and precious beyond measures of dollars and cents—they are our only homes and have been for generations, especially since the aftereffects of the battle of the Little Big Horn. I firmly believe that all Indians especially the Oglala Sioux have forgotten why that battle was fought. With their backs to the wall, Crazy Horse, Sitting Bull, Red Cloud, and every Sioux warrior with the backing of their wives and children fought a memorable battle for their homes, their families, and everything they owned under God. They were the bravest of the brave and knew they were fighting for not only the present but for generations to come. For them, they knew, there may not be a tomorrow, nevertheless, they were willing to sacrifice the last drop of their willing blood. The shedding of both the white and Indian blood could very easily have been avoided. By treaty, the Sioux were to be protected against trespassing.

A delegation of Sioux chiefs, one from each of the 9 bands of the Sioux Nation went to Washington to confer with President Grant, the Secretary of the Interior, Commissioners of Indian Affairs, and assistants, especially to request promised protection against trespassers. Briefly, the request was refused on the grounds that such trespassing was progress and could not be stopped. The Sioux delegation returned home emptyhanded and to the scorn of those waiting at home for good news. Following came the Custer battle. The events of time, since then, each and every man, woman, and child of the Sioux Nation knows by heart, by want and by sacrifice. Today, we are lost in the maze of misunderstandings, questionable interpretation of laws governing Indian welfare.

The fact that Uncle Sam has let us down, should not result in us letting ourselves down. We have too much at stake, our future. I think Uncle Sam appreciates in the other fellow, a good honest and just scrap and will concede for justice's sake. Surely he can't forget that his wards "nieces and nephews" fought in 2½ world wars to help keep and make people free of autocracy.

The battle of the Little Big Horn should not be a thorn in his side; rather, it should tend to strengthen his confidence in a great people that they should be made full-fledged citizens by constitutional amendment.

The Wounded Knee Sacrifice by the Sioux people needs Uncle Sam's fullest responsible consideration and restitution. So, with the right approach and a well-tempered hammering of circumstantial facts, Uncle Sam should give us a well-balanced rehabilitation program without any further congressional delay.

Let's survey our present circumstances and where do we go from here. The Sioux people have millions of acres of land held in trust, most of it is grazing land but much of it rich farming land. We are surrounded by successful outside operators either on deeded or leased land tracts. Slowly but surely, at the present rate of land sales, the Oglala Sioux people will either be living on tribal lands or out in the cold. The money derived from sales is not going back into more land or improved homes, but cars, liquor and many unpaid credit obligations.

Lease money from either grazing or farmland, plus welfare assistance, either Federal or State, is insufficient for an ordinary livelihood. Our homes and social circumstances speaks volumes of adversity. Why these deplorable conditions? Programs of rehabilitation have failed for two definite reasons, insufficient funds and follow through administration and, the lack of an all out fight by the Indians. The latter, the lack of education and discipline. Law and order on the reservation is at its lowest ebb and delinquency runs rampant. Higher education is limited to a select few high-school graduates. We need more Haskells and more funds to send our children to other colleges. We need a welfare program that takes workers more often into the homes—we need a health program that covers each district more consistently so that the Indian is not forced to go many many miles to the Pine Ridge Hospital. The Indian family does not have the money or transportation to make timely trips to Pine Ridge. Furthermore, Pine Ridge Hospital is not large enough by far to accommodate those that should be hospitalized.

We desperately need industry on the reservation for both common and skilled labor. The relocation program is not the solution to reservation labor or social problems. We have got to make a firm determination to get our heads, hands, heart, and soul into our problems and resolve now, to personally take the bull by the horns, as the saying goes, and work out our own problems. Our children demand it, and so does God. God helps those that help themselves, otherwise, we are left to the mercy of the man with the big stick, progress. Opportunity was conceived and created by God, for man, with open doors. Entering is all in the free will of man, I will, or, I will not. Henry Kaiser, Sr., puts it this way: "Opportunity is a problem in work clothes."

All success begins with work and the Indians have the tools to work with; a good mind, a strong heart and body, the spirit of God in his soul and, his native land to live and toil on. Millions are without some of these tools and are longing for the freedom to exercise their God-given rights. Men, through their communistic principles, have deprived them. Millions are coming to our shores annually and more land is needed for their and our welfare. Beware, hang onto your precious lands and make the most of it.

Elect and keep good, progressive, hard-fighting men in your council and in Congress. Fight hard and justly for your rights, stick together, old and new dealers alike.

Sleep on your petty grievances and forget them. Take your family to church regular and often, keep your children in school until they can properly care for themselves, pay your just debts, and you will live a fine, upstanding life in the grace of God and the friendship of men.

Small Flood-Control Projects

SPEECH
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. SADLAK. Mr. Speaker, I heartily endorse H. R. 9555, amending section 205 of the Flood Control Act of 1948 to increase and make certain revisions in the general authorization for small flood-control projects because it is most worthy legislation, not only for the New England areas that were so seriously devastated by the recent hurricane floods but because it will provide rapid assistance in all areas of our country without geographical restrictions and expedite the construction of small flood-control projects not specifically authorized by Congress. Similar legislation has already been approved in the other body where a herculean effort was put forth by the senior Senator from Connecticut [Mr. BUSH]. This companion measure by the distinguished majority leader of the House, Mr. MCCORMACK, will, when accepted by the House today, not only increase much-needed funds which will be used wisely by our Army engineers, but will provide for the immediate construction of flood-protective works which might otherwise be unduly delayed awaiting the usual survey and authorization process. This legislation will bring hope, relief, and a feeling of security to large segments of our people throughout the United States. I urge the suspension of the rules and approval of this bill.

A New Foreign Policy

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, it has been impossible for me to see the efficacy of a foreign policy which called, year after year, for the giving, the loaning, or the expenditure of billions of dollars to foreign nations on the theory that, if war with Russia came, they would be our effective allies.

It has never worked out that way. History will bear out the assertion that in every war, local or worldwide, in which a nation is involved, of necessity she makes her own objectives her first concern.

Our contributions of billions, whether in dollars, munitions of war, or economic aid, have failed, except as their own national interests indicated, to obtain for us overall, long-time allies.

Not only have our sacrifices and generosity failed to give us staunch, permanent friends abroad, but in some instances they have created a feeling of animosity against us. Well do I recall the report of a grandson who, some years ago, serving in the Navy, twice with his shipmates having shore leave in Italy, were greeted with shouts of "Go home, Yanks".

Recently the press, reporting on the election in Iceland—a United States base considered necessary for protection against Russia—told us that the Social Democrat and Progressive Parties, who joined forces in a drive-out-the-Americans-but-remain-in-NATO stand, polled 25 seats, 2 short of a workable majority.

The Independents won 19 seats; the Communists 7, giving them the balance of power.

This, notwithstanding the fact that we gave Iceland $35 million between 1948 and 1953. Because our contributions to Iceland caused inflation, raised the cost of living to local people, our activities there are resented.

Iceland's livelihood is derived from its fishing industries. More recently, both the United States and Great Britain, by the imposition of what is considered a high tariff, have made it almost impossible for Iceland to sell its fish in either country. Russia has stepped in, giving the Icelanders a market for the only thing they have to sell.

Iceland has no armed forces, her people have always resented the presence of troops from other countries.

The three factors—the one making it impossible for Iceland to market fish, the only thing she has to sell; another, the presence of American troops; and the other the influx of American dollars which raised the cost of living to every Icelander—all add up to ill will where we anticipated friendship.

We need a reconsideration of our foreign policy.

Rehabilitation of Persons Convicted of Crime

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 3, 1956

Mr. MORSE. Mr. President, it seems to me that very frequently we do not give sufficient attention to the fine work in rehabilitation of persons convicted of crime which goes on day in and day out, by dedicated and devoted public servants, such as Mr. James V. Bennett, director of Federal Prisons, and Sanford Bates, president of Prison Industries.

I wish particularly to commend to the attention of the Senate today the work which is being carried on by Federal Prison Industries, Inc., of which Mr. George Meany, president of the AFL-CIO, is chairman of the board of directors. I ask unanimous consent to have printed in the RECORD a press release issued under date of June 19, 1956, by the Department of Justice, pointing out some of the accomplishments of Federal Prison Industries, Inc.; also an article on the same subject entitled "Here's a Switch, Convicts Give Out with Sizable Check," written by Fred W. Perkins, a well-known newspaper man in Washington, D. C., and published in the Washington Daily News of June 20, 1956.

I believe that the men and women who have designed and developed the rehabilitation program of Federal Prison Industries, Inc., are deserving of the thanks of the American people. I know from my previous experience in the field of criminal law and my association with many of these men and women in the United States Department of Justice some years ago, that the approach which is being made to the problem of rehabilitating criminals by Federal Prison Industries, Inc., is deserving of the thanks of the American people.

There being no objection, the news release and article were ordered to be printed in the RECORD, as follows:

DEPARTMENT OF JUSTICE

Mr. George Meany, president of AFL–CIO and as member of the Board of Directors of Federal Prison Industries, Inc., today presented to Attorney General Herbert Brownell, Jr., a voucher for $1,500,000 for deposit in the Treasury representing earnings of the corporation.

This is the second dividend paid this year from the profits of industrial operations in the Federal prisons. At a previous directors' meeting a payment of $2,500,000 was authorized making a total return of $4 million for the present fiscal year.

Federal Prison Industries, Inc., is a wholly owned Government corporation that provides employment opportunities for inmates of Federal prisons.

A diversified system of some 50 different shops and factories in Federal prisons produces goods for the Government itself. None of the prison products are sold in the open market in competition with private industry and free labor.

The prisoners are paid a wage adjusted to their efficiency and status which averages about $30 per month. Pay jobs in prisons are given on the basis of family need and importance of trade training in the rehabilitation of the prisoner.

The prison industries corporation also finances the entire vocational training program in Federal institutions which enables over 10,000 inmates each year to enroll in 1 or more of the nearly 450 available courses ranging from airplane engine mechanics to poultry husbandry. Many of the courses are acceptable for accreditation under State and union apprenticeship programs.

The corporation is under the administrative supervision of the Attorney General and the Director of the Bureau of Prisons but its policies and program are a responsibility of a Board of Directors representing all interested groups. The present members are: Mr. Sanford Bates, representing the Attorney General; Mr. Emil Schram, representing agriculture; Mr. George Meany, representing labor; Mr. James Lindley Palmer, representing retailers and consumers; Mr. Frank A. Reid, representing the Secretary of Defense; and Mr. Berry N. Beaman, representing industry.

The corporation since its formation in 1934 has paid into the Treasury a total of $32,500,000. The earnings during the fiscal year 1956 have been the largest of any peacetime year. These results have been possible because Government departments and Federal purchasing officers have cooperated wholeheartedly with the corporation in its effort to find useful and stimulating employment for its approximately 20,000 prisoners. Private industry and organized workers have also greatly aided in helping to solve one of the most perplexing questions affecting prison administration. Attorney General Brownell adn Mr. James V. Bennett, Director of Federal Prisons, expressed their appreciation for this cooperation and the generous assistance and helpful counsel of the corporation's Board of Directors.

[From the Washington Daily News of June 20, 1956]

HERE'S A SWITCH, CONVICTS GIVE OUT WITH SIZABLE CHECK

(By Fred W. Perkins)

Smiles all around but no speeches, because a check for $1,500,000 speaks for itself.

That was the situation yesterday when George Meany, president of the AFL–CIO, handed the check to Attorney General Herbert Brownell, Jr., in a simple ceremony at the Justice Department.

Mr. Meany was acting as the labor member of the Board of Directors of Federal Prison Industries, Inc., Government corporation which has delivered $4 million this year for deposit in the United States Treasury. Since its formation in 1934, it has shown a cash profit of $32,500,000.

OTHER DIVIDENDS

But there are other dividends besides money, according to James V. Bennett, Director of Federal prisons, and Sanford Bates, President of Prison Industries. The more massive returns, they say, come from the teaching of useful vocations to prison inmates, helping them to become productive citizens instead of returning to a life of crime.

Mr. Meany's participating in the enterprise is evidence of its backing by organized labor. William Green, late AFL president, cooperated with Mr. Bates and Mr. Bennett in developing the idea of a Government corporation to operate the prison industries under a policymaking board representing the Government, labor, industry, retailers and consumers, and agriculture.

A primary policy is that none of the prison products are sold in the open market in competition with private industry and free labor. The Government itself is the only customer for the goods turned out by about 50 shops and factories in Federal prisons. Prices are kept at commercial levels, and in one respect the Government sells to itself and also makes a profit for itself.

The prisoners are paid for their work, an average of about $30 a month (of course, in addition to the board and lodging furnished by the prison). Wages are adjusted to efficiency and other considerations, and pay jobs are allotted on the basis of family needs and the importance of training in the rehabilitation of prisoners.

EARNINGS

Many men send their earnings to their families, and others save the money to help them through the adjustment period when the prison doors open for them.

The Prison Industries Corporation also finances vocational training which enrolls over 10,000 prisoners each year in nearly 450 courses ranging from airplane engine mechanics to poultry husbandry. Many courses lead into State and union apprenticeship programs.

Change Needed in the Administration's Near East Policy

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. TUMULTY. Mr. Speaker, during the mutual security bill debate I raised the question why the United States foreign policy was aggressively friendly toward Tito, an enemy, while almost hostile toward our friend Israel. Developments in the Near East during the past few weeks confirm my judgment.

The Russian Foreign Minister has been making a triumphant tour of Arab countries, ready to fill the vacuum brought about by the British withdrawal from the Suez base; the parade of Commu-

nist weapons in Cairo was a frightening spectacle; and Arab leaders, Colonel Nasser, of Egypt, and the new Premier of Jordan, have made new, open, and belligerent threats against Israel. Meanwhile, that little democracy still cannot persuade the Department of State to let her have the jets she needs to defend herself from the Communist planes now in Egypt. The administration continues in a state of paralyzed neutralism—utterly inconsistent with the responsibilities of leadership in the worldwide defense of freedom. There should be a change in the administration's unrealistic policy.

Long Beach-Los Angeles Breakwater Extension Urgently Needed

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. HOSMER. Mr. Speaker, tides and currents, in part due to existing extensions of the Long Beach-Los Angeles Harbor breakwater have caused much damage in the vicinity of Seal Beach and Surfside, communities adjacent to the harbor area. In part to remedy this situation, extension of the breakwater from where it now ends on to Seal Beach has been proposed.

Other advantages of this extension would include protection to entire harbor area from storms and giving it positive protection against submarine torpedoes. During the last war an elaborate and extensive system of antisubmarine nets had to be installed and maintained for the harbor. Today the Navy annually spends a considerable sum to keep nets available for the event of a future emergency. Construction costs of the breakwater extension would soon be recovered from abatement of damage at Seal Beach and Surfside, and from decreased maintenance cost by the Navy to keep nets standing by.

The Long Beach Press Telegram recently commented editorially on the subject as follows:

WHERE PERMANENT PROTECTION IS NEEDED

Residents of Seal Beach and Surfside appear assured of temporary protection against high tides and ground swells which have caused serious damage at times in the past. The protection comes from the depositing of nearly a million cubic yards of sand dredged from the harbor floor of the ammunition and net depot nearby. Citizens of the area are to be congratulated on the success that has crowned their efforts after a long flight.

But the protection may not be permanent, due to erosion. In time, unless ocean currents change their pattern, the new beach may be washed away, and more trouble can be expected. Permanent relief, according to engineers, will only come when the outer breakwater is extended to give lasting protection.

Inasmuch as the Federal Government has an important naval installation at the ammunition and net depot, there is good reason for the Government to extend the offshore rock barrier. It would not only protect the depot harbor from silting, according to engineering studies, but it would protect Seal Beach and adjacent communities against serious erosion. In addition, federally constructed jetties have been blamed as contributing factors to the past erosion.

Efforts should be made now to have the Army engineers recommend the permanent protection necessary, and then Congress should be urged to make funds available for the work.

Effingham, Kans., Bank Performs a Public Service

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. AVERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to bring to the attention of the Members of Congress an outstanding public service which is being rendered by the Farmers and Merchants State Bank of Effingham, Kans. Mr. Milton C. Cummings, president, instituted the idea of using bank advertising to present information regarding soil conservation and flood control. Mr. Cummings states:

For the past 5 years we have used approximately two-thirds of our bank advertising in generating ideas about land treatment and water control.

While we cannot measure results with the exactitude of bank operations we believe there has been some effects.

We do know that Atchison County is very close to "leading the pack" in the 105 Kansas counties in the matter of conservation.

An integral phase of the overall conservation program is the matter of keeping the urban population informed of the true significance of soil and water conservation work. The farmer knows what it is and what it can do for him. Programs of instruction in our city schools can render much good. No one will deny the great value to be gained by our cities from all phases of soil and water conservation.

Mr. Cummings and the Farmers and Merchants State Bank are setting an outstanding example in promoting an information covering this work.

The following is an ad which appeared in the Effingham New Leaf newspaper. I believe the ad speaks for itself:

CONSERVATION AND FLOOD CONTROL

Harold Engstrom, USDA representative on the Missouri Basin Interagency and a leading conservationist in the United States Soil Conservation Service, has stated the need for a coordinated land treatment and water control program which seems to have a practical ring in the light of northeast Kansas conditions.

Engstrom states that the experience of the past 20 years points to 3 principal types of operations which, if carried forward by farmers in cooperation with the Soil Conservation Service, the Reclamation Service, and the Army engineers, will add value to the farms in the Missouri Basin.

1. Land treatment: These measures control soil erosion, maintain soil fertility, conserve water by storing it in the soil, prevent damage on the farm from the erosive action of rainfall and runoff, and reduce the sediment loads of creeks and rivers. Atchison County is well on the way in this operation.

2. Flood prevention: This work, largely structural, involves work on the tributaries and waterways to control or retard runoff from neighboring farms. These measures alleviate damage to the agriculture of the smaller watersheds above the downstream engineering works. They slow runoff and stabilize sources of sediment in upstream channels.

3. Downstream engineering: This is the work done on the major waterways to control runoff after it has reached the main stream. It alleviates urban damages and damage to agriculture in the flood plains lower down the major rivers.

These are straws in the wind which indicate that the conservationists and the flood-control backers may yet get together, admitting neither side has all the answers to soil protection and water control. Farmers have a big stake in this matter. (Farmers and Merchants State Bank, member of the Federal Deposit Insurance Corporation, Effingham, Kans.)

Gen. George C. Marshall Dedicated Himself to Service to His Country, Forgetting Personal Ambitions

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article written by Roger D. Greene, of the Associated Press, which appeared in the East St. Louis (Ill.) Journal on July 1, 1956. The article, General Marshall Wanted To Lead Invasion, follows:

GEN. MARSHALL WANTED TO LEAD INVASION

(By Roger Greene)

The Democrats wanted Gen. George Catlett Marshall to run for President in 1948.

He wanted to command the Normandy invasion armies in World War II.

Why didn't he?

Now, for the first time, the 75-year-old soldier statesman brings into the open matters that have long been subjects of speculation.

Interviewed at his rambling 18th century home here, Marshall spoke with gruff finality.

"I would never have accepted the Presidency. I saw too much of it from the inside."

With a twinkle, he turned to his wife. "Besides," he said, "Mrs. Marshall wouldn't let me."

Mrs. Marshall explained:

"The Democrats wanted him to run for President. They wrote me in China asking me to urge the general to accept. I told them I would never consent to intercede with him on the subject."

Mrs. Marshall did not say what year it was, but presumably the incident occurred during Marshall's ill-fated mission to China to halt the conflict between Communists and Chiang Kai-Shek's Chinese Nationalists.

Elaborating, Marshall spoke fleetingly of political "rough stuff" and "some things I just wouldn't stand for."

He added: "I felt I had certain qualities, as a soldier, that shouldn't go with the presi-

dency. I have never thought a military man should be President."

Biographers have long puzzled whether Marshall ever regretted the decision that kept him tied to a Pentagon desk in Washington while the appointment to command the Normandy invasion armies went to his subordinate, Gen. Dwight D. Eisenhower.

Touching on this, President Eisenhower said at White House news conference August 4, 1954:

PERSONAL DESIRE SECOND

"I am quite certain that he did not want to sit in Washington and be Chief of Staff. I am sure he wanted a field command. But he wouldn't even allow his chief (President Roosevelt) to know what he wanted, because he said, 'I am here to serve, and not to satisfy personal ambition.'"

The British Cabinet reportedly wanted Marshall as supreme allied commander, and at one point arrangements are said to have been made to fly him to London to take command of the cross-channel invasion forces. Roosevelt scotched the plan.

"I feel I could not sleep at night with you out of the country," F. D. R. told Marshall.

I asked if those were the facts. The general nodded.

"Of course I wanted to get out of Washington," he said, with a touch of asperity. "I'm a soldier. I wanted a combat command. But I had no choice. President Roosevelt wanted me to stay in Washington."

A sparkling raconteur, Marshall reminisced about unpublished bits of history for nearly 2 hours as he showed the way, with Mrs. Marshall at his side, through the historic 20-room house and gardens on the 4-acre estate.

The house, shaded by giant oaks and maple trees, was begun in 1768 by George Washington Ball, a nephew of George Washington.

Marshall paused in the dining room to relate how the floor was hurriedly completed so it would be ready for a dance in honor of the French Marquis de Lafayette.

The Question of Fitness

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. MACDONALD. Mr. Speaker, I am sure that whatever their political affiliation, the vast majority of the American people are happy over the fact that President Eisenhower's operation for ileitis was a success, and that he is progressing so well in his recovery. The President's doctors agree that his illness need not bar him from a second term. Also, the Republican high command has expressed absolute confidence that the President will run, and that he will so announce shortly. The President, while he recuperates at Gettysburg, must be thinking long and hard whether he can carry on successfully for another term.

Even so, there are many millions of people in this country that are asking the question: "Should a man in the President's condition attempt to carry the crushing burden of the Presidency for 4 more years?" This question can only be decided by careful weighing of the medical factors, and other more intangible but equally more important factors as well. In any event, I feel that it is not only legitimate but right that the matter be frankly and fully debated by the American people.

With these facts in mind I would like to bring to the attention of my colleagues a very enlightening editorial written by David Brickman, editor-publisher of the Malden Evening News and the Medford Daily Mercury, two of the outstanding newspapers in my Eighth Congressional District. The editorial entitled, "Question of Fitness" deserves careful study not only by the Members of Congress but by all Americans who are endeavoring to reach a just and fair decision on a most difficult matter. I am confident that the American people will analyze all sides of this issue both impartially and as factually as possible. It is for this reason that I submit this editorial for the RECORD.

THE QUESTION OF FITNESS

A quick poll around the country shows that the second Eisenhower illness may have devastating effects upon his candidacy. The trend of opinion is that the President has tried to do too much since he announced his candidacy.

The majority of persons polled felt that he can't stand another 4 years in the White House. The optimistic reports from the bedside are received with thankfulness, but without political enthusiasm.

A considerable number of people feel that Len Hall and the Republican hierarchy are too aggressive. Despite the expert and folksy treatment by Jim Hagerty of the bedside bulletins, a lot of people feel that the politicians are pushing the President too hard.

No one at the opinion level could be found who felt that the President could do a good job in the next 4 years after his two illnesses. How this will be translated into votes come November, is, of course, another story. Here are some of the quotes from people polled:

"He is in no shape to run again."

"Those Republicans would run him stuffed."

"A man of his age with two close calls within a year should take to the sidelines."

"It is cruel to make him run."

"He might be better than ever as they are saying in Washington, but what if he isn't?"

"Everybody is sorry for the poor guy, but the country comes first."

The Republican high command can possibly overcome this present disadvantage by good luck and a burst of inspired showmanship along in October. Roosevelt campaigned through rain and sleet to give the Nation the assurance of his robustness. It is entirely possible that Ike, after a summer of rest, can dramatically appear before the television cameras, tanned and rested, and will sweep misgivings aside. There is no question that the Republican Party has the experts in public psychology to think out the problems of such a presentation.

It will take a lot of convincing that the President has enough stamina left to carry on the duties of his office. The average person is natively shrewd about health and disability. While Ike has a vast reservoir of good will to draw upon, many people at this stage will hesitate to vote for him. And the more the drums are beaten, the less they will believe. Ike has one enormous advantage, which few men have. He looks young and fit, no matter what. He has a wide, youthful face and the close-cropped look of a boxer. Most men of his age look worn and old before the cameras. If he does not hesitate in his decision to run, he can very well sell the country on his fitness.

But it would be a shame, and a disgrace upon our political system, if efforts to have him carry on resulted in further damage to his health.

Comments on the Poznan Revolt

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. GORDON. Mr. Speaker, I ask unanimous consent to insert in the RECORD, releases made by the Polish National Democratic Committee, in two instances; one comments on the Poznan revolt, and the other, on the events in Poznan.

The alarming and heartbreaking news of the uprising of the Polish workers in Poznan against their Communist oppressors and the gruesome massacre that followed, serves notice on the free world what is happening to Poland, our faithful ally in World War II.

The releases follow:

COMMENTS ON THE POZNAN REVOLT

(By Mr. Stanislaw Mikolajczyk, former Prime Minister of Poland and chairman of the Polish National Democratic Committee)

Once again in the history of Poland, Polish blood has been spilled on the Freedom Square in Poznan. Demonstrating against the Communist dictatorship demanding the release of political prisoners, and crying for bread, the people of Poznan received bullets from the Soviet-controlled security police which killed many innocent people. This revolt shows the unbearable situation created by the Communist oppression, economic exploitation as well as miserable living conditions under the Soviet colonial rule in Poland.

The province of Poznan has always been known for the high standard of its agriculture and large surplus of agricultural products.

The industry of Poznan has been outstanding in the construction of railroad cars and equipment, agricultural and industrial machinery, and in the rubber manufactory. Today, under the Communist rule and Soviet exploitation the railroad passenger cars built in Poznan are shipped to Soviet Russia and China while the workers are underpaid and undernourished.

The collectivization drive in agriculture which has increased in the recent months brought about a great scarcity of food.

Out of 100,000 political prisoners and 300,000 inmates of forced-labor camps in Poland only 26,000 were released under the recent so-called amnesty.

It is therefore not surprising that the people of Poznan went to the historic Freedom Square where the headquarters of the Polish Communist Party and security police are located—the prison being situated on the nearby Mlynska Street—to demand freedom and bread. They were answered with bullets and their innocent blood was spilled.

The Communists say that there was a foreign inspiration behind the revolt. This is nonsense. Today the people in Poland know very well that every premature uprising would bring only a disaster. But the recent political developments have created a special atmosphere.

The Poznan workers have never been Marxist. They have always been very patriotic and very industrious. From the beginning of trade unionism they have always been very well organized in the trade unions. In June 1946 when I returned to Poland they participated in a huge mass anti-Communist demonstration on the same Freedom Square. Later they frequently tried to show their dissatisfaction with political and economic

conditions by organized strikes. But in the end they were suppressed by the brutal force of the police and the Red Army stationed in Poznan.

Recently, the Communists started a false propaganda of more freedom and of right of the people to express their desires.

Nobody needed to destalinize Stalin in Poland, because the Poles know best the murders of Stalin and his collaborators, who today condemn him.

The struggle for power among the followers and collaborators of Stalin, Soviet Russia's economic and international difficulties influenced also the events inside the Communist Party in Poland.

Bierut, the closest collaborator of Stalin, has returned to Warsaw from the last Communist congress in Moscow, but in a coffin. Berman was dismissed because his reports were responsible for Stalin's dissolution of the Polish Communist Party in 1938 and murder of many Polish Communist leaders. Rokossowski and Zawadzki—both Stalin's and Beria's pupils could not succeed Bierut. The cruel and generally hated Ochab chosen by Chruszczew in Warsaw as the new Secretary of the Polish Communist Party is seeking Moscow's help by accusing whole Communist Party groups of disobedience.

The prestige of the Communist Party of Poland has always been low, because of its repeated betrayals of Poland—in 1920 during the Polish-Bolshevik war, in 1932 by the agreement with the German Communists and in 1939 after Molotov-Ribbentrop agreement.

Certainly, the struggle inside the Communist Party and its propaganda of so-called Polish way to socialism and of more freedom influenced the attitude of the Poznan people, who were encouraged by these events and tried to show their feelings. The bloody answer which they received shows how much value have the false Communist promises and propaganda.

Only full freedom and democracy based on the will of the people expressed in free elections under the United Nations supervision can bring a good solution.

The blood of the inocent people in Poznan will not be forgotten by the whole Polish Nation and specially it will not be forgotten by the workers and peasants in all parts of Poland who, praying for the dead, will increasingly oppose the so-called Lenin's principle of the October Revolution aiming to establish communism by all possible methods—parliamentary control, subversion, revolution, or war.

NOTE: In 1918 there was also a revolt in Poznan. It was against the German occupation. In fact, it is known as the only victorious uprising in the Polish history. It coincided with the arrival there of Ignace Paderewski from the United States of America at the end of the World War I. He stayed then in the Hotel Bazar on the same Freedom Square. After this uprising the square was named Freedom Square. This fact lies deeply in the hearts of the Poznan people. The Poznan workers also took a very active part in the uprising of 1918.

THE POLISH NATIONAL DEMOCRATIC COMMITTEE ON THE EVENTS IN POZNAN

The executive board of the Polish National Democratic Committee held in Washington on June 29, 1956, an extraordinary meeting which discussed the situation in Poland in connection with the recent events in Poznan. At this meeting the following resolution was adopted unanimously:

"Deeply shocked with the news of the events which took place in Poznan on June 28, 1956, we pay our homage to the victims of the Communist terror and express our deepest sympathy to their families.

"In spite of the tragedy of these events this blood was not spilled in vain. None of the Poles in Poland or abroad will forget this innocently spilled blood. It will speed up the liberation of Poland.

"We expose the propaganda trick of the Warsaw government which, having brought the Polish population to misery and despair, (Cyrankiewicz himself had to admit it after the events) tries to transfer the responsibility for Poznan events to the alleged 'provocation of the foreign agents' or to the activities of the 'reactionary underground.'

"These reactions of the Communist regime on the Poznan events show in the proper light the whole perfidy of its attitude toward the workingman and shows the falsehood of the policy of liberalization of the system of government, which is being publicly declared by the official representatives of the Warsaw Communist government and the Communist Party.

"The threat of the severe reprisals against the demonstrators proves that the Communist regime, in the same way as during the Stalin era, recognizes only the force of terror and police oppression.

"This confirms the conviction entertained in the public opinion of the West that, in spite of the boisterous promises, nothing has been recently changed in the political and social situation in Poland.

"The announced reprisals will not, however, change the real situation in Poland, but their execution will only exceedingly increase the responsibility of the present rulers of Poland, adding to the long chain of their crimes the new bloody perpetrations.

"Keeping in mind the system of provocation, used by the Communist regimes during the difficult for them periods of time, we appeal to our countrymen in Poland asking them to remain calm and collected and to preserved proper self-control and judgment.

"In view of the recently undertaken, with the aid of the diversion in exile, efforts to weaken the spirit of the nation and to undermine its faith in the West, we wish to assure our countrymen in Poland that the attitude of the governmental circles of the West as well as of the wide public opinion proves irrefutably that the case of Poland neither was nor can be forgotten by the free world."

At the same time the executive board of the Polish National Democratic Committee decided to send to the President of the United States, the Prime Minister of Great Britain, and the Chairman of the Security Council, the following telegrams:

The President of the United States, Dwight D. Eisenhower: "We send you our heartiest thanks for the moral support, given in the yesterday's statement of the United States Department of State, to the Polish people in these days of trial for Poland.

"At the time when the Polish people, instead of enjoying freedom based on free and unfettered elections, are being murdered by the Soviet controlled military units of the so-called Polish security police on the streets of Poznan and are exposed to the ruthless revenge of the Communist dictatorship, we beg you to bring the Polish case to the Security Council of the United Nations, in view of the wartime pledges given to the Polish people jointly by the United States, Great Britain, and the Soviet Union."

The Right Honorable Sir Anthony Eden, Prime Minister of the United Kingdom: "At the time when the Polish people, instead of enjoying freedom based on free and unfettered elections, are being murdered by the Soviet controlled military units of the so-called Polish security police on the streets of Poznan and are exposed to the ruthless revenge of the Communist dictatorship, we beg you to bring the Polish case to the Security Council of the United Nations, in view of the wartime pledges given to the Polish people jointly by the United States, Great Britain, and the Soviet Union."

Chairman of the Security Council of the United Nations, New York: "The events in Poznan, where the oppressed and exploited people, misled by the recent false Communist propaganda of more freedom, while trying to express their desires and demands for bread and freedom are being murdered by the Soviet controlled military units of the so-called Polish security police and exposed to the ruthless revenge of the Communist dictatorship, prove once more that not only all the provisions of the Charter of the United Nations are being violated but also the peace and security of the world are endangered.

"We beg you therefore to put the case of Poland as well as the case of other captive peoples of Central Eastern Europe on the agenda of the Security Council of the United Nations."

All the telegrams were signed by: Stanislaw Mikolajczyk, former Prime Minister of the Wartime Polish Government, chairman of the Polish National Democratic Committee; and by Karol Popiel, former Minister of the Wartime Polish Government, chairman of the executive board of the Polish National Democratic Committee.

Straightening Out the Facts

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 3, 1956

Mr. PRICE. Mr. Speaker, it is refreshing to have a newspaper clarify historic facts that recently have been distorted for political purposes during the necessary discussion of the illness of the Nation's President.

All of us wish the President full recovery and a happy tour of duty the remainder of his term. All of us recognize that in politics, distortions sometimes creep in. It is well, however, to try to keep the record clear. It is my thought that the following editorial from the St. Louis Post-Dispatch serves this purpose:

AS TO ILL PRESIDENTS

A good deal of bad history about the illnesses of Presidents is being circulated these days. Some newspaper readers are being told, for example, that Franklin D. Roosevelt was a dying man when he ran for reelection in 1944, but that a conspiracy of silence kept this fact from the people.

Mr. Roosevelt died of a cerebral hemorrhage. No evidence whatever has been produced to support the view that this affliction or any anticipatory illness had been either detected or concealed at the time of the election.

It was obvious to everybody in the fall of 1944 that the President was a desperately tired man. So were many men in other war jobs who, like their Commander in Chief, nevertheless had a national duty to perform. But it is unnecessary to create a Roosevelt myth in order to approve heartily of the Eisenhower administration's stated policy of giving the public detailed information on the President's illness.

The public did not get such information on Woodrow Wilson, when he was lying virtually disabled by paralysis for weeks toward the end of his term. Nor was there much reliable news about the illness that struck down President Harding in midsummer, 1923, and soon thereafter took his life.

This was at the very time when the scandals of the Harding administration were breaking around its amiable and easy-going

chief. The first postwar Republican President, he went to Alaska in the hope of getting relief from the betrayals of trust only to have the troubles follow him by telegram. En route to California, he became ill reportedly of ptomaine poisoning. In San Francisco his doctors said he was suffering from utter exhaustion. He was seized with bronchopneumonia and grew worse. Allan Nevins, writing the article on the unfortunate President in the Dictionary of American Biography, says cautiously, "the cause of his death was stated to be embolism."

Anyone who goes back to the newspaper files of the time will find that people were pretty much in the dark as to the true condition of their President and what had brought it on.

Tito and Aid From America

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Evening Star, Washington, D. C., of June 20, 1956:

TITO AND AID FROM AMERICA—YOGOSLAVIA LISTED AS SIDING WITH REDS AGAINST UNITED STATES ON MAJOR U. N. ISSUES

(By Constantine Brown)

Marshal Broz—Tito—will be allowed to continue his present game of playing both ends against the middle unless Congress firmly calls a halt.

Tito's statement in Moscow that there will be mere consultation and cooperation between the Soviet and Yugoslav Communist Parties—as if they were two distinct entities—was the result of the dictator's information that if he did not go entirely overboard there would be no drastic cuts in America's support.

Secretary Dulles provided Senators of both parties last week with a brief explaining the administration's policies. He pointed out that the State Department was vigorously opposed to Senate bill 4001 which seeks to cut off all United States assistance to Yugoslavia. The basic thought behind the policies expressed by the State Department can be summed up in these very Christian words: "Be kind to your enemies."

Dulles explained at length the well-known fact that the U. S. S. R. now sits astride the middle of the European Continent and has stifled the sovereignty of a number of once-independent countries in Eastern Europe. Then he went on to say: "Yugoslavia has had both the opportunity and the steadfastness to stake its virtual existence as an independent state on a defiance of Moscow's ambitions to dominate it." This is, of course, a defendant lawyer's argument. Tito was dazed when Stalin kicked him unexpectedly out of the Cominform in 1948. He would have sunk long ago if the American Government had not come immediately to his rescue. This assistance enabled him to adopt a cocky attitude toward his personal enemies, Stalin and Molotov, and survive.

But Tito and his Government have never shown any real gratitude to the United States for saving him and his regime. In all major international matters before the United Nations in which Yugoslavia had a chance to repay our generosity she sided with the anti-Western bloc.

Dulles' briefing paper reaches a conclusion which many Senators describe as strange when he explains the reasons for Tito's visit to Moscow. The Secretary admits, of course, that the Yugoslav regime is a Communist one. "It is understandable," he then adds, "that its leaders now look hopefully to the Kremlin to rescue the U. S. S. R. and the worldwide reputation of communism from the disrepute to which the totalitarian system perfected by Stalin brought it. In that sense, the United States cannot overlook the tendencies in Yugoslavia toward a rapprochement with the Soviet Union, induced both by ideology and the memories of long Communist Party collaboration prior to 1948."

The Secretary of State or those who prepared this remarkable policy paper seem to have forgotten their history. Yugoslavia—not Tito and his cohorts who were raised in Moscow and educated by the MVD long before the outbreak of World War II—got into the Kremlin camp officially only in 1944. Hence, the assistance and support from Moscow—which includes the organization of the present Yugoslav secret police—lasted only about 4 years. Tito and Yugoslavia have received America's unstinting military and economic aid amounting to well over $1 billion for twice as long a time.

Before Tito was designated as the leader of his nation by the Big Three at Teheran at Stalin's request the Communists were regarded as subversive criminals by the Serbian, Croatian, Slovene, Montenegran, and Dalmatian people who form the Yugoslav commonwealth. Even today, if the reports from western observers are accurate, the bulk of these people are kept in subjection to communism by Tito's secret police. There are grave doubts that he and his associates would last long if the Yugoslavs had even a small degree of freedom. These top-secret facts were not given to Congres lest they upset the applecart and provide ammunition for the sponsors of Senate bill 4001.

The Secretary of State points out that Yugoslavia is still economically weak and requires much help from abroad. "She cannot pass up," he says, "the relatively generous offers of trade and credits from the Soviet orbit." All the same we must bear in mind, according to the State Department policy paper, that the Yugoslav Government's policies "are being made in Belgrade and not in Moscow."

Dulles admits that "many of these decisions in the foreign policy field do not correspond to our own." But the salient feature is that "there is no credible evidence that President Tito wishes or is going to enter into a subserveint status vis-a-vis the Soviet Union."

Dulles concludes with his expressed concern that unless military and economic assistance continue to be given to Tito, "dire economic necessity" may force him to turn toward Russia once more. The Yugoslav portion of the present mutual securtiy legislation is designed "to contribute toward preventing that situation from arising."

Democrats Have a Fighting Order for Mankind

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. PRICE. Mr. Speaker, the following are excerpts from a speech in Miami, Fla., May 26, 1956, by Adlai E. Stevenson, former Governor of Illinois, who is seeking the Democratic nomination for President of the United States:

In answer to a question as to what he believed to be the heart of Democratic belief, Adlai E. Stevenson replied:

"I'm a Democrat—and mighty proud of it, incidentally. My father and grandfather before me were Democrats. I often think how much it is a measure of my political prejudice that this inheritance always seems to me a good enough reason for being a Democrat but not a good enough reason for being a Republican.

"But there is a lot more to it than this. I am a Democrat because I believe deeply in what the Democratic Party stands for, and has stood for for almost a century and a half. We sometimes forget that while other political parties have come and gone, we who are Democrats today are members of the party of Thomas Jefferson and Andrew Jackson. And this isn't just history. It is part of the answer to your question. Because the reason we have become the party of centuries now is because we do have a central belief—and time has proved its soundness.

"I can't put it in one word—although if I had to that one word would be 'people.'

"I find the heart of this belief in 3 statements you'll find in the history of the Democratic Party—2 of them, incidentally, by Democrats from the South.

"It was Jefferson who said, 132 years ago, that 'Men * * * are naturally divided into two parties; those who fear and distrust the people, and wish to draw all powers from them into the hands of the higher classes, and those who identify themselves with the people, have confidence in them as the most honest and safe * * * depository of the public interests.'

"Almost a century later, Woodrow Wilson said this: 'You will notice that whenever the United States forgets its fighting ardor for mankind it is necessary that a Democrat should be elected President.'

"And, just last month in Washington, a great Democrat of today, Senator HERBERT LEHMAN, of New York, spoke of what he called 'the passion for the full right of freedom.'

"Here, I think, are the seeds at least of the answer to your question. What is at the heart of democratic policy and principle and faith and belief? Well, we identify ourselves with people, and have confidence in them; we have a fighting ardor for mankind; and we have a passion for the full right of freedom.

"And these aren't just words. It seems to me they offer clear and firm guidance to the most immediate and current problems we face today—yes, and to most of the issues in this election.

"The present administration went into office proclaiming itself a businessman's Government. The President's Cabinet and most of the agencies of Government have been filled with representatives of a single interest. I spoke in Fort Lauderdale last night of the policy of this administration not even to tell the rest of us, the people of this country, the truth about what is going on in our Government and particularly in the handling of the issue of peace and war in the world. I say, with Thomas Jefferson, that this is wrong; that the Government of this democracy cannot be one that distrusts the people and draws all powers from them into the hands of one class; that Government in America must identify itself with people, have confidence in them, recognize all people—and no single group—as the only safe guardians of the public interest.

"We are prosperous today as a Nation. Yet in these last 3½ years the administration in Washington has done nothing—or at least nothing substantial—about the human uses to which most of us want at least some part of this prosperity to be put.

"We want better schools, more teachers, the hospitals we need, removal of the slums

and the urban blight that breeds juvenile delinquency. We want to keep the family farm as an essential part of our society. But these are basically human rather than business concerns—and this administration is utterly lacking, it seems to me, in what Woodrow Wilson called a 'fighting ardor for mankind.'

"We want a program to make our older age a time of meaning, of dignity, of opportunity—but this administration opposes even the modest proposals we have made to bring the Social Security Act up to date. And when unemployment threatens—as it does today in some of the industrial centers of the North, particularly the automobile and farm equipment centers—the President's assistant says, as Mr. Pyle did this week, only that 'the right to suffer is one of the joys of a free economy.'

"We Democrats do have a 'fighting ardor for mankind'—and what this means to us is using the fruits of our prosperity in this land of plenty, in this age of abundance, not to give tax cuts to large corporations but to give us the things we want as people. Yes, and it means a program of dealing with the peoples of Asia and Africa and the Middle East in the realization that it is not war or military pacts that will defeat communism there but a program rather that shows those people too that our ardor for mankind extends to all people.

"Yes; and we Democrats have a passion for the full right of freedom. That's why we spoke out so strongly against the political attacks by Senator McCARTHY and Vice President NIXON on the Bill of Rights. That's why we have championed the idea of free trade unions and free collective bargaining. That's why we have felt so strongly and have been so critical about the failure of the present administration in Washington to recognize that in the Middle East this past year not just one little nation, Israel, but the whole idea of freedom was being threatened by cynical aggravation of old tensions.

"We don't just believe in freedom as an ideal; we've got a passion, as Senator LEHMAN puts it, for full freedom—that means what it's supposed to mean in people's everyday lives—here at home, yes and in the whole world, for liberty knows no boundary lines, and tyranny won't stop at any border.

"Well, you asked me for an answer to a question; and I've made a speech. But you asked me really what I believe in—and this is it, and I believe in it so deeply that I wanted to say it. I'm only sorry there isn't time to spell it out more fully in terms of all the issues we face today.

"And now, because our time is up, and because this brings us almost to the close of this Florida Presidential primary campaign, I want to say, too: Thank you, to you who are delegates, endorsing my candicacy, in next Tuesday's election; thank you, to all of you here in Florida who have worked so selflessly and so faithfully in my behalf; and thank you all for listening tonight, I hope you will vote next Tuesday—not for me or for anyone as an individual, but for what we believe in so strongly.

"Goodnight and God bless you."

Robbery at Hells Canyon

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Daily News of June 28, 1956:

ROBBERY AT HELLS CANYON

The proposed Hells Canyon steal from the taxpayers (including you), previously discussed in this space, is now a longish way toward being committed.

Bills requiring the Federal Government to build a big power dam in that remote Northwestern spot (see map) have cleared the Senate and House Interior Committees in the last few days, and Congress should be voting on them before long.

Meanwhile, a private outfit—the Idaho Power Co.—is already at work on three smaller Snake River dams, under license from the Federal Power Commission.

These dams, if completed, will produce almost as much power as would the one big Federal dam. They will also produce some $10 million a year in taxes and they will be financed by private investors.

If the Government builds the one big dam, the $508 million cost of it will be got up by taxpayers all over the country. That works out to about $76 million from New York State, $19 million from New Jersey, and $10 million from Connecticut.

The Federal dam would pay no taxes. Any deficits it might run up would be charged to the general taxpayer. All this, so that a few people out in Idaho and Oregon could have more and cheaper electric power.

Why any lawmaker from any other part of the country should go for this steal from any but political motives, we can't see. Certainly we hope no New York, New Jersey, or Connecticut Senator or Representative will vote to have his or her constituents bilked in this fashion.

Criticism of Eisenhower Foreign Aid Program

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Time for Shift," which appeared in the July 1, 1956, issue of the East St. Louis (Ill.) Journal:

TIME FOR SHIFT

Of all the criticisms of the Eisenhower foreign-aid program, the one made this week by Publisher John Cowles is probably the most significant. Mr. Cowles, president of the Minneapolis Star and Tribune, is an Eisenhower Republican with a deep interest in international affairs, especially Asian-American relations. He knows the subject he is criticizing, and he has no political ambitions.

He is critical of the administration's foreign-aid program because it still stresses military assistance, almost to the exclusion of economic help. "Only a tiny trickle of the funds of the International Cooperation Administration," said Mr. Cowles in a statement published widely throughout the country this week, "is going to the economic development of such presently uncommitted nations as India, Indonesia, and Burma." He also said:

"What worries me far more than the remote possibility of Russia's launching a surprize attack on us in the near future is the grave possibility that the Communists may be able in the next 5 or 10 years, without open war but through propaganda and economic and political pressures, progressively to absorb into the Communist orbit most of the presently neutral or uncommitted nations. If that should happen the free world would be in dire peril."

There are three principal reasons why the Eisenhower administration has failed to shift its foreign-aid emphasis from military to economic assistance:

1. The belief of many persons in the administration, most notably Secretary of State Dulles, that the changes in the Soviet Union since Stalin's death are only surface differences and that the Soviet threat remains basically a military one.

2. The difficulty both the Eisenhower and Truman administrations has had in getting Congress to approve economic assistance funds and the consequent feeling in the executive branch that the battle for economic funds is not worth the meager victory that will at best be the result.

3. The apparent ability of the Eisenhower administration to shift its bureaucratic gears quickly enough to deal with new situations such as Moscow's obvious attempts to woo neutral nations with rubels rather than rumbles.

However, the difficulties in the way of persuading Congress that economic aid, not military assistance, holds the balance of power in the world today should not deter the administration from trying. The fact is that President Eisenhower is relying on the Truman administration's foreign aid concepts, which were valid 6 years ago when North Korean troops were swarming over the 38th parallel but are hardly valid today when Soviet Foreign Minister Shepilov, every bit as gracious as a 19th century British foreign secretary, is moving from one middle eastern capital to another, with talk of economic assistance on his lips and rubles in his pockets.

President Eisenhower indicated his awareness of the foreign assistance problems when he told a news conference early in May that the administration was conducting its own study of aid policies. Another Presidential commission is expected to be the result. In the last 2 weeks both the Senate Foreign Relations and House Foreign Affairs Committees have voted funds to conduct searching inquiries into foreign aid problems.

These studies are all to the good. The Soviet Union has got the jump on the United States, but all is not lost yet.

Nine years ago at this time a Presidential commission, a special congressional committee and a citizens committee were being organized to look into the feasibility of the suggestion made by then Secretary of State Marshall that the United States help Europe. The remarkably successful Marshall plan was approved by Congress less than a year after General Marshall's speech. The present criticisms of the foreign aid program and the plans to study the whole matter could lead to a program as important to Asia and Africa as the Marshall plan was to Western Europe.

But if such a program is to be drawn up, and is to succeed, the endeavor will need the vigorous leadership of President Eisenhower, the kind of enthusiastic backing which former President Truman gave to the Marshall plan idea.

Civil Rights Legislation

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, several weeks ago I signed a

discharge petition on H. R. 627, the bill seeking to assure and protect the civil rights of all American citizens. This bill has been favorably reported by the House Judiciary Committee and is pending before the Rules Committee.

It was to assure the Members of the House the opportunity to vote on this vitally important bill, that I signed the petition which now lies on the Speaker's desk.

I say "vitally important" in a very real sense. "Vital" because it affects the very life of the Nation; vital because it carries to the highest functional level, the very life of a free and democratic Nation. To carry this word just one step further: I am here as a Member, devoted to the ideals of America, vitalized by Abraham Lincoln.

It is profoundly significant to me that while Lincoln had the support of one party in his fight to assert and protect the civil rights of all the people, President Eisenhower has the support of members of both parties. I want to than those members of our Judiciary Committee who laid aside party partisan politics and harkened to the appeal of President Eisenhower and reported out the proposed Civil Rights Act of 1956. This bipartisan, thoroughly American attitude is shown in the very first section of the bill which provides for a bipartisan Commission on Civil Rights; truly bipartisan and not merely nominally so. For of the 6 members, not more than 3 may be members of the same party.

The appreciation of the deep meaning of the word "inequality" is wisely recognized. Inequality may assert itself in many ways. Basic, of course, is the right to vote. For there can be no equality unless the free exercise of the right to vote is carefully and continuously safeguarded. Hence, the proposed act would specially protect every citizen's right to vote. But this bill recognizes "inequality" as something which can be reflected in conditions which affect the rights of free citizens. This bill would authorize the Commission "to study and collect information concerning economic, social and legal developments constituting a denial of equal protection of the laws under the Constitution." It further expressly recognizes the gravity of "unwarranted economic pressures" which may be imposed on citizens because of "their color, race, religion, or national origin." This thought, these words, make a deep impression on me. I come from New England. In our very early history our boundaries enclosed men who would abuse our fellow men because of creed—when those who would impose such penalties had themselves come to this land to assure them the right to worship God as they chose. But long before my State, Massachusetts, led in helping found our Nation, we wiped out the denials of freedom of worship. When political slavery was the issue, so magnificently did Massachusetts point the way that Daniel Webster held us up as an example in his famous "Massachusetts, There She Stands." In our early history we led in wiping out the laws which imposed cruel punishments arising from economic inequalities. We wiped out the laws for imprisonment for debt. We pioneered in the enactment of child labor laws. We removed property holding requirements as a qualifying condition for voting.

But, today social and economic pressures assert themselves in a far more complex manner. As the great Lincoln said our Nation cannot be half free, half slave. So, today we realize that our Nation cannot be half free economically and socially and half degraded. Poverty, disease, antisocial conduct of all sorts know no State boundaries. Physical and social ills of one part of the country may and often do, become a problem of grave concern to all of us. Lincoln had the vision to recognize this fact and so it is that today as I plead for action on the proposed Civil Rights Act, I plead for a modern adaptation of the great plea of Lincoln. Today there is no threat of a break from our national unity. But there is a threat to our national spiritual unity if we forget the responsibility of all of us to assure equal protection under the laws for each of us.

I am happy that President Eisenhower has taken such a sound and firm position in assuring all people in all of the States that the resources of the Federal Government shall be used for the protection of each and all. I would close this appeal by telling the House of an incident which occurred shortly after President Eisenhower's inauguration.

It was on February 12 at the Lincoln Memorial here in Washington where annually the Military Order of the Loyal Legion holds its exercises in commemoration of Lincoln and in rededication to the principles which he served. These exercises were conducted under the leadership of our beloved civic leader, Gen. U. S. Grant III. For the first time in many years, the President of the United States personally went up those steps to lay the wreath which his aid carried. As President Eisenhower stood there before this statue, in a moment of prayerful, silent devotion, his eyes welled with tears. He looked at Lincoln and bowed his head; he placed the wreath and again seemed to dedicate himself to the spirit of Lincoln with profound feeling. From that moment on, President Eisenhower has proved his sincerity and his devotion to Lincoln's devotion to the freedom of all men.

It is in this spirit that I plead that an opportunity be given to the House Members to vote on the proposed Civil Rights Act.

The Preservation and Protection of Precious Documents of Our Historic Past

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. DODD. Mr. Speaker, today I have introduced a bill establishing a commission, similar in form and content to the Hoover Commission, for the purpose of making a critical revaluation of all documents in the possession of the Government. In the 180 years since the founding of our Nation there has been no adequate program developed for the preservation and protection of precious documents of our historic past.

While it is true that the Declaration of Independence is preserved for the ages under glass, there are other documents of almost equal value that are not. The establishment of a commission charged with the task of determining what documents are of historic significance and making recommendations as to their preservation and display, could make a valuable contribution to generations of Americans to come.

The Fourth of July is more than just a pleasant summer holiday to thoughtful Americans. It is a time to pause briefly, forgetting the cares of the day, and reflect on the courage and wisdom of the men who forged America's freedom from tyranny. It is easy to take our heritage of freedom lightly and to forget that men, not unlike ourselves, were inspired to boldly proclaim the practical idealism upon which our Nation was founded. It was a new departure in the philosophy of Government, and for the first time set forth the principle that the State is the servant of man, not his master.

The Nation was born of strife and suffering and the universal urge of mankind for freedom. Our early struggle for independence is documented by the letters and papers, both public and private, of the colonial leaders who had the courage and the spirit to fight for freedom. It is clearly the duty of Congress to take an active interest in these documents and to make sure that they are not allowed to deteriorate.

George Mason, the outstanding patriot from nearby Fairfax County, Va., is the author of what later became the Bill of Rights. The first draft of this precious document, in Mason's handwriting, is the property of the Federal Government and is now in the possession of the Library of Congress. While the Mason papers constitute an important segment of Revolutionary documents, absolutely nothing is done to preserve them, or to make them available to the public in the form of reprints. This is by no means an indication of neglect in the care of these papers. They are well guarded against the possibility of theft or malicious mutilation, but are vulnerable to the attrition of time. In a recent issue of the American Bar Association Journal, Mr. R. Carter Pittman, an authority on Mason, states:

> The original (Mason's Bill of Rights) in Mason's handwriting now lies unrecognized, unhonored and unsung among the Mason papers in the Library of Congress. It too is forgotten history.

Yet this first draft of our Bill of Rights eventually became living law.

My bill will establish a commission to be known as the Commission on Historical Documents that will conduct a comprehensive review of historical documents in the possession of the United States relating to the formative years of our country. It will be the duty of this Commission to determine, after objective evaluation, whether a docu-

ment is of such historical importance that it should be preserved for future generations. There can be little doubt that hitherto neglected portions of America's past will come to light by the establishment of such a Commission. Generations of Americans to come will profit by gaining an accurate, contemporary view of the genesis of our country.

The Commission will be composed of seven members, chosen to insure a balanced representation among individuals equipped to undertake such an evaluation. The Commission members will be:

First. The Archivist of the United States.

Second. The Librarian of Congress.

Third. One Member of the Senate appointed by the President of the Senate.

Fourth. One Member of the House of Representatives appointed by the Speaker of the House of Representatives.

Fifth. Three members from private life appointed by the President of the United States.

I feel certain the creation of such a Commission would make an invaluable contribution to a better and more widespread understanding of the principles upon which our Nation was founded.

Survey of Current Business

EXTENSION OF REMARKS
OF

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 3, 1956

Mr. DIXON. Mr. Speaker, the June 1956 issue of the Survey of Current Business contains a short article entitled "Concerns in Business and Their Turnover." The article makes these major points:

First. In 1955, the 60,000 increase in the number of operating businesses was slightly in excess of the long-term growth trend.

Second. More new businesses were started last year than in any other year since 1948.

Third. Fewer firms discontinued business last year than in either 1954 or 1953.

Most of the new firms started in 1955 represent small businesses, as well as do the bulk of all our business firms. These facts clearly indicate that the owners of small businesses, therefore, have participated in the economic prosperity which has prevailed under the Eisenhower Republican administration.

The article follows:

CONCERNS IN BUSINESS AND THEIR TURNOVER

The number of business concerns in operation in the United States was 4¼ million at the beginning of 1956, having expanded during 1955 under the impetus of the general advance in economic activity which characterized that year. The increase during 1955 of more than 60,000 concerns was larger than in any other year since 1948, which marked the end of a period of rapid postwar growth after the reduction caused by wartime conditions.

Except for minor seasonal variations, the business population as a whole was at a virtual standstill during 1953 and 1954, a period which witnessed some decline in business and profits from the second quarter 1953 peak. In 1955, the growth in the number of operating businesses was slightly in excess of the long-term growth trend. The increase in the number of operating concerns in 1955 resulted from both a rise in the number of new firms started and a decrease in the number of business discontinuances.

Last year's rise in concerns in business was reflected in each of the major industry divisions except manufacturing, which continued to dip slightly. Manufacturing was the only major division in which the number of operating concerns increased throughout the World War II period. This division also shared in the rapid rise in the earlier postwar years.

Contract construction again last year showed the largest relative increase in operating concerns—6½ percent. The construction division dipped and rose much more sharply than any other major part of the business population in response to war and reconversion influences. This division currently contains nearly 3⅓ times the number of concerns operating in December 1943; the latter period marks the low point since 1935 in the total number of concerns in business. The more stable trade and service divisions gained about 1 percent each last year and now contain about 1½ times as many firms as in 1943.

BUSINESS STARTS UP, CLOSURES DOWN

During 1955, some 374,000 new firms were established, about 311,000 businesses discontinued operations, and 321,000 going concerns were purchased or otherwise acquired by new owners. More new businesses were started last year than in any other year since 1948, when new firms numbered 393,000. Fewer firms discontinued business last year than in either 1954 or 1953; except for these 2 years, however, discontinuances were more numerous last year than in any other since the 337,000 closures in the wartime year 1943.

The number of businesses newly established in 1955 was 12 percent higher than in the previous year and 10 percent higher than in 1953 while the number of concerns discontinued was below the same years by about half these percentages.

This pattern was repeated in each of the major industries except services where both new and discontinued businesses increased in number from 1954 to 1955. The increase in the number of new service firms, 10 percent, was much greater than the 1½-percent increase in discontinued firms.

Business transfers in 1955 were little different from 1954, but 10 percent below 1953. About two-thirds of all firms involved in transfers of ownership are classified in retail trade while this division contains about three-fifths of the operating concerns.

Number of firms in operation, selected dates 1940–55, and number of new, discontinued and transferred businesses, 1953–55 [1]

Labor Rackets

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of July 3, 1956:

SIX INDICTED HERE IN LABOR RACKETS—HOGAN SAYS THOSE ACCUSED OF EXTORTION ARE OR WERE TEAMSTER OFFICIALS

(By Jack Roth)

District Attorney Frank S. Hogan took another step yesterday in his crackdown on labor racketeers. He announced the indictment of six present or former officials of a local of the International Brotherhood of Teamsters.

And, once again, looming in the background of extortion, conspiracy, and the shakedowns of small businesses, were the figures of John Dioguardi, known as Johnny Dio, and Anthony (Tony Ducks) Corallo, who have been described by Mr. Hogan as the two "most powerful underworld figures in the field of labor."

The six men indicted for shaking down small businesses are now or have been officials of local 875 of the Teamsters Union, a local established in the spring of 1954, according to Mr. Hogan, "principally for the purposes of extortion and under the control of Corallo."

Although the indictments named 13 concerns as having been shaken down, Mr. Hogan said as many as 85 small businesses might have been victimized.

NEW LOCAL FORMED

Mr. Hogan explained that local 875 was the successor to local 512 of the International Association of Cleaning and Dye House Workers Union, AFL. Mr. Hogan said that local 512 was headed by Samuel Zackman, who served as a lieutenant of Johnny Dio when Zackman headed local 102 of the old United Auto Workers, AFL., a Dio-dominated local.

When Zackman and his secretary-treasurer were convicted in 1953 of conspiracy and extortion, local 512 disappeared and a charter was obtained for local 875. Those applying for the charter said they wanted to crusade for the teamsters "honestly and fearlessly." Actually, Mr. Hogan said, the local became the instrument for extortion.

The prosecutor said that, although local 875 would pretend to negotiate with employers, this was just a "sham to cloak the criminal activities" of the union's officers.

Mr. Hogan outlined the method by which the local's officials would shake down businessmen. He said the heads of small-business concerns were approached and threatened with picket lines if they did not sign with local 875, which the prosecutor called a "catch-all union."

Fees were extracted from these small-business men whether they did or did not sign up. In many cases a concern's employees were not even aware their employer had signed a contract with a local, Mr. Hogan said.

According to assistant District Attorneys James J. Fitzpatrick and Vincent Ferrara, the local's officials put forth "elastic price tags" as the price for labor peace and avoidance of picket lines. Demands for $5,000 were settled for $1,500. Demands for $500 were settled for $100 or less.

Mr. Hogan said that although the known extortions amounted to between $6,000 and $7,000, he was sure the figure would be much higher when the "complete picture of these six" was known.

Three of the local's former officers are now officials with another teamsters local—275—said by Mr. Hogan to be "another local under the thumb of Corallo."

Dio was indicted on June 19 for conspiracy and bribery in connection with a plot to exact $30,000 in bribes from an electroplating company as the price for labor peace.

After Dio's indictment the International Brotherhood of Teamsters announced plans to review the charters issued to 7 controversial new locals in this city, 6 of which were originally set up by Dio.

Thomas L. Hickey, international vice president of the teamsters, said yesterday a special investigation would be conducted into the affairs of Locals 275 and 875.

Mr. Hogan said that in recent cases of labor racketeering the names of Dio and Corallo seemed to be continually cropping up, indicating a network.

Those indicted yesterday were:

Jack Berger, 37 years old, of 398 Rockaway Parkway, Queens, president of Local 875.

Nathan Carmel, 39, of 73-51 260th Street, Bellerose, Queens, vice president of the local.

Aaron Kleinman, 33, of 44 Howard Street, Freeport, L. I., secretary-treasurer of the local.

Milton Levine, 40, of 814 St. Ouen Street, the Bronx, former organizer of 875 and now president of Local 275.

Samuel Zebofsky, 39, of 189 East 34th Street, Brooklyn, and Jack Priore of 167 Montauk Avenue, Brooklyn, both former organizers for Local 875, now doing the same work for Local 275.

Highway Legislation

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. FALLON. Mr. Speaker, as chairman of the subcommittee on roads, it was my privilege to introduce H. R. 10660, national highway legislation passed by this Congress. This legislation became a reality when President Eisenhower recently signed the measure. It is now known as Public Law 627, 84th Congress, the Highway Act of 1956.

Mr. Speaker, in my opinion, the new Highway Act is an excellent one. It is essentially the bill introduced by me in January and passed by the House by a vote of 388 to 19. I am particularly gratified that the House formula for allocation of funds on the National System of Interstate and Defense Highways was retained for the vital final 10 years of the 13-year program. This will guarantee that each State will receive exactly the amount of money it needs, no more and no less, to complete its section of the Interstate System during the life of the program. This is, I believe, the most important section of the act.

Nothing in my career as a member of the House of Representatives has given me the satisfaction that I have experienced from playing my part in the creation and forwarding of this truly great legislation. Not only will every person in the United States benefit from it, but its favorable impact on our economy already is felt. My colleagues in the House and their counterparts in the Senate I know must feel as I do that the act which we have produced was worth every minute of the many months of effort that went into it.

Under leave to extend my remarks in the RECORD, I wish to include a statement by the Bureau of Public Roads, listing benefits expected under the new Highway Act. I think the statement will be of interest to every citizen and car owner of the Nation.

BUREAU OF PUBLIC ROADS LISTS BENEFITS EXPECTED FROM NEW HIGHWAY PROGRAM

FEWER TRAFFIC JAMS

About 80 percent of our citizens drive to work. Considering only the Interstate System, this network will get millions of people out of daily traffic jams as they go to and from the job. How tomorrow's freeways will speed the flow of traffic can be seen on such busy routes as the Hollywood Freeway near Los Angeles, where 290,760 vehicles were counted on its busiest day—the average is 172,000 daily. On Chicago's Lake Shore Drive near Aldine Street, 142,503 vehicles have been counted in a single day. A highway bridge which takes U. S. Route 1 from Washington, D. C., has carried 117,333 vehicles in 24 hours.

BIGGER, LESS-TIRING VACATION TRIPS

To the vast majority of American families, thoughts of a vacation include the family car. Vacationing families must ration both time and distance carefully. When the Interstate System is completed to modern standards, vacation plans will range much further than they do today. Expressways will let motorists lay out daily mileages on a 60-miles-an-hour basis, and those longer runs will take much less out of drivers and passengers alike.

INCREASED SAFETY

Last year the death toll on our streets and highways reached 38,300. About 1,350,000 people were injured, including more than 100,000 persons who were left with permanent physical impairments. Dollarwise, the National Safety Council estimates the annual loss from traffic accidents at nearly $5 billion.

In 1955, on all rural highways, nationwide, trere were 8.4 fatalities per 100 million vehicle-miles, in contrast with 3.2 for the representative rural freeways for which the Bureau of Public Roads has data. The Automotive Safety Foundation has estimated that modernization of the Interstate System will save 3,500 lives a year.

MORE JOBS IN HIGHWAY CONSTRUCTION

Jobs in highway construction will increase as the new program gets under way. In 1955 contractors employed nearly 240,000 persons and it is estimated that each increase of $1 billion in the value of highway construction over the 1955 level will require at least 70,000 additional employees.

The highway construction industry, which has been operating at less than 50 percent of capacity, will step up its operations to near-capacity levels when the program reaches its peak in 1963–64.

MORE JOBS IN SUPPORTING INDUSTRIES

The demand for earth-moving and other road-building machinery will keep manufacturers of such equipment busy for the next 10 or 15 years.

At the end of 1954, the production capacity of the cement industry was 294 million barrels per year. Plans now under way indicate that this will be increased to about 400 million barrels sometime in 1959. Now that an enlarged highway program is assured, such plans for future expansion may be carried out even sooner.

In 1955 the aggregates industries produced 821 million tons of crushed stone, sand and gravel, and slag. Over 400 million tons of this total were used in highway construction. The new highway program will give a sustained lift to production and productive capacity in this widespread industry.

United States total consumption of bituminous materials in 1955 came to about 18.6 million tons. Highway construction used about 6 million tons. It is obvious that a greatly enlarged highway program will provide a much bigger market for petroleum asphalt and other bituminous materials.

Many segments of the steel industry will benefit from an expanded highway program. In 1955 highway construction consumed over 800,000 tons of structural shapes and piling, about 700,000 tons of reinforcing bars, and over 110,000 tons of welded wire fabric. Traffic signs, corrugated pipe, guard rail, and many other items used in road construction and maintenance also require steel.

COMMUNITY DEVELOPMENT

The indirect impact of expressways on industry and communities is illustrated by recent investigation of Route 128 in the Boston metropolitan area, the New York Thruway and some California studies.

Among the recently completed new plants on Route 128 is that of a publishing plant costing $3,500,000. Under construction is a shoe machinery corporation in Waltham, costing half a million dollars, which will employ 300 persons. It is estimated that the cost of plants which have been started or finished exceeds $100 million. Land that sold for $50 or $100 an acre before Route 128 was built now commands $5,000 to $10,000 an acre.

Although the New York Thruway is not yet completed nor has it been opened to traffic for very long, it is conservatively estimated that already more than $150 million worth of new industrial plants have been erected adjacent to it. These plants are estimated to employ 30,000 persons with an annual payroll in excess of $100 million. Typical examples range from a $4 million television assembly plant at Batavia in western New York to a $30 million shipping center at Yonkers.

In California, a new section of the Eastshore Freeway has stimulated a spectacular growth of industry in the Oakland metropolitan area of Alameda County. The particular area investigated, served by the freeway, constituted only 9 percent of the total industrial area in Alameda County, yet it accounted for 43 percent of the dollars invested in new industries, 30 percent of the number of new industries, and 38 percent of the dollars invested in industrial expansion.

Similar results can be expected nationwide as the highway program is carried out, but these changes will not come overnight. They will develop section by section. Cross-country travel entirely by expressways will not be possible until the Interstate System is nearly completed. So far, only the general locations of the network are fixed. Detailed locations, especially in and around cities, will be proposed by the States for approval by the Bureau of Public Roads and will be acted upon one by one.

MORE FUNDS FOR OTHER HIGHWAYS

Apart from funds for the Interstate System, the 1956 act adds $125 million to the apportionment for other Federal-aid highways—primary, secondary and urban. It also authorizes $850 million for 1958 and $875 million for 1959.

In addition, the assumption by the Federal Government of 90 percent of the cost of constructing the Interstate System will leave many States with more funds to spend on other road systems, including farm-to-market roads.

Having So Little, They Dared So Much

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. OSTERTAG. Mr. Speaker, as we celebrate Independence Day this year, let us take thought of its true significance. Beyond the baseball games and picnics, beyond the parades and the rhetoric, beyond this wonderful, bounteous land which is America today, let us pause to remember the courage, the devotion, and the dedication of the men who signed the Declaration of Independence, pledging to its realization their lives, their fortunes, and their sacred honor.

The issues and the stakes have seldom been better or more succinctly stated than in the following column by A. B. Genung from the June 30 issue of the Rochester Times Union, which, under leave to extend my remarks, I include in the RECORD:

THE PATRIOTS OF 1776: DARED MUCH WITH LITTLE

(By A. B. Genung)

Four days hence we shall remind ourselves and our children, I hope, of the greatest event in our history.

The Fourth of July didn't originate in baseball games and picnics.

Many people think that the United States never was in greater jeopardy than right now, when we are faced across the oceans by a colossal military power bent on conquest. But there was a time when this land faced greater odds and lived.

In that grim day, 180 years ago, our forefathers had to make a choice. That choice was whether to fight for their freedom or submit to a despot. They choose to fight.

Read your history all the way back to Babylon. You will find few times when men, having so little, dared so much as did those American patriots of 1776.

The Revolution was already more than a year old when our grandsires determined to make themselves completely independent of England. So drastic a step had not been in their minds at all when the trouble began. They merely were resisting intolerable acts of the British King.

George III, master of Europe's finest army and navy, was not one to wink at treason. He had put 12,000 disciplined, well-equipped troops ashore here, backed them up with a powerful fleet, and then began to tighten the noose about his revolting American subjects.

On our side there was no army, no navy, no money, no munitions of war, not even a central government. It was, indeed, a brash little David challenging the Goliath of Europe.

But the Colonies had some assets. They had leaders. Some of the world's greatest leaders. They had devoted patriots. They had the fertile land. Above all, they had courage.

Every person who raised a voice against King George knew he would be branded a traitor. Every man who signed the Declaration of Independence knew it could be his death warrant. They laid their lives and their property unhesitatingly in the scales for liberty.

That epic fight for liberty was won by men prepared to pay the price, no matter how high. For they knew what life was under a despot.

Next Wednesday let us take at least one good look about the world and let it remind us what our heritage is worth, and what it cost.

Let the games and picnics pause for just one moment while we ask Heaven to make us worthy descendants of free men.

Administrative Levy Against Warm Springs Indians Reduced

EXTENSION OF REMARKS
OF
HON. EARL CHUDOFF
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. CHUDOFF. Mr. Speaker, in November 1955 the Public Works and Resources Subcommittee of the House Government Operations Committee and the Legislative Oversight Subcommittee of the Senate Interior and Insular Affairs Committee jointly held 3 weeks of hearings in northern California, Oregon, and Washington. We were looking into Federal timber policies as carried out by the Forest Service, the Bureau of Land Management and the Bureau of Indian Affairs.

In the course of the hearings, on November 21, 1955, representatives of the Indians of the Warm Springs Reservation in Oregon told the committee that they were being seriously overcharged by the Bureau of Indian Affairs for administrative expenses in connection with the sale of their timber. Under the Bureau's regulations, 10 percent of the income from the sale of Indian timber was being deducted from the amount paid to the Indians to cover the costs of administering the sales. This 10 percent went into the Federal Treasury.

The Indians' representative pointed out that since 1950, the amount deducted has exceeded the actual administrative expenses incurred by the Indian Bureau on the Warm Springs Reservation. In 1955 the Indians were overcharged by over $40,000. In 1956 the overcharge was expected to reach $60,000.

The members of the two subcommittees were quite concerned about the situation. We asked the Bureau of Indian Affairs for a report on the matter. On February 22, 1956, the Bureau supplied figures indicating that between 1951 and the end of 1955, the Warm Springs Indians had been overcharged in excess of $100,000, although if the figures were carried back to 1943 the overcharge was only about $14,000, since between 1943 and 1951 administrative expenses exceeded the deductions.

The subcommittee members made clear their view that the Indian Bureau should reduce the levy against the Warm Springs Indians before the overcharges reach even more serious proportions.

I am very happy to be able to inform the Congress that on June 22, 1956, the Commission of Indian Affairs announced that effective July 1, 1956, the administrative charge against the Warm Springs

Reservation timber would be reduced from 10 percent to 7 percent. I trust that the Bureau will watch the Warm Springs situation closely and make further adjustments promptly if they are warranted.

I am sure that all members of the two subcommittees are gratified that our hearings did work out to help the Warm Springs Indians.

In fact, the Warm Springs overcharge was just a small facet of our many days of hearings. We expect to present to Congress soon a comprehensive report on our studies. I hope the report will prove useful to Congress and to the Federal agencies in meeting some of the difficult problems which they face.

Education of the North Proceeds

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. GRANT. Mr. Speaker, much has been printed in the northern press about racial conditions in the South. I believe that those interested in fair play and the truth will read with interest the recent editorial in the Richmond Times Dispatch that I have the privilege of inserting in the CONGRESSIONAL RECORD:

EDUCATION OF THE NORTH PROCEEDS

Education of the North in the ways of the South proceeds apace. Among the latest to be awakened to the facts of life in the field of race relations here below are James Wechsler, editor of the liberal New York Post, and Ted Poston, his celebrated Negro reporter.

Wechsler sent Poston to Montgomery to spend a couple of weeks studying and writing about conditions in the capital of Alabama, in connection with the prolonged bus boycott there. Editor Wechsler instructed reporter Poston to call him daily by long distance so Wechsler would know that his colored reporter hadn't been murdered or lynched.

Poston himself revealed this, after he had been in Montgomery for about a week, and had found himself hospitably received on every hand, according to an article in Editor & Publisher, of New York.

Grover C. Hall, Jr., the enterprising editor of the Montgomery Advertiser, is quoted there as saying that he opened his files to the visiting Negro reporter from Gotham, "offered him the services of a staff photographer, and promised to make appointments for him with local 'biggies.'" Furthermore, "City Editor Joe Azbell was assigned to him as guide and chauffeur, just as he had been to other reporters before Poston, and he was off to tour the town."

Editor and Publisher then goes on to say:

"By sundown Poston had been offered and had taken his pick of all the typewriters in the newsroom. He chose one between two women reporters and adjoining the city editor's desk * * * Poston likes fun and laughter, and he hit it off fine with both editor and news staff. After a few days he became bewildered at the absence of race tension in Montgomery."

It was then that Poston revealed to the Montgomery Advertiser staff that he had been told when he left New York to phone his office daily and give proof that mayhem had not been committed upon him. He even revealed that so far from being strung up to a lamppost he had got lost one night in Montgomery and had been "led three blocks to a telephone by two white children."

Here, then, is one more impressive example of the opening of northern eyes to conditions in the South. The stereotyped picture of lantern-jawed southern bigots, drooling tobacco juice and bent on mob action, which seems to have been accepted so widely in the North, is slowly giving way, it would seem, to something approaching reality. Even the New York Post must now be aware that the people of Montgomery and the atmosphere there are far, far different from the caricatures painted in many segments of the northern press.

Secretary Wilson and the Unwanted $1 Billion

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. HOSMER. Mr. Speaker, a man could not count 1 billion dollar bills in a lifetime. Yet following 60 minutes' discussion on a certain conference report last week, this body disposed of not one but many billions of dollars. The course of the measure, the Defense Department appropriations bill, was not unattended by storms, however.

As a consequence, one rather perspicacious observer was moved to paint a word picture of us as others see us at such times. The piece appeared in the Long Beach Independent newspaper and was written by Mr. Larry Collins, Sr.:

WILSON "PHONY" ISSUE

Senators and Congressmen are not always the amiable individuals they appear when in their home districts seeking votes. When they are in Washington they often become prima donnas and assume dignities which do not fit their characters. It is natural because in Washington they are almost completely surrounded by public officeholders and lobbyists. All these people are seeking something from Congress so they flatter the elected officials who can give them beneficial treatment. It takes a strong character to remain modest and understanding under such flattery and in such an atmosphere.

It seems, to this writer, that the tirades against Secretary of Defense Wilson are an example of this attitude by Senators. We certainly agree that Secretary Wilson is not a good politician in that he says things no politician would say. But Wilson is a blunt, successful businessman who came up through industry from the bottom. He reached the highest industrial level in the world as head of General Motors.

When he was asked to take over the branch of government calling for great understanding of mechanical developments as well as direction of our entire defense program, he accepted. To do so he had to sell all his General Motors holdings. Those holdings have increased $2 million since he sold them. In addition he had to pay a large capital gains tax when he sold them. He took those losses because he felt it his duty, because it was a challenge to his ability and because he felt he had enough money anyhow.

Now he is under attack by a group of Senators because he was not diplomatic in referring to those among them who seek to ADD to the spending program under Wilson's direction. We capitalize ADD because it is rarely that any department of Government tells Congress to give it less money. But Wilson referred to the issue as a "phony" when in a discussion with reporters. He did not use the careful words of a politician but rather the common language of workmen or ordinary people who refer to an issue as a phony when they are convinced it is not being presented on a sincere basis.

The issue is not the words Wilson used in discussing it but rather if he is correct in saying we do not need more money for our Air Force. The Democratic Senators who are making a great issue of this have done so only since the start of the campaign. The Defense Department says we have enough money to build all the planes we need to meet any Russian threat. That department under Wilson has more information on the subject than any other source in this Nation. He is under President Eisenhower who knows how to evaluate our military strength. It therefore seems like a petty exhibition of opportunism for Senators to become so eloquent and insulated because Wilson lets slip that he thinks it a "phony" issue. The Senators certainly can find more serious issues to take up their time.

Physician, Heal Thyself

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. REES of Kansas. Mr. Speaker, under permission approved by the House, I am including a sermon delivered at the National Presbyterian Church in Washington, D. C., by the well-known and outstanding minister, Dr. Louis H. Evans. I commend this sermon for your reading:

PHYSICIAN, HEAL THYSELF

And He said to them, "Doubtless you will quote to me this proverb, 'Physician, heal yourself; what we have heard you did at Capernaum, do here also in your own country.'" (Luke 4: 23.)

That was a fair challenge: "We expect you to do here only what you were supposed to have done in another land. If you cannot do it in your own country, how do you expect us to believe it can be done elsewhere?" This is the attitude of mind which we also meet on every hand today, just as Christ met it in Nazareth.

What, more than anything else, does America symbolize for you? What is your concept of her mission? In what way can she give her greatest service to God and man?

Do you think of her as a great giant, limbed with power, standing like a mighty colossus astride the continents and seas—a Nation armed to the teeth for military warfare?

Is America a gigantic factory with its humming machinery, its whirring wheels, its citizens madly burning incense to the goddess Production?

Is America a great family hearthside, where its people find safety, peace, and plenty?

Or is America, to you, a good Samaritan, stooping over a weak and bleeding world;

making humanity healthier and happier, using its strength in helping to bear the infirmities of the weak?

Possibly America is all these things—military colossus, gigantic factory, peaceful family—but surely its whole development, from its Christian founding to its present position of leadership among the nations—evolves almost inevitably into a clear picture of its mission: to serve mankind with its strength and love.

Can we achieve this objective as a Nation? Surely we can—but not without help.

The Apostle Paul was fortunate in having with him on many of his travels a very close friend whose name was Luke. In the fourth chapter of Paul's second letter to Timothy he wrote, rather pathetically, "Demas * * * has gone to Thessalonica * * * Alexander the coppersmith did me great harm * * * Luke alone is with me. * * * But the Lord stood by me." In trying hours, Paul had two loyalties upon which he could depend: the Lord and Luke, the physician—his God and his friend.

That trio is sufficient for any need. Give a man—or a country—God and a friend, and he can see anything through.

Is it possible for America to aid God in this classic combination; as physician and friend, to bring healing to man in body, mind and soul? Can America be friend and physician to a stricken world in this Pauline day? For this is certainly a Pauline world.

In II Corinthians, 11: 23, Paul describes his own difficulties: "In labors more abundant"—and what a parallel this verse strikes today. This is an age of workshops and toil, of men sweating to rebuild their cities from the rubble of war. It is a day of labor battalions.

"In death oft"—and how often death seems to strike. One writer estimated that in the first 30 years of the 20th century, more people died of war and other violence, of pestilence and famine, than in the previous 800 years.

"In perils by the heathen"—certainly we are threatened by paganism and the heathenism of communism's great atheistic forces, which surround us and sometimes infiltrate us.

"Thrice was I beaten with rods"—the backs of men were never so scarred as by the rods of the dictators, or their souls so bloody with man's brutality to man.

"Thrice was I shipwrecked." We see governments, ideologies, movements of all kinds suffering shipwreck all along the shores of times. Perhaps no other century has recorded the wreckage of so many would be utopias and broken dreams as the one to which we belong.

"In perils by mine own countrymen"—treason in one's own land. Subversives, spies, counterspies, informers, seem to abound these days; it is difficult for man to have faith in his fellows.

"Once was I stoned." The rocks of abuse today are hurled by tyrants and false accusers until men are dizzy and bewildered under their bludgeonings.

"In perils of robbers." There are exorbitant taxes the world around. Eight hundred thousand Arabs have been robbed of their homes. Thieves, singly and in whole armies, steal everything from men's earnings to entire art galleries and church treasurers.

"Bring my cloak." This was a colloquial way of saying, "they have taken my shirt." Paul had nothing left.

"But," he said, "Luke is with me * * * and the Lord stood by me." Can we be Luke, the physician and friend, to an ailing world?

If America is to do this, certain things must prepare the way. Primarily, we must recognize that the spiritual need of the world is very real. The cries of men's hearts today are largely spiritual cries. We have passed from an age dominated purely by reason and science to a day of the religious, the spiritual, and a very real desire for the mystical and personal experience. If we are to meet the needs of the world, we must change our techniques from those of material accomplishment, and the emphasis must be more on spiritual service to mankind. This is the area in which America can offer its greatest gift to the world—in the field of the spiritual.

Secondly, we must meet the challenge first given so long ago in Nazareth: "Physician, heal thyself." Paul said he feared "lest preaching to others, I myself should become a castaway." It is not unusual for the cobbler's children to go without soles on their shoes. Eli, the high priest of Israel, who helped many men, failed to help his own sons; they died in rebellion against God.

America herself is sick—spiritually sick. There are 10,000 communities in this country without a regular minister or church of their own—without a single fort in the spiritual wilderness wherein they may protect their souls. There are 27 million boys and girls in America without religious education. That is spiritual malnutrition—starving for the vitamins of God.

We have chastized other nations for war crimes—but who is there to chastize us? The nation that wins a war is in a more dangerous spiritual position than the nation that loses it. The defeated nation is likely to cry out in humility, "God, why were we defeated? Name our sins; cure us; have mercy upon us." But the conquerors are likely to conceive of themselves as being God's darlings, as being worthy of victory in every phase of their endeavor.

While other nations are punished, who will punish us for our sins? If we merely cry out against the faults of other nations and do not confess and cure our own, we may find ourselves in the position of the woman who was asked, "Why did you fire your maid?"; to which she replied, indignantly, "Well, I caught her stealing my Waldorf-Astoria towels."

It is not enough for America to spend her spiritual power in fighting the sins of other nations; she must first use it to cooperate with God in erasing her own. Such a preliminary cleanup is essential to the success of her mission.

I never knew a physician to go into the operating room without "scrubbing up" beforehand. If America is to assist Christ, the Great Physician, in operating upon the soul of the world and in helping to cure its ills, then America must "scrub up" first.

Some time ago I said to President Eisenhower, "Mr. President, I doubt if any man ever came to the presidential office with more hopes and prayers behind him than you." He replied, "Thank you, Dr. Evans. I believe what we need now is not so much political genius as inner integrity. May God give it to all of us."

It is something like this on which we must take hold. America must cry, "Create in me a clean heart, O God, and renew a right spirit within me." Then we will be on our way.

A great obligation confronts us regarding the spiritual as well as the physical health of our commonwealth children. In Puerto Rico there are approximately 600 people per square mile—that is 10 times as many as in the State of Texas. Until a short time ago, one-third of the people of Puerto Rico lived in some of the worst slums in the world. Now, thank God, we are beginning to mend the situation, but for a long time it did not seem that we cared.

Cuba has been a free country since 1935, and yet, more or less, has continued to lean upon us spiritually. Nearly two-thirds of the religious education of the island is now in our spiritual charge—yet one-tenth of the people there are without any adequate religious instruction.

On one of our western reservations, fewer than six Indians are not addicted to the peyote drug. Alaska has two pressing problems. The first is tuberculosis, the death rate for which is 14 times greater than the rate for the States proper. The second problem is alcoholism. Many of the natives of Alaska spend 3 months of the year fishing, and the remaining 9 months in idleness. Much of this idle time is spent in poolrooms and bars. One ship flying the American flag that entered an Alaskan harbor had whisky as four-fifths of its cargo.

The world is watching America to see whether or not the principles of brotherhood are working here. While in the African jungle with my two sons a few years ago, a native chief said to me, "Dr. Evans, don't bother wasting money on sending missionaries over here to preach the Fatherhood of God if you cannot live the brotherhood of man at home. After all, if you do not love the minority at home, you cannot pretend you love the majority here." I shall never forget that. Africa is watching to see how America treats the black man within her own borders.

The Chinese Communists are suggesting that their people examine the way 28,000 orientals are treated in San Francisco. Our love for the rest of the oriental races will be judged by the way we treat these people in our own country.

This sort of challenge is both subtle and forceful. America, you must heal yourself of the disease of race prejudice.

Again, if America is to aid in ministering to the world spiritually, she must see to it that the spirit captains her technology. We must remember that "out of the heart are the issued of life." This is quite a definite change from some 25 years ago, when the technologist was hailed as our messiah. If we worshiped at all, then, we did so in the laboratory; the smell of chemicals was our incense; the table of valences and mathematical charts were our creeds. We were admonished to "learn all the science we can and have confidence in ourselves, and that will be the only religion a man under 40 years of age will need." We learned all the science we could, and had great confidence in ourselves—and now look at us.

Fortunately, the scientists are now becoming in a sense our spiritual evangelists. Whenever I visit a university I nearly always have a meeting or informal talk with its men of science, and usually it is not very long before one or more of them will get into a sort of sermon on the absolute necessity of our souls catching up with our brains in this material age.

For quite a while our goddess was production. Businessmen in America spent more time before breakfast studying the market reports than they did in reading their Bibles; what they had was becoming far more important to them than what they were.

We are of course thankful for our ability to produce things, but this, after all, simply adds to our spiritual problems. We were grateful for the invention of the cotton gin, but out of this came industrial slavery and many of the problems of labor. We were proud of our production and assembly lines, but with them came endless tenements, and dead-end kids. Millions of people rushed into the cities to answer the call of the factories for production, and gave rise to tremendous problems of secularism. Many a working man said, "Religion is like shoe polish; women and children like it, but it doesn't mean much to a man in boots," and most men wore boots.

Many things can happen to the souls of men, and of their children, in great metropolitan industrial areas. One of our national missions workers reports that in the McKim Community House in Baltimore, a Sunday-school teacher said, "The scope of our opportunity can be judged by the fact that in my teen-age Sunday school class, 2 of the girls have been prostitutes, 3 boys are

on parole from training schools, and 2 others are on probation from juvenile court."

It is not enough that our factories turn out good machines and wares; our Nation must turn out good men and women. We are reminded by our urban religious and industrial leaders alike that we must keep God in the city, and the church on the busy metropolitan corner. As never before we need churches and community houses in our great industrial areas, and the workers in them to touch the soul of labor. We need still more workers to go into the residential districts, the suburbs and the rural areas. Dr. Marshall Scott said, "The future of our church in the next generation depends largely on how effectively we minister to the wage earners in this generation." This is certainly a considerable part of our problem.

One of the things of which we must beware is the comfort of a false optimism, something we might define as the opiate of relativity. This is a dangerous drug; it is a coverup, not a cure for anything. By opiate of relativity I mean the putting of ourselves at ease and imagining the disease is cured, simply by comparing our own yesterdays with our own today.

This danger is particularly great in the field of evangelism. The Presbyterian denomination, a few years ago, was very gratified to discover that as a result of the new live movement of our church the years 1948 and 1949 showed the largest increase in church membership of any 2 years in our history. Also, while the population of the United States has increased 22 percent in the last 20 years, the membership of all churches has increased 44 percent.

This might give us some reason for elation, although it is not the recognized, organized churches that have made the largest of these gains. The sects and cults seemed to have greatly out-passioned us. We must remember, however, that despite these seemingly impressive figures there are more people outside the church, numerically speaking, in America right now, than ever before in our history—even though, percentagewise, a larger number are members of a church.

It is comforting—if only to a degree—that while some years ago it required 28 people a whole year to win one other person to the Kingdom of Christ, it now takes only 20 members to do the same. As I say, that is a somewhat encouraging thing—until we compare ourselves with other movements. One Communist sets himself up as a cell, and singlehandedly wins 25 to his cause—but it takes 20 Christians to win one to the Kingdom of God. You see, here again we are being out-passioned.

By thus comparing the figures of 1 year with those of another, we dream happily under the opiate of relativity, but by comparing ourselve in the same way with the gains of other movements, we see immediately the actual anemia of our efforts.

It has been said that "as long as there remains a gap between what you are and what you aspire to be, you have to press forward. When you cease to advance, you begin to fall back." We may paraphrase this somewhat by saying that as long as there remains a gap between what we aspire to and what the Communists aspire to, we must press forward or be pushed back.

The same thing can be applied in the realm of America's stewardship. This, too, can be a matter of relativity. A few years ago our Board of National Missions registered a 25 percent increase in 1 year's giving as against a 17 percent increase the year before. But when we think of what others—less blessed—do, our progress, relatively, does not seem so vital. In 1 desperate year the people in the West Indies were told our church budget would have to be cut. These poverty-stricken people increased their giving 10 percent. In poor Puerto Rico they increased their giving 26 percent; in Cuba, 37 percent; in the Dominican Republic, 66 percent. In comparison with this, our own "increase" looked pale.

There was a period when the per capita giving in our denomination increased from $39 to $50 per year. This seems startling—but $50 is a tithe of only $500, and our average individual yearly income is certainly more than that. It has been said that the Indians of the Northwest are more impressed by the Mormon system of giving than by the Presbyterian system of asking. In the early days, the Israelites gave to God 10 percent of all they had, and sometimes in the special years of heave and jubilee offerings they gave as much as 30 percent. America is giving less than 2 percent to God.

Statistics, of course, can be frightening enough, but this story frightened me more: A man was standing on a street corner when he was approached by another man, who asked him for some money for a meal. The first man said, "I won't give you money, because I don't know how you would spend it, but I will buy you a meal. Come with me." The second man said, "No; I'm busy and you're busy. Just give me the money, and I'll go my way and you go yours." The first man said, "No, come with me and I'll buy you the meal." After some hesitancy, the beggar went with him, and they ate together. The second man ate avidly; evidently he was half-starved. At the conclusion of the meal the first man said, "Tell me—what were you going to do with that money? You weren't going to spend it on food, were you?" The second man replied, "No, I was not. I'll tell you what I was going to do with it. You have been kind to me, and I'll be honest with you. You see, I'm a Communist. Two blocks down the street we have a printshop. We have type all set up, but we couldn't get paper because we ran out of money. Three of my comrades and I vowed we'd go without eating for 4 days and use the money for our meals to buy paper. We have to get the message out."

Did you hear that? "We have to get the message out!" Have any of my listeners gone without a meal, for one day, in order to "get the message out?" Mussolini was able to bring the women of Italy to such a state of enthusiasm for a new Roman Empire that they stripped the rings from their fingers and the jewels from their necks, and gave them to him for war. How long a time has it been since any woman of the church has done this for the Kingdom Cause?

That is the difficulty; these other movements both "out-passion" and "out-purse" us. Let us remember that any given moment in history, that moment belongs to the passionate and to the dedicated. Sometimes too few of us are either one.

Am I pessimistic? God forbid! An intern once came to his superior and said, "I am sick of human nature; I am fed up with odors and diseases and putrefaction and death. I am so sick of humanity I could destroy it. What do you do, doctor, to keep going?" The older physician replied, "Young man, I always look at humanity from a curative standpoint—there is something we can do about."

No, I am not a pessimist; I am an optimist—because I look at humanity from the curative standpoint, also; there is something we can do about it. Christ is here and He can use us. While others may shout in despair, "See what this world has come to!" you and I can cry out in faith, "See Who has come to this world!"

More people than ever before are now coming to the church—the doctor's office. It is our opportunity to make the prescription clear, and this is no time for stammering. We have the cure for the world's ills, and it is up to us to apply it. We must not be daunted by the world's fears and frustrations; we must have but one fear now, and that is the fear of failing God. John Foster Dulles reminded us that "Faith is as contagious as fear." Let us not forget this.

Let us remember also that while we might not know what tomorrow holds, we do know who holds tomorrow! This is the basis of our faith.

Let us pray: O God, bless America, and use her. May this world see her bending over it like a good Samaritan. May we be feared by all who do evil, and loved by all who do good—but above all, may we be loved. Teach us, in turn, how to love, for if we do not learn this, Thou wilt take the leadership from us and give it to a nation that will love.

Enable us, then, to keep our place in Thy heart, and in the hearts of men, through Christ, our Lord. Amen.

School Encumbrance

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 3, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, in the Washington Post of July 3, 1956, there appeared the following thoughtful editorial:

SCHOOL ENCUMBRANCE

The school construction bill, now under debate in the House, is expected to encounter one of its crucial tests today when an effort is made to saddle it with the Powell rider. This rider, sponsored by Representative A. C. POWELL, of New York, is an effort to mount desegregation on the program of Federal aid to education. We believe that desegregation must be accomplished with all deliberate speed in conformity with the Supreme Court's mandate. And we believe that Federal aid is necessary to bring about an urgently needed revitalization of the country's public school systems. Nevertheless, there are two compelling considerations which, in our judgment, make a coupling of these aims in a single piece of legislation altogether undesirable. First, there is a pragmatic consideration. The plain fact of the matter is that an anti-segregation rider will give the school-aid bill more weight than it can successfully carry. This rider evokes two forms of bitter opposition to the bill. It invokes opposition from all those who believe that desegregation should not be hurried and from those who insist that Federal aid means Federal intervention in the management of school affairs. If the Powell rider should be adopted by the House, it would be met by a filibuster in the Senate. And it is improbable that the Senate leadership would have the toughness to break that filibuster. Thus neither education nor integration would be advanced.

But beyond this pragmatic consideration, there is, we are convinced, a strong case to be made against the Powell rider on grounds of principle. The Supreme Court wisely decided that the change which is commanded in the pattern of the public schools should be made at a pace in conformity with local needs and circumstances—swiftly where feasible, more slowly where the adjustment would be more difficult. Moreover, the Court provided—again, most wisely, we think—that compliance with its mandate should be judged by Federal district courts familiar with local situations. To make the allocation of Federal funds in aid of education contingent upon a finding of compliance by the Commissioner of Education would be to transfer

judgment from the judicial branch to the executive branch of Government. Thus the Powell rider would serve to thwart rather than to support the Supreme Court.

It is a fact that four States have openly defied the Supreme Court, and it goes deeply against the grain to give them money from the National Treasury which they may use to further that defiance. Nevertheless, it would be the part of wisdom, we believe, to give them the fullest opportunity voluntarily to accept a change which the rest of the Nation is embracing and, if they continue to refuse, to let them stand alone and isolated. Patience will enlist on the side of law and order and progress many who would be alienated by peremptoriness. Aid to education uncomplicated by any irrelevant encumbrances is an immediate imperative. It ought to be adopted by Congress—by itself and on its own merits—for the sake alike of the schools, of civil rights and of national unity.

Federal Giveaway Pays Off in Federal Income

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith a very interesting editorial by Jim MacLean in the Oregon City Enterprise Courier regarding the tidelands legislation:

FEDERAL GIVEAWAY PAYS OFF IN FEDERAL INCOME

Whenever somebody gives away something you can rest assured it isn't just "for free." We've often wondered whether philanthropists were really behind giveaway programs, or that ax grinders were hiding their real motives under the spurious smile of "with the compliments of the house, if you please." What brings this to mind is the bitterest of issues with respect to the control of the United States tidelands which featured so prominently in the 1952 presidential campaign.

One of the first steps taken by the Congress was to pass legislation giving the States control of tidelands out to the historic State boundaries. The Federal Government was given control of the waters beyond these boundaries. The hope was that this dual system of State-Federal control would provide maximum development of these vast oil reserves. Yet, many critics labeled the Tidelands Act a Federal giveaway.

Those who took this viewpoint might be interested in recent figures issued by the Interior Department and compiled by Business Week for June 2. In the 1947–52 period, when the Federal Government claimed sole control over the tidelands, it received less than $10 million in payments. Companies couldn't know whether the States or Federal Government would ultimately control the area, so they stayed out. Since Congress cleared up the confusion in 1953 with the Tidelands Act, the Government has received $260 million for drilling rights.

And this is only a starter. The Government receives a 12½ percent royalty on every barrel of oil produced. As the flow of oil increases—estimated to reach 400,000 barrels a day by 1960—the Government take will fatten proportionately. The inference, of course, is that under the Tidelands Act all of the people of all of the States stand to benefit, whereas under private or State control, only those States possessed of oil-rich tidelands would profit.

The Republic of the Philippines Celebrates Its 10th Anniversary of Independence, July 4, 1956

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. POWELL. Mr. Speaker, I wish to extend sincere felicitations to the people of the Philippines, President Ramon Magsaysay, and His Excellency Carlos P. Romulo, Ambassador of the Philippines, on the occasion of the celebration of the 10th aniversary of independence of the Republic of the Philippines, July 4, 1956.

After 4 centuries of alien rule, the Philippines emerged as the first free and democratic republic in the world after the Second World War. The Philippines is a nation founded on democratic principles. The Constitution and laws of the United States of America were inspiring, decisive factors in the development of political institutions in the Republic.

The unfortunate occupation of the Philippines during the war interrupted its constructive progress toward nationhood. After the war, the Philippines Government was saddled with crushing problems of rehabilitation and reconstruction. Under the energetic leadership of President Magsaysay, the Filipino people have embarked on a concerted effort to achieve peace and prosperity at home as well as security from external dangers. Although the war wrought havoc to the economy, the nation since that time has displayed amazing recuperative powers. The economy is being rapidly modernized and diversified.

As an independent country, the Republic of the Philippines has pursued a course of friendship and understanding among the free nations of the world. The Republic sums up the cornerstones of its policy in dealing with other nations thusly:

First, loyalty to freedom and democracy and therefore against communism; second, adherence to the principles of the United Nations Charter and active participation in United Nations activities; third, espousal of the cause of non-self-governing peoples and protection of minorities; fourth, friendship toward the United States as the foremost and sincere champion of peace and economic well-being; and fifth, closer cultural, political, and social ties with our Asia neighbors.

President Magsaysay's statement on the Asia foreign policy of the Philippines is significant and merits the attention of all freedom-loving people:

The Philippine Government stands for the right of self-determination and independence of all Asian nations; for closer cultural and economic relations and mutual cooperation with freedom loving Asian countries as a group and within the framework of the Charter of the United Nations; and for the proposition that a return to colonialism, of which the last vestiges are now disappearing from Asia, shall not be tolerated in any form.

The colonialism that threatens Asia today is world communism. Nations which have won their freedom from old-style colonialism now face the danger of losing that freedom. A good defense against this threat is a healthy Asian trend to self-determination. We support this kind of nationalism as a rallying point for all free Asians against the forces of aggression and subversions.

The Filipino people can best serve the cause of freedom and democracy by cooperating actively with other Asian peoples in the achievement and maintenance of political independence, economic stability, and social justice. We cannot contribute to that cause if we isolate ourselves from other freedom-loving Asian States and are suspected by them of ulterior motives of insincerity in our relations with them. Our Asian policy must, therefore, seek to remove all causes of distrust.

To achieve our goals, underdeveloped countries in this region need the assistance of the more advanced economies and that each Asian country should be free to decide for itself whether or not it desires such assistance as well as the conditions it believes compatible with its sovereignty and economic objectives.

I salute the Republic of the Philippines as it embarks upon a new year of national life and pray for its people continued progress.

The Secret Place: A Prayer

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. GRANT. Mr. Speaker, the poem The Secret Place: A Prayer was 1 of 2 lyrics selected by the poet laureate of Alabama and awarded honorable mention at the recent Alabama writers' conclave. This poem was written by Dr. P. Dan Hudson, chief medical officer of the Veterans' Administration regional office, Montgomery, Ala. It is fitting that this poem be published in the CONGRESSIONAL RECORD, as July 4, Independence Day, reminds us that in the spirit of our Founding Fathers' faith and fortitude America today is great and strong because America is free. And we are free from want and fear because we pray:

THE SECRET PLACE: A PRAYER

"He that dwelleth in the secret place of the most high shall abide under the shadow of the Almighty." (Psalms 91: 1.)

The woodland path of yellowed leaves winds
through the fronded dark.
The sunlight sprinkles from above, like rain
on weathered bark
Of wayside trees, and sunbeams trace bright
patterns through the glade,
And the silent restful pathway where footsteps seldom strayed.

When burdens cast my spirit low, this quiet
path shares peace:
The sylvan temple's muted aisles give solace
and release.
For I have prayed along the way, and the
secret of the glen
Reveals the Lord's peace and good will,
sketched on the hearts of men.

—*P. Dan Hudson, M. D.*

My War With the Mob

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 3, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include the fifth in a series of articles by Victor Riesel which appeared in the Washington Sunday Star of July 1, 1956, entitled "My War With the Mob":

MY WAR WITH THE MOB—BIG AND SMALL LABOR CRUSADERS PROVE THAT HOODLUMS CAN BE GIVEN THE BOUNCE

(By Victor Riesel)

CHAPTER V

The mob can be fought.

Certainly there will be casualties. Men have been killed and wounded in the rolling war on the rackets. But you really are not forced to decide whether you want to be a live slave or a dead hero. Many have stood up and have survived.

Back in the Murder, Inc. days, the men—and women, too—who fought back outlived Dutch Schultz, Arnold Rothstein, Legs Diamond, Lepke and their "troops." It took just a little courage, such as the hatters union leader, Alex Rose, found in several hundred hat workers one day in the thirties.

The hatters were mad—fighting mad. They had heard that the mob was planning to move in on one of their big shops. Word was that the hoods were under orders to take over physically early the next day.

Mr. Rose, a veteran of Allenby's Near Eastern Army, could have hired thugs and shot it out. Instead, he called together 200 hat workers, men and women. They agreed to march on the threatened shop.

Hoods back down

The next morning they deployed on the sidewalk in front of the factory entrance. When the gun-toting hoods arrived, they found the middle-aged hat workers standing solid showing Ghandi-like passive resistance. There was tough talk from the hoods. But the rank-and-file union members stood steady.

The mobsters had two alternatives. They could have mowed down scores of men and women. Or they could walk back to the fleabag hotels in which they were quartered while awaiting calls for $15-a-day sluggings. They walked away. The hatters have not been bothered since.

The mob never pushes its luck. It never goes in for unprofitable business. When the hatters made it look unprofitable, they left them alone. But this did not stop the union's fight on the mobs. Only a few weeks ago, Mr. Rose persuaded his union's annual convention to call for a "labor FBI," a special agency to "get after racketeering elements in organized labor." Mr. Rose's proposal calls for trained investigators and the establishment of a clearinghouse of anticrime information.

The Hatters Union is one of the smallest in the AFL-CIO. Mr. Rose's colleague, David Dubinsky, leader of the powerful, 450,000-member International Ladies Garment Workers Union, had a far tougher problem.

David and Goliath

The Communists had brought the big-time mobs into the needle trades. By the time Mr. Dubinsky took over the presidency of the ILGWU, the hoods held artillery positions in the industry which only a political atomic bomb could shake loose.

Little David took on the Goliath. Back in 1940, Mr. Dubinsky decided to hit the crime cartel head on. He was the first to introduce an antiracket resolution at an AFL convention. Joe Fay, of the operating engineers, took personal insult, and that evening Fay swung at Mr. Dubinsky in the bar of the Roosevelt Hotel in New Orleans.

Fay did not quite connect, and the two men were soon rolling the length of the long lobby. That night bodyguards paced outside Mr. Dubinsky's room, while the late AFL president, William Green, fretted over all this fuss in public. When Mr. Dubinsky got to the convention floor the next morning, the resolution was as watered down as the third drink in a Burbon Street pub in New Orleans.

But that was only the beginning. Mr. Dubinsky has fought the mobs for years. He was the first to urge Government aid and even laws which might be helpful in beating back the mob. Some years ago I suggested he see Joe Kaitz, one of the top anticrime fighters in the land. They talked. Soon afterwards, Mr. Dubinsky set up his own anticrime unit headed by an investigator suggested by Mr. Kaitz.

Funds untouched

As a result, the hundreds of millions of dollars in the many funds of the International Ladies Garment Workers' Union have been untouched, and seven union employees found guilty of unethical practices were heaved out.

At the recent ILGWU convention, Mr. Dubinsky and AFL-CIO President George Meany lashed out at union men who use their locals and positions to set up or cut into profitable businesses.

Mr. Dubinsky's fight is far from over and he is the first to admit it. But he is fighting back. There are others. There is Joe Curran, leader of the National Maritime Union. There is Paul Hall, of the Seafarers International Union, who has stood up against the mobs of the waterfront and against the narcotics smugglers.

For his trouble the mob sent a killer with a shotgun to track Mr. Hall down. But the police moved in first.

Mr. Curran was the first to threaten to resign from the AFL-CIO's ethical practices committee if it didn't move fast against the mob. In this he was backed by Jack Potofsky, leader of the Men's Clothing Workers Union.

REUTHER FOUGHT BOOKIES

Walter Reuther took on a good-sized mob when he began driving the bookies out of the giant auto plants. This mob fought back. Its take ran as high as $20 million a year in the giant factories.

The auto union worked with the employers by telling members that any rank-and-file duespayer or shop steward fired for being one of the gambling ring would not be protected by the United Auto Workers.

As Mr. Reuther put it recently: "The kind of free labor movement that we believe in must make leadership a sacred trust and not an opportunity to feather one's nest and make a fast buck. If these people want to get rich, if they want to make a fast easy buck, that's their business, but we must insist that they do it outside of the American labor movement and not inside the American labor movement."

But these men are the national leaders of labor—the publicized ones. There are many unsung crusaders inside labor who battle the crooks quietly.

COURT HEARS COMPLAINTS

There is a little fellow with tall courage by the name of Sal Hoffman, leader of the Upholsterers Union. Some years ago he set up a special court inside the union to which the rank and filers can come with complaints if anybody moves against their union rights.

This court has on it a panel of outstanding public figures. Any union member who wants to appeal any decision of any official or board of the union can come before the court. On it sit Judge Curtis Bok, of the Philadelphia Common Pleas Court; Paul Herzog, former National Labor Relations Board Chairman and assistant dean of Harvard's School of Public Administration; Prof. Nathan Feinsinger, of the University of Wisconsin; Prof. Archibald Cox, of Harvard; the Reverend Leo C. Brown, of St. Louis University; the Reverend Dennis Comey, of St. Joseph's College; Dr. Joseph D. Lohman, of the Illinois Probation Commission; J. B. Gillingham, of the University of Washington; and Dr. Clark Kerr, chancellor of the University of California.

There are rank and filers such as my good friends Bill Wilkens and Pete Batalias, who were on the air with me the night I was attacked by an acid hurler and who had to have police protection while attending their union's convention in Chicago. They have contacted other rebels in other cities to fight on a national front against the toughs and the fronts for ex-convicts in the Operating Engineers.

Kicked in stomach

This is a union which has this country by the throat. A union whose executive board sat quietly by when an older member came to it for justice and one official kicked him in the stomach. The victim of the kick survived, too. He went back home to fight. He calls me from time to time to report his progress.

Let me not pass without mentioning rank and file longshoremen who risked their lives by rallying to the Rev. John Corridan's fight on the New York docks.

Just as the terror is transcontinental, so is the fight for decency inside labor.

But how many kicks in the stomach will it take before the rank and file of those unions which are like slave centers stand up and roar defiance? When will they demand action from their national leaders in Washington, from the Government, from their local district attorneys and from the police?

The mob can be fought. It takes guts. Like the men and women who stood with arms folded against the hoods in front of the hat company back in the 1930's.

Rank and file must act

But remember this. Certainly labor's national headquarters has responsibility. Certainly the Government, the district attorneys, the police have responsibility. But when all is said and reported, so does the rank and file of American labor. It must make up its mind to stand up like men or crawl before the manicured mob.

Certainly there are decent men leading millions in American labor. But there also are convicted rapists, extortionists, hijackers, loan sharks, bank robbers, cop killers, professional sluggers, gunmen, knifers, narcotic smugglers, alien smugglers, bookies, tax dodgers, muggers and perverts. These are just a few taken from the Nation's police blotters.

And unless the rank and file fights them, the modern mob may some day take over all American labor, just as cancer infiltrates the body.

Support needed

Where are the men willing to give their decent leaders the support needed to return labor to the idealism which motivated the old cigarmaker, Samuel Gompers? Gompers used to go to the AFL headquarters many years ago in a pair of frayed bedroom slippers because he couldn't afford to buy shoes, although he was president of the organization.

The AFL headquarters was not a marble palace across from the White House but an old shack. And the AFL president's desk was an empty wooden box.

That financial poverty isn't necessary today but neither is a poverty of idealism. Leaders of American labor have to fight for decency. And rank-and-file union members must rally behind their decent officials to throw off the yoke of the crime cartel.

Farm Stabilizing Needed

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks, I would like to have inserted in the CONGRESSIONAL RECORD, the enclosed article from the Minneapolis Star of May 29, published in Minneapolis, Minn. This article quoted one of the outstanding businessmen, and the board of which he is chairman, at a speech given to the St. Paul Kiwanis Club, of St. Paul, Minn. These men in business know that the problems of the farmer are the problems of the entire country.

The article follows:

THOMSON SAYS FARM STABILIZING NEEDED

A Minneapolis banker, J. Cameron Thomson, chairman of the board of Northwest Bancorporation, told St. Paul businessmen Thursday that farmers have a right to expect effective Government action to promote greater income stability for them.

Speaking at the St. Paul Kiwanis Club luncheon, he said that it should be a permanent part of the agricultural policy of this Nation "to promote income stability on the farm."

"There are a lot of ways to do this, but they boil down to Government action to iron out sharp and temporary price variations in key farm products."

Pointing out the key word is "temporary," Thomson said it does no good to support the price of wheat, for example, at a level that encourages production over the long run to increase faster than consumption.

"We'd quickly be back in the old surplus mess again. Over the long run, the market must be the primary guide for farm prices.

"But just as Government, through monetary and fiscal policy, acts to curb extreme swings in the business cycle, so Government should take specific, special action to curb extreme fluctuations in farm prices."

There are two techniques at hand for this job, Thomson said. The Government can buy or give loans on crops in connection with a storage problem.

When there is a temporary drop in demand for an unusually large crop, stocks in Government hands would be increased; when demand or production is back to normal, stocks would be reduced.

Or, he said, the Government can make production payments to farmers representing some part of the difference between the actual market price and the price that would prevail under conditions of high employment and normal yields.

"In theory, while production payments interfere less with market price-making forces, there isn't much to choose between production payments and price supports as tools for promoting income stability."

It all depends on the level chosen to support prices and the crops which are made eligible for support.

"It will be people who will have to make these decisions and the best assurance we can have of fair and effective action is to be found in the caliber of the people chosen to do the deciding."

Obviously, he declared, they should be people close to the farm community and capable of discriminating between long-run benefit and short-run political advantage.

To this end, said Thomson, who is vice chairman of the board for the Committee for Economic Development, "we have recommended the establishment of an agricultural stabilization board."

Members, he said, would be chosen by the President for long terms of service after the fashion of Federal Reserve Board members. The Secretary of Agriculture might serve as chairman, and the Board would report to Congress at least once a year.

One of its main responsibilities would be to determine the support level in time of temporary drops in demand and to give broad supervision to the operation of any Government storage program.

The Board might also designate those crops eligible for support, Thomson said, adding that a nonpartisan, decision-making authority like this is needed to insure that we get effective action to stabilize farm incomes.

Republican Corruption

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. MULTER. Mr. Speaker, the following item by Drew Pearson, which appeared in the Washington Post of July 2, 1956, typifies how this administration fails to protect the taxpayers' money. But then, what can we expect from a big business Government run for the benefit of big business?

The article follows:

REFUNDS UNPAID ON CHEESE DEAL

(By Drew Pearson)

Full story can now be told how the Kraft Foods Co. cashed in on Secretary of Agriculture Benson's cheese deal, then tipped off its customers so that they, too, could profit at the taxpayers' expense.

Kraft Vice President A. W. Sigmund was a member of Benson's Dairy Advisory Committee, which recommended that the Agriculture Department buy cheese from processors, then sell it back 3 cents a pound cheaper.

As it turned out, the cheese never left the processors' warehouse, and Uncle Sam simply paid them a generous profit for a paper transaction. The program's stated purpose was to help the dairy farmers, not the cheese companies. But the latter got the benefit.

The same Kraft vice president who acted as adviser for Benson's Dairy Committee and joined in recommending this Government giveaway wasted no time taking advantage of it. Before the regulations were even issued, Sigmund wrote to four of Kraft's biggest customers telling them how they could get in on the windfall.

These were: National Biscuit Co., which collected $108,693 from the Agriculture Department; H. J. Heinz Co., which made $24,865; United Biscuit Co., which made $12,062; and Campbell Soup Co., which tried to sell and buy back 5 million pounds of cheese but never closed the deal.

By this time, Kraft was behaving in a taxpayer-be-hanged, get-in-on-the-gravy manner. The company notified seven small customers in New York, Massachusetts, New Jersey, Maryland, and the District of Columbia how to make a quick profit in cheese. These 7 firms made a total of $18,171 at the expense of the taxpayers.

Kraft also sent letters to 11 retail customers—grocery chains, bakeries, and food companies—which made nearly $164,000 total profit.

Meanwhile, Kraft was happily peddling its own cheese to the Government and buying it back for windfall profits. In fact, the company actually collected $725,797 for 7 cheese deals that were made after the program had officially expired.

The whole cheese scandal was so fantastic that the Justice Department finally ordered the companies to give their windfall profits back to the taxpayers. It took Attorney General Brownell and Secretary of Agriculture Benson 9 months after this column first exposed the amazing cheese story exactly 1 year ago—June 24, 1955—to admit the mistake. So far, however, none of Kraft's customers has returned a dime.

Hells Canyon Frontier Opening Up to Tourists

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks I include an article by Mr. Blaine Stubblefield which appeared in the Washington Post and Times Herald newspaper Sunday, July 1, 1956. This is rather a new and enlightening approach to the present controversy raging in Congress and one which I think is refreshing. Mr. Stubblefield is a native of my State and runs the river in the Hells Canyon section. He is one of the best authorities in the Nation on this area.

The article follows:

THANKS TO THOSE DAMS—HELLS CANYON FRONTIER OPENING UP TO TOURISTS

(By Blaine Stubblefield)

WEISER, Idaho.—"For 6 years our politicians have argued about Hells Canyon. Now that the Government has given the go-ahead on power development, maybe the folks who live here could put in a few words."

The quote is from Tom Chamberlin, chamber of commerce president at Weiser, Idaho, at the canyon's upper gate.

"Decision was made by the Federal Power Commission, and Idaho Power Co. is building the dams. Now Mr. and Mrs. United States wants to know if they can see the big canyon that made all the headlines.

"We are qualified to say yes. Since the controversy began, more people have been coming here each year to see the deepest gorge in the Western Hemisphere. Construction of the dams is creating additional rather than less recreation.

"This canyon is just less than 8,000 vertical feet deep from Snake River to the Idaho rim. It is walled on the Idaho side by the Seven Devils Mountains and on the Oregon side by the Wallowa Mountains.

"You have to drive 3 or 4 hours of dirt road to see this natural phenomenon. Most visitors say the inconvenience pays off in thrills 10 to 1.

"The canyon area is 170 miles northwest of Boise, and you drive by way of Weiser and Council, Idaho, or Baker, Oreg. The old mining town of Cuprum, Idaho, near the rim, is headquarters for canyon visitors.

"From Cuprum it is a 30-minute drive (up 3,000 vertical feet) to the 7,000-foot-high overlooks at Kinney Point, Horse Mountain, and Sheep Rock.

"It's 12 miles from Cuprum down the Kleinschmidt grade, one way with turnouts and a head-swimming view, to Homestead on

the river. From Homestead, white-water boats will take you for a few hours or a few days into or through the main Hells Canyon gorge, which can be seen in no other way.

"Five miles upstream from Homestead is the spectacular Oxbow Dam site, and 13 miles farther up is Brownlee Dam, not under construction, among the Nation's biggest dams. High overlooks are provided for visitors to observe the builders in action.

Oxbow and Brownlee Dams are both upstream from the main gorge—17 and 30 miles, respectively, and they offer scenic access in their own right to famous Hells Canyon proper.

"The power company's third licensed project, to be named Hells Canyon, will leave the major part of the main gorge unchanged. The tributary gorges of Hell Creek and Deep Creek, central themes in the rugged scene, both will remain untouched.

"The constant-level reservoirs created by Oxbow and Hells Canyon projects will provide unparalleled road and water access to Hells Canyon splendors. Because the water level of these reservoirs will remain virtually constant, there will be no muddy bathtub rings along the banks.

"Some rapids will be drowned out, but some of the best ones will remain. White-water boats will continue to navigate the entire gorge.

"New and better access roads will be constructed; work has already started. Some will be hard-surface highways. Idaho Power Co. is providing funds for fish and wildlife studies, and for construction of facilities to create better fishing than ever before. Because deep water is cooler, fish that never inhabited the warm Snake River will thrive in the three reservoirs, which will be progressively cooler downstream.

"The company will provide boat-launching facilities, will construct picnic and camping areas and help create a new area of recreation opportunity.

"Hells Canyon is the focal point of a vast frontier country, until recently little known to the public. This includes the wild Idaho primitive area, the Salmon River canyons across central Idaho, the scenic Payette Lakes and Payette Forest, and the Wallowa and Seven Devils Mountains, 10,000 feet high and gemmed with nearly a hundred small glacial lakes, many stocked with trout.

"Paved roads generally reach the portals of these retreats, from which travel is by horseback, jeep, boat, or bush airplane. The chamber of commerce in Weiser, Idaho, sends full information to all who inquire."

Low Blow on Polar Route

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include herewith an editorial from the Oregonian, of Portland, Oreg., regarding proposals for transpolar service from the Pacific Northwest to Europe:

LOW BLOW ON POLAR ROUTE

The proposed schedules filed by Pan American World Airways and Trans-World Airways in their applications to the Civil Aeronautics Board to fly the polar route from California to Europe, each provide for coterminal status for Portland and Seattle on 1 of 7 weekly flights each way.

United Air Lines, in its appearence at a hearing in San Francisco Tuesday, argued that CAB should eliminate the two Northwest cities from the transpolar schedules.

We do not thank United for its intervention in this regard. If there is to be an American transpolar service from Los Angeles and San Francisco, Portland wants to be in on it—even though it be for only 1 day instead of 7. The Northwest is entitled to the opportunity of showing whether or not it will support coterminal status. The rate of population and business growth in this area gives some assurance that weekly flights to London from the Northwest would have to be increased rather than eliminated.

Pan American's proposed polar schedule shows Saturday departure and Sunday arrival of planes which would bring Portland and London within 19 hours 45 minutes flying time. All flights would originate and terminate either in Los Angeles or San Francisco. Thus, no hardship would accrue to California by Northwest stops.

But should CAB heed United Air Lines, and eliminate Portland and Seattle altogether from polar flights, the chief result would be to push more Northwest-Europe passenger travel to Canadian Pacific Airlines which now is carrying a respectable volume of traffic on the polar route between Vancouver, B. C., and Europe.

Washington State Lawyers Want Social Security Coverage

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. MACK of Washington. Mr. Speaker, the Washington State Bar Association recently took a post-card poll of its members on whether lawyers favored being included under the Social Security Act coverage.

This poll of Washington attorneys revealed that the lawyers of the State of Washington favor almost 2 to 1 being included under social-security coverage even on a compulsory basis.

Here are the results of the post-card vote among lawyers on social security in Washington State as reported by the Washington State Bar News, official organ of the bar association:

1. Do you favor coverage of self-employed lawyers within the Social Security Act on a voluntary basis? Yes, 1,667; no, 206; 149 not voting.

2. Do you favor coverage of self-employed lawyers within the Social Security Act on a compulsory basis? Yes, 911; no, 855; 315 not voting.

3. Do you favor complete exclusion of self-employed lawyers from the Social Security Act? Yes, 167; no, 1,432; 482 not voting.

4. If your answers above to qusetions 1 and 2 show that you favor voluntary coverage but oppose compulsory coverage, what is your choice if voluntary coverage is not obtainable? In that event do you favor: Compulsory coverage, 1,141; complete exclusion, 542; 398 not voting.

It is hoped that the United States Senate soon will pass the social-security bill which the House of Representatives passed almost 13 months ago. This bill provides social-security coverage for lawyers and for dentists.

The Late Fleet Admiral Ernest J. King, United States Navy

SPEECH
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

(Mrs. ROGERS of Massachusetts asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. ROGERS of Massachusetts. Mr. Speaker, on Friday afternoon, as I watched the extremely impressive funeral procession for Fleet Admiral King as it passed in front of the United States Capitol, the thought occurred to me that this very great sailor and this distinguished admiral of our Navy was making his last voyage to the Capitol prior to leaving for Annapolis where he will rest and receive the admiration and respect of thousands upon thousands for the rest of time. Many of us remember his official calls at the Capitol during the war.

Fleet Admiral Ernest J. King was, without question, one of the great naval commanders and leaders in all history. He was our great Chief of Naval Operations during World War II and also our great Commander in Chief of the entire United States Fleet during this gigantic struggle. Taking over these two great responsibilities after Pearl Harbor when our Navy and our country suffered from one of the most devastating blows in our history, Admiral King brought a clear mind, steel courage, unshakable determination, and firm decision, not only to the United States Navy but to the Nation as a whole. His force, tremendous ability, and power of decision soon marshalled our Navy into a fighting unit that struck blow after blow after blow for victory. During his leadership he built the United States Navy into the greatest naval fighting force in the world. Throughout his long career of 59 years as a sailor and a leader of men, Admiral King distinguished himself in serving his country as the kind of a commanding officer who rises to the leadership of mankind only once in generations. Fortunate, indeed, was the United States Navy and the United States of America that when the time required a great leader he was there and in position to take command.

As I watched the impressive march of the sailors in white, the precision of the company of marines, and the performance of the great Navy and marine bands, I was deeply impressed with the solemn respect that was being shown to this wartime leader of the Navy. It seemed as if the Navy were saying, "Admiral King, you have led us through many rough and dangerous seas and it is now our great privilege and honor to lead you on your last voyage." The respect rendered by the military services was inspiring and this inspiration was almost as deep as the inspiration Adm. Ernest King gave to America in the dark days of 1941 and 1942. This inspiration will never die, for it will be always a

part of young men who follow in his footsteps as officers of our Navy.

Impressive, too, was the presence there of some of those great officers of the Navy, some of those great fighting leaders in those historic sea struggles of World War II, to pay their respects and to lead their old chief on his last voyage. There was Fleet Admiral Nimitz, Fleet Admiral Halsey, Fleet Admiral Leahy, and many, many other distinguished flag officers. They were all on deck Friday afternoon, for in their hearts they knew one of the greatest of America's fighting men and one of the greatest of our country's leaders was stepping down for all time. Admiral King would be one of the first to say that no leader can accomplish gigantic deeds without great men at his side. These men and many others have earned their place in history and were at the admiral's side to the very end.

With his place in history secure, the deeds and accomplishments of Admiral King will never cease to be important. Always he will be an inspiration to American fighting men. If the time should ever come again when our great Navy must sail into action against an enemy, somewhere ahead of the ships in the sea mist will be the image of Admiral King still leading, still commanding.

To have led the United States Navy in the greatest of human conflicts not only was a tremendous task but it was also a great privilege and a great honor. Admiral King was always proud he was an American and America will be grateful forever as a country and as a people that Admiral King commanded the United States Navy. He steered the course to victory at sea.

America is proud of its great leaders. In the days to come may America never forget the tremendous inspiration of the leadership of Admiral King. Let it be preserved through the ages for all America in the form of a fitting monument in the Nation's Capital. Already enshrined in the hearts of his countrymen, this great monument will stand as a lasting and inspiring tribute to the glory and magnificence of the Nation's wartime naval leader, Fleet Adm. Ernest J. King.

Humane Slaughter Bills

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. SCOTT. Mr. Speaker, I would like to take this opportunity to state my position on several bills which are now pending before the House and Senate. These bills are H. R. 8540, H. R. 9603, and S. 1636, also known as the humane slaughter bills.

While I am sure that the authors of this legislation were prompted by humane considerations, I do not believe that they have taken into account the full significance of what these bills, if enacted into law, would do.

Passage of such legislation would make illegal the ritual slaughtering of beef by members of the Orthodox and Conservative Jewish faith which is now carried on and has been carried on for centuries past. For this reason I am definitely opposed to these measures. I do not think that Congress should pass any laws which would abridge freedom of religion or of religious practices. This legislation would also drive out of business countless numbers of beef and poultry slaughterers.

I intend to continue in my opposition to the passage of these bills so long as they involve these undesirable consequences.

Fitness Guided Washington's Judicial Appointments

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. GRANT. Mr. Speaker, under date of June 25, Judge Walter B. Jones of Montgomery, Ala., in his weekly column, Off the Bench, published in the Montgomery Advertiser, wrote a most interesting article which I have the pleasure of inserting in the CONGRESSIONAL RECORD. Judge Jones is the son of a distinguished Confederate veteran who was governor of Alamaba and also a United States district judge. Judge Jones has served for many years as a circuit judge of Montgomery County. He is president of the Jones Law School and has always taken a most active interest in social, fraternal, civic, and religious activities. He is a former national archon, or president, of Sigma Alpha Epsilon Fraternity and has held other honors too numerous to mention. He is a deep student of constitutional law, and his column is widely read. He has written many books and articles on the subject of law and also on the Confederacy:

OFF THE BENCH
(By Judge Walter B. Jones)
FITNESS GUIDED WASHINGTON'S JUDICIAL APPOINTMENTS

A few weeks ago in this column I made mention of the fact that during the past 25 years appointments by the President of the United States and confirmations by United States Senate to the Supreme Court of the United States have been made largely on the basis of politics. Political appointments have been made much oftener than have appointments to the Supreme Court been made on the basis of character and ability.

Since that time, in reading among some old books, I have found letters written by George Washington, who is well called the Father of Our Country, to the men selected by him to sit on the Supreme Court of the United States.

Hampton L. Carson, while attorney general of Pennsylvania, in 1891, wrote his history of the Supreme Court of the United States. In it he tells us that "the ink was still wet upon the signature of the President (Washington) to the Judiciary Act, when he sent to the Senate the names of the men he had selected for Chief Justice and the five Associate Justices of the Supreme Court."

Mr. Carson writes also:

"To Madison, a few days later, he expressed the utmost solicitude for drawing the first characters of the Union into the judiciary and his regret that Edmund Pendleton was too old to be appointed to the Supreme Court. For Randolph in the character of Attorney General he declared a preference to any person with whom he was acquainted of not superior abilities, from habits of intimacy with him.

"To the Judges themselves he addressed letters, stating that he considered the judicial system as the chief pillar upon which our National Government must rest; that he had thought it his duty to nominate for the high offices in that department such men as he conceived would give dignity and luster to our national character, and he flattered himself that the love which they had to their country, and a desire to promote the general happiness, would lead them to a ready acceptance of the commissions enclosed, which were accompanied by a copy of the Judiciary Act."

In his letter to the Associate Justices of the Supreme Court, written from New York, September 30, 1789, after his appointees had been confirmed by the United States Senate, President Washington said:

"Sir: I experience peculiar pleasure in giving you notice of your appointment to the office of an Associate Judge in the Supreme Court of the United States.

"Considering the judicial system as the chief pillar upon which our National Government must rest, I have thought it my duty to nominate, for the high offices in that department such men as I conceived would give dignity and luster to our national character; and I flatter myself that the love which you bear to our country, and a desire to promote general happiness, will lead you to a ready acceptance of the enclosed commission, which is accompanied with such laws as have passed relative to your office. I have the honor, etc."

President Washington's selection of John Jay to be the first Chief Justice was a wise one. Jay was rather a statesman and a jurist, than a pleader of causes, and Daniel Webster, in a speech, said that Jay's character was "a jewel in the sacred treasures of national reputation, and when the spotless ermine of the judical robe fell upon him, it touched nothing not as spotless as itself."

George Washington, in a letter written September 29, 1789, to John Rutledge, advising him of his appointment as an Associate Justice of the Supreme Court, said:

"Regarding the due administration of justice as the strongest cement of good government, I have considered the first organization of the judicial department as essential to the happiness of our citizens, and to the stability of our political system. Under this impression it has been an invariable object of anxious solicitude with me to select the fittest characters to expound the laws and dispense justice."

How upright and honorable was this determination on President Washington's part "to select the fittest characters to expound the laws and dispense justice."

And now we turn from these notable letters of the high-minded Washington to the things that were to be taken under consideration when the appointment of a Chief Justice was under consideration in 1953, the final choice being Earl Warren.

An article in the New York Times about that time tells us that even before the late Chief Justice Vinson was buried, President Eisenhower was being urged by leading Republicans to apply all sorts of different tests to the appointment—political, geographical, personal and philosophical. You will note that not one of the leading Republicans of that time urged President Eisenhower to select the "fittest characters to expound the

laws and dispense justice." Instead of taking these things into consideration, the President was urged to look West because there were no representatives of that section of the country on the Supreme Court. He was also urged to appoint Governor Dewey of New York because he was only 51 years old. The President was urged to appoint others because they had "strong personal and political claims" on him.

Many years ago Chief Justice Charles Evans Hughes said that in appointing judges to the Supreme Court of the United States, priority should be given to these considerations: "Strength of character * * * courage of conviction, sound learning, familiarity with precedents, exact knowledge and painstaking study * * *"

How good it would be for the welfare of our country if an Almighty Providence could place George Washington back in the White House a little while today, with power to make the 9 appointments to the Supreme Court. My belief is, in such case, that Washington would remove from that bench the Chief Justice and his 8 Associate Justices who sit with him there today. In their place he would appoint an entire new Court, composed of "the fittest characters to expound the laws and dispense justice."

My War With the Mob

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include the sixth in a series of articles by Victor Riesel which appeared in the Washington Star of July 2, 1956, entitled "My War With the Mob":

MY WAR WITH THE MOB—AFL–CIO HAS ACTED TO ROUT HOODLUMS, BUT MANY LABOR DEFENDERS FIGHT PROBES

(By Victor Riesel)

CHAPTER VI

I have been blinded by acid—but I can still see more clearly than those who so glandularly champion labor that they denounce automatically all crusades against the mob inside labor.

It is these decent but overzealous defenders of labor who are blind. It is they who identify all labor with the mob. It is the public crusader who carefully etches the sharp line between the underworld invaders and the honest union leaders.

What the disturbed champions of labor don't see is the danger of their outcries. Unwittingly these men become, in effect, the secret weapon of the mob. By blasting all outside forces which fight the labor underworld, they frighten off public officials, Senators, Congressmen and even governors in some States. For no ambitious political figure is willing to jeopardize his career by pushing for an investigation only to find himself later smeared as antilabor.

Congress' probes dropped

Just look at the record of State and Federal probes. I charge that at least four major congressional investigations have been dropped like hot coals because of political pressure. I have been told by investigators that they had been directed not to get too tough or bring in evidence which would force indictments.

Look at this Congress. How many probes into any cobwebbed corner of the underworld has it launched?

Why, after Senator Douglas, Democrat, of Illinois, found a score of union officials using warfare and pension funds as their own money, was his investigation permitted to die? It had one of America's top investigators, Frank Plant, a former FBI agent. Its chief counsel, Paul Cotter, was raring to dig deeper. They turned out a searing 365-page indictment of the crime cartel inside labor. The AFL–CIO executive council went through it. AFL-CIO Chief George Meaney sent it on to the ethical practices committee for action.

Yet nowhere in the Government was there $100,000 to keep the Douglas committee alive. Why?

There must be congressional probes. Otherwise the ball falls between two outfielders. The Government finds it can't handle clever criminals on any charge except income-tax evasion. So some of the worst hoods get away with sentences as short as 8 months on tax raps. There just are no laws to deal with the subtleties of the crime cartel.

Hamstrung by local laws

And we find district attorneys with no power to prosecute because they are hamstrung by local laws. Only the spotlight of a properly conducted congressional investigation can light up the murky corners.

But an even greater obstacle than ineffective laws is local political pressure. Here is where the honest leaders can move boldly. They can make it known that they would not regard an honest investigation into labor rackets as an attack on all labor.

They can say publicly that they welcome such a probe. Then, perhaps, the automatic deplorers of probes might agree that there are honest men outside labor as well as inside.

The fault is not all on the conditioned-reflex champions of labor. The fault lies, too, on the shoulders of the public defenders, the law and order forces of State, county, and municipal governments—and in Washington, as well.

If they have been listening as carefully as did the President of the United States before he became ill, they would have heard stentorian voices calling for Government help.

Three leaders speak out

Violence, corruption, and betrayal of trust by labor officials have been loudly denounced by David Dubinsky and George Meany at the recent International Ladies Garment Workers Union convention in Atlantic City. Walter Reuther struck out at the hoods before the Textile Workers Union's sessions in Washington.

Furthermore, at the most recent session of the AFL–CIO executive council, labor's high command, Mr. Meany brought in a resolution giving real police power to its ethical practices committee.

O. K., let's go. The committee, led by the truly crusading Al Hayes of the Machinists, and manned by equally courageous and honest men—Mr. Dubinsky, Jack Potofsky (Amalgamated Clothing Workers), Joe Curran (National Maritime Union) and George Harrison (Railway Clerks)—now has the power to hire a staff and become labor's FBI. And it has President Eisenhower's personal promise that it can utilize every Government facility to help it.

Can probe "muscled" unions

It can look into the 15 national unions and scores of local unions which have been "muscled." The committee can hire lawyers, investigators and researchers. It can go to any police force. It can recommend that a union be thrown out of the AFL–CIO.

It can stand up and fight. It can right the wrongs of a thousand martyrs. It can prove what so many of us believe—that regardless of our agreement or disagreement with such men as Mr. Meany and Mr. Reuther there are honest leaders in the labor movement ready to apply the same fervor and genius they use in collective bargaining, strikes and organizing drives to clean up that part of the underworld which is making a patsy out of sections of labor.

Power to map ethics code

This Ethical Practices Committee has the power to work out a code of ethics for all labor. It can demand that all union leaders maintain honor and decency in their unions.

To draw up this code so it can be hammered into philosophical shape, the committee has the Bernard Baruch of American Labor, Washington Attorney Arthur Goldberg, who believes that labor should conduct itself so ethically that it can live in a giant fish bowl. This isn't guaranteed to win him popularity in certain circles. But what price popularity? What price votes? What price compromise?

This is no fight on juvenile delinquents. This is no fight on other labor men who simply want to live by their own code. This is a fight on men who are really not of labor, who buy and sell unions just as real estate men unload parcels of land.

This is a fight on terror.

Crusade, anybody?

Community Progress Through Self-Reliance

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. OSTERTAG. Mr. Speaker, all of us recognize the fundamental importance of keeping our country strong at the grassroots, and some of us occasionally talk about it. But until recently there has been no nationally planned and coordinated volunteer effort to do something about it.

In the National Council for Community Improvement, of which Mr. James C. Penney is chairman, this important gap is being filled. The council is dedicated to just those objectives which are essential to our freedom and independence; namely, the encouragement of greater self-reliance and community responsibility in government, and the systematic fostering and coordination of those forces which give vitality and rich meaning to community life.

Recently the council sponsored a conference here in the Nation's Capital, which was ably summed up in a closing address by its chairman, Mr. Penney.

Under leave to extend my remarks, I include in the RECORD a copy of that address:

COMMUNITY PROGRESS THROUGH SELF-RELIANCE

(By James C. Penney)

Honored guests, fellow officers and members of the National Council for Community Improvement, officers and members of the other participating organizations, other participants in this National Community Conference; I thank you deeply for the warmth of your applause. (I trust that my

salutation was sufficiently broad as to include all of you.)

I stand before you in a position of dubious desirability. When I think of the many fine speakers who have addressed this conference in the past 3 days, I can well imagine how my remarks may seem in the nature of an anticlimax. However, you can take heart, and hence I will do likewise; for this talk of mine is the last, so-called address on the conference program.

At the outset, let me point out that the essence of my message is this: the soundest kind of community progress is that which results from self-reliant action of the cooperative type on the part of both the individuals and the organizations in each community. From the materialistic standpoint, this is the most efficient and economical way—with its lower costs and fewer demands on Government funds. From the spiritual viewpoint, this manner of proceeding brings about the greatest fulfillment of the creative potential of each individual and organization involved. Those of you who have been able to attend at least some of the earlier meetings of this conference will recognize in the above statement of my theme what might be called a very brief summarization of the conference findings.

This matter of self-reliance is a very interesting and important subject. As a devoted student of American history, I have realized that it is a fundamental feature of the true American way of life, and hence that it has played a major role in the wonderful and amazing development of our great Nation. Yes, self-reliance can certainly be regarded as a typical quality for Americans to have—or to aspire to possess. In fact, through the years I came to feel that the people of other nations very generally did not appreciate the desirability of this trait of character. It is only within this very year that my personal experiences and observations have led me to believe that there is a deep desire to be self-reliant residing within individuals generally regardless of where they live on the earth.

I have just recently returned from a 3 months' trip by airplane around the world. Mrs. Penney accompanied me as far as India, where we have a daughter who is married to an American executive with the United Nations Technical Assistance Mission to India. During the month and a half there, I traveled to various points of interest, spoke to government, business, and agricultural leaders, and gave talks before various native groups on Christian principles in business and the democratic way of life. I then proceeded to such places as Jakarta in Indonesia, Bangkok in Siam, Hong Kong, on the China coast, 10 of the major cities of Japan, and Seoul in Korea—where I had the honor and privilege of a good visit with President Rhee.

On this second part of my tour, I was accompanied by Weyman Huckabee, the secretary of the Laymen's Movement for a Christian World, of which I am the vice president. This organization was a sponsor of my 3 weeks' speaking tour while in Japan, from where I had received several invitations to visit following the translation into Japanese, about 3 years ago, of my autobiography, Fifty Years with the Golden Rule.

It is not my purpose to give here, a detailed account of my journey. I simply want to point out that such trip gave me an opportunity, the like of which I had not had before, to talk frankly with persons of various walks of life in these foreign countries. I visited too with some of their government officials, as well as with many of our own representatives in these lands. I thus have been able to clarify appreciably my own thinking about our international relations. In all of the countries I visited, I found a very friendly feeling toward the United States. My observations led me to conclude that our allies and the neutral nations in the various parts of the world highly value our friendship and our economic aid along technical assistace lines—in which they indicated a willingness to share in the cost. Of course they appreciate the worth of our military aid, but they appear to value learning our economic know-how even more—from the long-term point of view. In discussing this attitude on their part it was brought out again and again that they wanted to achieve a self-reliant status for themselves as individuals, and for their country in the family of nations; and, to do this, they realized that they have to make a go of things economically.

So I have come back from trip around the world with three conclusions:

1. The desire to be self-reliant is such a fundamental longing among individuals generally that we can say that it is a part of what we call human nature itself—even though it does need to be encouraged at times among many people.

2. If our Government can increase our foreign still more, along the practical lines of helping our allies and the so-called neutrals to become more self-reliant, without weakening our own economy too much, of course; then I am confident that communism will lose its worldwide struggle against the things which freedom loving people value most highly.

3. The peoples of the world, at a steadily increasing rate, are developing more similar interests generally, and this will become a very important factor in improving the chances of a permanent world peace. This matter of similar interests is underlined by the information I have just received that the General Federation of Women's Clubs currently has members, federated clubs, in 42 countries.

I now would like to direct your attention to some of the observations brought out during this conference which I consider of special importance.

First, despite the magnitude of our task, we must not lose sight of the fact that we are dealing, in the final analysis, with individual attitudes of our citizens in more than 16,000 American communities. Furthermore, under our democratic form of government, voluntary cooperation is the most potent and effective kind. Although the task of reaching and inspiring our fellow citizens in their communities is a great one, we have in this country outstanding methods of communication which can do the job. No other Nation has the quantity and quality that we have in the way of newspapers, magazines, radio and television facilities. They already are being used in a very extensive way to increase the desire of all Americans for further progress and achievement. Of course, we also have a superior postal system, and the NCCI is relying on it for dependable delivery of the appreciable amount of correspondence and printed material which is necessary to perform our mission. Yes, our needed tools are available and in functioning order.

You have heard and seen this week a demonstration of the activities taking place in numerous States and communities where the better hometown movement has taken hold. The extension of this movement is not automatic. There must be outside stimulation and the spreading of information to assure the permanent growth of even such an important idea. But essentially this is a movement of, by, and for the individual community.

When the people of a community choose their own leaders and determine their own activities, they have something that is their very own. An essential principle is the enlistment of all groups in voluntary teamwork. Such an assembly of citizens is not another organization with specialized objectives; it is in reality an interorganization committee, made up of representatives of all of the important local organizations. It may be called the community improvement council, community development council, citizens' association, coordinating council or the correlating council. The essential idea is that all of the organizations get together and work together for progress and improvement. The fundamental purpose of the National council for Community Improvement is to assist, usually through State councils, the formation and functioning of these local councils.

An impressive feature of this movement is its all-inclusive nature. The national council was originally organized with the cooperation of 60 national associations. This national community conference was arranged by national associations. The conference committees are composed of representatives of national associations and universities.

Most of us today are thinking in terms of national and international developments. We need and want a strong Nation—spiritually, physically, militarily and economically; but we can have a strong Nation only with the active cooperation of the people in their relationships within the States and local communities. This is the way to establish unity, and to get the people to take informed and aggressive action.

During the past several years, since World War II, the National Council for Community Improvement has been conducting a countrywide crusade for community responsibility and self-reliance. This program has been aimed at discouraging centralized power at Washington and, at the same time, at making an important, positive effort to promote and coordinate activity and teamwork in the communities. In this, we have the continuing advice and active cooperation of key national leaders in such major fields as business, industry, agriculture, and education.

The American way of life will not automatically continue to function by itself. Real effort on the part of all will be needed constantly to preserve our system and expand it further. For example, how well are we business leaders doing our part in this great vital movement beyond what we need to do to make our individual business successful and safe? How much are we leaving to others to do, and how well are they doing it?

Washington cannot do the job alone. In fact, many leaders in our Government have said that the work of many throughout the Nation is needed to continue and extend the stimulation of our citizens in the communities to organize, to become more interested in economics, and to cooperate in assuming responsibility for many local projects which they can develop for themselves. This is an especially important time for teamwork, for organization, for helping the move toward decentralization—toward greater community responsibility.

Our own self-interest is ultimately dependent upon an all-out, aggressive movement that encourages individual initiative, citizens; responsibility, and community self-reliance. This is something that may not safely be left to chance. Millions of people are likely to lose their courage and slip back at the first real encounter with unusual difficulty. The tendency then to turn to the Federal Government must be countered by a vigorous effort to help the masses of people at "the grassroots" to see and aprpeciate both the virtue and the immediate need for self-reliance.

Aggressive communities must take the lead. Other communities must be made to see the necessity and advantage of doing for themselves, of building up their own communities and thus becoming a collective tower of strength for the Nation.

The opportunity now presented to the loyal citizens of America is so great as to

stagger the imagination. Yet there are many who will not rise to the occasion. There are those who will turn away with a casual remark that the administration and Congress will, or should, fix things up without help from them.

What is needed is a coordinating organization made up of all major citizen groups working together in the interest of community initiative and community progress.

In this effort, it also is apparent that we need to continue to enlist the so-called genius of American businessmen who possess both insight and foresight and the qualities of sound management and statesmanship.

At this point I would like to pay special tribute to the public-spirited business firms who are sustaining contributors to the National Council for Community Improvement. I want also to acknowledge with deep appreciation the active cooperation of the many educators, and leaders in other fields, who have seen the need for community self-reliance and responsibility and been willing to assist in this work. The splendid organizations currently active in specific fields of community development also have been very helpful to the national council.

As a result, it is generally recognized now that there is a real need in most communities for a coordinating organization—in other words, a community improvement council—to get the people working on their own local projects, to help take care of the many local problems which arise, and to strengthen the individual community as a unit. To the extent that this need is met, the United States will be a stronger Nation, for the country will be made up of healthy, self-reliant communities which will be developing their own local prosperity mainly with their own efforts.

The American people, working together in their local and State organizations can reach great heights of community accomplishment. The fundamental purpose of the National Council for Community Improvement is the securing of this type of teamwork, and I believe that this organization has the background of experience, the plan and the program for such activity on a national basis.

I therefore ask you to give thoughtful consideration to the stated objective of the National Council for Community Improvement. They constitute what we call the 4-point program, and here they are:

1. To encourage greater self-reliance and community responsibility through cooperation of national associations and State councils, working with their local chapters and local leaders.

2. To encourage economy in all levels of Government. To encourage local initiative and less dependence on Federal aid in order to check the tendency toward centralized Federal power.

3. To gather and organize information on ideas and methods of community development, and to maintain a clearinghouse to supply such information to State and community leaders.

4. To encourage the formation of State and local councils which will foster the cooperation of all organizations in the community in furthering self-reliant community improvement.

The council's officers will continue to be pleased to have your ideas and suggestions concerning the furtherance of this program in every way possible.

In closing, I want to extend my deeply sincere appreciation to all of you who have attended and who have participated in this conference, which I understand is the first of its kind ever held. I personally have gained from it valuable information, stimulation, and inspiration. If the rest of you can say the same, then the conference can be termed a success—and is worth the very extensive amount of time and effort put into it by Paul Stark and the many others who have worked along with him on it.

May God bless all of us in our efforts to improve our communities through the exercise of as much self-reliance as possible.

School Aid Now

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks I should like to include an editorial which appeared in the New York Times of July 3, 1956, entitled "School Aid Now":

SCHOOL AID NOW

The Federal school-aid bill is now being debated in the House and is expected to reach a vote this week. Although it is very late in the day, the bill still has a fair chance of becoming law providing no antisegregation rider is attached to it. The segregation question is being dealt with separately. This bill is aimed at the improvement of educational opportunity for all the children of our Nation, and it ought to be kept free of punitive, self-defeating, and irrelevant amendments designed for either propagandistic or legislative purposes.

Congress recently approved a far-reaching measure to help the States construct a network of first-class highways. Is the same Congress going to refuse to pass a far-reaching measure to help the States construct a multitude of first-class schools? Is speed of transportation really more essential to our civilization than adequacy of educational facilities? We think not, and we do not see how the Members of Congress will be able to face their constituents unless they can say they have done their level best to remedy the appalling shortage of schoolrooms that is daily growing worse. It takes 2 to 3 years to build a school from the time local bond issues are voted, so that even if the pending bill is pased this session we can hardly expect to reap the physical benefit much before the school year 1959.

The bill actually before the House is a Democratic measure known as the Kelley bill. It differs mainly in degree from the administration's own proposal. One important point of difference lies in the method under which Federal aid would be apportioned among the States. The Kelley bill provides for a flat grant, based on the number of schoolchildren in each State. The administration would distribute Federal funds on the basis of State need (per capita income) and State effort (relative expenditure on schools). Although New York would receive much more under the Kelley formula than under the Eisenhower program, we think the latter is far more equable and should be adopted despite its obviously lesser political appeal.

Representative GWINN, of Westchester, has been making a big point of the fact that New York and a few other of the wealthier States would be paying out under the school-aid proposal more than they would receive for this purpose from the Federal Government. There is nothing novel about such a situation. It is to the interest of New York as well as of Mississippi that Mississippi's children have adequate educational facilities and, we may hope, an adequate education. Though education is and must remain under local control, the opportunity for education is a matter of national concern. We believe the wealthier States are willing as well as able to take on this responsibility.

Keyes Medal Awarded to Dr. Charles C. Higgins, of Cleveland Clinic

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mrs. FRANCES P. BOLTON. Mr. Speaker, it is always a pleasure to call the attention of this House to the high level of medicine practiced in the greater Cleveland area. At the annual meeting of the American Association of Genito-Urinary Surgeons at Oyster Harbors, Osterville, Mass., on June 4, Dr. Charles C. Higgins, head of the department of Urology of the Cleveland Clinic, was awarded the coveted Keyes Memorial Medal.

This medal, about the highest honor this association can award, has been presented to only seven other people since it was first awarded 23 years ago.

Under leave granted me by unanimous consent, I am inserting an article by N. R. Howard, editor of the Cleveland News, about the importance of this citation:

[From the Cleveland News of June 14, 1956]

WHAT DOCTORS THINK OF AS HONOR

To the undersigned, all doctors are impressive; they represent to my imagination an embodiment of exact knowledge, self-discipline, and mental courage I am sure I could never achieve.

What causes doctors to be admired by other doctors has been a vague matter to me until this week when I had the chance to read the citation by which Dr. Charles C. Higgins of Cleveland Clinic was awarded the Keyes memorial medal, only eight of which have been given in 25 years. The award is for provable distinction by the American Association of Genito-Urinary Surgeons.

The citation recites that the award depends on "meritorious work; keen observation; originality; unwavering integrity in the recording of procedures and results; a desire for others to profit from one's experience." Dr. Higgins, with relation to this last qualification, has published (in the medical sense) 165 reports, papers, and treatises about genito-urinary analyses.

"In 1933," the citation acknowledged to Dr. Higgins, "you made your original report on the experimental production of urinary calculi; your subsequent experimental work, with particular reference to vitamin A deficiency, was received with widespread interest.

"In 1933, you originated a technique for aseptic ureterointestinal anastomosis and through the years you have published 24 articles dealing with ureterosigmoidostomy incident to exstrophy of the bladder and cystectomy for carcinoma. * * * In 1934 you were the first to perform on the human a transureteroureterostomy, when a painful refluxing ureter was transplanted to the opposite one, thus conserving the involved kidney by taking advantage of the intact valve on the opposite side.

"The courage of your conviction in performing this operation was justified by the highly satisfactory clinical result."

There were further acknowledgments of Dr. Higgins' recognition in his profession by selection to 10 offices in the medical and surgical organizations, including his present capacity as chairman of the board of governors of the American College of Surgeons. Then the citation also noted his talent at the piano and his collection of the largest known library of Oliver Goldsmith.

Any layman, even while stumbling over the unknowable polysyllabic words behind which the medical profession conceals its exact definitions, thus learns that Dr. Higgins has added to the knowledge of the behaviors of the human plumbing systems, and has had the courage to discover how to divert or simplify them for the benefit of sick or tortured human beings.

Lawyers, bankers, engineers, or journalists seem not to have the obligation which is on doctors and some other scientists to reveal for the benefit of all what they have learned or discovered in applying science to the human mechanisms. This is a very great nobility, in my book, about the medical profession; it conjures up the sense that doctors are constantly at work with whatever brains and imagination they have, to make us all constantly better off physically.

The finest doctors, according to the standards for the Keyes award, have to have imagination and powers to comprehend what they are seeing, and must be wholly, frigidly, honest in setting down all notes of their findings. * * * I think of no other class whose standouts are qualified by such towering demands.

Problems in Introducing a Foreign Product Into the United States of America

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by Maj. Gen. Julius Klein at the 12th annual national conference and the 7th International Public Relations Institute of the American Public Relations Association which was held at the Statler Hotel in Washington, D. C., on April 5, 1956:

PROBLEMS IN INTRODUCING A FOREIGN PRODUCT INTO THE UNITED STATES OF AMERICA

(Address of Maj. Gen. Julius Klein, ING, retired)

It is a privilege for me to join with you in discussing some of the problems that engage the attention of our profession.

The subject assigned to me is listed on the program as "Problems in Introducing a Foreign Product Into the United States of America."

An audience as sophisticated as this needs little, if any, instruction in the craft of product publicity and public relations. However, I do think it would be useful to share with you some thinking on the role our profession can play in serving the interests of free economic interplay in the world of today.

President Eisenhower, in his message to Congress on the foreign-aid plan last month, emphasized the importance of international trade as a means of cementing the strength and unity of the free world. I should like to take my cue from the President and assume that the foreign products whose introduction to the United States we are talking about are those which emanate from either anti-Communist countries or non-Communist countries.

This is an important distinction. It is important because in the light of current history no new foreign product can be introduced here successfully without taking into account American public opinion about the country whose industries seek a market here.

In one sense, this is all to the benefit of our profession. It leaves less room for stuntmen while increasing the need for skilled practitioners with a grasp of the complex economic and political factors that govern international commercial relations today. It is from responsible, well-rounded people such as this that our profession will have to draw in the future to maintain the high standards set by such great pioneers of our craft as Ivy Lee, the dean of our craft Carl Byoir, and Pulitzer prize recipient Herbert Bayard Swope. Lee was the public relations counsel to old John D. Rockefeller, Carl Byoir advised other greats. And the old sage Swope served Bernard Baruch.

The introduction of foreign products here is a unique test of the public relations profession's ability to keep pace with the main currents of our times. We are in a period of increasing pressures for tariff increases or the establishment of quota systems on foreign imports. In many cases, these pressures are the result of hard economic facts on the American scene. Despite record figures of employment and national income, some segments of the American economy are either in distress or in fear of downward trends. The domectic pottery industry, the coal industry, some of the fashion trades—all these have real cause for concern in the face of foreign competition.

The public relations counselor must therefore take into account all phases of the domestic market, from manufacture to point of sale. He must keep a watchful eye on domestic political implications. He must take account of this country's foreign policy, economic as well as political. It is only after a complete understanding of these factors that he can begin to plan intelligently.

As the economic health of foreign countries continues to improve—and as they seek to utilize such instrumentalities as the Organization for the General Agreement on Tariffs and Trade to facilitate their entry into the American market—the public relations counselor is likely to find that the emphasis of his thinking and planning will have to reside more in the areas of Government trade policy and tariff legislation than in the field of product publicity.

Let me stress that product publicity will continue to be important. If anything, it will take on greater significance. But it will also call for fresh imagination and additional techniques.

At the same time, we must recognize that—increasingly—the public relations practitioner will have to deal with the introduction of foreign products in terms of what is good for the foreign economic and political interests of the United States as a whole—as well as what is good for consumers and domestic industry. The greater professional versatility this will require can only work to the benefit of our entire craft.

But if the public relations counselor faces difficult tasks in winning American acceptance of foreign products, he is also confronted with formidable problems of client relations.

Public relations as we know it here is little known or understood in many European countries. In 1940, I had the privilege of compiling for the War Department a combat public relations plan which underlined the differing factors that enter into the shaping of public opinion in foreign countries as against the factors that make for public judgments here in the United States. One of the points made in the plan was that while it might be possible to overcome language barriers in explaining American policy concepts, there still remained very formidable problems in semantics. The term "public relations" is a prize example of what I mean. It defies translation in some European languages. And because this is so, public relations is too often regarded by Europeans as a synonym for advertising. Among some foreign businessmen, public relations is considered to be a device for insuring favorable publicity. Only in the rarest of cases, is public relations understood as an implement of company policy.

To some degree, the inability of many Europeans to grasp our concepts of public relations is due to differences between newspaper practices here and abroad. In many foreign countries, the treatment of news leans heavily on interpretation instead of the straight, factual reporting we know here. There are marked differences in newsgathering techniques. The American newspaperman is unique for his independence of judgment and inquiry. His like is to be found in very few countries overseas.

One of the greatest gaps in European understanding of American public relations is the role our craft can, and does, play in the prevention of adverse publicity. Most European businessmen who venture into American public relations for the first time tend to assume that the employment of public relations counsel here carries with it some kind of built-in guarantee that the American press will adhere faithfully to the texts of all company publicity handouts. The ready distinction that we here find it easy to make between publicity and public relations is not so readily understood in Europe. Hence, it is all the more difficult for our European friends to understand that the prevention of adverse publicity is one of the positive aims of public relations, just as the preventon of illness by the medical profession comes about through positive application of needed safeguards.

Client education in the relationship of public relations to basic company policy is, therefore, one of the first problems that confronts any American practitioner in dealing with a foreign client. At the same time, there is always the problem of communication between client and counselor. Marconi helped to solve the problem of time in client-counselor communications. But differences in language and psychology remain.

Many foreign manufacturers feel insecure in the American market because of questions raised in their countries about American foreign policy. They have trouble in grasping all the factors that go into pressures here for tariff increases. American governmental regulations and American politics are often complete mysteries to them. It is in these areas that a public relations counselor can perform immense service—not only to the foreign client, but in bringing about a more informed climate for the conduct of two-way commercial relations between the United States and her neighbors abroad.

There will, of course, be found a certain degree of resistance to foreign-made merchandise. Some of this resistance will be instinctive; some of it will stem from natural economic factors in this country. Foreign products will often have to run a gauntlet of competitive opposition that will raise such bogeys as cheap labor and inferior technology.

These are attitudes which have to be met with a variety of public-relations implements, among them the point that realistic American hospitality to foreign economic ventures on our shores is a sounder and healthier procedure for helping free countries to resist Communist economic pressure than by forcing them to rely on Uncle Sam's handouts. The creation of a climate of understanding about the need for a free flow of international trade is a first necessity. It is the foundation on which the

techniques and resources of American public relations can proceed to build acceptance of imported products. Nor must we forget that American business and industry has some $26 billion invested in plants and property overseas. Our profession has an obligation to point out that in the world of today no nation is self-sufficient. More than ever, the economy and political stability of the free world demand two-way cooperation.

It is to the credit of Europe, and to the benefit of a stronger and more united free world, that a number of European companies have undertaken pioneering efforts in the use of American public relations in our domestic market. The impact on foreign sales here has been quie healthy. But more important, it has led to marked increases in the exchange of technological information and know-how, and in a greater volume of personal contacts by leading European businessmen with our American people and institutions.

This is a process that needs to be encouraged and expanded. And I believe that our profession can help immensely. European business is beginning to think in public-relations terms, not only as regards foreign trade but as concerns its own domestic structure. Organizations such as the American Public Relations Association can encourage this trend by preparing the groundwork for international conferences of public-relations counsel—just as advertising and other professions have undertaken through the years.

Our profession as a whole stands to gain by a regular exchange of ideas and the establishment of personal associations with Europe's practitioners. We have made great strides here as some of our colleges and universities have introduced courses on public relations in their curricula. We can, I believe, use increased contact with the European public-relations profession to suggest that similar attention be given to our profession in European institutions of higher learning.

The end result can help us to do a better job of serving both our domestic and foreign clients and, in the end, the interests of the free world itself.

Thank you for your hospitality and the privilege of this most important forum.

Increased Appropriations of Watershed Management

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. DIXON. Mr. Speaker, this date I received from the Society of American Foresters, intermountain section, a resolution adopted by the intermountain section at its March 31 convention, relating to the need for increased appropriations for watershed management, research and action programs.

Under unanimous consent I insert this letter containing the resolution in the Appendix of the RECORD:

SOCIETY OF AMERICAN FORESTERS,
INTERMOUNTAIN SECTION,
Boise, Idaho, June 20, 1956.

The Honorable HENRY ALDOUS DIXON,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN DIXON: In a meeting of the intermountain section of the Society of American Foresters held March 31, 1956, a resolution was passed as follows:

"Whereas better watershed management is essential to the solution of serious water problems in the Intermountain and Northern Rocky Mountain West, but watershed management programs are handicapped by incomplete knowledge about basic principles and hydrologic effects and by inadequate funds for action: Therefore be it

"*Resolved*, That the Intermountain Section of the Society of American Foresters urge Congress to increase appropriations for watershed management research and watershed management action programs."

Very truly yours,

ARCHIE D. CRAFT,
Secretary-Treasurer.

Common Knowledge to All the World Except to Our Traveling Secretary of State

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. MULTER. Mr. Speaker, the following article which appeared in the Washington Post of July 3, 1956, by by George Sokolsky, is interesting, though distressing, information which everybody seems to know about except our Secretary of State. If he does know about it, his actions show no indication thereof. The item follows:

THESE DAYS
(By George Sokolsky)
SOMEBODY GOOFED

Robert J. Donovan, who has written a pro-Eisenhower book entitled "Eisenhower—The Inside Story," recounts the following with regard to the Nasser-Soviet transaction. Nasser first tried to deal with the United States, desiring to buy $30 million of weapons, paying in cotton. The United States, having a cotton surplus, did not want Egyptian cotton. Did the United States want cash or did it propose a credit? Now I quote Donovan:

"Nasser then suggested buying the arms on credit. Washington was slow in reaching final policy decisions in the matter, and Egypt dropped it.

"In the following month, June (1955), the administration got word that Nasser was having discussions with the Soviet bloc about buying arms. Next—before the 'summit conference' in July—American Ambassador Byroade received word from high sources in the Egyptian Government that the talks with Russia has been discontinued. So Eisenhower did not bring it up at the Geneva conference. But in September, the Soviet-Egyptian arms deal was sealed."

The significance of Donovan's report is that the White House did not have what is called "intelligence" on this subject. Our ambassador in Egypt, Henry Byroade, apparently permitted himself to be misinformed by the Egyptians as he had been misinformed by the Chinese when he was in that country with Gen. George Marshall.

A nation without information is blind. Surely President Eisenhower at Geneva should have known of the Nasser-Soviet deal; otherwise, the Russians had an advantage over him of enormous value to them. Khrushchev must have been astonished that Eisenhower did not know what Nasser was up to.

In March 1956, Eisenhower said:

"We do not believe that it is possible to assure peace in that area (the Middle East) merely by rushing some arms to a nation (Israel) that can absorb only that amount which 1,700,000 people can absorb; whereas, on the other side, there are some 40,0000,000 people."

The absurdity of that statement is now obvious to everyone. If we sell Israel arms, are we to make sure that the Arabs have 40 times as much? The alliance of Egypt, Saudi Arabia, and Syria, with enormous influences upon Jordan and Yemen and other Arab states, including Morocco and Algeria, gives Soviet Russia a foothold in the Mediterranean which is as important as a tremendous military victory. Already the very important American air base in Morocco is in peril and our enormous investments in Saudi Arabia need to be reviewed.

To Nasser, this situation opens the prospect of building a career that makes him at least of equal importance in international relations to Nehru and Tito, if not of greater importance in due course. Therefore, it is absurd to make a comparison of 1,700,000 people to 40,000,000 people. If that is the basis of our thinking, why not knuckle under to Red China which has a population of 500,000,000 people?

The answer is that whoever briefed the President on the Middle Eastern situation gave him a wrong steer. Whoever put those statistics before the President was using a trick argument to support a private opinion, not the national interest. This has happened so often that it is astonishing that Congress does not investigate.

What is the national interest? The answer must depend upon whether one believes that the expenditure of $500 billion to purchase friendship could ever have succeeded. As of June 1956, this policy shows many signs of having proved to have been a failure. Nevertheless, Congress is voting more money. Certainly this phase of American policy requires re-thinking and review.

Bow to Mrs. Conyngham

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre (Pa.) Record of June 27, 1956:

BOW TO MRS. CONYNGHAM

Her concern for the welfare of the community has led to many generous deeds by Mrs. William H. Conyngham. Gifts in countless instances have been of lasting value. It has been well said of her that she is a "beloved community personage."

Wyoming Valley Playground and Recreation Association through its board members and their guests took formal note last night of one of the latest of Mrs. Conyngham's benefactions of enduring worth and service—the donation to the city of a modern play center with wading pools on Lincoln Street. The center has been established in memory of her father, the late George W. Guthrie, a leading member of the medical profession and chief surgeon at the General Hospital at the time of his death. His interest in the young people of the community was highlighted by long and distinguished service on the Wilkes-Barre School Board. It is

now many years since that time, but no board member could be remembered more respectfully or affectionately than Dr. Guthrie is to this day.

For many reasons and for that one particularly it is most appropriate for his daughter to contribute in his name a means of advancing the well-being of the city's youth of today. It was also most appropriate that Mrs. Conyngham should be honored for a handsome gift, as she was last night, and by an association of which she has been a valued board member since 1949.

The affair, held at Weissman's Recreation Room, had something of the characteristics of a welcome-home party, for Mrs. Conyngham has just returned from a European tour.

Commodity Highlights

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. DIXON. Mr. Speaker, on June 25, 1956, the Department of Agriculture released the Demand and Price Situation. This publication points out that:

First. Prices received by farmers in mid-May averaged 9 percent above the low point of last December.

Second. May 1956 was the first month in almost 4 years that prices have not been below a year earlier.

Third. Farmers' cash receipts have reflected the rise in prices and in May were tentatively estimated at about 1 percent above a year earlier.

Fourth. Prices of both crops and livestock on the average have shown steady improvement since the early part of the year.

Fifth. Since prices paid by farmers on the other hand have increased very slowly during the same period, the parity ratio has risen significantly, increasing 6 percent since mid-December.

The same publication contains an excellent section entitled "Commodity Highlights." I ask unanimous consent that it be printed at the conclusion of these remarks in the Appendix of the RECORD.

COMMODITY HIGHLIGHTS

Cattle slaughter so far this year has run about 6 percent above last year, mainly because of large supplies of fed cattle. By mid- to late summer, hog slaughter may be down to the rate of a year earlier, and prices may be up to last year's prices.

Cash receipts from sales of dairy products are above 1955 and, for this year as a whole, will approach the record of $4.6 billion reached in 1952.

Egg prices in early June, though at the season's low to date, remained above a year earlier. Prices have since begun to rise seasonally, and probably will continue above last year until late summer or early fall.

Flaxseed prices declined about 12 percent from mid-June, and in midmonth were slightly above the 1956 crop support level. A large increase in foreign supplies is in prospect for 1956–57.

A record carryover of about 43 million tons of feed grains in is prospect for 1956–57, a 10 percent increase over last year. With a near average growing season, this would mean another big supply of feed grains for the 1956–57 feeding year.

Wheat exports in May and June have been very heavy. The total exported in the year ending June 30, 1956, may be 330 million bushels. The carryover on July 1 will probably be about 1,030 million bushels, about the same as a year ago.

Supplies of early season deciduous fruits are large. Growers' prices for the larger supplies of early season peaches are likely to average below the unusually high prices of of 1955.

Prices received by farmers for early summer vegetables are expected to average at least as high as those of a year earlier.

Fewer potatoes are expected to be available for market during the next 2 months, and prices are likely to average substantially higher than a year earlier.

Prices for middling $1\frac{5}{16}$-inch cotton have averaged around 35.50 cents per pound in recent weeks, or almost 2 cents more than a year ago. The higher price results from the large quantity of cotton withheld from the market under the CCC program.

Consumption of wool in 11 major consuming countries in the first quarter of this year is estimated to have been almost 10 percent above a year earlier.

About 15.4 million pounds of 1955 crop Maryland tobacco—43 percent of the crop—was marketed by mid-June. Auction prices averaged well above a year ago.

Senator Kennedy's "Boomlet"

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to have printed for the benefit of my colleagues to read a timely editorial entitled "Senator KENNEDY'S 'Boomlet' " that appeared in the Youngstown, Ohio, Vindicator on June 29 last:

SENATOR KENNEDY'S "BOOMLET"

Connecticut's Governor Ribicoff's proposal that Senator JOHN KENNEDY, of Massachusetts be the Democratic Vice Presidential nominee has much to recommend it. The Democrats could go further and do much worse.

Mr. KENNEDY is a young man, only 38, but already has made his mark. Millions of Americans have read his best-selling book, Profiles in Courage, which he wrote while recovering from an operation to correct a spinal injury received as a PT-boat commander in World War II. His Senate record is that of a liberal who recognizes the need for moderation in many issues. He has made himself an expert on numerous phases of government, including the lobbying problem.

Senator KENNEDY's father, Joseph P. Kennedy, was chairman of the Securities and Exchange Commission in the early days of the New Deal and served as American Ambassador to Britain from 1937 to 1941. His mother is a daughter of John F. Fitzgerald, a former mayor of Boston. A younger brother, Robert, is chief counsel for the Senate Permanent Investigating Subcommittee.

The Kennedy "boomlet," supported chiefly by New England Democrats, will grow or burst with the fortunes of Adlai E. Stevenson, whom the Senator strongly supports. Mr. KENNEDY's admirers assert that he would attract many youthful voters. They argue also that if the convention chooses a Southerner as Vice Presidential nominee many Americans will interpret the action as a blow to continued progress toward racial integration.

Another aspect is that Mr. KENNEDY is a Roman Catholic. He would give voters a chance to disprove the ugly theory that religious prejudice bars Catholics from the highest offices. As Governor Ribicoff asserts, "The United States has gained in maturity since 1928" when Al Smith, a Catholic, was the victim of smear tactics.

Many political considerations will dictate the Democrats' Vice Presidential choice and Senator KEFAUVER may be a serious contender. However, if Mr. Stevenson is to be the standard bearer, as seems increasingly likely, many party leaders may well consider that Senator KENNEDY would make an attractive running mate.

Resolution of Department of New Jersey Disabled American Veterans

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I include a copy of resolutions adopted by the Disabled American Veterans, Department of New Jersey, at their annual convention in Wildwood, N. J., on June 21 to 24, 1956, opposing the so-called Bradley report. These have been sent to me by James F. Patten, commander, and William J. Dodd, adjutant:

DISABLED AMERICAN VETERANS, DEPARTMENT OF NEW JERSEY, CONVENTION RESOLUTION

Whereas the present administration of the Federal Government has ordered a study of veterans programs and benefits, by a commission headed by Gen. Omar Bradley, which commission produced a series of pronouncements and recommendations, known as the Bradley report; and

Whereas a study of said Bradley report discloses that its recommendations are designed to drastically curtail veterans' benefits, including the total elimination of all benefits for millions of veterans; and

Whereas these recommendations, if implemented, would have a disastrous effect on veterans, particularly disabled veterans, their families and dependents, because the Bradley report seeks to reverse the 150-year-old American tradition and policy, in the words of Abraham Lincoln, to "care for him who shall have borne the battle, and for his widow and for his orphan," and seeks to demolish and wreck the system of veterans' benefits built up so laboriously over the years: Now, therefore be it

Resolved by the degelates of the New Jersey Department, Disabled American Veterans, in convention assembled, That this department highly resolve and go on record, as being unalterably opposed to the said Bradley report in its entirety, as being a deadly and direct threat to the welfare of this organization, its members and their families and dependents, and to all veterans, and as being a bald, deliberate, cynical breach of faith with the American veterans; and be it further

Resolved, That this department, its officers, member chapters and membership, do all in their power to oppose its implementation, in any way, legislative or administrative, and that copies of this resolution be forwarded to appropriate officials of the Federal and

State governments, the United States Congress, the New Jersey Legislature, and to the national convention, Disabled American Veterans, 1956, in San Antonio, Tex., for adoption and support.

H. R. 12078 Will Stop Profiteering of Foreign-Flag Ships

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. PELLY. Mr. Speaker, non-United States flag privately owned commercial ocean vessels, with low-wage foreign crews, are charging rates for transporting United States Government-owned or financed cargoes substantially the same as the rates charged by American-flag privately owned commercial ocean vessels.

If, as I understand to be the case, the owners and operators of American flag ships are finding ample cargo available and are able to charge rates which return them substantial profits, then certainly the owners of foreign registered ships must be reaping a harvest from United States Government cargoes at the expense of the American taxpayer, because the rates of a crew on a non-United States flag vessel aggregate approximately $20,000 a month less than the wages of a crew of one of our United States flag vessels.

In effect, an American owner can register his ship under a foreign flag and then by replacing American seamen with a foreign crew he can reduce his cost of operation and increase his profits to the tune of nearly a quarter of a million dollars a year. That situation is deplorable because that profit is at the expense of American seamen and, likewise, is at the expense of our Federal Treasury—and to add insult to injury, it is United States Government cargoes which are making possible such profiteering by foreign-flag ship operators.

I have sought, Mr. Speaker, to correct the situation. Earlier this year I introduced a bill to force our foreign competition, if it accepted our United States Government cargoes, to pay our scale of wages. Unfortunately, there has not been widespread support to date for that type of solution which is patterned after the Davis-Bacon area labor standard provision used in Federal construction and other legislation.

Meanwhile, the problem of foreign steamship profiteering has become more aggravated and, accordingly, I have developed a new legislative approach which offers, I think, a more practical remedy. This new idea is incorporated in H. R. 12078, a bill which I introduced yesterday and to which I call all Members' attention.

As the membership knows, Mr. Speaker, under the United States Cargo Preference Act, or, as it is generally referred to, the 50–50 cargo law, American ships to qualify for any preference must be available and agree to transport the cargo at reasonable rates. My bill provides, in effect, that foreign-flag vessels to qualify must have rates that are in line with the rates charged by American-flag ships so that the margin of profit of the former is not greater proportionately than the margin of profit of our privately owned commercial oceangoing ships for comparable service in comparable geographic areas, such margins of profit being based on determinations of the Secretary of Commerce, taking into account wage differentials.

I submit, Mr. Speaker, that this legislation is fair and would accomplish three desirable objectives: First, American shipowners would be discouraged under such a provision of law from transferring their vessels to foreign registry by reducing their profit incentive; second, the bill would relieve the United States Treasury and the poor long-suffering taxpayers of this country of paying exorbitant transportation and profits to operators of foreign ships; and, third, the measure would expand our active American merchant marine and increase job opportunities for American seamen.

My purpose in introducing H. R. 12078 at this late date in the session is to allow time for study and Department reports, so the House Committee on Merchant Marine could give the bill early attention next year. At the moment there is considerable demand for cargo and passenger space, so that our seafaring personnel may not be too concerned or fully conscious of future unemployment possibilities. But if the American people come to a realization that in a measure they are subsidizing not only our merchant marine but the ships of other nations and ships flying foreign flags and manned by foreign crews, then there is a danger of a popular move to cut off Government assistance of every nature and to all. In effect, our United States ships are being driven off the seas right now and indirectly and in a large measure it is our own Government cargoes transported on foreign ships which are causing this situation.

Let us stop this profiteering before it boomerangs. H. R. 12078 may well hold the answer to the problem.

Dr. Aaron Kottler

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. MULTER. Mr. Speaker, a new honor has come to my congressional district. Dr. Aaron Kottler, who has long resided in my district and practices his profession of medicine throughout the Borough of Brooklyn and the city of New York, has just been elected president of the Kings County Medical Society and the Brooklyn Academy of Medicine.

He is attached to the medical staff of the Coney Island Hospital and has served for many years as chairman of the legislative committees of the Kings County Medical Society and of the Coordinating Council of the Five County Medical Societies of Greater New York.

He has served as a member of the board of censors of the Kings County society, and, more latterly, as its senior censor. He has been a delegate to the State Medical Society since 1948 and is a member of the Board of Directors of the State Academy of General Practice and of the Group Health Insurance, Inc.

Dr. Kottler graduated from the Fordham University School of Medicine and served as an interne at the Williamsburg, Cumberland and Kingston Avenue Hospitals. He is former president of the Physicians Guild and of the Kings County Chapter of the American Academy of General Practice.

It is indeed a pleasure to join his many friends in wishing him well in his new office and many more years of happy service to his community.

Why Does President Eisenhower Command Such Public Confidence?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following:

IKE'S POPULARITY IS UNPARALLELED
(By Edgar Ansel Mowrer)

How many Americans would get all hot and bothered over the illness of any foreign statesman (except perhaps of Sir Winston Churchill—and even then)?

Yet that is exactly what free citizens in all parts of the world have done at the news of President Eisenhower's illness.

Or again, why are the American people so affected by everything that happens to the present incumbent of the White House? What makes Ike so popular?

My colleague, Dorothy Thompson, in a thoughtful appraisal of Mr. Eisenhower's popularity at home, attributed it to the fact that he is a typical American citizen, only more so. He acts and talks just about as Joe Doakes imagines he would act and talk if President of the United States—only better. He enjoys the same relaxations, eats similar food with no foreign frills. He advises citizens to be happy and to let no day pass without some fun. And he does his best to live up to his admonition. Yet at the same time, his administration runs and he managed to win victory in the greatest war the United States has ever fought. So what more do you want? Small wonder that as a candidate for a second term, he seems unbeatable.

But this is only part of the story. Alone it could not account for the President's amazing popularity overseas, even in countries where American stock is none too high. For that we must look further.

REASSURING HONESTY

Another obvious reason, I surmise, is the impression Dwight Eisenhower never fails to make on those who see or hear him—one of high intentions, love of people, and complete candor. As he once said publicly, even those

of his opponents who think him stupid admit his honesty. This is undoubtedly reassuring to citizens suspicious of politicians. Mr. Eisenhower can be candid even when he is being most political.

But most important, in my opinion, is the compelling factor that this particular American President stands for normalcy in a period when people everywhere are sick of crisis and would forget danger.

Psychologically, there seems to be a rhythmic process in history, certainly in the recent history of the United States. From the beginning of this century we have more or less zigzagged between change and disturbance and the search for stability.

After 7 years of strenuous life with Theodore Roosevelt, the people chose a quiet guy, William Howard Taft. After 8 years of Wilson's new freedom and World War I, they flocked to Warren Gamaliel Harding, a candidate so normal as to be a freak. Harding was followed by the equally normal Coolidge. Then when the economy blew up under Hoover, the people flocked to abnormality incarnate in F. D. R. and the New Deal.

SOUGHT PEACE

Depression, World War II, the cold war, the Korean war—these filled the next 20 years. And after this period of unimaginable change and crisis, the people in 1952 elected a quiet man of great distinction, Dwight Eisenhower.

He has not disappointed them. He has sought peace, persistently and quietly even when this meant substituting his own optimism for the reasoned pessimism of his associates. He has taken things on the up and up rather than as they seemed. With the Russians he agreed to let bygones be bygones if only the Kremlin would lay off further aggression. Domestically, he has stayed in the middle of the road.

And he has found support for these attitudes in the aspirations of simple people not only in the United States but in all other free countries.

Here, in my judgment, lies the explanation of a worldwide popularity greater than any other American has had in his lifetime.

Advisory Committee on Weather Control

SPEECH

OF

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. DIXON. Mr. Speaker, reserving the right to object and I am not going to object, I wish to make a statement explaining this bill.

The bill, S. 2913, would extend the life of the President's Advisory Committee on Weather Control. One might logically ask, why extend the life of this Committee when it originally was set up to complete the job by June 30, 1956? The answer simply is this: A check of the record shows that the act creating this Committee was approved August 13, 1953, but funds were not appropriated until almost a year later, in July 1954. Because of this fact, the Committee was not able to assemble a qualified scientific staff that could accomplish the work of the Committee until January 1955.

In effect, therefore, this means that the Committee has had only about 1½ years in which to study the problems it was set up to examine. Its published report shows that cloud-seeding operations in the mountainous areas of the Pacific coast States have produced increased precipitation ranging from 9 to 17 percent above the normal expected precipitation. Most important of all, however, there has simply not been time to permit the Committee's technical staff to study the possibility of increasing precipitation in the Mountain States and the Midwest, which do, as you know, have vast sections now labeled drought disaster areas and which are, thereby, eligible for Federal assistance. To a lesser extent, the same is true of certain sections of the East and South. Because of these conditions, it would be regrettable if the life of this Committee is not extended. Water is one of our most basic resources and it is terribly important that every possible means be exhausted to increase its availability. Because of these factors, I urge passage of the bill.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

Address Delivered by Rabbi David Berent at Naturalization Ceremonies at Portland, Maine

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Thursday, July 5, 1956

Mr. PAYNE. Mr. President, on June 26, 1956, Rabbi David Berent, of the Congregation Zeth Jacob, in Lewiston, Maine, delivered one of the finest addresses it has ever been my privilege to read at naturalization ceremonies at the United States district court in Portland, Maine. This inspiring message, delivered to a group of new citizens, merits far wider circulation than it has yet received. I commend it to the Members of Congress and all Americans for careful and thoughtful reading. I ask unanimous consent that this outstanding address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY RABBI DAVID BERENT, UNITED STATES DISTRICT COURT, PORTLAND, MAINE, JUNE 26, 1956

It is a great privilege which this court has bestowed upon me, and I am mindful and deeply appreciative of the high honor. Much should be said, which I am incapable of saying, and upon a level of eloquence such as this court is accustomed to hearing, which I cannot reach.

My first words are directed in prayer to the Master Architect of the universe, that He send a perfect healing and renewal of strength to the Honorable Justice John Clifford, the judge of this court, that he may soon resume his duties with restored health in body and in spirit.

And now, congratulations are in order. Congratulations to you, new citizens who I am happy to call fellow Americans. It is indeed a pleasure for me to be able to call you fellow Americans and to extend a warm hand of welcome to each of you as you become citizens of the United States of America. You are today joining some one hundred and seventy million Americans in the privileges, rights, and obligations of American citizenship. This occasion will be indelibly inscribed in your memory as one of the most important and thrilling days in your lives, for it means the reaching of a goal—the finding of something long sought.

Today, having pledged allegiance to the United States in these naturalization ceremonies, you are as much a citizen of this Republic as the man or woman who can claim a background of a dozen generations on this soil. After all, every American came from some foreign land, with the exception of the American Indian. That beloved humorist, Will Rogers, was proud of the Indian strain in his ancestry. At one time, he made this comment: "My ancestors did not come over in the *Mayflower*—they met the boat." Of the two classes of citizens—those who claim the right by birth and those who have studied, as some of you have for as long as 3 years in the evening classes of our night schools and striven to become Americans through naturalization—I am often led to believe that the latter very often have the deeper and truer appreciation of what American citizenship really means. Americans by birth all too often accept this blessing as a matter of course.

You come here with varied backgrounds, just as those who have preceded you brought with them the best of their respective cultures. America welcomes you for what you have to offer. You have become aware through the medium of advertising, that it is the blend that counts. That's what makes good tobacco, good coffee, good flour—it's what gives quality and flavor to our Nation as well. That's why the United States stands head and shoulders above other nations—because we are a blend of many different cultures, creeds and races—an unbeatable blend of many peoples. As John Latouche in his stirring Ballad for Americans has the solo voice sing out in answer to the question, "Am I An American?" "I'm just an Irish, Negro, Jewish, Italian, French and English, Spanish, Russian, Chinese, Polish, Scotch, Hungarian, Litvak, Swedish, Finnish, Canadian, Greek and Turk and Czech and double Czeck American!" "And that ain't all—I was baptized Baptist, Methodist, Congregationalist, Lutheran, Atheist, Roman Catholic, Orthodox Jewish, Presbyterian, Seventh-day Adventist, Mormon, Quaker, Christian Scientist and lots more." Yes, my friends, a nation compounded of almost every national stock, of almost every race and color and creed, must be built on the cornerstone of tolerance, of breadth of understanding, of generosity of viewpoint, and largeness of outlook. With insignificant and sporadic exceptions, America and Americans give full tolerance to other viewpoints and are ready to assimilate the best of all groups. Therein lies her strength!

Second, you will find here a high degree of individual freedom. The Colonies were founded by refugees from Old-World restraints and by fearless seekers after individual freedom.

Third. You will find here full equality of opportunity, so that native talent and native capacity may freely rise to the top, irrespective of social or economic station.

It may be stated categorically that our country has given to its citizens more of well being, more purely material and spiritual advantages, and a higher standard of living than any other group of people has ever known for such a long period of time in all the history of mankind. With the light of freedom in their eyes, with dreams of brotherhood in their hearts, oppressed men and women fled to this country and here they became giants in the earth. Liberation from tyranny freed something heroic in their souls. They conquered a continent with civilization. They reared great cities on what had been desolate plains. They covered the good earth with fields of grain and orchards heavy with luscious fruits. They spanned the rivers and the deserts and the mountains with bridges and tunnels and railways. Through the telegraph and telephone, the radio and television they bound together the vast heterogeneous masses who were scattered from the Atlantic to the Pacific, from the Gulf of Mexico to the Great Lakes, into a great community—these great and blessed United States.

Our Nation has not been without its faults, nor have its bounties always been equitably distributed. But in the light of history, and in comparison with what other countries have achieved for their peoples, not in empty words but in bread and freedom, in faith and peace, American democracy has proved to be the most successful experiment in human living together in all the experiences of mankind. But it seems to me that the most precious contribution of democracy is something that cannot be measured by material standards. It has taken the prophetic vision of that time when every man would be able to sit beneath his own vine and fig tree and none would make him afraid. It has taken the saints' dream of a social order founded upon the Golden Rule. It has taken men's deathless aspirations for brotherhood and freedom, and it said, "Here are the materials to make your dreams come true—to realize brotherhood on the foundation of freedom."

I can testify from my own experience to the meaning and power of this American dream, for I happen to be the son of immigrants, who, as young people, fled to this country to escape from tyranny and persecution in Eastern Europe. I know from what is in the hearts of my people what this democracy means to the downtrodden and the disinherited of the earth. To millions it has meant refuge. Only a short time ago while in New York City I visited a family that had recently arrived in this country. The mother cried out of sheer joy when she told me how happy her children were in the public schools. With tears in her eyes she said to me, "You do not know what it means to be one of the very few families to be fortunate enough to survive the Hitler gas chambers. After having searched for my children who were scattered in England, France, and Belgium, finally getting them together with the aid of American relief agencies who arranged for our admittance to this country—you cannot realize what this new-found freedom means to me and my children. You can't imagine what it means to have your children free from abuse and hurt because of their race or creed." Perhaps I do not know with the poignancy of her mother's heart, but I do know what this freedom has meant to those who fled from the Old World because of persecution. The whole history of America, from the arrival of the Pilgrims at Plymouth Rock to the last refugee entering New York or Portland Harbor, is a record of man's response to the challenge of liberty.

Today you enter the golden door of citizenship. It behooves you, therefore, to pause frequently and appraise that citizenship, placing as much emphasis on its duties as its privileges. These two elements of the modern concept of citizenship, rights and duties, are mutually interdependent. The citizen will continue to enjoy his civil rights and liberties to the extent that he continues to perform his civic duties. Being an American means more than just fairmindedness; more than just a willingness to size up the other fellow on his merits, instead of judging by the color of his skin or the way he worships God. Being American means being on your toes, seeing that your neighbors enjoy the privileges of citizenship, protecting their rights as you would your

own. It means working with other Americans of every race, creed, and ancestry to solve the many problems that confront us from day to day. These are not empty phrases; they represent a way of life that has brought us prosperity and power, made us the envy, and the hope, of the world.

Remember, we are not Americans simply because we live in America and call it our country. Nor are we Americans simply because we were born of American parents or of naturalized American citizens, or merely accepted the oath of citizenship as you are doing today. No. We are Americans because we have something in common with the Americans of the past who put the seal of their spirit and the imprint of their hands on this blessed land.

But the innermost meaning of American democracy is something that goes deeper than refuge from tyranny. It is an affirmation of human dignity, as against the contempt for man, which is felt and expressed by those who espouse the political philosophy of communism. It affirms the divine worth of the individual human being. I believe that America rests on a religious conviction concerning the worth of man. Life, liberty, and the pursuit of happiness are not blessings men can give, or that a ruler can take away. These are gifts with which we have been endowed by our Creator. They are, therefore, inalienable rights. It is a religious conviction which undergirds our democracy and is its strongest safeguard.

Do you like quiz shows? Here is the $64,000 question for today. On what statue wil you find these stirring words engraved?

"Give me your tired, your poor
Your huddled masses longing to breathe free,
The wretched refuse of your teeming shore,
Send these, the homeless, tempest-tossed, to me;
I lift my lamp beside the golden door."

If your answer is the Statue of Liberty, you're absolutely right. And these words, written by Emma Lazarus, a Jewess, have special meaning today as we salute you new citizens. For more than 300 years, people from all over the world have brought to these shores the energy, the vision, the many different skills that have made our country the greatest nation on earth. You new citizens are the inheritors of this proud tradition. Of all races and all religions, you are now equal partners in this mighty Union.

I am confident that you will fulfill the faith that your country is placing in you. I have faith that you will help your fellow Americans to transmit, unimpaired, the great values of which we of this generation are but trustees. I warmly extend to you my hand and my heart in welcoming you to the brotherhood of America.

Our Lives, Our Fortunes, and Our Sacred Honor

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, July 5, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD an editorial by William Loeb, publisher of the Manchester Union Leader, Manchester, N. H., entitled "Our Lives, Our Fortunes, and Our Sacred Honor."

I consider this an excellent editorial, as is the article to which it refers and which appeared in the American Legion magazine. It is a very timely commentary and I highly recommend it to my colleagues as well as to the American people as a whole.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR LIVES, OUR FORTUNES, AND OUR SACRED HONOR

As is customary, tomorrow, the Fourth of July, the entire front page of this newspaper will be devoted to the greatest document in the history of this Nation, the Declaration of Independence.

This editorial today is written to bring to our memory something about the signers. For many of the facts we are indebted to a splendid article, They Signed for Us, by Merle Sinclair in the July issue of the American Legion magazine, of which Manchester's own Jimmy O'Neil is publisher.

At the end of the Declaration is the great phrase: "And for the support of this Declaration, with a firm reliance on the protection of divine providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor." History proves that these were no empty phrases.

Let us take the case of Francis Lewis, whose fight for freedom cost his wife her life. Because he signed the Declaration, his Long Island home was ransacked by the British, his books and papers destroyed, and his family forced to flee. His wife was captured and held in a filthy barracks for months. She refused a release that would have been given her if her husband agreed to desert the Revolution. Finally she was liberated but died 2 years later as a direct result of her mistreatment.

Then there is the case of Thomas Nelson, Jr. He was the wealthy Governor of Virginia when he signed the Declaration. He mortgaged all his property and raised $2 million, virtually overnight, with which to help the fighting in his colony. The day after he signed the Declaration his home in Yorktown was occupied by Cornwallis' personal staff. When rebels tooks the offensive, Nelson visited their firing lines. He watched the patriots' artillery raze all the houses of the neighborhood except his own.

He asked: "Why do you spare mine?" "Out of respect to you, Governor," he was told.

"Give me the cannon," Nelson ordered. Whereupon he fired and destroyed his own house. Thomas Nelson, Jr., gave his entire fortune to his country. He was never paid a penny of it back. Dying penniless, he was buried in a nameless grave.

Then let us take Rev. John Witherspoon, of New Jersey, who had been president of Princeton College for 10 years. Needless to say, this was in the days before Princeton believed in inviting Alger Hisses to the campus. When a southern delegate to Congress opposed ratification because "we are not ripe for revolution," Rev. Mr. Witherspoon rose to his great height and shouted, "Not ripe, sir? We are not only ripe but rotting for want of it."

Oldest signer of the Declaration was Stephen Hopkins, of Rhode Island, who was suffering from palsy so badly that he could hardly hold his hand still when he signed. Said Hopkins: "My hand trembles, but my heart does not."

Hopkins was 10 times Governor of Rhode Island, chief justice of its supreme court, and first chancellor of Brown University. He must be rolling in his grave when you consider the attitude of Barnaby Keeney, present president of Brown University. Keeney, it will be recalled, called J. Edgar Hoover an anti-intellectual.

Then there was Caesar Rodney, of Delaware, suffering from a cancer which had already affected half his face. He was on his deathbed, 80 miles from Philadelphia, when he was told that his vote was necessary for ratification. Rodney rose from his bed, in fever and pain, and rode the 80 miles in a thunderstorm, arriving in the Halls of Congress in Philadelphia as the voting on the ratification of the Declaration of Independence was going on and just as the name "Delaware" was called. "I vote 'yes,'" said Rodney as he sank, exhausted, to his seat.

Carter Braxton, of Virginia, was the richest of all the signers. He died in debt, a broken-hearted man. His fortune had been in ships. All were captured by the British.

John Hart, of New Jersey, another signer, was a farmer. His wife lay dying when Hessians reached his farm, a few months after he signed the Declaration. He was driven from her side. His property was ruined and his 13 children fled, and he never saw his wife alive again. He was almost 70, but he joined Washington's army as a private.

Finally, we come to Lewis Morris, of New York. As he was about to sign he received word that the enemy was at the gates of his Long Island home, but that his property would be spared if he would withhold his vote for liberty. Said Morris: "There are plenty of homes, but only one country."

What do the signers think about today as they view conditions in the present-day United States? What will they think tomorrow if pitifully few American flags are displayed in the State of New Hampshire? Furthermore, what would they think of the craven and cowardly foreign policy of the United States today?

Federal Assistance to States for School Construction

SPEECH
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 7535) to authorize Federal assistance to the States and local communities in financing an expanded program of school construction so as to eliminate the national shortage of classrooms.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania [Mr. SCOTT].

Mr. SCOTT. Mr. Chairman, difficult problems compel difficult decisions. Under this bill the State of Pennsylvania will be required to contribute about $30½ million and will receive back about $25 million. We are interested in what happens to the $5½ million for which we get no return other than the satisfaction of seeing that it is justly and fairly administered and distributed. If this money were to be distributed by States which had levied taxes for it, those States might well say that we should leave the entire matter to them. But if the money is to be raised by other States and distributed by the Federal Government then I think we should be bound by the Federal law and by the decisions of the Supreme Court.

It was shocking to me to hear the distinguished Vice Chairman of the Democrat National Committee argue against the Powell amendment. The opposition to the Powell amendment of ex-President Truman and the Democrat National Committee exhibits continuing determination to kill civil rights measures. This is not the first time Harry Truman has tried to pull the rug out from under civil rights legislation.

(Mr. SCOTT asked and was given permission to revise and extend his remarks.)

Federal Assistance to States for School Construction

SPEECH
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 3, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 7535) to authorize Federal assistance to the States and local communities in financing an expanded program of school construction so as to eliminate the national shortage of classrooms.

Mr. BAILEY. Mr. Chairman, the proposal of the gentleman from New York is a basic one. If adopted it can well mean the death of this legislation, if not in the House most certainly in the other body.

My position is well known, Mr. Chairman. Some years ago I assisted the gentleman from New York in getting a fair employment practices bill out of our Committee on Education and Labor by a 13-to-12 vote. I assisted him in the fight on the floor even though it was a losing fight. I am still sympathetic toward minority groups.

The Supreme Court has ruled on two occasions, once in 1954 and again in 1955, that the group he seeks to aid is no longer a minority group in the field of educational affairs. I must oppose his amendment on the ground that it has no place in this legislation.

He is not satisfied with equality; he wants the Congress to give special treatment to his race. He wants us to pick them up now that they are on a basis of equality, pick them up as a considered group over and above everybody else who is on a basis of equality, and pass legislation to punish somebody.

It is not the purpose of the Congress of the United States, it is not the function of the Congress, to pass punitive legislation; it is the function of the Congress to pass legislation that is for the general welfare and that bears equally on everyone.

It is the function of the courts to administer punishment and the courts are open to him just like they are open to all the rest of our citizens.

Mr. KELLEY of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. BAILEY. I yield to the gentleman from Pennsylvania.

Mr. KELLEY of Pennsylvania. Will the gentleman explain to the committee whether or not the Committee on Education and Labor considered this amendment?

Mr. BAILEY. We did.

Mr. KELLEY of Pennsylvania. What was the result?

Mr. BAILEY. I think the vote was 17 to 10, as I recall it. If I am wrong, I am sure the clerk of the committee can correct me. I think that was the vote in the Committee on Education and Labor.

Mr. Chairman, I would like to submit at this time for inclusion in the RECORD a wire I just received from the National Education Association in session at Portland, Oreg., as follows:

JULY 2, 1956.

Hon. CLEVELAND M. BAILEY,
United States House of Representatives, Washington, D. C.:

The 2,200 delegates representing over 550,000 classroom teachers in these United States meeting today at their annual business meeting in Portland, Oreg., urgently request the defeat of the Powell amendment and the passage of H. R. 7535 to meet the urgent need of classrooms for our Nation's children.

ELIZABETH YANK,
President, Department of Classroom Teachers, National Education Association.

Here is another telegram from West Virginia, as follows:

The executive board of the West Virginia Federation of Women's Clubs representing 20,000 West Virginia women in session in Charleston ask for your support of the school building construction bill without the Powell amendment.

Mrs. PHARES E. REEDER,
President.

DUNBAR, W. VA.

Here is a telegram from the secretary of the National Education Association in session at Portland, Oreg.:

Respectfully urge you be on House floor to oppose and vote against Powell amendment.

WILLIAM G. CARR,
Executive Secretary, National Education Association.
JOHN LESTER BUFORD,
President, National Education Association.

Mr. Chairman, I also have the following letter from James G. Patton, president of the National Farmers Union, as follows:

NATIONAL FARMERS UNION,
Washington, D. C., June 26, 1956.

DEAR CONGRESSMAN: National Farmers Union urges you to support the school-construction bill, H. R. 7535. More than ample justification for enactment into law has been given the Labor and Education Committee in lengthy hearings.

Rural farm States in particular are in need of assistance. Since the beginning of the industrial revolution, wealth has flowed from farm to metropolitan-industrial areas. Migration of rural youth, settlement of estates with off-farm residents, and payment of interest and rent to off-farm interests all contribute to the loss of wealth in rural areas. Wealth from farms will continue to move in this manner with an increasing amount flowing across State lines. The only means we as a Nation have to protect the right of our children to equal educational opportunity is to provide through the Congress the taxing of wealth where it is and the use of funds so derived to help children where they live.

The many long-standing programs of federally aided education have operated under universal local control. National Farmers Union strongly supports local control of educational programs at every level. We do not believe approval of federally aided school construction will violate this principle of long standing.

National Farmers Union strongly believes the bill will give greatly needed aid to children both in urban and rural areas. We hope that you will support H. R. 7535, opposing any crippling amendment when it reaches the House floor for debate and vote.

Sincerely,

JAMES G. PATTON,
President.

Then I wish to submit also the following news item from the National Education Association, which includes a speech by Eric Johnston made at the Annual Convention of the National Education Association in Portland, Oreg. This news item is as follows:

ERIC JOHNSTON, FORMER CHAMBER OF COMMERCE PRESIDENT, ENDORSES FEDERAL AID FOR SCHOOL CONSTRUCTION

PORTLAND, OREG., July 2. Eric Johnston, president of the Motion Picture Association of America and former president of the United States Chamber of Commerce, declared here tonight that there is no crisis in education that money won't cure and that some of the money—"perhaps most of it—must come from the Federal Government." Mr. Johnston's endorsement of the use of Federal funds for education and more specifically of passage of the school construction bill now being debated in Congress comprised a major part of the speech delivered at the National Education Association annual convention being held here this week.

"At the outset," he said, "I would like to offer one personal conviction. I am for Federal financial responsibility in American edueation. I say this unequivocally. I know and you know that we cannot buy one new classroom or hire one new teacher with a tax cut. Personally, as a businessman, I would favor postponing any cutting of corporate or income taxes until we deliver adequate funds for restoring our national educational system. * * * I firmly believe that Federal support for education can be supplied without disturbing the autonomy of our Nation's schools in our local communities."

Mr. Johnston pointed to congressional approval of an expenditure for highway construction that could amount to some $3 billion annually for the next decade. "I favor this expenditure. We need the roads," he continued, "but if we can afford $3 billion of Federal funds each year to improve our roads, why can't we afford $3 billion to improve our schools?"

"I know full well," he stated, "that an additional $3 billion for our schools must come from taxes, not tax cuts. Now some people say we must cut taxes to stimulate business. As a businessman, I am sure we can also stimulate business through a Federal school construction program."

"It's not hard to offer new ideas," he concluded, "It's always harder to work them out. One reason for this is that our society is always in motion—and today it is moving at breakneck speed, with the accelerator down to the floorboard. The status-quo people will undoubtedly argue that large-scale Federal support for education is at least upsetting, possibly radical, probably dangerous. But status-quoism is an old-fashioned and fairly common disease. We've cured it before. We can cure it again. And we shall also cure the diseases now besetting education."

AN ADDRESS BY ERIC JOHNSTON BEFORE THE ANNUAL CONVENTION OF THE NATIONAL EDUCATION ASSOCIATION, PORTLAND, OREG., JULY 2, 1956, MULTNOMAH STADIUM

The theme of your convention this week is "Be Proud To Teach." It's a fine theme. But pride is not enough. I have not come before you this evening to talk as a professional in the field of education. I don't pretend to be one. I have come to talk to you as a businessman and taxpayer who is interested in the welfare, growth and prestige of our country.

You have talked and I presume will continue to talk during your entire session on the crisis in education. I want to say to you as a businessman that there is no crisis in education—that money won't cure.

And that is why I say that pride is not enough? To be proud of your profession, your profession must have a proper status in our society. This will cost money.

At the outset, I would like to offer one personal conviction. I am for Federal financial responsibility in American education. I say this unequivocally.

I know and you know that we cannot buy one new classroom or hire one new teacher with a tax cut. Personally, as a businessman, I would favor postponing any cutting of corporate or income taxes until we deliver adequate funds for restoring our national educational system.

At the same time, I would like to add that I am against the Federal Government telling our schools what they should teach, or how they should teach it. I firmly believe that Federal support for education can be supplied without disturbing the autonomy of our Nation's schools in our local communities.

* * * We've heard the nature of our educational crisis recited many times in many ways—inadequate schools for our growing population, inadequate salaries and status for teachers, inadequate recruits for the teaching profession, inadequate recognition of gifted students, inadequate opportunities for students to proceed to the limit of their talents, inadequate opportunities for students to become acquainted with our complex world—both at home and abroad.

Some of these problems have been with us for years, but never have they been more acute. Let me anchor this fact with a statistic. In the 20 years between 1930 and 1950 our school enrollments remained about the same. Today our school enrollments are increasing by 1¼ million students every year. If we weren't prepared for our new students in the 1940's, how well prepared do we think we are in 1956?

With that disturbing question, I hope to put aside the problems and consider some of the solutions. I don't think it will be hard to find workable solutions—if we are willing to pay for them. As we all know, free education is free only to school children. Someone has to pay for it.

At this moment in our history, we're getting our nickel's worth of education—perhaps even a dime's worth for a nickel. But if we want a dollar's worth, we're going to have to spend a dollar. There is no bargain counter price for education in this or any country.

This year our States and communities are spending almost $10½ billion annually for our public elementary and high schools—which amounts to about 3 percent of our gross national income. How do we spend it? According to our public ledgers, we are now paying about $2½ billion annually for new school buildings, about $5 billion for teachers' salaries, and about $3 billion for all additional school costs—books, pencils and paper; heat, light and water; and the salaries of clerks, cooks and janitors.

This amount is simply not enough—neither for our school sytem today nor for the expanded school system we will require tomorrow. How much more do we need and where will it come from? As a rough figure—a kind of target figure to shoot at—we might consider an additional sum of $3 billion a year for education. I don't intend to stand here tonight and tell the Congress of the United States what it should appropriate—as to the final precise amount, even educators will disagree.

Where the increased funds must come from, however, is a rather simpler question. Some of it, perhaps most of it, must come from the Federal Government. In the gaslight era of our recent past, the States and communities collected 75 percent of all tax revenue and the Federal Government collected 25 percent. Today the States and communities collect only 25 percent while the Federal Government collects 75 percent. If our schools need more tax money today, and they do, they have to go where the tax money is.

Our Congress this year has considered an expenditure for highway construction that could amount to some $3 billion annually for the next decade. I favor this expenditure. We need the roads. But if we can afford $3 billion of Federal funds each year to improve our roads, why can't we afford $3 billion to improve our schools?

I know full well that an additional $3 billion for our schools must come from taxes, not tax cuts. Now some people say we must cut taxes to stimulate business. As a businessman, I am sure we can also stimulate business through a Federal school-construction program. I am opposed to cutting taxes generally until we put our schools in order.

How do we arrive at our target figure of an additional $3 billion a year for education? First of all, we must have more classrooms because we have more children to put into them than ever before and because we have neglected to build enough classrooms for the past 20 years. Today more than a million children can't be properly educated—unless you have no objection to such emergency schoolhouses as war-weary barracks and empty garages.

I am no expert in this field, so I called on the experts. The Federal Office of Education, which has more dedication to its work than funds to carry it out, tells me we must build at least 95,000 classrooms a year for the next 5 years to meet our present needs and increasing enrollments. Their experts say we are now building only 67,000 classrooms a year and that unless we expand our construction program, we will have to stretch the very walls of our schoolhouses to crowd in the avalanche of new students.

I asked how much more we needed, at a minimum, for school construction. With their hearts as well as with their slide rules, they set the figure at $1½ billion annually.

It's not hard to offer new ideas. It's always harder to work them out. One reason for this is that our society is always in motion, and today it is moving at breakneck speed, with the accelerator down to the floorboard. The status quo people will undoubtedly argue that large-scale Federal support for education is at least upsetting, possibly radical, probably dangerous. But status quoism is an old-fashioned and fairly common disease. We've cured it before. We can cure it again. And we shall also cure the diseases now besetting education.

No nation on earth is more devoted than we are to a system of universal free education. After all, we invented the idea. But in recent years, we've neglected our responsibility and now we must give more than lipservice, we must dig into our own pockets. That may hurt a bit, but the rewards will be enormous, for ourselves and the generations to come.

With the funds we need we can restore our educational system to the status it deserves; we can relieve the shortage of skilled people in this country; we can provide an adequate school plant for the children we're raising, an adequate staff to instruct them, and a status for the teaching profession to rank among the highest in America. When that day comes, one truly may be proud to teach.

Bridges Warns on Foreign Aid

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, July 5, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Bill Cunningham, an outstanding columnist for the Boston Herald and radio and TV commentator, entitled "Bridges Warns on Foreign Aid." This article appeared in the Boston Sunday Herald of July 1, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRIDGES WARNS ON FOREIGN AID

(By Bill Cunningham)

"Let us bear in mind that every American compromise, however it may be explained, is multiplied in other countries into surrenders. Our job, to ensure our own security, and to secure the survival of freedom on this earth, is to galvanize the stragglers, the fearful, the intimidated, by examples of moral valor and spiritual dedication. Such is the rule of leadership which, though we never sought it, we can reject only at our peril."

So said New Hampshire's Senator BRIDGES, as he approached the conclusion of a hard-hitting speech on United States foreign policy on the floor of the Senate last Wednesday afternoon. His absolute conclusion went as follows:

"That, my friends, is what I meant when I said that attitudes and basic principles are no less decisive than actions and policies. An attitude of compromise on essentials, phony friendships with gangsters at any price, leads to one set of decisions.

"It is precisely these underlying considerations which must be examined in the debate on foreign policy which will develop in the forthcoming election campaign. We can excuse and make up for failures of particular policies. Those reflect the mistakes of fallible men in a complex situation.

"We dare not excuse a failure of nerve and a failure of principle, for those witness a weakening and threaten a collapse of our whole moral structure. If the present drift to cynical grayness, where once we knew the difference between black and white, is not arrested and reversed, we shall lose our ability to defend ourselves. Indeed, we shall have little left that is worth defending."

This address, entitled "The Moral Crisis in American Foreign Policy," was part of the great debate on foreign aid, although beyond questioning the value of further contributions to Tito and Nehru, it had little to say about foreign aid as such. Rather it was intended to serve as a reminder and a warning of how far we've wandered from the real point of it all, how fuzzy much of our official thinking has become, and how foolish it is to be taken in by the new Russian pose.

SOMETHING OF A REBUKE

Whether it was meant to or not, it came as something of a rebuke to an emotional address previously delivered by the veteran Senator GEORGE, of Georgia, in which he appealed to the Senate to raise "the best

hopes of mankind" by restoring the $700 million to President Eisenhower's foreign-aid program. Senator GEORGE, as chairman of the Senate Foreign Relations Committee is leading the fight for adoption of the $4.5 billion foreign-aid program for the fiscal year that starts today.

"Is there anyone in this body, or in America, who believes we can abandon our world responsibilities without the gravest consequences to humanity?" the veteran southerner asked the Senate in a speech that brought him close to tears at its close. "The danger of war cannot be avoided if we begin in this bill to liquidate the military strength of the free world."

Many Senators moved forward to wring Senator GEORGE's hand when he had finished and the scene was very emotional. Many reporters and commentators gave this the old Billy Sunday, hit-the-sawdust-trail twist and preferred to see it as GEORGE's having converted many former opponents of the full Presidential measure.

Others, less inspired, saw it more in the line of a sentimental farewell to an old friend and a great figure. This was quite possibly the last major speech the 78-year-old, Democratic leader will ever make from the floor of the Senate of which he has been a Member for 34 years.

He was up for reelection in November, and at first declared himself as a candidate.

Later, after surveying the situation as it seems to stand in his home State, he decided he didn't have a chance against Georgia's former Governor and present champion of State's rights and segregation, Herman Talmadge and so he withdrew with the prospect of remaining in the field of foreign affairs as the President's Ambassador to NATO. Thus, as an internationalist, he becomes a casualty along with such figures as Senators Vandenburg and Ferguson, and apparently Wisconsin's Senator WILEY, whose grassroots electorates didn't agree with their assumption of authority as global experts and policy pushers.

NO REFERENCE TO GEORGE

The Bridges address made no reference to Senator GEORGE, nor even to the Presidential policy. In fact, it didn't even knock foreign aid. Instead, it said:

"I have long favored the basis of our foreign-aid program. I was for foreign aid nearly two decades ago, at a time when that position was not entirely popular, because I believed it was essential to the security of the United States and the protection of the free world. I am still for a truly mutual-assistance program, with particular emphasis on aiding those countries who honestly intend to help themselves and the rest of the free world."

But in explaining further he said, "In my view foreign aid should be employed to build and nurture these allies and alliances necessary to protect us and to assure our safety." He had already said, "the purpose of our foreign policy is to promote and protect the true interests of our people," and said this is the basic and original fact that's being lost in such "incredible confusions."

But, to go on with the above, after saying, "in my view foreign aid, military, economic and technical, is an instrument of foreign policy," Senator BRIDGES continued, "We must match with bonds of friendship the enmities our opponents try to create.

"We want to help other nations, to strengthen them spiritually and economically, so that if they are assaulted, or if we are assaulted, we will all be much stronger to resist and to fight. I don't care about buying gratitude, but we ought to buy something.

"Surely we aren't spending $5 billion a year on a huge giveaway charity program. We have no right to tax our people just to give largesse all over the world. If nations tell us they want our economic help but that what side they are on is none of our business, or that they see good in both sides, and some bad in both sides, then how does helping them aid our foreign policy? What kind of global do-gooding is that?

"How can we respect ourselves for giving our money and substance all over the world and asking nothing in return? What has this to do with an effective policy which, in this day and age ought to be pretty hard, and realistic? Our survival, as a people and a Nation may depend upon who our allies are and how firmly they stand with us.

"And, if we don't have any allies, we ought to know that too, and act accordingly. This confusion—this softheadedness—must end. We must realistically reappraise the whole business or in the end we will waste our substance and perish. * * *"

TITO HONEYMOON

Of Tito he said, "What have we got for the billion dollars we gave him? We fed him, bolstered him when Stalin tried to crush him, we supplied and equipped his army. And what have we got for our pains? We get a Tito honeymoon, staged in Moscow. We get a statement from Marshal Zhukov to Tito that, in war, the Kremlin and Tito, will fight shoulder to shoulder. We get an official statement that Tito and the Kremlin will make stubborn efforts to see that Red China is admitted to the U. N.

"We get an official statement that East and West Germany must be reunited, not by plebiscite, nor popular vote but by a negotiated deal. We get an official statement that Formosa must be handed over to Red China. Americans paid $1 billion for this, and if any one can show me why we should provide more money for Tito, I should like to be shown.

"It was a disdain for moral values which maneuvered us into the folly of building up the dictator, Tito of Yugoslavia. And it is the same retreat from moral standards which today creates the confusion over so-called neutralists. * * *"

Then he went on to say that neutrality makes sense where physical war is concerned and some country wants to stay out of it, but cold war, where the contest is a conflict of "human, moral, and spiritual" issues—"the determination of a crusading totalitarianism to extend its pattern of life to the rest of the human race" is definitely something else, and who, here can be neutral?

"Every time a spokesman for the free world speaks of neutrality in the old sense in relation to our present dilemma, he cheapens the issue and betrays the high purpose of the free world. He helps make it seem—as the Kremlin wants it to seem—simply an old style duel for power. On that false assumption the contest loses its true significance, and other countries are fortified in their delusion that the whole thing concerns only the main antagonists: the United States and Russia.

"It is at this point that I lose patience with those nations which are not only neutralist in their military position, but insist upon neutralism in their moral position. I know of no worse offender in this regard than Nehru, who proclaims himself the moralist of Asia.

"I know of no instance where Nehru has openly and sincerely taken the side of freedom and democracy. I know only weasel words and idle pretensions. Nehru has yet to denounce slave labor, torture, trial without jury, political violence, and all the absolute dictatorship that goes with Soviet Russia.

MAY YET COME AROUND

"It is just possible that Nehru may yet come around and denounce Stalin. Everyone else is doing it. It's thoroughly fashionable and quite safe. Dead men can't retaliate. But, on a more specific level, I cannot feel justified in voting large sums of foreign aid to India. * * *

Earlier in the address, Senator BRIDGES had said "It is with the moral and spiritual side of our problem that I am greatly concerned.

"I don't say Americans are morally weak. I do say we are morally confused. Nowhere is this moral confusion worse than among our so-called liberal intellectuals. This confusion tends to paralyze the mind and the will. The more extended the paralysis, the easier the Communist victory.

"There are moral questions on which we cannot be neutral. The recognition of physical torture as a deliberate instrument of government, the employment of secret police, the use of summary trials and executions behind closed doors, the dragooning of forced labor—these and other practices of tyrannical despotisms have been abhorrent to our people. Yet these practiecs are commonplace in Communist states.

"Right now, we are being told that some mysterious and inexorable law of history and economics is remaking the conduct of the Russians. Things are going to be different. How different? In what way? The 'purported' speech of Khrushchev before the 20th Communist Party Congress * * * (said) * * * of the gruesome methods of the Stalin regime, 'When the cases of some of those so-called "spies" and saboteurs were examined, it was found that all their cases were fabricated. Confessions of guilt of many arrested and charged with enemy activity were gained with the help of cruel and inhuman tortures. * * *

"He continued with instance after instance of these horrors. He spoke repeatedly of trials in secret, of what he calls 'illegality,' etc. What does he mean by the word 'secret' and 'illegality'? This man engaged in denouncing Stalin for these crimes, is the prominent member of an oligarchy which, since it came to power, has been doing the very things of which Stalin is now accused.

"Beria, the Chief of Secret Police, was not the only man the present regime has sent to death. We don't know how many, but we do know that a few weeks ago, the news was permitted to leak out that four lieutenants of Beria had been tried in secret and shot. Is this what you call legal? Is this what you call 'an open trial'? I say we have no evidence whatever that the leopard has changed his spots.

"Only a short time ago, Khrushchev and Bulganin paid a visit to Britain. While there, they were entertained at dinner by Labor Members of Parliament. When the dinner was over the time came for questions. One of those present adressed Khrushchev and said there was concern in Britain over the fact of a number of Social Democrats who had been imprisoned and had disappeared in Eastern Europe.

"Would Mr. Khrushchev be so good as to receive a list of the names and, at his convenience, furnish information about these Social Democrats? the man asked. According to the description of the dinner, Khrushchev turned livid with rage. He brushed aside the list of names and said, 'Why should I take such a list when I have no idea whatever of paying any attention to it?' * * *

"Are we going to give away here a little, there a little, to people of this stripe? There was once a British Prime Minister who went to Munich to get what he called 'peace in our time.' You know what happened. Are we to ignore and pass over and rationalize these things? I say we cannot if we have any moral principle left. We cannot if we act on moral principle at all. * * *"

How much good this will do remains to be seen, but it's a straight and needed reaffirmation of basic principles and common sense. At this point, however, its' practically a voice crying in the wilderness. The Russion "New Look" is making a great hit in many places—the recent triumph in Egypt, for example.

"Neutralism" is the new international style, and even President Eisenhower flum-

bumbled into an endorsement of it recently, and did an awkward job of retracting. It's said that even our White House staff is softtening toward the admission of Red China, if it can only be stalled until after the elections. Foreign aid, at the rate of $5 billions a year for friends and foes alike and with no strings, nor any idea of "buying something" is being driven hard, and will probably pass.

The Bridges voice may be crying in the Wilderness, as it has cried there before, once or twice in this column, as he's quoted in that speech, but it's strange how truly and prophetically these lonely voices speak occasionally. One of these Sundays I'm going to show you by quoting from some of the most bitterly attacked speeches of Senator Taft. Reread now, in the light of what's happened, he seems often to have been the only man in Washington whose vision was clear and whose conclusions were right. This address of Senator BRIDGES places him in the same category currently.

Speech of Hon. Sidney R. Yates Before the National Convention of the National Association for the Advancement of Colored People, San Francisco, Calif., June 29, 1956

EXTENSION OF REMARKS
OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

SPEECH OF HON. SIDNEY R. YATES BEFORE THE NATIONAL CONVENTION OF THE NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE, SAN FRANCISCO, CALIF., JUNE 29, 1956

Mr. Chairman, ladies and gentlemen, I am grateful for your invitation to speak to you tonight and to participate in this convention. Your kind invitation gives me the opportunity to pay tribute to your fine organization for its devoted fight for freedom for all Americans.

"Freedom is more than a word * * * freedom is a creative spirit that summons the energies of all men to the task of building the kind of community, the kind of nation, the kind of world in which they want to live. It is a dream of a world in which all men, women, and children are encouraged to grow to their fullest—physically, mentally, spiritually—so that they may fulfill the great promise of their inner potential."

It is for this freedom—so aptly stated by President Edward J. Sparling, of Roosevelt University of Chicago—that the National Association for the Advancement of Colored People has been making a great fight, and for which it deserves the thanks of all Americans. I have been in the Congress for 8 years. In that time I have come to know and to appreciate the dedicated work being done by the NAACP. In the courts, working with Congressmen and with officials in the executive branch, the NAACP has indeed served as one of the most active guardians of the conscience of the community. As one of society's good housekeepers, it lifts the rug under which the Nation has swept and tried to forget the difficult problems of human relationships, in order that they may be exposed to the light of decency and cleaned up.

This is an important meeting for both political parties. It is to be expected that I would meet with Mr. SCOTT at this meeting because he is one of the few members of his party who remembers that it is the party of Lincoln. Knowing this, whenever there is a meeting on civil rights, the Republican National Committee appoints Mr. SCOTT as the party spokesman in order to try to convey the impression that the other members of the Republican Party are like him. Every time there is a meeting of the NAACP you will find HUGH SCOTT present as a party spokesman. The Republicans don't have anybody else they can substitute in his place.

And Mr. SCOTT is about as good a spokesman as the Republicans have. Unfortunately for him, he has no product to sell, because the Republican Party's record on civil rights is a blank—a real dud. Regardless of this fact, however, the Republican Party still tries for the votes of those who want civil rights progress.

The NAACP recognized the potency of the ballot as a sword and shield to obtain justice almost a half century ago. In the first issue of the Crisis in November 1910, Dr. W. E. B. DuBois sounded the clarion call to Negroes everywhere to qualify and vote so that they might have a part in shaping their country's destiny and their own. "Let every colored man who can, vote," urged Dr. DuBois, "whether he vote the Republican or Democratic ticket, let him vote it, not because his father did or because he is afraid, but because, after intelligent consideration, he thinks the success of that ticket best for his people and his country."

Negroes are like all other Americans in seeking the blessings of this democracy. They want equal protection of the laws. They want no more, no less than is their just birthright under the Constitution. They want to enjoy the equal opportunity to work in any position for which their training and education qualify them. They want to see an end to discrimination by employers and by unenlightened labor unions.

They want the right to engage in the election of candidates for all offices and to run for office themselves, without fear of becoming the victims of a bigoted, lawless mob. They want the right, too, to be considered for appointive office on all levels, including that of the President's Cabinet itself.

They want the end of separate but equal facilities, with the tag of inferiority which such separation brings. They want the elimination of Jim Crow everywhere—in transportation, in hotel accommodations, in restaurants, in recreation and entertainment. They want the opportunity for their children to obtain the same good education that is offered to the other children of our country, and they want fulfillment of the Supreme Court's decision in the school case.

In short, they want the eradication of second-class citizenship. In this respect, the ballot has been and will continue to be a most potent weapon.

It was the ballot, bringing the Democratic Party into power in 1932, which contributed most toward projecting America's minority peoples closer to their goal of equality than any other influence in our history. Led by Presidents Franklin D. Roosevelt and Harry S. Truman, the New Deal and Fair Deal brought hope and courage to the masses of American people to replace the despair which had been their lot under Republican administrations. The Democrats brought, too, the opportunity to earn a decent living after the Republicans had left deep poverty and depression in their wake.

The New Deal and the Fair Deal brought a social revolution which changed the people's attitude toward their Government. As explained by Republican editor William Allen White, the victory of the Democrats indicated a firm desire on the part of the American people to use government as an agency of human welfare.

Under this concept, the powers of government were used by Democratic administrations to assure the American people of the right to a usful and remunerative job; of the right to earn enough to provide adequate food, clothing, and recreation; of the right of every farmer to raise and sell his products at a return which would give him and his family a decent living; of the right of every businessman to trade in an atmosphere of freedom from unfair competition and domination by monopolies; of the right to a decent home; of the right to adequate medical care and the opportunity to achieve and enjoy good health; of the right to a good education for their children; of the right to adequate protection from the economic fears of old age, sickness, accident, and unemployment.

Taking action to achieve these goals, the Democratic Party initiated legislation for a minimum wage law; for a full employment law; for a Federal aid to education bill; for raising health standards through adequate medical care; for good housing, including public housing; for unemployment compensation and for social security; for a farm bill that would permit farmers to live in decency.

And all this time what were the Republicans doing? They were opposing every single one of the New Deal measures. The record shows that all the social reforms which are recognized today as being an essential part of our democratic way of life were enacted into law in spite of—not because of—the Republican Party.

Why did they oppose such reforms? They said they were socialistic.

Socialistic? Not to all Republicans. The Democratic program wasn't socialistic to Dr. Channing H. Tobias, for example, who at the time was an Independent Republican. He said that he proposed to support President Roosevelt in 1944 "because his philosophy of government and the generally progressive course he has followed for the past 12 years have vested the common man of every race, creed, and color with a dignity and inspired him with a hope that he has never known before."

Dr. W. E. B. DuBois, after looking carefully at the record, was convinced "without the slightest doubt that Franklin D. Roosevelt has done more for the uplift and progress of the American Negro than any president since Abraham Lincoln."

And with respect to President Truman, Mr. Thurgood Marshall, whom I think you know, and is one of the most respected attorneys in Washington, had this to say in a recent radio interview when he was asked about possible presidential candidates: "The candidate that gets nearest to Harry S. Truman will more than likely get the votes of the people who believe in civil rights. That's my belief."

It is to be expected that these outstanding leaders would so express themselves. Mr. SCOTT stated that the New Deal improved the economic condition of Negroes in this country. It certainly did. The rise of the average American under the Roosevelt reforms was amazing. Knowing that there could be no true freedom unless there is freedom from want, the New Deal of the Democratic Party set about first the elimination of the ravaging effects of poverty, and bringing a dignity to the forgotten man that he never before enjoyed. Both the President and Mrs. Roosevelt gave him a recognition and the feeling that he was a necessary part of the community—that he belonged.

And as for Harry Truman, he became the symbol of progress in the field of human rights. It was he who established the famous Commission to study the complex problems of assuring every citizen's constitutional rights. It was he who fathered the greatest all-around legislative program in the

field of civil and constitutional rights this country has ever known.

Yes, and it was Harry Truman who stuck by that program right through the 1948 Democratic Convention and right through the election, even though he knew it might split his own party and cost him the Presidency.

Harry Truman is a man who knows what it is to stand up and fight for what he believes in, no matter what the cost. More important, perhaps, is the fact that his civil-rights program was not just an election-year matter. Year after year, he kept urging his program on the Congress.

Just compare President Truman's actions with those of the present administration. What a difference. Under President Truman the Federal Government stood squarely behind the constitutional rights of all individuals. Shortly before he left office he stated his view of the responsibility of Federal Government in this field. "I am not one of those," he said, "who feel that we can leave these matters up to the States alone, or that we can rely solely upon the efforts of men of good will. * * * The full force and power of the Federal Government must stand behind the protection of rights guaranteed by our Federal Constitution."

No wonder Thurgood Marshall is searching for a candidate that "gets nearest to Harry S. Truman."

I was in the 81st Congress when the civil-rights bills were filed to implement the civil-rights program, as recommended by President Truman's Commission. They might have been passed if the northern Democrats had received the cooperation rather than the opposition of the northern Republicans. But because most of the members of the Republican Party chose to work with reactionary Dixiecrats from the South, the bills were defeated.

For example, I remember very well the fight on an FEPC bill in 1950 because I was right in the middle of it. After months of maneuvering the bill finally came to the floor on Washington's Birthday, February 22. The southern Congressmen who opposed the bill fought it with the only filibuster that the House knows, quorum calls and rollcalls. Even though the bill had been made the legislative business of the day, after completion of the reading of Washington's Address, which is always done on his birthday, Congressman Cox of Georgia got up and moved that the House adjourn out of respect to the memory of George Washington. Time after time that day I watched Republican Members of the House walk off the floor so that a quorum call would be necessary. A quorum call takes 40 minutes. There were about 10 of them.

We got a vote on FEPC at 3 o'clock the next morning. Those of us who favored the strong bill, watched with dismay when a substitute bill which took away all the enforcement powers of FEPC was offered. Was it offered by a southern Democrat? It was not. It was offered by the ranking Republican member of the Committee on Education and Labor, and the Republicans approved it. On that vote, a majority of the Democrats voted against the substitute bill. Sixty-eight percent of the Republicans voted for it.

You have heard, too, that no civil-rights bill can get through the Senate because of the threat of a southern filibuster.

In 1949 the Republicans in the Senate had an opportunity to strike a blow for civil-rights progress. They could have helped by supporting Vice President Barkley in his ruling to close a loophole in the antifilibuster rules. But nearly three-fifths of the Republicans voted against Mr. Barkley. As a result the Senate today is shackled by the infamous rule 22, which makes it virtually impossible to stop a filibuster. Was the author of that rule a southern Democrat? He was not. The author was the late Senator Wherry, of Nebraska, who was then the Republican floor leader of the Senate.

As a matter of fact, when southern Democrats have proposed anti-civil-rights measures, northern Democrats rather than Republicans have been in the forefront to resist them. A few years ago, Congressman WINSTEAD, of Mississippi, offered an amendment to the Selective Service Act which gave the right to every inductee to serve in a segregated outfit, if he chose. That amendment, which was approved by the House Armed Services Committee, was defeated on the floor of the House because of a magnificent speech delivered by Congressman WILLIAM L. DAWSON, of Chicago. Congressman DAWSON, a Democrat, is the first Negro chairman of a major congressional committee in the history of the Nation.

The record shows that the Republican Party has fought public housing; it has fought the minimum-wage law and subsequent increases; it has fought social security and increased coverage and benefits; it has fought unemployment compensation; it has fought appropriations for health measures and hospitals; it has fought FEPC; it has fought Federal aid to education. It has fought all progressive legislation.

But now the Republicans say—forget the past. We have a new Republican Party. We are now the party of Eisenhower. Forget the fact that the Republican Party did little to help the average man when it was in power. Forget that the Republican Party fought all measures for the people. Forget that it is the party of big business. This is a new party, say the Republicans.

Well, let me say this, former President Calvin Coolidge was once asked the question: "Mr. President, do the people where you come from say a hen lays or a hen lies?" Mr. Coolidge replied: "The people where I come from, sir, lift her up to see."

Let's lift up the hen and take a look at the new Republican Party. What has the President done in the field of civil rights? In contrast to the fighting leadership given to the civil-rights program by Harry Truman, President Eisenhower has done little or nothing. During the first 3 years of his administration he presented no civil-rights program at all to the Congress. This was the first year in which he made any recommendations. He came forward with a limited program of civil-rights legislation.

Did President Eisenhower include FEPC in his program? He did not. The President has stated that he is opposed to FEPC. A few years ago when Secretary of Labor Mitchell testified before a Senate committee that he favored a strong FEPC with enforcement provisions, the President declared that Secretary Mitchell was entitled to his opinion. As far as he, the President, was concerned, he did not agree with him.

Nor did President Eisenhower recommend passage of the antilynching bill or the anti-poll tax bill, which have traditionally been recognized as necessary parts of the civil-rights program. Why did he refuse to sponsor these bills?

Last year, Democrats sponsored several measures to advance the progress toward our goal of equal opportunity. Congressman POWELL introduced an omnibus civil-rights measure in January of 1955, providing for all the recommendations called for by President Eisenhower in 1956.

A comparable measure was sponsored by Congressman CELLER last year. Congressman CELLER is chairman of the Judiciary Committee which has charge of civil-rights bills. It is customary to ask the opinion of the Department of Justice on such bills. Did the Republican Attorney General approve such bills? He did not. He didn't even reply. He took notice of the bill only after a House Judiciary Subcommittee had ordered the bill reported.

Literally dozens of similar bills were sponsored by Democrats last year. On all of them the Department of Justice was conspicuously silent.

In February of last year, Congressman DAVIDSON's bill calling for a Civil Rights Division in the Department of Justice under an Assistant Attorney General got the same treatment from Mr. Brownell. Congressman DIGGS' effort was treated the same way.

Why should the Attorney General take this position? Why shouldn't Government help implement the Supreme Court decision rather than leaving that burden to the NAACP?

I think this is the answer. This morning's Washington Post carried a column by Marquis Childs. The heading reads "Brownell Hedges on Security Issue," and this is what the article says: "Although the Senate Committee on Constitutional Rights is about to make a concluding report, that committee has not had the benefit of the views of Attorney General Herbert Brownell Jr., who is the officer of the Government most directly concerned with the Constitution and its interpretation in law enforcement.

"Repeatedly for many months the committee chairman, Senator THOMAS C. HENNINGS, JR., of Missouri, has invited Brownell to testify and repeatedly Brownell has found one reason or another to evade the invitation.

"This is perhaps the most conspicuous example of a trend more and more evident in the administration to avoid taking any stand on issues that might be considered in any way controversial. It is too often the press agent's approach to Government."

Can anyone tell me how you can be for civil rights and be afraid of controversy at the same time. If any organization knows that you can't make progress in the field of civil rights without a fight, it's the NAACP. You can't get freedom by wishing for it or uttering pious phrases. You've got to fight for it like you did in the Supreme Court or like you are doing in Montgomery, Ala.

Marquis Childs is right—much too often this Government is a government by press agents. Their actions are like the cotton candy you get at the circus—all air and no substance.

It is no secret that there exists within the Democratic Party divergent views on the question of civil rights. We have our Dixiecrats it is true. You know what a Dixiecrat is—it's a man who is elected as a Democrat and then spends his time in Congress voting like a Republican. We have our Dixiecrats because the Democratic Party is truly a national party—a party that knows no regional boundaries. Despite this fact, the record shows that every key motion for civil rights in the United States Congress has been supported by a majority of the Democratic Members.

But is there any reason why the Republicans should act like Dixiecrats? The Republican Party has virtually no representation in the South. The Republicans are not bound by the customs and prejudices of the Southern attitudes on civil rights. The Republican Party represents itself as the party of Lincoln, but Lincoln would turn over in his grave if he saw the way the Republican Party was voting against civil-rights matters.

Mr. SCOTT called the roll of Democrats who would be chairmen of congressional committees next year if the Democrats won the Congress again. He also called the roll of Republicans who would be chairmen if their party wins the election. But Mr. SCOTT forgot to mention the fact that Senator MCCARTHY would also be a chairman. Why Mr. SCOTT omitted the name of Senator MCCARTHY, I don't know. It may have been inadvertent, but he cannot deny that Senator MCCARTHY will be a chairman if the Republican Party wins. And you will remember that Mr. MCCARTHY is the man who a few days ago said that Chief Justice Warren was following the Communist line.

Mr. SCOTT also threatens you with the fact that Senator EASTLAND will be a committee chairman if the Democrats win. Well, Mr. SCOTT—who voted against Senator EASTLAND's confirmation as chairman? Two Democrats voted against it; MORSE and LEHMAN. Every Republican voted in favor of his confirmation.

Mr. SCOTT threatens you by saying that a vote for the Democrats is a vote for EASTLAND. He says this to get you to believe that a vote for the Republicans is a vote for civil-rights legislation. But how gullible does he think you are? If what he is saying is true, why didn't the Republicans come out with a program on civil rights in the Republican 83d Congress. They controlled the Congress. They controlled the committees. Senator EASTLAND wasn't chairman then. No Democrat was a chairman during that Congress. And what happened? Not one civil rights bill was voted out.

Why is it that the Republican Party has voted solidly against fair employment practices legislation in State after State? Right here in California, for example—assembly Republicans voted solidly against an FEPC bill in committee, and in the assembly itself—they voted nearly 3 to 2 against forcing the bill out of committee. Democratic assemblymen, I am proud to say, voted 34 to 1 in favor of the bill.

The story is the same in my home State of Illinois. In 1949, when Governor Stevenson recommended an FEPC bill, it passed the Democratically controlled house, but died in the Republican-controlled senate. In 1951 with both houses of the legislature in the hands of the Republicans, it never even got out of the house committee, and was reported unfavorably in the senate.

That's how the "party of Lincoln" behaved in the land of Illinois.

And in Michigan, in 1952, when an FEPC bill finally reached the house floor, 25 Republicans got up and left the house chamber, refusing to listen to one of their Republican colleagues speak on behalf of the bill. And here is what the Republican said:

"My grandfather and my father voted for Abraham Lincoln. I never expected to see the time when Republicans would leave their seats rather than hear a Republican discuss human rights."

So much for the Republican Party and civil rights. It is a field in which the Administration and the administration's party cannot take pride.

What about other legislation? The NAACP is interested not only in civil rights matters—it is interested in all legislation which will help the average American.

In the field of housing, the President has been content to recommend the annual construction of only 35,000 public housing units, an amount that could be absorbed by the New York City itself. The Senate of the United States almost each year passes a bill providing for the construction of 135,000 public housing units. The House always scales it down. The President always accepts the lower figure.

Is this the attitude of a new Republican Party?

Over the President's opposition, the House passed a new social security bill providing benefits to be paid to women at age 62, rather than age 65. The bill also provides for totally and permanently disabled people to obtain social-security benefits at age 50. This is the provision to which the administration is violently opposed.

Is this the attitude of a new Republican Party?

And in the House Committee on Education and Labor a few weeks ago, the bill sponsored by Congressman UDALL of Arizona, which would help solve many of the problems of desegregation by offering additional funds to school districts making the change, was voted down by a vote of 14 to 10. Every single one of the Republicans voted against it.

Is this the attitude of a new Republican Party?

Congressman POWELL has declared that if the Udall bill were approved there would be no need for his amendment to the school bill.

The Eisenhower administration can hardly be called an administration devoted to the interests of the average man. The school bill was forced on the President by outraged mothers of the Nation, who pointed out the enormous educational deficit which had accrued. The Congress has approved appropriations far in excess of the recommendations of the administration for health and welfare measures.

But you don't find the administration reluctant to heed the call of big business. If this is a new Republican Party, how can it justify the Dixon-Yates contract; the Tidelands giveaway; and other giveaways of the people's natural resources?

The administration makes much of the fact that it has given important jobs to Negroes. Yet, for each such job given, it has discharged almost a hundred Negroes under the security order. The greatest number of people who have been fired under the security order have been porters, charwomen, janitors and other custodial employees. They have been dismissed from Government service as security risks because of some minor gambling infraction.

This, then, is the record of the new Republican Party—of a party, which, according to the New York Times, "is going after the votes of Negroes in the large urban areas of the north in an effort to regain control of the Congress." This is the record of a party, which, it seems, is going to try to persuade the voters that everything from Supreme Court decisions to President Truman's Executive orders are official property of the Republican Party. They have even taken over the victories of the NAACP, like the District of Columbia desegregation case. Did Mr. SCOTT ever hear of Mrs. Mary Church Terrill? It was Mrs. Terrill and the NAACP who won that fight.

Take, for example, the statement of Mr. Richard Tobin, public relations director of the National Citizens for Eisenhower. "In the context of Supreme Court decisions under a Chief Justice appointed by the President," said Mr. Tobin, "decisions as historic as the Emancipation Proclamation of Lincoln, we have a wonderful story to tell, and it is my opinion that it has not yet been told sufficiently well to the average Negro voter."

I am sure the Court and I am sure the people of the United States resent this politicalization of the Supreme Court of the United States—this identification as part of the Republican Party. Certainly the Democrats would never claim that the Supreme Court decision was a Democratic decision because 7 of the 9 Justices who voted on the decision were Democrats.

Apparently, the Republicans will tell the people anything to win. The Republicans in the north say one thing. They say the opposite in the south. Just recently, Mr. Charles McWhorter, national chairman of the Young Republicans, journeyed to Mississippi. There he said that Republicans will be campaigning this fall on a States rights platform. He expressed the opinion that the "Republican" record as a conservative party, moderate on civil rights, best suited the interests of Mississippians.

Is this what Republicans have been saying in the north? Is this what Republicans have been saying to minority groups?

The new Republican Party today is a confused party of inaction and political opportunism. The story is told on Capitol Hill of veteran GOP congressmen who are trying to affiliate themselves with the new Eisenhower look and don't know quite how to do it. They used to be isolationists—now they have to vote for foreign aid and mutual security. They used to call public housing socialism—now they have to go along with it. As one observer put it—they're like the Australian bushman who was given a gift of a new boomerang and went crazy trying to throw his old one away.

It takes aggressive national leadership to chalk up new gains in human rights now and in the future. It takes an active role—as this organization so well knows—not a passive one—to record progress.

You've got to believe in the cause of human rights if you expect to get anywhere in overcoming prejudices and bigotry. You've got to have heart and courage to fight for the things you believe in. You've got to have a feeling—a deep emotional feeling—to do away with discrimination and segregation and second-class citizenship. You've got to have the very qualities that this administration does not possess.

Where has this administration shown any disposition to fight on any issue?

The only important legislation the President has vetoed has been the fixed price support program, and the natural gas bill, and he said he vetoed the natural gas bill not because he wanted to protect the consumers. He said he was for the bill in principle, but he just didn't like the way the gas people were lobbying.

The cause of human rights is served best by the Democratic Party. The Democratic Party ask only that you look at the record. Don't be taken in by sweet words and smooth phrases and glib promises of what you may expect in the future. Don't be taken in by an administration that rests on press agents' ideas. Look at the facts. Look at the record and ask yourselves:

Which party consistently fought for progress through national legislation? Which party stands firmly on the side of equality—of human rights?

The questions are important ones. The answers are important, too. There comes to my mind the time a Boston minister visited Abraham Lincoln early in the Civil War. "Let us pray, Mr. President," he declared solemnly, "that in this conflict the Lord is on our side."

Lincoln paused a moment and said:

"Reverend, I'm not concerned about the question whether the Lord is on our side. I know the Lord is always on the side of the right. But it is my fervent prayer that we may be found on the Lord's side."

1956 will be a fateful year. Let us pray, too, that in making our choice we may be found on the Lord's side. For my part, the Democratic side is the Lord's side.

Statement Issued by George J. Burger, Vice President of the National Federation of Independent Business

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, July 5, 1956

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement recently made by Mr. George J. Burger, vice president, National Federation of Independent Business, before the Subcommittee on Antitrust and Monopoly Legislation of the Judiciary Committee.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF GEORGE J. BURGER, VICE PRESIDENT, NATIONAL FEDERATION OF INDEPENDENT BUSINESS, WASHINGTON, D. C., BEFORE SUBCOMMITTEE ON ANTITRUST AND MONOPOLY LEGISLATION OF THE SENATE JUDICIARY—SUBJECT: S. 11

I am George J. Burger, vice president and Washington representative of the National Federation of Independent Business. I am appearing here solely for the membership of the federation.

We represent independent business and professional people in all vocations from all parts of the country. We have the largest directly supporting membership of any business organization in the country.

Our position on legislation is dictated directly by our membership. We poll our members on all important issues, and are committed by their majority vote.

Our members desire enactment of S. 11. We take this position because of their vote, in mandate No. 193, on S. 1357, 82d Congress. Eighty-two percent of our members who voted on that issue favored it. The bill is substantially the same as S. 11 which you are now considering.

In my complete statement which I am asking to be made a part of the record of the hearings at this point, from which I quote, "Big business interests have consistently fought against this law (Robinson-Patman Act). It is self-evident from their action they realize for the first time efficient small business would be placed on parity with others so they could fairly compete."

In a message to Members of the House of Representatives under date of May 22, when the discharged petition to House Resolution 414 was completed, I said, "With the recent action of the Federal court in the Standard Oil of Indiana case immediate action on H. R. 11 is more important than ever to protect the future of independent business of this Nation. Destroy the effectiveness of the Robinson-Patman Act and small business can close its doors."

Mr. Chairman and members of the committee, I have gone through the school of hard knocks like many thousands of others who owned and operated independent businesses and irrespective of how efficient an independent business institution may be and no matter how well financed the independent business institution may be, it is impossible to compete with unfair competition that appears to be in violation of Federal laws.

Not alone in my heretofore private business, but in the 10 years or more as an executive officer of the National Federation of Independent Business, which, by the way, comprises all types of independent businesses, to review the correspondence as to unfair competitive conditions faced by the Nation's independent business, I say to you in all sincerity in their behalf, there is need for your committee to report out immediately S. 11.

It is my hope that the Senate will duplicate the action of the House where the vote was practically unanimous on the companion bill.

Foreign Aid to Neutralists

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, July 5, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Manchester Union Leader, Manchester, N. H., on July 2, 1956, entitled "Bridges Is Right."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRIDGES IS RIGHT

The sound judgment of Senator BRIDGES in his warning to the United States Senate that the United States should stop sending large amounts of foreign aid to such neutralists as Tito and Nehru ought to be apparent to everyone.

BRIDGES pointed out that our security is not confined to military preparations alone. It must also be considered in the light of moral and spiritual considerations. Communism is a type of totalitarianism that denies God and tramples on freedom. With such a system there can be no neutrality without disregard of moral and spiritual considerations.

Thus for Nehru to become a neutral in the struggle between communism and freedom is to disregard moral issues such as slave labor, torture, trial without jury, and an absolute ruthless dictatorship, which constitute the framework of communism today.

In other words, Nehru's neutralism is devoid of any moral and spiritual meaning and is simply an empty challenge to communism.

For us to give financial aid to that kind of leader, who refuses to stand for moral and spiritual principles, is a crime against decency. And the same goes for Tito. We backed him up when he defied Stalin and furnished him financial support, only to see him spend a honeymoon at Moscow, where he promised to help Red China get into the United Nations, and where Marshal Zhukov declared that, in case of war, he and Tito would stand shoulder to shoulder.

To give financial backing to Nehru and Tito is, as Senator BRIDGES said in his speech to the Senate, nothing but a desire to pose as do-gooders, without any regard for the deeper interests involved in the fight against communism.

One thing you can be absolutely sure of is that pouring out money in that way will promote only spiritual demoralization and aid the program of Communist aggression.

Kings County, N. Y., Republicans Overwhelmingly Endorse President Eisenhower for Renomination

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. DORN of New York. Mr. Speaker, the Republicans in Kings County, N. Y., have overwhelmingly endorsed President Eisenhower for renomination.

The Kings County Republican executive committee at a meeting on June 14, 1956, adopted a resolution offered by Judge Roy M. D. Richardson, and the Kings County Republican county committee at a subsequent meeting on June 21, 1956, on motion of Judge John R. Bartels, adopted identical resolutions. The latter meeting was attended by over 1,200 members of the county committee, at which time Commissioner John R. Crews was reelected chairman, as he had previously been reelected chairman of the executive committee. The statement follows:

Four years ago the Kings County Republican Executive Committee adopted a resolution in advance of the Republican National Convention held in Chicago, urging that the convention nominate Gen. Dwight D. Eisenhower for the Office of President of the United States of America. We did so because we believed that his prestige in the Nation and the various capitals of the world, his patience, tolerance, and understanding, and the love and reverence with which he was and is universally regarded, eminently qualified him for the difficult and arduous responsibility of bringing peace to a world in which hot wars were raging in many diverse areas. We felt that the universal respect and admiration as well as love and affection with which he was held here at home made him the one candidate who could preserve the confidence of our citizens in our economic and political system, bring to an end the activities of the subversive elements who had infiltrated into Government, place our domestic economy firmly on the middle rails and preserve our basic American goal of the highest achievable standards of living for all of our people, and the preservation of private enterprise.

The ultimate nomination and election of Gen. Dwight D. Eisenhower has completely vindicated in every regard the high hopes then expressed by us. Through his intercession and effectiveness there is, at long last, no hot war raging anywhere on the face of this earth. He brought to an end quickly the indeterminate warfare in Korea and the senseless casualties resulting therefrom. He has succeeded, too, in lessening the tensions of the cold war while ever remaining alert to the continuing menace of the Communist system and the determination of Moscow to dominate all of the capitals of the earth. He has cleaned house of the subversive elements in American government, preserving at the same time all of our basic civil liberties including freedom of speech, freedom of thought, and a right to dissent. Even in the troubled Middle East situation he has achieved the difficult accomplishment of maintaining friendly relations with Arabs and Israelis alike, preserving our prestige and friendship with all of the dissident groups without in any way compromising our basic responsibility for the preservation and maintenance of the political and geographic integrity of the State of Israel as well as all other nations recognized by the United States and by the United Nations. His quiet determination that violence and aggression shall not prevail anywhere in the world is the greatest stabilizing force for peace and security extant today. On the domestic scene he has brought tranquillity to American life. He has effected a transition from a war to a peace economy without the customary accompanying economic disasters which have attended so many prior transitions. Our economy has expanded to the greatest ever known in the history of mankind. The 65 million Americans employed is an achievement which 4 years ago would have been deemed incredible. The standards of living of all Americans have increasingly improved. Newer and broader horizons of social benefits have come into being. Many more millions of Americans have been brought under the protection of our social-security laws and the benefits thereof not only widened but expanded. At the same time the creeping inflation of the prior administration has been brought to a halt; the cost of living stabilized and the increases of earnings and incidental benefits translated into greater purchasing power for our people.

In the field of civil liberties, the Bill of Rights has been made a reality and the equality of all Americans, without regard to race, color, or creed, transmitted at long last into judicial expression and enforcement as a result of the vigorous intercession

before the Supreme Court of the United States of the administration's viewpoint expressed through its Attorney General, appointed by our President.

In the field of education, President Eisenhower has taken the lead to insure adequate educational standards for all Americans in every village and hamlet of the country, however remote. Opportunities for academic education have likewise been broadened and expanded so that the opportunity of full expression and achievement might become truly a reality for every American boy and girl. All of these achievements have been accomplished, not alone without any increased burden of taxes but with accompanying tax reduction already achieved and the certainty that the immediate future will see even greater tax relief for all American citizens who too long have known the burden of tax rates discouraging of enterprise. Even above and beyond and greater than all of these tangible accomplishments is the human factor so important in life, of the personality of this great American to whom all well-intentioned people instinctively turn with love and admiration and reverence. He has won the hearts and the confidence of the American people and citizens of other lands as well, who trust in him, respect him as one who in heart and soul typifies the highest nobility of human character. The American people instinctively place their trust in him and in this trust find a sense of peace and security and confidence in the future of their land and the well-being of their children and posterity.

The Kings County Republican Committee, therefore, in this meeting assembled, by unanimous vote, expresses its wish to the delegates to the Republican National Convention from Kings County, that they cast their unanimous votes for renomination by acclamation of our great and distinguished President, Dwight D. Eisenhower, to succeed himself in his great office.

The American's Creed and the Fourth of July

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. CHIPERFIELD. Mr. Speaker, as Independence Day comes around each year it brings to mind The American's Creed and its connection with the Fourth of July.

One need only to recall the author of The American's Creed, the Honorable William Tyler Page who for many years was Clerk of the House of Representatives. He was accustomed each Independence Day to go into his library and read the great and foundamental documents on which this country was founded. From such study was born his inspiration to write The American's Creed.

He began his life work at the age of 13 as a page boy, and held numerous offices in the House of Representatives. He completed 60 years of service—the longest any individual ever worked on Capitol Hill. He served under 14 Speakers of the House. Every office he ever held he filled with simple dignity and distinction. His personal charm and superior mental ability were known to all.

William Tyler Page carried in his veins the blood of many great Americans, and his philosophy of life and of Government upheld the finest traditions and ideals of his ancestors.

He was born 88 years ago in Frederick, Md., and early in life formed a friendship with a boy named Schley. Later on Schley went to Annapolis while Tyler Page went to the Capitol. This warm friendship between these two boys continued for many years. Finally, in the Spanish-American War, Schley, who had risen to the rank of commodore of the Navy, and who was temporarily in charge of the American Fleet, won a glorious American victory on July 3, 1898. The marvelous news of the victory of his old friend Schley, thrilled Tyler Page and filled him with patriotism.

He made the resolve that instead of celebrating the next day, the Fourth of July, in the usual way, he would shut himself up in his library and read the great and fundamental documents of the beginning of our country, such as the Constitution, Declaration of Independence, and the Farewell Address of Washington. That evening, after reflection on what he had read during the day, he made the further resolve that he would continue this practice of reading the great historical writings upon which our Nation was founded each Fourth of July thereafter, and he kept that promise for forty-odd years.

In the war of 1917 a contest was held to write an American creed. Page submitted his manuscript and won the contest, and the Congress officially recognized it as the American's creed of our country. It would have been strange indeed if William Tyler Page had not eventually written this creed, for unconsciously, from the reading of these great works, he had been formulating in his mind such a creed for many years. It was the welling up from the soul of this man all of the devotion to liberty, all the ideals of his love of country.

Knowing the Apostles' Creed to have been a compilation expressing their doctrines and principles, which they practiced long before the creed was formulated, and the sources of its articles were the books of the Bible, he resolved that his American creed must also come from recognized authoritative and historical writings. He did not want to use his own words, and every word of the American Creed is taken from such documents as the Constitution of the United States, the Declaration of Independence, Lincoln's Gettysburg Address, Washington's Farewell Address, the National Anthem, and other similar references.

I could do no better in paying tribute to William Tyler Page than to quote the American's Creed of exactly 100 words:

I believe in the United States of America as a Government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign Nation of many sovereign States; a perfect Union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

I therefore believe it is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies.

Alarm Gong Against Red Trap

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, July 5, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Constantine Brown, a well-known authority on foreign affairs and columnist for the Washington Star, entitled "Alarm Gong Against Red Trap." This article appeared in the Washington Evening Star, June 28, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALARM GONG AGAINST RED TRAP—SENATOR BRIDGES WARNS THAT SOVIET AIMS TO CONQUER BODIES, MINDS, AND SOULS

(By Constantine Brown)

Senator STYLES BRIDGES, of New Hampshire, the senior Republican Member, sounded the alarm gong from the floor of the Senate against our being entrapped by the sweetness-and-light tactics of the Communist dictatorship. A stanch supporter of President Eisenhower, Senator BRIDGES felt, however, in discussing the grave international problems confronting this Nation, that the elected representatives should be "free of party discipline and executive dictation."

We are today in an incredible confusion about the threats to this country. This is due, according to Senator BRIDGES, to the fact that we overlook sometimes the purposes of our foreign policy, which is "to promote and protect the true interests of our people."

Senator BRIDGES pointed out that the threat from Soviet and international communism means not only that of military conquest but also "of spiritual and intellectual conquest." The American people are cognizant of the military dangers confronting the Nation; but they believe far less in the "dangers of the moral and spiritual offensive of our enemies."

"The time has passed when only men's bodies are conquered," Senator BRIDGES said. "We now live in a world where the dictators are as much interested in the conquest of men's souls and minds as that of their bodies and lands. Security now also means defense against spiritual and intellectual demoralization."

For a number of years our neo-liberals have been critical, on the surface, of the policies of the Kremlin. At the same time they have done their utmost to hamper, under the cloak of seeing a direct menace to the Bill of Rights, the sanitation job against the Kremlin's tools by Congress, the FBI, and other agencies.

"The American is not morally weak," said Senator BRIDGES. "But I do say that we are morally confused. Nowhere is the moral confusion worse than among the so-called liberal intellectuals. This confusion tends to paralyze the mind and the will. The more extended the paralysis the greater the Communist victory."

Senator BRIDGES, like many other thinking Americans, does not believe that anything

has changed radically in Moscow now. "At present we are being told that some mysterious and inexorable law of history and economics is remaking the conduct of the Russians and that things are going to be henceforth different," he said.

He then proceeded to take to pieces the historic "phony" speech of Nikita Khrushchev before the 20th Communist Party Congress: "This man, engaged in denouncing Stalin for these crimes, is the most prominent member of an oligarchy which, since it has come to power, has been doing the very things of which Stalin is now accused."

Senator BRIDGES, who because of his position as chairman of the Republican Policy Committee knows the tendency toward "a little softness toward Moscow on the part of a relatively small but influential group in the administration, cautions against it: "Are we going to give way, here a little, there a little, to peoples of this stripe? There was once a British minister who went to Munich to get what he called "peace in our time." You know what happened. Are we going to ignore and pass over and rationalize these things?"

He wonders how any American in his right mind, unless he is a victim of the present intellectual confusion, can want to deal with the Red regimes when the captive peoples from East Germany to North Korea and North Vietnam "were driven into the Kremlin's prison of nations, and are still hermetically sealed against escape.'

It is a known fact that a number of influential star gazers in this country—including some in the administration—are now more than in the past toying with the idea of inviting to Washington the B & K team and President Tito of Yugoslavia.

To this Senator BRIDGES has this to say: "When Comrades Khrushchev, Bulganin, and Mikoyan stage state visits, they pose as merely the heads of one country. This pose unfortunately is accepted at face value. Yet only the most befuddled can be unaware that these despots are at the same time the heads of a world revolutionary movement. So why the new optimism? Why the disastrous letdown of our vigilance? We are today neck-deep in confusions and illusions, as if the 1930's had never been. In order to soothe our nerves and conscience, we are fed with fairy tales about the new looks in the Communist world and the magic of collective leadership. * * * Certainly, this is not the time to dignify the culprits of the Kremlin by accepting them and extending the courtesies of normal statesmen."

Enforce the Dies Bill To Outlaw Communist Organizations in the United States

EXTENSION OF REMARKS
OF
HON. MARTIN DIES
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. DIES. Mr. Speaker, it has been nearly 2 years since my bill to outlaw the Communist Party or its successors, and to define Communist membership or participation in organizations so as to destroy and prohibit Communist organizations, passed the Congress as sections 3, 4, and 5 of the Communist Control Act of 1954.

By enforcing my bill, the Department of Justice can put out of existence for all time every Communist organization in the United States. Prior to the passage of my bill, the Department of Justice brought proceedings to require Communists to register under the Registration Act. However, the Communists appealed to the courts, and the Supreme Court sent the case back for additional evidence. Because of the pendency of this case, the Department of Justice has delayed the enforcement of my bill. Mr. Speaker, it is the duty of the Department of Justice to enforce my bill without further delay.

During its 7 years of existence the Dies committee established beyond any doubt that the Communist Party is a foreign conspiracy masked as a political party and that Communist organizations are controlled and operated by Moscow to undermine our country from within. The Dies committee exposed hundreds of Communist organizations with several million members who were financing Communist propaganda and activities, and 600 periodicals in the United States. We exposed 2,000 Communists on the Federal payroll who later stole hundreds of vital military, industrial, and diplomatic secrets which enabled Russia to build up her formidable war machine to threaten the free world. We exposed a dozen Communist-controlled labor unions in key industries which thereafter instigated scores of strikes to cripple American industry.

Events during the past 15 years have confirmed our findings 100 percent. If our warnings had been heeded promptly, thousands of lives that have been sacrificed, and untold billions of dollars that have been spent to resist Communist aggression, could have been spared.

In the report of the Dies committee filed January 3, 1939, with the Congress and released to the country, we warned the Nation that "Communism is a worldwide revolutionary movement aiming ultimately at the setting up of a world Union of Soviet Socialist Republics. The Communist conquest of the earth will be far less than compiete until it has conquered America and destroyed our free institutions."

In numerous other reports issued by our committee we warned the Government that the chief objective of the Communists was world conquest, and we exposed the techniques and tactics which the Communists intended to use and which they later used in every detail.

Ten years after this exposure, our Government followed our recommendations, but much of the damage had already been done.

From these tragic experiences we should have learned that "an ounce of prevention is worth a pound of cure," and that to govern is to foresee.

While as a result of the exposure by the Dies committee the Communist movement in America was seriously crippled, it will rise again to threaten us unless our Government profits from its past mistakes. It was to keep this from ever happening that the Congress passed my bill. But my bill will not do the job unless the Department of Justice enforces it vigorously without fear or favor and without further delay.

S. 3879

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. DODD. Mr. Speaker, I believe it is important that this House adopt S. 3879, which reads as follows:

S. 3879

An act to supplement the antitrust laws of the United States, in order to balance the power now heavily weighted in favor of automobile manufacturers, by enabling franchise automobile dealers to bring suit in the district courts of the United States to recover compensatory damages sustained by reason of the failure of automobile manufacturers to act in good faith in complying with the terms of franchises or in terminating or not renewing franchises with their dealers.

Be it enacted, etc.—

SEC. 1. As used in this act—

(a) The term "automobile manufacturer" shall mean any person, partnership, corporation, association, or other form of business enterprise engaged in the manufacturing or assembling of passenger cars, trucks, station wagons, or other automotive vehicles, including any person, partnership, or corporation which acts for such manufacturer or assembler in connection with the distribution of said automotive vehicles.

(b) The term "franchise" shall mean the agreement, contract, understanding, or arrangement between any automobile manufacturer and any automobile dealer which purports to fix the legal rights and liabilities of the parties to such agreement, contract, understanding, or agreement.

(c) The term "automobile dealer" shall mean any person, partnership, corporation, association, or other form of business enterprise operating under the terms of a franchise and engaged in the sale or distribution of passenger cars, trucks, station wagons, or other automotive vehicles.

(d) The term "commerce" shall mean commerce among the several States of the United States or with foreign nations, or in any Territory of the United States or in the District of Columbia, or among the Territories or between any Territory and any State or foreign nation, or between the District of Columbia and any State or Territory or foreign nation.

(e) The term "good faith" shall mean the duty of each party to any franchise, and all officers, employees, or agents to act in a fair, equitable, and nonarbitrary manner so as to guarantee such other party freedom from coercion, intimidation, or threats of coercion or intimidation, so as to preserve all equities of such other party which are inherent in the nature of the relationship between such parties by such franchise.

SEC. 2. An automobile dealer may bring suit against any automobile manufacturer engaged in commerce, in any district court of the United States in the district in which said manufacturer resides, or is found, or has an agent, without respect to the amount in controversy, and shall recover compensatory damages by him sustained and the cost of suit, including a reasonable attorney's fee, by reason of the failure of said automobile manufacturer to act in good faith in performing or complying with any of the terms or provisions of the franchise, or in terminating, canceling, or not renewing the franchise with said dealer: *Provided*, That in any such suit the manufacturer shall not

be barred from asserting in defense of any such action the failure of the dealer to act in good faith.

I have suggested to members of the Judiciary Committee that this legislation be passed, and I urged favorable report on this legislation.

The statement which I submitted to the Judiciary Committee is as follows:

Mr. Chairman and gentlemen of the subcommittee, it is my sincere conviction that the enactment of the legislation being considered today, S. 3879, will be a significant step forward in freeing thousands of automobile dealers from what amounts to economic bondage.

An automobile dealership represents a substantial investment, not only in money, but also in effort. It seems obvious to me that these small-business men are entitled to the protection of the law in their relationships with manufacturers, since under the present system they can be forced out of business almost at the whim of the supplier.

S. 3879 represents a fair and equitable attempt to bring at least a measure of security to the thousands of automobile dealers in the country. It is not intended to underwrite poor judgment on the part of the dealer in his business dealings, as has been charged by opponents of the bill. But it will give him his "day in court" if he believes that the manufacturer has treated him unjustly.

Section 1 (e), the so-called good-faith portion of the bill, seems to me an excellent way to insure that all parties in any dealer-manufacturer franchise arrangement will maintain high standards of business ethics. The critics of this legislation have advanced the old argument that Government should not interfere needlessly with the conduct of private business. Unfortunately, however, the automobile industry has made little or no progress in achieving better dealer relationships and, indeed, the abuses have been increasing at an alarming rate.

Many dealers have been forced to the wall by the practice of shipping unwanted cars to them—cars that cannot be absorbed in the market because of the senseless race among some manufacturers for first place in sales volume. The manufacturers have sometimes totally ignored the saturation point where dealer cannot sell the product in legitimate commerce. Consider the plight of a dealer who can sell about 20 new cars a month at a maximum who is forced to accept delivery of 25 or 30 cars. If he refuses to accept the number of cars that the district representative of the manufacturer arbitrarily sets as his quota, his dealership can be canceled on a unilateral basis.

I think, in all fairness, that any businessman is entitled to a far better break than that. Under the provisions of the bill under discussion here today, he would at least have the chance to bring suit and possibly to recover damages.

The pressure that has been brought to bear on the country's independent automobile dealers by some manufacturers to accept more cars than they can reasonably hope to sell has resulted in a grave deterioration in marketing techniques. To avoid bankruptcy, some dealers in desperation have resorted to shoddy service work, deceptive and dishonest advertising, and the "packing" of insurance and finance charges as well as the "packing" of the prices of cars. Automobile overproduction has led unavoidably to the practice of "bootlegging," which undermines public confidence in the entire industry.

Many dealers from my own State of Connecticut have expressed the strongest possible support for the good faith aspect of the bill. They feel that the enactment of this legislation will have a wholesome effect upon the automobile industry, lead to better dealer-manufacturer relationships, and ultimately be of benefit to our entire economy.

I hope that my colleagues will join me in this effort to pass this very necessary legislation.

Wisconsin the Pioneer and Also the Leader in Bringing Education to the People

---

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. JOHNSON of California. Mr. Speaker, several weeks ago I made a trip to Wisconsin, my native State. On this trip I also visited Madison to be present at the commencement exercises and also to attend a class reunion. The Alumni Association had a meeting which was addressed by the president, E. B. Fred. Also present at the Alumni Association meeting was the dean of the university law school, John Ritchie, who delivered a masterful address. He developed and analyzed an idea that had been started during the regime of president Charles Van Hise almost 50 years ago. That idea was that the university should lend its influence, training, and talent to the citizens of the State. Consequently, extension courses were offered to the people; short courses in agriculture were offered to the farmers of Wisconsin who wished to come to the university during the cold winter days when they could do nothing on their farms. All these activities proved to be popular and productive to the people of the State. About this time a well-known national magazine was printing a series of articles about American universities. When writing about Wisconsin University it started the article as follows:

About all that can be said about the University of Wisconsin is that its campus is at Madison but its influence covers every square mile of the State.

Dean Ritchie developed this idea of mass education in such a way as to arouse the thinking of all of us. What pleased me most was that he dwelt heavily on the idea that those who are offered this opportunity for higher education should have sufficient native ability to be able to capitalize on this opportunity. Especially should the bright student be encouraged, as from that group will come the leaders of the future. We have heard the expression that without vision the people perish. We may also say that without leaders the country will perish. Leaders in public life or in private enterprise are the indispensable spark that makes the American system work.

Following is the speech, which I hope may be read by all of the Members of the Congress:

THE UNIVERSITY'S RESPONSIBILITIES

"Human history becomes more and more a race between education and catastrophe." So wrote the great British historian, H. G. Wells, in his "Outline of History." These days of grave international tensions and recurrent crises emphasize the verity of Mr. Wells' observations. In a very real sense our national survival is conditioned upon an educated citizenry. Bear in mind that the effective functioning of our form of government, the oldest republic extant, depends upon an informed and enlightened electorate; that our military strength in relation to that of our potential enemies is conditioned upon our scientific Hegemony and productive might, and that our Nation's economic strength, which gives us the highest standard of living that the world has ever known, is conditioned upon an educated know-how in the production and distribution of wealth. Permit me to develop these thoughts briefly.

As we are all aware, our form of government rests ideologically on faith in the dignity of the individual and his capacity through reason for polical self-government. Implicit in this conviction is the assumption that opportunities for education will be available to all citizens to the end that they may be informed and trained to "sift and winnow," to recognize the relevant and discard the irrelevant, and to reach decisions only after considering all the pertinent factors. Otherwise our priceless heritage of the ballot may become the instrumentality through which we surrender the cherished values of our society either by an hysterical response to demagogic appeal, or by indifference to the corrosive rot of subversion.

In these days of hydrogen bombs, guided missiles, jet planes, and other awesome weapons of mass destruction it is unnecessary for me, I am sure, to labor the critical importance to our Military Establishment of our Nation remaining the vanguard of scientific discovery—a desideratum grounded on a sound educational system.

Also, blest though this country is with natural resources, its relative economic strength far outstrips its relative wealth in natural resources. What then is responsible for the fact that during the past calendar year the United States with 6 percent of the world's total population, accounted for 60 percent of the world's total production? What is the source of this country's great economic strength? Undoubtedly many factors contribute to this happy state of affairs. But I suggest that in final analysis the answer lies in American know-how. This know-how in turn rests upon training and education coupled with native intelligence, initiative, and hard work.

Much of what I have been trying to say is summarized in the report of the University of Wisconsin Policies Committee of the Wisconsin Legislative Council, as follows:

"But probably the most important reason for our strength is this: The United States has made good use of its human resources. This has been no happenstance. It rests on two significant factors:

"1. The basic law of our Nation guarantees to all citizens equal opportunities and provides that they may earn rewards in proportion to their achievements; and

"2. The principle of public education for all—firmly established at many places in the 13 Colonies even before our Nation was born—has been adhered to and expanded as our Nation has grown."

In implementation of this principle the University of Wisconsin was established more than a century ago. All of us are familiar, at least in a general way, with its past record of distinguished achievement. For more than a century it has been a pacesetter in the race between education and catastrophe to which H. G. Wells refers. As the capstone

of the State's educational system it recognizes three basic obligations: To teach, to search for truth, and to serve the public.

Discharging its primary obligation of instruction requires able, devoted teachers, well equipped laboratories, libraries, an adequate physical plant, and perhaps most important of all, an alert, able, and well prepared student body.

In this country the responsibility for preparing students for college is discharged principally by our public primary and secondary schools. Happily we have an excellent public school system in Wisconsin. Elsewhere, however, increasing enrollments and teacher shortages are causing a discernible trend toward mass education in primary and secondary schools. Mass education is characterized by large classes. Instruction typically is on the average-pupil level of capacity. Particular attention is ofttimes paid to the retarded pupil. Little is done to challenge and hold the interest of the bright pupil. There seems to be more concern over the bonehead than the egghead. This is perhaps understandable. Crowded, understaffed schools, battling illiteracy and striving to see that all pupils receive at least minimal training, are inclined to overlook the bright pupil on the theory that he can take care of himself. But I insist that each pupil must be challenged to work at peak capacity. This means that the gifted pupil must be given the opportunity of progressing through the hierarchy of grades at a much faster pace than the less gifted. It means that courses of study must vary according to demonstrated aptitudes. It means that pupils with a flair for the manual trades must be channeled into vocational schools and thus spared the frustration of pursuing a liberal education. It means therefore that there must be a periodic sorting out of pupils according to abilities and aptitudes.

This sorting-out process is imperative if our universities are to discharge their responsibilities. Otherwise their energies are dissipated in providing training that should have been obtained in high school. And they suffer the further drag of offering higher education to those who have no aptitude for or interest in a college education.

This lowering of the level of instruction penalizes the gifted and well-prepared student for the benefit of the ill-prepared and those who aptitudes or interests lie outside the classroom.

I suggest that the principle of public education for all, when applied to universities, means all who are qualified in terms of training, ability, industry, interest, and character to participate in the intellectually exciting and challenging experience that should characterize university training. Quality of training not quantity of students is the touchstone of a great university.

Happily, our university has always emphasized quality. This insistence on high standards is reflected in admission policies and probation and exclusion rules for academic deficiency. Although a large university, the ratio of faculty to students is approximately 1 to 15. Except for survey courses, supplemented by quiz and discussion sections, classes are relatively small in most branches of the university. Many seminars are offered for advanced students. An advisory sytem and counseling program further attest the university's interest in the individual student. Truly on this campus students and faculty are partners in the learning process. Here the philosophy of mass education is emphatically rejected. May that always be true. Let us never forget that the destiny of this country rests with our young people. There is danger that the industrial genius of our Nation for mass production and standardization will blind us to the tragic waste implicit in mass education. The added costs of individualizing education on every level of instruction pays tremendous dividends in the currency of individual achievement. Collective mediocrity, the end product of mass education, is repugnant to the American tradition. If long tolerated it may spell the doom of the America we know.

The advancement of knowledge and the search for truth is of course a central purpose of a university. Indeed our universities are great research centers. Their faculties are constantly wresting the secrets from nature and advancing the frontiers of knowledge in the humanities and the social sciences. The discoveries of their scientists are largely responsible, on the one hand, for the dramatic progress that is being made in the vanquishing of disease and on the other hand for the position of leadership that our Nation maintains in the never-ending race for the development of more efficient and devastating weapons of destruction. Technological advances contributing to the improvement of our living standards trace back to university laboratories. Coming out of universities also is an enriched understanding of man in his relation to his fellows and his environment. Indeed it is not too much to say that the research activities of universities affect directly or indirectly well nigh all aspects of life today.

Throughout its entire history our university has been famous for the research accomplishments of its faculty. I am sure that you require no documentation in support of that observation. To list even a representative sampling of the significant research performed by the faculty for the past year alone would extend these remarks well beyond my allotted time. Of three matters only would I remind you.

First, throughout the entire history of this country only three American universities have awarded more Ph. D. degrees than the University of Wisconsin. Candidates for such degrees are attracted to the universities reputed to offer the best research opportunities and training. Hence it is that the number of Ph. D.'s awarded by a university is a reliable barometer of its research reputation.

Second, the Wisconsin Alumni Research Foundation, now in its 31st year, has given the university more than $14 million. Most of this money was given in support of research in the natural sciences. With assets now totaling about $30 million, it is anticipated that research in the natural sciences will continue to enjoy generous support from WARF in the years ahead. The significance of this support cannot be overemphasized. All who are interested in our university and the progress of natural science owe an eternal debt of gratitude to WARF, an unique and inspiring undertaking in the field of higher education.

Third, contrary to the situation unfortunately obtaining in many other universities, on this campus there are no artificial barriers insulating one discipline from another. Interdisciplinary research flourishes. Thus, for example, the law school now participates in research undertakings with the college of agriculture, the school of commerce, and the department of economics. The absence here of artificial barriers between disciplines is reflected also in the large number of interdisciplinary courses and seminars available to students. Typical is the course on contemporary trends and the seminar to be given for the first time next year on military policy and administration. Each of these offerings is taught by teams of instructors recruited from a number of different departments and schools of the university. Interdisciplinary research and teaching is so obviously sensible that few outside of academic circles realize how unusual it is for them to be as wholeheartedly accepted as at this university.

All universities worthy of the name are dedicated to research and the oncampus instruction of their students. But our university also recognizes an obligation to serve all the people of the State. This concept of public service extending the boundaries of the campus to the boundaries of the State was pioneered by our university and is known throughout the Western World as the Wisconsin idea in education. It is implemented by the adult education programs, correspondence courses, and publications of the university extension division and the Agricultural Extension Service; by the short course conducted for farmers, by the school for workers, by the continuing professional education institutes in medicine, law, engineering, pharmacy, and commerce; by radio station WHA and allied State broadcasting and television stations; by faculty members working with appropriate State officials and committees of professional associations on law revisions and codifications, and by soil testing and other services performed for individual residents of the State. The Wisconsin idea insists that a university is obligated not only to pursue knowledge for its own sake, but also to make more widely servicebale to mankind that which is already known.

The trinity of obligations recognized by our university—teaching, researching, and serving the public—are not mutually exclusive. On the contrary, they are closely integrated. Thus energetically pursued research undertakings create a vital and exciting intellectual climate within the university which challenges students to realize their optimum capacities. Public-service activities apply the discoveries of research to the service of the State, utilize members of the faculty to teach in the adult education programs, and feed back to the classroom, the study, and the laboratory the insights, information, and stimulation derived from members of the faculty serving as counselors to government, business, and agriculturists. Discharging concurrently all three of its basic responsibilities makes our university a particularly dynamic institution of learning.

And now by way of drawing these remarks to a close, I remind you that President Fred describes the basic needs of a great State university as follows:

"First, qualified and deserving students, drawn from all segments of our society;

"Second, distinguished and devoted teachers, dedicated to teaching, research, and service;

"Third, adequate facilities and equipment; and

"Fourth, an intelligent, resourceful, and provident people who fashion, nourish, and sustain it, convinced of its value and confident of its purpose."

No doubt implicit in this magnificent statement is a prerequisite that I venture to make explicit; that is, the tradition of free inquiry in the resolute search for truth. This tradition finds eloquent expression in these well-known words taken from a report of the board of regents of 1894:

"Whatever may be the limitations which trammel inquiry elsewhere, we believe that the great State University of Wisconsin should ever encourage that continual and fearless sifting and winnowing by which alone the truth can be found."

That immortal declaration of principle voices what I think of as the spirit of Wisconsin; a spirit which undergirds and strengthens the university in the discharge of its responsibilities; a spirit which acts as a catalyst unifying alumni, students, and faculty in the service of the university; a spirit which in the war of political ideologies raging throughout the world today, challenges the various "isms" inimical to the basic values of our society; a spirit which assures that education continues to lead in the race with catastrophe. Nurtured by that spirit your university goes forward in service to State and Nation.

Presentation of Career Service Award to Dr. Helen K. Mackintosh

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Thursday, July 5, 1956

Mr. MARTIN of Iowa. Mr. President, on Monday evening, July 2, 1956, Mrs. Martin and I had the great honor to attend the second annual presentation career service awards dinner of the National Civil Service League. We were deeply impressed with the qualifications of the 10 civil-service employees honored with the career service awards; and we were particularly proud of the only woman to win the award this year, Dr. Helen K. Mackintosh, of the United States Department of Health, Education, and Welfare, because Dr. Mackintosh received her bachelor of arts, master of arts, and doctor of philosophy degrees from the State University of Iowa, and she has won outstanding recognition throughout her entire service to community, State, and Nation.

I ask unanimous consent to have printed in the RECORD in connection with my remarks news articles which appeared in the Cedar Rapids (Iowa) Gazette on June 25; the Des Moines (Iowa) Register on June 26; and the Washington Evening Star on July 2. These articles describe quite fully Dr. Mackintosh's record of achievement.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Cedar Rapids Gazette of June 25, 1956]

DR. MACKINTOSH TO BE HONORED AT WASHINGTON

WASHINGTON.—An Iowa woman who devoted her career to the United States Office of Education will be honored by the National Civil Service League in Washington July 2.

She is Dr. Helen K. Mackintosh, of Hopkinton, chief of the elementary schools section.

Dr. Mackintosh joined the Office of Education in 1938 after supervising elementary schools at Grand Rapids, Mich., and teaching at the University of Pittsburgh and Miami University. She is a graduate of the University of Iowa.

In 1947, Dr. Mackintosh worked with English teachers in the American Military Government at Vienna, and recently she flew around the world.

On that trip, she assisted with workshops for elementary school principals in Cambodia under a program sponsored by the Foreign Operations Administration.

She will be the only woman among 10 Federal employees to receive the second annual career-service awards announced by Look magazine.

[From the Des Moines Register of June 26, 1956]

CAREER AWARD TO MISS MACKINTOSH

Helen K. Mackintosh, State University of Iowa graduate, Monday was named a winner of the annual career-service awards given by the National Civil Service League.

Miss Mackintosh, chief of the elementary schools section of the Federal Department of Health, Education, and Welfare, will receive $100 and a scroll at a dinner Monday in Washington, D. C.

She and 9 other career civil-service employees were chosen for the award from 130 nominations submitted by 33 Federal Government department heads.

Miss Mackintosh was born in Hopkinton and received her B. A., M. A., and Ph. D. degrees from the State University of Iowa. She went to work for the Federal Government in 1928. She worked with the American Military Government in Vienna, Austria, in 1947 and assisted in setting up workshops for elementary-school principals in Cambodia in 1954 before becoming head of the elementary schools section.

[From the Washington Evening Star of July 2, 1956]

EDUCATOR BELIEVES TODAY'S CHILDREN BETTER EDUCATED

Children are being better educated than they were a generation ago, chiefly because teachers try to treat each child as an individual.

This is the belief of Dr. Helen K. Mackintosh, whose distinguished leadership in the field of elementary school education will be honored tonight by the National Civil Service League.

Miss Mackintosh, who is chief of the Elementary School Section of the Department of Health, Education, and Welfare, is 1 of 10 Federal career employees who will receive career service awards from the league.

She is the only woman in the group.

Miss Mackintosh went to work for the Office of Education (now a part of HEW) in 1938. Prior to that she had taught elementary, high school, and college students.

GOOD TEACHERS

Good teachers today concentrate not on pounding facts into a child's head, "but with giving him the tools of learning—teaching him where to go to find out something he wants to know," Miss Mackintosh says.

"The child of today—and the grownup, too, for that matter—can't begin to carry around every bit of this mental baggage, that is all the things he would like to know," she added. "Even in first grade, we try to teach children where to find the answers. We start them using the dictionary—a picture dictionary, of course."

Many parents actually impede their children's ability to absorb learning—particularly the ability to read—by pushing them too fast, the educator believes.

"They read to the children constantly—long, complicated, often quite interesting stories, that make the little tales in the first year reader seem dull by comparison," she said. "They would do better to have their little preschooler concentrate on simple picture books, with perhaps a few words to a page."

Other parents give their children a bad conditioning to reading by never reading anything themselves, she declared.

"A child who never sees anyone pick up a book or magazine isn't likely to want to read much," she explained. "Children are great mimics."

As might be expected, Miss Mackintosh has firm convictions Why Johnny Can't Read, the controversy which has been waxing furiously in educational circles. Like the bulk of educators, she does not agree that Johnny's reading troubles come about because schools are giving less emphasis to the phonetic method of teaching reading.

Essentially, the phonetic method "teaches children how to pronounce words, not what they mean," she says. The method is just one of several we use to help children learn to read, and no one method works with all children.

Miss Mackintosh challenges the thesis that more children now are unable to read than many years ago.

DIFFERENCE

"The difference is that more children are staying on in school," she said. "When they get to high school, their teachers discover that some of them can't read. Those same children wouldn't have been able to read in the past, but they dropped out of school before any teacher made a point of it.

"The teaching of arithmetic has undergone somewhat of a modification since mother was a girl," the HEW official states.

"Long division, which formerly was thrust upon children in the fifth grade, now is spread out over the third through sixth grades," she said. "And arithmetic problems have been brought up to date," she added.

"Children, no longer are given problems having to do with digging a well, or papering a room, which they aren't very likely to do. Their problems today deal with automobile mileage, gas consumption, the buying and selling of merchandise.

"And the memorizing of multiplication tables is discouraged in many schools," she added. "Some combinations are much easier to memorize than others," she explained.

"It is silly to waste time on the easy ones, by reciting the whole table over and over. So now each combination is learned individually. Children often make a game out of this. They write 6 x 6 on a card, with the answer, 36, on the back. Then they see how many they get right. The ones they miss go into one pile, to be tried over again."

Asks Common Justice for Migratory Worker

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. BEAMER. Mr. Speaker, on March 8, 1956, I introduced H. R. 9836, a bill to provide for the regulation of the interstate transportation of migrant farm workers.

The Transportation and Communications Subcommittee of the House Interstate and Foreign Commerce Committee has conducted hearings on this legislation and is giving consideration to this worthy legislation. It is designed specifically to provide more comfortable and humane transportation of these migrant farm workers. Many States already have provided regulations for their intrastate transportation and, thus, this bill would serve to provide the same consideration for these workers when they are transported across State lines.

This bill has the approval of the various Federal agencies and of many other groups. Under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD, an approving article in the June 18 edition of the Lampmaker, published by Local No. 663, UAW–CIO, Guide Lamp of Anderson, Ind.:

ASKS COMMON JUSTICE FOR MIGRATORY WORKER

The AFL–CIO called on Congress to "take one small step toward common justice" for the Nation's migratory farm workers by voting immediate enactment of a bill to permit Federal regulation of their transportation.

Testifying before the House Commerce Committee, Walter Mason, AFL–CIO legislative representative, charged that "overcrowding, the use of unsafe vehicles, and driver exhaustion is needlessly killing and maiming uncounted numbers of these un-

protected migrant workers, the victims of insatiable greed."

Mason said that, although much of the transportation of farm workers involves crossing State lines, "those who profiteer from human misery still escape the jurisdiction of the Interstate Commerce Commission" because most of the transportation is done by private carriers. As a consequence, he pointed out, they are now beyond the scope of public control except as it is imposed by inadequate State and local traffic laws.

Reserve Construction

EXTENSION OF REMARKS
OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I enclose the Reserve construction programs of the Air Force, Navy, and the Army National Guard for the fiscal year 1957. I am personally glad to realize that the Defense Department is getting in shape with Reserve training facilities for the time when our Reserve begins to reach its maximum legal strength. Detailed construction in these programs is as follows:

Air Force Reserve construction program, fiscal year 1957

Andrews Air Force Base, Md.[8]: Operational facilities	$89,000
Bakalar Air Force Base, Ind.: Airfield pavements, operational, housing and storage facilities, utilities	4,186,000
Barksdale Air Force Base, La.[2] Airfield pavements, liquid fuel storage, maintenance facilities and utilities	1,821,000
Bates Field, Ala.[4]: Airfield pavements, operational, shop, and storage facilities, maintenance and training facilities, liquid fuel storage, housing and messing facilities, utilities	7,809,000
Bradley Field, Conn.[1]: Airfield pavements, shop facilities, and liquid fuel storage	559,000
Brooks Air Force Base, Tex.[3]: Maintenance facilities	815,000
Chico Municipal Airport, Calif.[4]: Airfield pavements, liquid fuel storage, operational and shop facilities, maintenance, medical, and training facilities, housing and messing facilities, utilities	3,771,000
Clinton County Air Force Base, Ohio[2]; Airfield pavements, liquid fuel storage, maintenance facilities, housing and messing facilities, land acquisition, and utilities	5,063,000
Dallas Naval Air Station, Tex.[2]: Training facility	713,000
Davis Field, Okla.[4]: Airfield pavements, liquid fuel storage, operational, storage and shop, facilities, land acquisition and utilities	2,432,000
Donaldson Air Force Base, S. C.[2] Airfield pavements and maintenance facilities	2,200,000
Dress Memorial Airport, Ind.[4] Airfield pavements, liquid storage, operational storage and shop facilities, utilities	1,281,000
General Billy Mitchell Field, Wis.[1] Shop facilities and land acquisition	$635,000
Grandview Air Force Base, Mo.[4] Operational facilities	106,000
Greater Cincinnati Airport, Ohio[4] Airfield pavements, operational maintenance and storage facilities, liquid fuel storage, shop and administrative facilities	2,844,000
Griffis Air Force Base, N. Y.[2] Airfield pavements, liquid fuel storage, maintenance and administrative facilities, utilities	2,013,000
Hill Air Force Base, Utah[2] Airfield pavements, maintenance and shop facilities	1,933,000
McConnell Air Force Base, Kans.[2] Airfield pavements and maintenance facilities	2,015,000
McGuire Air Force Base, N. J.[2] Airfield pavements, maintenance and shop facilities	1,962,000
Memphis Municipal Airport, Tenn.[4] Airfield pavements and operational facilities	113,000
Mitchel Air Force Base, N. Y.[2] Training facilities	750,000
New Castle County Municipal Airport, Del.[7] Airfield pavements, maintenance facilities and utilities	2,149,000
New Orleans Naval Air Station, La.[5] Airfield pavements	297,000
New York Naval Air Station, N. Y.[6] Storage facilities	133,000
Orlando Air Force Base, Fla.[2] Airfield pavements, maintenance facilities, and utilities	1,981,000
Paine Air Force Base, Wash.[2] Airfield pavements	385,000
Pinellas County International Airport, Fla.[4] Airfield pavements, operational and maintenance facilities, shop and storage facilities, liquid fuel storage and utilities	2,419,000
Scott Air Force Base, Ill.[2] Airfield pavements and maintenance facilities	2,074,000
Tinker Air Force Base, Okla.[2] Airfield pavements and maintenance facilities	2,491,000
Toledo Express Airport, Ohio[1] Airfield pavements, liquid fuel storage, operational and storage facilities, shop and maintenance facilities, land acquisition and utilities	3,350,000
Willow Grove Naval Air Station, Pa.[6] Shop facilites	76,000
Youngstown Municipal Airport, Ohio[8] Training facilities	70,000
Total	58,535,000

[1] Civil, Air Force Reserve, and Air National Guard.
[2] Air Force Reserve and Active Military.
[3] Air Force Reserve, Air National Guard, and Active Military.
[4] Civil and Air Force Reserve.
[5] Air Force Reserve, Air National Guard, and other Reserve.
[6] Air Force Reserve and other Reserve.
[7] Civil, Air Force Reserve, Air National Guard, and Active Military.
[8] Civil, Air Force Reserve, and Active Military.

Department of the Navy military construction, Naval Reserve forces, fiscal year 1957

NAVAL RESERVE (AVIATION)

	Estimated cost
Naval Air Station, Columbus, Ga.: Additional fuel storage, installation of sprinkler systems and jet engine test facilities	$402,000
Naval Air Station, Dallas, Tex.: Airfield pavements, land acquisition, and jet engine test facilities	$1,985,000
Naval Air Station, Denver, Colo.: Airfield pavements and jet engine test facilities	3,056,000
Naval Air Station, Lincoln, Nebr.: Land acquisition, ammunition storage, and jet engine test facilities	220,000
Naval Air Station, Los Alamitos, Calif.: Airfield pavements, aviation fuel storage and jet engine test facilities	596,000
Naval Air Station, Miami, Fla.: Alterations to hangar and jet engine test facilities	325,000
Naval Air Station, Minneapolis, Minn.: Jet engine test facilities	170,000
Naval Air Station, New York, N. Y.: Airfields pavements and jet engine test facilities	890,000
Naval Air Station, Niagara Falls, N. Y.: Airfield pavements, reserve hangar, boiler house and transformer station, messing and Navy exchange facilities, jet engine test facilities	1,573,000
Naval Air Station, Oakland, Calif.: Jet engine test facilities	170,000
Naval Air Station, Olathe, Kans.: Airfield pavement, and jet engine test facilities	504,000
Naval Air Station, Seattle, Wash.: Communication facilities	85,000
Naval Air Station South Weymouth, Mass.; Jet engine test facilities	170,000
Naval Air Station, Willow Grove, Pa.: Relocate communication transmitter, training tank, and jet engine test facilities	659,000
Total	10,805,000

NAVAL RESERVE (SURFACE)

Brownwood, Tex.: Electronics facility, including acquisition	$56,000
Clifton, N. J.: Land acquisition	30,000
Crowley, La.: Electronics facility and land acquisition	58,000
Eddystone, Pa.: New N & MCRTC and land acquistion	770,000
Emporia, Kans.: Electronics facility	60,000
Florence, S. C.: Electronics facility and land acquisition	69,000
Great Falls, Mont.: Electronics facility	63,000
Kingsburg, Calif.: Electronics facility	100,000
Malden, Mass.: Electronics facility and land acquisition	88,000
McKeesport, Pa.: Expansion to existing NRTC	80,000
Paducah, Ky.: Electronics facility and land acquisition	66,000
Parsons, Kans.: Electronics facility and land acquisition (no cost)	60,000
Petaluma, Calif.: Electronics facility	61,000
Raleigh, N. C.: New N & MCRTC and land acquisition	633,000
San Pedro, Calif.: Fire protection for NRTC	38,000
Stockton, Calif.: Land acquisition	22,000
Washington, N. C.: Electronics facility and land acquisition	58,000
Wilmington, Del.: New N & MCRTC and land acquisition	790,000
Total	3,102,000

MARINE CORPS RESERVE (GROUND)	
Baltimore, Md.: MCRTC and land acquisition	$522,000
Jacksonville, Fla.: Expansion to existing NRTC	79,000
San Jose, Calif.: Expansion to existing N & MCRTC	99,500
Rochester, N. Y.: Alteration of existing NRTC	$79,000
Forty Fort, Pa.: New MCRTC and land acquisition (no cost)	285,000
Houston, Tex.: New MCRTC and land acquisition	858,500
Lewiston, Maine: Purchase of land and buildings	$81,000
Total	1,504,000
Grand total	15,411,000

Recapitulation of projects, fiscal year 1957 armory construction program, Army National Guard

Type of armory	Number of projects	Total costs	Federal share	State share
1-unit	18	$2,577,500	$1,868,625	$708,875
2-unit	1	200,000	150,000	50,000
2-unit and MVSB	1	398,000	298,500	99,500

Mutual Security Act of 1956

SPEECH
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11356) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. HAYS of Arkansas. Mr. Chairman, the debate on the pending bill has been an enlightening one and may conceivably be viewed in the future as the beginning of a great debate on the revision of our foreign policy. As I indicated in my remarks in support of my amendment to restore a portion of the cut in title I, I do not believe that a review of our foreign policy would result in any sharp reversal, but I fully concur in the opinions expressed during the debate regarding the need of a resurvey. I am confident that this will be achieved before the 85th Congress convenes. As we conclude the discussions on this measure I wish to express my views regarding some of the more important phases of this legislation.

AMERICA'S ROLE IN THE FREE WORLD

Mr. Chairman, the current Soviet emphasis on "peaceful coexistence" must not lull us into a false sense of security. It is obvious that the Soviets are using every device to gain trade and political advantages in certain parts of the world through a stepped-up economic program that makes use of deception coupled with a propaganda drive to extend Communist influence throughout the world. The so-called lessening of tensions does not mean any lessening of the aims of international communism. As a leader of the free world, the United States must maintain its attitude of defense as well as contribute to the preservation of free countries everywhere. The theme of the 20th Congress of the Communist Party was that "the ideas of communism will triumph without war." Not only do we have to accept this fateful challenge, but we must strive to roll back whatever advances the Communists have already made. The vitality of democracy and national independence is equal to the task, provided we are aware of the challenge and organize our moral, intellectual, and material resources to meet it.

Any discussion of the Mutual Security Act should make it clear that mutual security means exactly what it says. We live in a world where no one nation has the dominant influence and all free countries are mutually interdependent. We did not seek or want the role of leader of western civilization, but this status became something of a fact before we were aware of it. We have, however, become much better conditioned for the interrelationships of the modern world than we were after the close of World War I. This maturity is now being tested in Congress, Mr. Chairman, since we are again being called upon to contribute to the military and economic potential of the free world. Every representative must undertake constantly to balance those interests that are local and regional in character and those that have a national import. And in these times as America proceeds into a crucial period of transition, accepting rather reluctantly her position as the free world's leader, there is, of course, the obligation upon all of us to think of America's greatness in terms of the welfare of other peoples, and never to measure our greatness and our progress exclusively in terms of our own narrow national interests.

It is doubtless apparent from what I have said that I believe we must not retreat. Now we have come to the position of world leadership reluctantly. The Nation is not yet fully prepared, spiritually, for it, for two oceans separate us from the quarrels of other continents, and we still wonder why we are inevitably drawn into their conflicts. Our cultures are so different and so many of our purposes seem to conflict. Still we cannot escape them. Our advocacy of participation in world affairs is not born of an intention to serve other nations at the expense of our own, but a recognition that we are inextricably bound up with their destiny. We must not retreat, whatever the temptation, whatever the cost. We must accept as a physical fact our proximity to aggression and our identification with intended victims closest to it. Almost every Member of Congress, whatever his political preferences, recognizes this condition.

MUTUAL CONTRIBUTIONS TO WESTERN DEFENSE AND PROGRESS

That our assistance to other countries has not been a one-way street may be shown easily. Many of the weapons that now are an integral part of our defense were made available to us by other free nations. The British discovered the radio-locator at the beginning of World War II, which aided the American development of radar. So also was the jetplane invented in England, as well as such other useful weapons of war as the steam catapult for aircraft carriers, antisubmarine sonar weapons and the midget submarine. Just to name a few more, the Belgian automatic rifle was made available to NATO troops, as was the new British Sterling machinegun, the French Mystere plane, and the British Hawker Hunter all-weather fighter. We all know the great contributions made by foreigners in the development of atomic weapons, which now represent our first line of defense. The non-Communist world has become so intimately interrelated that the welfare of each reflects significantly on the welfare of all the rest and no one country can claim self-sufficiency.

Nowhere else is this more evident than in the field of medicine. Antitoxins were discovered by a German and a Japanese in 1890. Insulin was discovered by Frederick Grant Banting and John James Richard MacLeod in England and Canada. The first sulfa drugs were used by Gerhard Domagk on his daughter in Germany early in 1933. In 1928 Alexander Fleming of the University of London discovered penicillin, thus starting an era of "anti-biotics." DDT was synthesized by Dr. Paul Muller in Switzerland in the autumn of 1939. I could go on and on down the pages of medical history to show that the health and welfare of the United States have been advanced by discoveries made in many countries.

THE PERIL IS STILL GREAT

Aggression still threatens. Although great strides have been made since the end of World War II, we are still confronted by totalitarianism. The Mutual Security bill as reported by the Foreign Affairs Committee authorizes $1.925 billion for military assistance to our allies and $1.147 billion for defense support. These are large sums but are a small price to pay when we realize the alternatives. The Communists would not hesitate to employ physical force or other means of undermining independent governments if they thought we had weakened our defenses sufficiently. The loss of any substantial territory in Asia, Africa, Europe, or even South America would lead to catastrophic results for America. Not only would our standard of living sag, but our ability to defend ourselves would be gravely diminished. So also would our liberties be increasingly sacrificed to the harsh demands of a garrison state.

If many peoples are drawn into a closer political and economic relationship with the Soviet Union, then eventually we would be cut off from the essential raw materials we need to keep our economy running. We are already importing 50 percent of the industrial raw materials required by our expanding industrial machine. We have recently become quite aware that 80 percent of all the oil in the non-Communist world is concentrated within 300 miles of the Persian Gulf. A complete survey of our domestic economic needs would reveal that the expenditure of $3.07 billion raised from our traditional revenue source is a small sacrifice indeed compared to the havoc that would be caused by the stoppage of international trade with countries now menaced by the Communists.

Figures presented to the Foreign Affairs Committee reveal that the NATO countries make a great effort to provide military equipment for their own defense. NATO members have contributed of their own resources about 85 percent of the total cost of the European buildup. Funds from the United States sent through the military assistance program have made up the difference of only 15 percent. Our percentage has currently been decreasing. While the defense expenditures of most European countries represent a smaller percentage of their gross national product than does that of the United States (about 10 percent) the per capita incomes of the others are much lower and the sacrifice is somewhat greater. As General Gruenther pointed out, "one NATO country has an average income of $175 per person per year. By the same method of figuring, the average income in the United States is $2,000 per person per year. Should the basis of contribution be $175 to $2,100?" Certainly the United States must not permit itself to

become the leader in reducing expenditures in the face of possible slackening efforts by our allies. We must show our determination to continue our assistance to those who have provided us with strong defensive outposts.

RESPECT FOR NATIONAL SOVEREIGNTY AND FREEDOM

One major problem in providing foreign aid is the tendency of the countries of the free world to arrive at mutually contradictory policies. A hazard of freedom that we cheerfully accept is the strain on free world unity caused by national sovereignty. We all know that such strains can be converted into our greatest asset, but in the short run, we must be patient and understanding. We cannot expect to buy the loyalty of any nation or people with aid dollars, no matter how many we spend, or as Chester Bowles expressed it "It is also folloy to assume that simply by filling people's stomachs we can automatically turn them into believers in liberal democracy, American brand." Assuming that we have provided for the necessary defense potential, the primary purpose of our economic assistance program should be to help new and struggling nations to create societies which offer a steadily expanding measure of justice and opportunity. We must not demand a uniformity of outlook among the recipients of our aid. It is enough to contribute to the growth of stability and security throughout the non-Communist world. While we are obviously spending large sums to support our allies' defenses and economies, we are also aware of the need to win the respect of all the world's free peoples.

The strengthening of military alliances as such is not the only objective of our foreign aid program. We must constantly reappraise our collective security system to determine how effective and reliable it is. Meanwhile, we seek to provide such countries as India and Indonesia with the help they need to improve the standards of living of their peoples. It should not be difficult for us to understand the desire of nations newly independent, free for the first time in modern history from colonial domination, to have a large degree of independence in their foreign policies. We have also learned that the neglect of have-not nations will only create problems for other regions of the world. Mr. J. D. Zellerbach, chairman of the Committee for Economic Development and one of the leading industrialists of the United States, points out that "foreign aid is not a device for rewarding those governments which agree with us and punishing those which do not." As he see it:

> You do not initiate and develop an economic policy to produce shiploads of gratitude. You do so to produce shiploads of food and machinery, our economic policy was never meant to create expressions of appreciation but to serve serious objectives of mutual interest.

A resident of one of the emerging new nations of the Old World indicated this point of view in answer to the question of an American: "What do you expect of us?" "Respect and rice," he said, adding "and in that order."

UNITED STATES MORAL LEADERSHIP

This leads us to a realistic assessment of the role the United States must play in western civilization. I would like to quote from a speech I made some time ago:

> We must not undertake to dominate the world. Now we have the power, of course, to do great things for all the nations of the world, and sometimes when the requirements seem to overwhelm us, we must remember that our capacity industrially is stupendous. Paul Hoffman gave us this charting of progress recently: Just 50 years ago, America had 6 percent of the world's population and was producing 20 percent of its wealth. Today, with 7 percent, just a little more of its population, we are producing not 20 percent but about 50 percent of its goods, and so by reason of our tremendous material and physical strength we are preeminently the world's leader. The important thing, however, is that we match these enormous industrial powers with a moral leadership that is commensurate.

We cannot limit ourselves to proposing a policy of foreign aid solely to prevent Russian aggression. We must seek to assist other countries to achieve common ends by means of fostering common values. There are over 1 billion people living in the so-called neutralist countries who are today fully aware of the opportunities for economic advancement available to them through employment of modern technology. Our economic policy must be designed to win their confidence and prove to them the superiority of our way of life.

Woodrow Wilson said that "America was created to unite mankind." And with this purpose in mind, his urgent advice was for Americans not only to think of America, but in order to be truly American, "always, also, to think first of humanity." He warned us that if we seceded from the emerging world community, "there will come, sometime, in the venegeful providence of God, another struggle in which not a few hundred thousand fine men from America will have to die, but as many millions as are necessary to accomplish the final freedom of the peoples of the world." Now that we are aware of our international responsibility, we find the totalitarian Soviet Union offering a fraudulent but rather persuasive vision to much of the world. We can and must win this ideological struggle by proving to the disadvantaged people of the world that the American way of life means self-determination, human dignity, expanding opportunities, and peace. In this way, whatever material assistance we offer will be recognized as part of a genuine effort to assure the preservation and the ultimate expansion throughout the world of the spirit of liberal democracy with its primary regard for the dignity and integrity of man.

If we put into our world leadership this greater moral concept, the 20th century can be ours, just as the 19th century was Britain's. As one of my good friends said, "I am sure it will either be ours or Russia's." If we claim it, it must be said, too, that it was humanity's century. Just as Great Britain, supplying the leadership that seemed essential to holding the world together, gave it the impress of freedom of international commerce, so America in the 20th century must give it the impress of spiritual greatness. I am sure of that.

I believe that out of new devotions to these common ends—the attainment of justice and liberty; the achievement of the rule of law in our world—there will be the grandest demonstration of faith that a people ever had. The tax burdens that Congress places on our citizens for these purposes are heavy and they pain every sensitive person in the Congress, but we must believe that these sacrifices are the only basis for a hope that there can be a world united—if not in our time, in some future period. International aspirations are consistent with the truest nationalism as America knows it. As Lincoln said, it is here that "we may meanly lose or nobly save the last best hope of earth."

Now that a form of military stalemate can be maintained through a sustained defense effort, the ideological dimensions of the Soviet challenge achieve new importance. The Communists are placing renewed emphasis upon propaganda and economic programs, and the United States must not neglect this aspect of Soviet aggression. The United States delegation to the United Nations Assembly of 1955 prepared a statement urging that our own policies be reassessed in the light of this move. We said at that time:

> We believe that the United States must counter these Soviet efforts. We can succeed not by outbidding communism in sheer amounts of economic aid, but by making newly independent and newly articulate peoples feel that they can best satisfy their wants by becoming and remaining part of the community of free nations.
>
> We welcome more emphasis on economic and educational endeavors, for we have a proven experience in these fields.
>
> We are in a contest in the field of economic development of underdeveloped countries which is bitterly competitive. Defeat in this contest could be as disastrous as defeat in an armaments race.
>
> We could lose this economic contest unless the country as a whole wakes up to all its implications.

With special regard to the problems of Asia, Mr. J. A. Villamor, a native of the Philippines but a naturalized American citizen and a lieutenant colonel in our Air Force Reserve, a man of wide military, political, and diplomatic experience in the Orient, has this to say:

> Many times the failures of our foreign aid have been due to our own unrestrained, let's-go spirit; our we-know-what's-good-for-you-better-than-you-do approach; our heavy dependence on material things to answer needs that are often largely spiritual; and worst of all perhaps, our tendency to forget the human problems—of peoples with hearts, minds, and souls, as well as stomachs, just like the peoples of the West.
>
> In my opinion, our foreign aid ought to be directed more to the needs of the underdeveloped peoples as they see their needs, not as we see them.
>
> The importance of paying attention to the attitudes of the people of Asia cannot be overemphasized. To ignore their attitudes, to interpret them only by western standards, to base policies and programs on one-way percepts—this is just about the fastest and surest way to bankrupt American policy in Asia.

Thus an adequate, long-range program of assistance, intelligently keyed to the political and ideological as well as the economic realities of the underdeveloped continents, is essential to our national objectives.

CONTINUING AID

Mr. Chairman, such a program of economic assistance cannot be considered as a temporary thing, or stop-gap against the advance of communism. I wish I might be convincing on this matter of continuing the responsibility of Congress to provide economic aid. We are not doing this because we are being pressured or are fearful, but because such aid is a fundamental part of our long-term foreign policy. I believe that if we were less favored industrially we would also argue that the productive nations have an obligation to provide economic help. The authorization for development assistance is $243 million. This is relatively small compared with the total MSA authorization and a minute percentage of our defense budget. With these funds we help to advance the standards of living in Asia, Africa, and Latin America so that the current gap is at least held constant and possibly improved.

The Soviet Union is now engaged in an all-out effort to use its diplomatic, propaganda, and economic power to attract new subjects, to weaken and divide the free world, and to isolate the United States. It is obvious that the emphasis on peace and relaxation of tensions is basic to the success of this policy. We must not permit ourselves to be deceived into thinking that this new economic warfare is any less dangerous than the old conventional warfare, and we must therefore apply our unique abilities and our resources to speed up free world economic growth and development. The basic obstacle to that growth is the shortage of investment capital available to underdeveloped countries. While we should do much to encourage private long-term low-interest loans in these countries, we must recognize the tremendous need for "infrastructures," the fundamental building blocks of an economy—transportation, power, other utilities, irrigation, basic agricultural industry, and so forth—which can only be created with public capital provided by the "have" countries.

When the proper political stability and favorable industrial environment are achieved, then private capital should be able to supply the funds necessary for the profitmaking enterprises. Until then the United States Government should accept the obligation to bolster the economies of the have-not countries with the financial assistance they need. Such assistance should not be in response to the challenge of Soviet promises, but rather in terms of a positive policy of foreign aid, based on the consistent development of a long-term program to raise the productive potential of the free world. Only in this way shall we be able to avoid a repetition of the experience of the Afghanistan Helmand Valley irrigation project. An ill-conceived attempt to win the support of this politically strategic area, this project was not carefully thought out and the extravagant expenditures there have succeeded only in causing a major political crisis. With professional planning of a balanced economic-aid program, we will provide for the kind of economic development that includes the close participation and training of the people we wish to benefit. We would then gain friends and lovers of freedom by the manner in which we present our defense and economic development programs.

TECHNICAL COOPERATION

It is not enough to provide economic development assistance to the underdeveloped countries of the free world. One of the most difficult problems that face the underdeveloped countries in their efforts to improve the living conditions of their people is the urgent need for acquisition and dissemination of basic technical knowledge. In the process of economic development, the solution of this problem ranks equally in importance with that of mobilizing the resources necessary to carry out large investment programs. Without such technical knowledge, nations cannot really begin to extract the potential benefits from capital investment. The total authorization for both bilateral and multilateral technical assistance in this bill is $157,500,000. I can think of no money better spent for the purpose of raising the living standards of other nations. While I will consider the problem of whether more money should be channeled through the U. N. in a short while, I should like to point out here that striking contributions to human welfare have been made by our point 4 experts throughout the world. We should all be very proud of the pioneer part the United States has played in the development of the idea of organized exchange of technical knowledge in the international area; we have now reached the stage where this type of assistance can really begin to pay full dividends in terms of free world economic health.

THE MIDDLE EAST

This general discussion of the benefits of our mutual-security program to our freedom-loving friends and world neighbors should not overlook the existence of various "malignancies" around the globe. Grave dangers exist in the Middle East, and the greatest threat to peace arises there. While strategic considerations are obviously of prime importance, we can readily see that the basic cause of the disturbances is economic. We must, of course, do everything in our power to prevent the outbreak of hostilities in the immediate future, but, in the long run, peace in the Middle East is dependent on political and economic stability and security. We are prepared to offer the economic and technical assistance that will aid in gradually raising the living conditions of the area to an adequate level. In the meantime, we shall maintain an attitude of friendship to all the peoples of the region, seeking to arrive at a peaceful and equitable settlement of Arab-Israeli differences through the United Nations. Above all, we will strive to repel the penetration of Communist influences which seek to inflame passions and stir up enmities. There is no other course available to us that will achieve these ends better than contributing to the establishment of strong independent nations, whose peoples are secure, well trained, and well fed.

NATO PROBLEM

We have all recently noticed the increased concern of our allies and our own Government over the effectiveness of NATO. Secretary of State Dulles suggested in Paris at the meeting of the NATO foreign ministers that article II of the treaty be used to give the Organization new life. This would mean employing the NATO machinery to administer economic aid. While there is much to be said for such an expansion of NATO activities, the important thing to realize is that the United States is giving consideration to multilateral means of assisting other nations. That the Atlantic Alliance needs strengthening is possibly true, but we must also give long consideration and though to the problems that would arise if NATO, primarily a military organization, were to be projected into the economic development of unalined countries of Asia and Africa, such as Burma, Egypt, India, and Indonesia.

MULTILATERAL AID

When we talk about the need for multilateral aid for underedeveloped countries, we must always remember that bilateral American aid is not to be contrasted with multilateral U. N. aid. What we are striving for is simply the most effective means of using our foreign-aid money. Both bilateral and multilateral aid should be coordinated to achieve overall economic development in a given region. We need to coordinate our assistance efforts so that they are on a regional and functional basis—that we aid many countries in one area, and that this aid include many operations which transcend border lines. Thus, not only the U. N. but also the Organization for American States is an international device for getting several countries to consider the same problems. In the report on the 10th General Assembly of the U. N. that Mr. Merrow and I filed with the Congress we did point out that:

It is urgently necessary that in the future we make for greater use of the United Nations' system for foreign aid than we have in the past. This would not mean an increased amount of money appropriated for foreign aid but, rather, the channeling of a part of existing appropriations through United Nations machinery.

Some will say that such sponsorship does not give us the advertising and good will that bilateral programs provide. However, we would point out that the basic reason for our program of economic assistance is not to purchase affection but rather to strengthen the free world, eliminating the vacuums of weakness into which the Soviet power is trying to move.

We do not, of course, overlook the factor of good will, but the leaders of the nations, even the so-called underdeveloped ones, know where help is coming from, and even though the goods are not clearly identified as being of American origin, we believe the people of those countries discern and appreciate our help.

U. N. PROPOSALS FOR DEVELOPMENT

The proposal for the creation of a Special United Nations Fund for Economic Development—SUNFED—reflects the increasingly strong world sentiment in favor of some type of multilateral aid. We voted for the resolution at the U. N. which created an ad hoc committee to carry on the orderly exploration of various relevant ideas and suggestions to establish an international development fund. We believe it premature to try at this time to define precisely what should be the organization and operation of the proposed fund. Heretofore our representations as to such aid have been linked to a worldwide system of disarmament, so that we could use some of the savings thus effected, without remaining inflexible about this mutual connection. As I said then, however:

We feel there is an inherent and logical relationship between an effective move to relieve the world of the heavy burden of armaments on the one hand and an effective effort to use large additional resources to promote human well-being on the other.

With regard to the technical assistance aspects of this program, I believe—that no genuine economic development can take place unless the people concerned work it out for themselves. The goal of the technical-assistance program is to bring out latent aptitudes and skills. Sometimes this means teaching completely new skills. At other times it may mean only helping people recapture skills lost or forgotten because of the tragedies of war, economic misfortune, or physical adversities. In either case technical assistance is the most direct way of helping people help themselves to improve their economic lot. For the future of both economic and technical aid, I wrote Secretary Dulles that in my work in the General Assembly I was struck by the extent to which many of the underdeveloped countries about which we are most concerned would prefer to be helped through the United Nations rather than to receive bilateral assistance which they may view as having "strings attached." This feeling is so strong in many cases as to amount almost to an obsession. Whether we agree with it or not, we must recognize that it exists.

Without abandoning the bilateral programs for economic aid and technical assistance by which we contributed much to raising living standards of other nations we should channel an increased percentage of our aid through the United Nations. We can avoid some of the misunderstandings and misinterpretations by taking this course and we will be more effective in working toward economic goals that are essential to world stability. Francis O. Wilcox, Assistant Secretary of State, who by reason of his legislative experience retains a strong influence on Capitol Hill, testified before the Foreign Affairs Committee that he does not subscribe to the belief held by some that the United States does not benefit as much through its contributions to multilateral activities as through its direct bilateral aid. As he put it "our vigorous support of these popular multilateral programs has been well received by all free countries and has gained for this country a good will which I firmly believe could not be developed to as great an extent in any other way. It is an effective answer to Communist propaganda charges that we are seeking to dominate countries in which we have bilateral programs. It is further evidence of our genuine interest in helping to promote the economic development of newly developing countries." In the context of our relations with other governments, the work of United Nations technical assistance has been increasing steadily in significance. It is furnishing a striking demonstration of the potential effectiveness of multilateral action in the economic and social fields. Experts from some 60 nations are working all over the world to bring knowledge of better methods of doing things to people who are eager to learn. These experts are employed by the international organizations of which the newly developing countries are members. This is rather a unique program of organized self-help, certainly the first of its kind to be established on an international organization basis.

FURTHER STUDIES

The difficulties which have arisen in the formation and administration of a consistent foreign-aid policy indicate that there is great need for further studies in this area. One possible method of reassessment would be the establishment of a joint congressional committee on foreign aid "to conduct a thorough factfinding study and investigation of the operation of the foreign aid programs of the United States in the past and present," as proposed by Mr. HARRISON of Virginia and Mrs. CHURCH of Illinois. Independent studies by the Foreign Affairs Committee would also prove to be extremely helpful.

Another means of revamping our foreign economic policy is the examination of professional reports, such as the recent one prepared by Profs. Max Millikan and W. W. Rostow, of the Massachusetts Institute of Technology's Center for International Studies. The proposals that these scholars of foreign affairs have made, such as creating a long-term capital fund, enlarging international flows of private capital, establishing international stocks of agricultural surpluses, and so forth, should be given the closest study, and the Congress should be prepared to adopt significant revisions in our current programs, when the studies reveal better ways of achieving our goal of strengthening the free world.

WHAT WE NEED TO DO NOW

Until we have obtained the revised foreign economic policy we seek, however, we must evaluate the current MSA bill in terms of its relation to what we now recognize as essential. The provisions of this act do enable us to help the newly independent countries of Asia, the Middle East, and Africa with their economic development, as well as contribute to the military defense of the free world. The case for foreign aid is still a very strong one, however imperfect the present mechanisms may be, and the money requested will do much to tip the balance in freedom's favor in the countries assisted.

Putting an Edge on Studies by Buying a Share of Stock

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mrs. ST. GEORGE. I should like to include in the RECORD an article which appeared in Business Week about a very interesting classroom experiment which was conducted at the Nyack (N. Y.) High School in my district.

It seems to me that both the teacher of the class, Mr. Edward Schweikardt, and the superintendent of the school, Mr. K. R. MacCalman, deserve high credit for this dramatic and effective way of illustrating the free-enterprise system.

This experiment enlisted the interest of the president of American Zinc Co., Mr. Howard I. Young, who made a trip to Nyack to address the class, wrote a special report on the activities of the class, of which he distributed over 25,000 copies.

Finally, on August 1, the school is putting on a program before the Associated Public School Systems at their national meeting in New York on the teaching of economics and free enterprise.

The article follows:

PUTTING AN EDGE ON STUDIES BY BUYING A SHARE OF STOCK

These 14 high school students, and 70 classmates, are a stockholder in an American corporation. On May 10, the day after their company's annual stockholders' meeting in Portland, Maine, they will have a special meeting of the owners of their one share of stock to hear a report of their company's president.

The students are seniors in the Nyack (N. Y.) High School history classes of Edward Schweikardt, the teacher in whose name their share of stock is registered. The company president who will address them next month is Howard I. Young, head of American Zinc, Lead & Smelting Co.

It's all part of Nyack's senior history course that stresses how the American economy works. And the actual ownership of a share of stock by the students grew out of class discussion last October. It has resulted in an experience more personal and more vivid than most college economics students get, according to Dr. Allen O. Felix, director of education for the New York Stock Exchange.

PLANTING THE IDEA

Originally, Schweikardt used a fairly widespread teaching trick of illustrating his economics unit by imaginary stock deals. Last fall, however, he had an uneasy feeling that, book-perfect as the students' work might be, the lessons on business ownership and financing weren't coming alive. Imaginary stock investments remained abstract and remote, he felt, to teenagers whose sole economic experience, personally, was as consumers. So, he recalls, he began throwing out the bait in his classes until someone asked, "Can't we buy a share of stock and see how it works?"

The disbelief that greeted his "yes" confirmed his opinion that the students needed a personal experience in stock owning.

STUDENT BROKERS

Each of the five classes elected a "student broker," who had the job of collecting 25 cents per pupil and then investing the proceeds. A sixth student who had already written to brokers and corporations for information was added to the committee as a consultant.

At 25 cents a head, the brokers raised $21 among Schweikardt's 125 students. They called on a local resident, Sydney Bradshaw, a member and former Governor of the New York Stock Exchange, for help in explaining terminology and the details of financial statements. Each of the five boys and girls then nominated one stock for consideration.

The class didn't want a stock with any local industrial connection or one with a static price performance. It looked, rather for the

stock of a sound and interesting company but one whose price would swing enough to enliven a wall chart (picture). Nicholas Golosov, a young Russian refugee who has been in the United States only 3 or 4 years, made a winning case for American Zinc on the basis of his weeks of study or financial data. In 1955 American Zinc traded in a range of $24.25 to $14.25 a share.

IT'S A DEAL

Up to this time, Schweikardt learned by calling for a show of hands, no other pupil in all his classes had ever heard of American Zinc. But after listening to their brokers' report, the students ratified the purchase of one share last October.

American Zinc was then selling at $18.50. The buy order was executed by the Wall Street firm of Montgomery Scott & Co. at a cost of another $1.10 or so. The rest of the $21 was kept in a cash balance.

The first exhibit for the classroom bulletin board was Montgomery, Scott's notice of purchase. "The students were amazed that a brokerage firm would give attention to one share," says Schweikardt. "Here in one brief experience the students were freed of the idea that a person has to have a lot of money to hold ownership in a business."

Next came the stock certificate. "Their first look at an actual piece of ownership of productive America," Schweikardt calls it. Teachers and pupils from other classes came in to look at it and talk about it.

FOLLOWING THE MARKET

The wall display included two graphs, one showing daily changes in price of American zinc and the other showing the volume of shares traded daily in this issue.

"The financial page of the New York Times began to rival the sports page in student interest," says Schweikardt. "Now the questions came fast: What made stock go up? What made it go down? The impact of political and economic events as market factors came into student conversations in the cafeteria, gym, and halls."

Then came the first quartely dividend check—for 25 cents. "A 25-cent check isn't a particularly impressive thing," the teacher says, "but when the students figured it out in terms of yield, this was something different. A 5.4 percent annual yield rang a bell with them. Here was the realism of investment."

Since then, another 25-cent dividend check has joined the first one on the bulletin board. "Up to this time," says Schweikardt, "$18.50 challenged a student only to the extent of what it could buy or where he could go on that amount of money. Here now was proof that $18.50 could mean ownership and production." Besides 50 cents in dividends so far, American Zinc has gained around $3 in market price since the time the group purchased it.

STILL MORE LESSONS

The value of the lone American Zinc share in teaching economics to Nyack teen-agers will continue through the school year. On May 1, all 125 senior history students will be taken on the annual trip to New York, 25 miles down the Hudson River, for a day divided between the New York Federal Reserve Bank and the New York Stock Exchange. Nine days later, they will have their "stockholder meeting" with President Young, of American Zinc.

Finally, as graduation time nears, the students will have to decide what to do with their share of stock. Their sale of the stock will complete the cycle that began last fall with the theory of corporate ownership.

LESSON FOR GROWNUPS

Nyack High School's project is becoming a lesson, too, for other teachers, investment people, and businessmen.

When American Zinc heard of the identity of its new holder of one share, President Young asked Schweikardt to describe the project. This month the company printed Schweikardt's report in a pamphlet that was sent to 3,800 stockholders and 2,400 employees in the same mailing with the annual statement. As word got around, requests for copies of the pamphlet piled up. A first printing of 25,000 copies has now been exhausted and more are being printed.

The stock exchange last week took delivery of 11,000 copies, of which 7,000 will be distributed among educators by Dr. Felix.

"This is the most ambitious high-school project in economics that I've heard of," says Dr. Felix. "We want to let other schools know about it, not that many will actually put it into practice. This is part of what we call 'the growing edge' of teaching practice, and it usually takes something like 50 years for such an idea to spread. But it will start high schools thinking about ways to teach economics more effectively."

Economics in secondary schools is being stressed by business leaders, partly because only 2 percent to 4 percent of college students take economics. "I never heard of a share of stock, or knew really what it was," says President Young, "until I was well up in my career."

Young attributes wide interest in the Nyack project to the fact that the school initiated it, rather than having the idea pressed by business. Public-school people are traditionally wary of direct pressure from special interests.

Rounded experience—In their training as stock investors, the Nyack students even found themselves sought after by securities salesmen. One afternoon, Joseph Caruso, one of the broker committee, received a phone call from a penny-stock salesman who urged him to invest in 2,000 shares of uranium stock. Caruso was evasive.

"What do you do for a living?" the caller finally asked.

"I set up pins in a bowling alley after school," Caruso replied. And the sales pitch ended just about there.

Fallacy of Democratic Claim To Be Party of Common Man

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, July 5, 1956

Mr. MARTIN of Iowa. Mr. President, on April 11, former President Harry S. Truman, at Des Moines, addressed the people of Iowa. He indulged in his usual unsupported charges which have characterized his political speeches.

In discussing foreign policy, he said:

My friends, I have spoken to you tonight mostly about the agricultural situation. However, there is another matter which should never be absent from our thoughts—that is the question of foreign policy and world peace. I have spoken on this subject a number of times recently and I shall not dwell upon it tonight. But we should always remember that this subject is so important it overshadows all our other problems here at home. And in this field, unfortunately, the Eisenhower administration has made the worst mistakes of all.

They have made a mockery of bipartisanship in foreign policy. They have put politics first and the national interest second. The result has been to dismay our friends, comfort our enemies, weaken the position of the free world, and drive other nations closer to the Communist bloc.

One would think from this statement that Harry Truman thought there was really something basically wrong with President Eisenhower's foreign policy. He supplied the refutation for his own statement. In Rome on May 21, he said:

I am for the foreign policy outlined by the President of the United States. I only wish everyone on the other side had done the same for me (New York Times, May 22, 1956).

On April 26 I placed in the RECORD an answer to many of Harry Truman's charges in his speech at Des Moines. His own statement in Rome repudiating his foreign policy charges at Des Moines must now be included as a part of that record.

The entire tenor of his speech at Des Moines followed the familiar Democratic theme that the Democrat Party holds a monopoly in serving the interests of the common man. He said:

Really the only people who haven't been messed up are General Motors, big business, and the stockmarket gamblers.

On April 26, in answer to his attack on this particular point, I said:

From Harry Truman's speech, you would gather the impression that this administration is only interested in the very rich. He said: "Really, the only people who haven't been messed up are General Motors, big business, and stock market gamblers." The distribution of the increase in both personal and national income does not support the repeated Democratic claims that this administration is operating solely in the interests of big business. The repeated attacks by Harry Truman, Adlai Stevenson, and Senator KEFAUVER on the businessmen in Government is a terrible disservice to the American people.

Let me remind you that prior to 1939 President Roosevelt used to indulge in attacks on the leading members of the business community. However, when the chips were down and it became necessary to mobilize our resources to fight the Nazis, to whom did President Roosevelt turn? He asked William S. Knudsen, then president of General Motors; Edward R. Stettinius, then chairman of United States Steel; Donald Nelson, the president of Sears Roebuck; Charles E. Wilson, the president of General Electric; and William H. Harrison, a vice president of the American Telephone & Telegraph Co., along with countless others of similar capacities and abilities, to enter the Government service. What happened? A certain Senator from Missouri, Harry S. Truman, proceeded to impugn the integrity of these people. He questioned the distribution of defense contracts and asserted that undue favoritism had been shown big business. Early in 1941 the Truman committee was established which plummeted Harry Truman into the Vice Presidency, and then the Presidency. A few years later, when confronted with the Korean emergency what did Harry Truman do? He asked Mr. Charles E. Wilson, the president of General Electric, to take over the Office of Defense Mobilization, one of the most important positions in the entire Federal Government.

Do the Democrats imply the people of the United States can only secure the service of competent people in a period of acute emergency—that the rest of the time we must be content with mediocrity, political hacks, and intellectual theorists? As a matter of fact, the Democrats when in power have recruited business leaders for many important posts. Let me remind you that our first Secretary of Defense—an unusually

capable man, James Forrestal, was a Wall Street banker. W. Averell Harriman, President Truman's Secretary of Commerce after he kicked Henry Wallace out, was not exactly a barefoot boy. The Biddles and the Morgenthaus would not qualify as little business men.

It is time that we stopped peddling this kind of nonsense, that we ceased appealing to the basest of human motivations—envy and jealousy of the achievements of others. President Eisenhower is to be commended for having secured the most capable people he could find to operate what is the biggest business in the world, our Federal Government.

The staff of the Senate Republican policy committee has recently completed an extensive study of the record which disposes of the Democratic claim to be the party of the common man. Mr. President, I ask unanimous consent that excerpts from this study may be printed in the Appendix of the RECORD.

Mr. President, I am advised by the Public Printer that the excerpts I have asked to have printed in the RECORD will exceed by 2½ pages the two pages which may be printed in the Appendix without a statement of cost, and that the entire cost will be $346.50.

There being no objection the excerpts were ordered to be printed in the RECORD, as follows:

NOTES ON THE DEMOCRATIC PARTY CLAIM TO BE THE PARTY OF THE COMMON MAN

Campaign oratory is usually dissolved in the ballot box. But occasionally some political claims and slogans are made to stick in the public memory and become part of the folklore of political parties.

One of these is the claim that the Democratic Party "is the people's party" while the Republican Party "is the party of special interests." Stated another way, Democrats assert theirs "is the party of the common man" while Republicans favor "the privileged few."

This claim is utterly false, but Democrats have pressed it so boldly, for so long, and in so many forms that they have achieved for it a measure of popular acceptance.

DEMOCRATIC PLAY ON THE THEME OF THE COMMON MAN

The theme has a double-barreled effect (1) to praise the Democratic Party and associate it with the interests of "the common man" and the "average man"; and (2) to condemn the Republican Party and associate it with the interests of the "rich," the "bankers," "big business," and the "privileged few."

SPURIOUS NATURE OF THE DEMOCRATIC CLAIM

The Democratic Party claim to be the "party of the common man" and the corollary that the Republican Party is "the party of the privileged few" is a flagrant sample of the big lie in politics.

No major party could function successfully in a country the size and diversity of the United States if it served only the common man or only the privileged few.

It is one of the virtues of our nationwide two-party system that the voters may switch from one major party to the other and find each one an adequate instrument to serve the Nation as a whole. If this were not true, our political system would soon degenerate into a multiplicity of small special interest parties incapable of governing, as we see in some countries abroad. The very health and vigor of our two-party system—each drawing strength from all four corners of the union, belies the Democratic Party claim.

One reason behind the Democratic Party claim to be the party of the common man is the fact that for years the Democratic Party has followed a philosophy and has labored hard to mold the American people into common men.

Secretary of Labor James P. Mitchell observed this tendency of the Democrats to turn our people into common men in these words:

"The keepers of this doctrine were interested not in individual men but in collective man, massed man. For them social problems were quite simple. One merely had to determine what was good for collective man and then shove it down his throat like castor oil. The government was of the people, for the people, but by the social planners."[1]

And Dr. James B. Conant, former president of Harvard University, put his finger on the source of the doctrine of massed man when he said: "The Soviets seek uniformity and strict adherence to the creed of Marxism-Leninism."[2] In that creed man is nothing as an individual. He exists only as an unidentifiable atom in a collective mass. And men and mass exist only for the state.

Recent history shows the many steps through which the New Deal-Fair Deal Democrats, who were in control of Government, attempted to deprive our people of their individuality. These Democrats strove to centralize government of everyday affairs in Washington, leaving less and less for people to do in their home States and localities. They handed out billions in relief, grants, and aids from Washington, making a large number of people dependent upon the Government at the Nation's Capital. The centralized administration of these activities operated to reduce the individuality of persons to numbers in electronic computing machines. The list of laws, acts, and regulations systematically designed to rob people of their individuality and pile them up in collective masses could be extended a mile long.

No one can deny that the Democrats responsible for these operations intended to do good by them. But it also cannot be denied that an inescapable and most harmful byproduct of such operations has been the weakening of individual personality and self-reliance.

The Democratic Party under New Deal-Fair Deal domination has done its utmost to pour our people into the mold of common men and to deal with them in the mass. This is the basis of their political philosophy and voting appeals. They have had some measure of success, especially where our technical progress has emphasized collective or mass action. But the success has been superficial because deep down our people are proud and jealous of their individuality. They resent being compressed into the mold of the common man. Behind the mass production and the collective this and that our people still have wide diversities and at heart remain individualists. This is clear when we examine some of the deep-seated diversities in American life.

AMERICA HAS NO "COMMON MAN"

Where Democrats are sincere in making the claim to be the party of the common man, as some undoubtedly are, they see the forest and not the trees. They look at the material uniformities in American life—the same trains, hotels, restaurants, cooking, and newspapers—and quickly come to the conclusion that all our people, too, are of a common mold.

What they fail to see is that this conformity is merely an expression of our technical, material progress. They fail to understand or deliberately close their eyes to the fact that underneath the common material veneer is a people still highly individual in talents, aspirations, and with the intense desire of each to fulfill his or her individual personality.

Footnotes at end of speech.

The greatest fallacy in the Democratic Party claim is that in America there is no common man.

Secretary of Labor James P. Mitchell declared: "We were told for some years that government was supposed to minister to the 'common man.' This doctrine of the common man was as singularly unfree a doctrine as we have ever witnessed in this country. The idea that we are all alike, a common mass, the products of some sort of biological punch press, seeking the same end, through the same means, with the same ideas, desires, and needs, is indeed a devastating one."[3]

REAL BASIS FOR THE DEMOCRATIC PARTY CLAIM TO BE THE PARTY OF THE COMMON MAN

Democratic Party leaders who make the claim that theirs is the party of the common man are well aware that ours is a Nation of great diversities, and that there is no such thing as a common man in our midst.

They even play upon these diversities by making demogogic appeals to minority racial, religious, occupational, and class prejudices. They do not hesitate to develop and inflame class distinctions in their aim to separate a few of our people from all the others.

One doesn't have to think hard to find the reasons for such Democratic trickery. One reason, as explained previously, is that the Democrats have been running the Government on the doctrine of the collective man, massed man.

A second reason lies in the field of raw politics.

Political history shows that present-day Democratic Party leaders will make any claim and follow any line which promises them the votes to gain control of the country and remain in power.

They have shrewdly calculated where the bulk of votes lies and they make their appeals accordingly. That is why they label Republicans as the party of the "rich," the "bankers," "big business," and the "privileged few." They know that such labels carry an unpleasant, even sinister implication; and that few votes can be had from those sources.

They label their own party the party of the common man, the average man, and include among these the farmer, the laboring man, the white-collar worker, and the small-business man because such labels sound wholesome and the bulk of votes can be found in those sources.

It does not trouble such Democratic spokesmen in the least that this deliberate inflaming of class distinctions can do great harm to the peace and unity of the Nation.

It does not bother them to malign good men and women among our people.

Their consciences aren't troubled when it is pointed out that their party, too, has its share of millionaires, its quota of advisers from banks and big business, and a much sorrier record of favors to "the privileged few." It doesn't seem to bother them, either, that a great many of the things they have done with professed intentions to help the so-called "little man" have resulted in great harm to the bulk of our people.

In using the inflammatory phrases of class distinction, they have had but one thought in mind—to get in power and stay there.

MILLIONAIRES AND BIG BUSINESSMEN IN DEMOCRATIC PARTY ADMINISTRATIONS

Common observation of political debate readily shows that Democratic Party leaders never leave off criticizing Republicans for having businessmen serve in Government posts. "Eight millionaires and a plumber" is the way Adlai Stevenson expressed it. The same idea is phrased in many other ways.

Since Democrats seem to think it bad for Government to avail itself of the talents, abilities and competence of businessmen, one would think that no Democratic Admin-

Footnotes at end of speech.

istration would touch a millionaire or a businessman with a ten-foot pole.

Let us look at the record on this point. Does the Democratic Party of the "common man" rub shoulders with millionaires? Does it seek the aid of bankers—big bankers and big-business men?

MILLIONAIRES SERVE DEMOCRATS, TOO

A cursory examination of the men in the United States Senate discloses at least a half dozen multimillionaire Democratic Senators, more it seems than can be found on the Republican side of the aisle (BYRD, GREEN, KERR, LEHMAN, MURRAY, SYMINGTON).

It is a matter of common knowledge that John J. Raskob, multimillionaire contributor to the Democratic Party, bailed out Franklin D. Roosevelt (a millionaire in his own right) when Roosevelt was reluctant to run for Governor of New York for fear of losing his investment in Warm Springs, Ga.

Bernard M. Baruch, who got millions out of Wall Street just before the 1929 crash, is well known as an adviser to Democratic Presidents.

Four out of five prominent contenders for the 1956 Democratic Presidential nomination—Adlai Stevenson, Averell Harriman, W. Stuart Symington, and G. Mennen (Soapy) Williams—are men of wealth.

BANKERS ALSO SERVE DEMOCRATS

Big bankers are not neglected in the roster of Democratic Party aides. Former Secretary of Defense Robert A. Lovett is a partner in the influential Wall Street firm of Brown Brothers, Harriman & Co., Averell Harriman, holder of a half dozen top-level posts under Truman, and now Democratic Governor of New York, was associated with the same firm. The late James Forrestal, first Secretary of Defense, was president of Dillon, Read & Co., one of the Nation's largest investment houses.

DEMOCRATS CALL UPON BIG BUSINESS

Nor has big business been neglected by Democratic Presidents in their search for executive talent. W. STUART SYMINGTON, before he was elected to the Senate, served in the Defense Department and several other high Government positions after he was brought to Washington from the presidency of the Emerson Electric Co., St. Louis, Mo.

A mainstay in high level Democratic Administration posts was Charles E. Wilson, president of General Electric Co. Roger L. Putnam, chose to head the Economic Stabilization Agency with virtual power of life and death over American industry, had been connected with the Nation's largest manufacturers of package machinery, a director of a large machine and gear firm, and of a Springfield (Mass.) bank. Putnam's predecessor as Economic Stabilizer was Eric Johnston, former president of the United States Chamber of Commerce, now president of the Motion Picture Association of America, and a director of United Air Lines, the Bank of America, an insurance firm, and several banks. Paul Hoffman, automobile magnate who reportedly made his first million before he was 35, was head of the Economic Cooperation Administration (ECA) in the Truman administration.

Ex-Secretary of State Acheson has been associated between periods of Government employment with a law firm which has drawn huge retainers as representative of foreign governments, some of them seeking large loans from the United States.

In May of 1952, Senator CAPEHART inserted in the CONGRESSIONAL RECORD a list which provided a quick glance at men of wealth and big business connections who are either prominent Democrats or who served Democratic administrations in recent years.[4] A thorough survey would multiply this record many times, especially if it included the thousands of businessmen participating in Franklin D. Roosevelt's National Recovery Administration (NRA). But the list presented by Senator CAPEHART should be enough to prove the point.

In setting forth the list, it was not the Senator's purpose to direct criticism at any of the men listed. The purpose was to brand as contemptibly false the Democratic Party insinuation that the employment of big business executives in Government is against the interests of the "little man."

Some of the men listed are Republicans, more are Democrats, judged by voting registrations, by intent, or by repeated and substantial contributions to the Democratic Party. But all who are listed are men whose talents, abilities, initiative, and effort have served the American free enterprise system with distinction. If any administration failed to use such men of proven ability, the people would have cause to charge Government with stupidity, or worse, dereliction of duty.

Memory need not be long to recall the early days of the Roosevelt administration in 1933 when a host of crackpot economists, lawyers alert for the main chance, poets, social planers, and intellectual freebooters swarmed to Washington to inaugurate the more abundant life. After having spoon-fed the Nation's ailing economy for 5 years from sundry bottles of elixir bought with billions of taxpayers' money, these assorted buccaneers only succeeded in having the 1937 depression take the country back to 1932 levels.

Then it was that the Democratic Party of the "common man" turned to the businessmen they pretended to despise in every election campaign. Then began the process of replacing the social adventurers with men whose outstanding performance for American business and industry testified to their talent, ability, and competence.

Once the door was opened no field of private industry and enterprise was left unexplored in the scramble for talent. After World War II began, the Democratic administration's appeal to businessmen was intensified and thousands upon thousands came to Washington to help produce the production miracle which insured victory.

In the roster we find representatives from the American Telephone & Telegraph Co., Aluminum Co. of America, Standard Oil, United States Steel, Republic Steel, General Electric, and General Motors.

Roosevelt and Truman obtained officials for Government posts from General Foods Corp., Eastman Kodak, United States Rubber Co., Lever Bros., Merck & Co., the Union Pacific, and several other railroads, half a dozen air and steamship lines, the Greyhound Corp., many insurance companies, the National Broadcasting Co., and other radio chains.

Investment and international financiers were brought to Washington from Dillon, Read & Co.; J. P. Morgan & Co.; Kuhn, Loeb & Co.; and others.

Mention could also be made of John W. Davis, wealthy lawyer and lifelong Democrat; Owen D. Young of General Electric Co.; Melvin A. Traylor, president of the First National Bank of Chicago; Henry Bruere, president of the Bowery Savings Bank, New York; Basil O'Connor, a lawyer with whom President Roosevelt had been associated and who once asked a fee of $200,000 in an RFC loan, according to Jesse Jones, RFC Administrator; Joseph E. Davies, Roosevelt's millionaire Ambassador to Russia; Col. James W. Flanagan, formerly president of the Imperial Oil Company of Canada who went as RFC representative to South America; Louis Johnson, former Secretary of Defense and who also served the Democratic administration as counsel of General Aniline & Film at $50,000 per year; John M. Hancock, industrial banker who worked with Bernard Baruch on Government missions; Walter Dunham, banker and Detroit businessman of RFC notoriety; Kaiser and his sons who received millions in Government loans which interested his large creditors, the Giannini Bank of America and the Mellon National Bank & Trust Co.; and Delos W. Rentzel of American Air Lines whom Truman made head of the Civil Aeronautics Board.

In the appendix of his book, Fifty Billion Dollars, RFC Administrator Jesse Jones presented a list of former employees of RFC (alumni, he called them) with their connections in business, industry, finance, and other associations. All served the RFC with honor and distinction under a Democratic administration whose leaders now denounce businessmen when they serve in a Republican administration.

The use by the Roosevelt and Truman administrations of wealthy bankers and businessmen is not subject to condemnation, Democrats, like Republicans, simply discovered that these men were the best men for the large jobs in which the Government engaged in depression times, war years, and during the postwar transitions.

It does make the case, however, that the Democratic Party has made lavish use of men from the very sectors of American life their leaders constantly denounce. Republicans, even in their most active days in control of the Government, never had such extensive big business connections.

MEASURES OF NATIONAL WELL-BEING UNDER DEMOCRATS AND REPUBLICANS OR WHICH PARTY BENEFITS THE COMMON MAN?

The test of a political administration, Democratic or Republican, does not lie in comparing benefits given to particular groups in our population. It does not lie in making general conclusions from bits and pieces of data. Yet this is the method Democratic politicians repeatedly use to show that Republicans favor big business, or are against the farmer, or hurt the little man. The method is just as phony and just as meaningless as it would be so say that a husband favors his wife when he buys her a dishwasher, is against his daughter because he does not get her a piano, and hurts his children because he denies them candy before supper.

The true test of a political administration must be found in the general effect the administration has on the national interest and the well-being of the people as a whole.

The chief measures of the well-being of a nation are not hard to find. Does the nation enjoy peace? Is the nation secure from external danger? Is individual freedom preserved? Is the nation prosperous? Is there plenty of work at fair wages for all willing and able to work? How burdensome is the level of taxes? Is the government operated economically and free from corruption?

Questions such as these indicate the true measures of well-being in a nation. A political administration can be judged good or bad by how its performance affects these measures of national well-being. If such tests are applied with regard to the people of the Nation as a whole, the Democrats who claim so loudly to be the party of the common man have much to explain.

WAR AND PEACE

Few events are more important to the average man—the people as a whole—than war and peace. When a nation goes to war the rank and file of people pay the heaviest price. Their sons do the fighting and make up the biggest list of dead and wounded. They and their succeeding generations pay the cost in money. They suffer the shortages and privations of wartime economy. The nation suffers a tremendous loss in resources, many irreplaceable forever. The life of the nation generally is deeply upset and its troubles continue long after the last shot is fired.

While no political party can be absolutely charged with blame if the nation becomes

---

Footnotes at end of speech.

involved in war, yet the diplomacy and foreign policy of a political administration has a considerable bearing on whether the natiaon goes to war or not. With a nation as powerful as the United States, the influence of its diplomacy and foreign relations also has a strong bearing on whether the world generally remains at peace or sinks into war.

Each of our major political parties has been in office for approximately half the time since 1900. Their diplomacy and foreign policies worked completely opposite results.

THE DEMOCRATIC PARTY RECORD ON WAR AND PEACE

It is a singular fact of history that the United States has gone to war three times since 1900—each time under Democratic administrbations; not once under Republican administrations.

In World War I, 4¾ million men were engaged in the Armed Forces. The batte deaths numbered 53,407, other deaths 63,156, and 204,002 were wounded.[5]

In World War II, 16 million were engaged. The battle deaths totaled 293,986, other deaths 113,842, with 670,846 wounded.[6]

In the Korean war, which Mr. Truman entered without prior authority from Congress, 5¾ million men were engaged. The battle deaths numbered 33,629, other deaths 20,617 and 103,284 were wounded.[6]

The full money cost of these three wars cannot be computed finally until many generations have passed because the people of our country will be repaying the borrowed money and continued obligations stemming from these wars beyond the year 2000.

Some measure of the immediate cash cost of these wars can be inferred from figures on the national debt. The average gross public debt of the Federal Government for the period 1911–1915 was $1,191,000,000. For the period 1916–1920, under Democratic administrations, which covered World War I, the debt rose to an average of $24,299,000,000. In 1941, just prior to World War II, the debt stood at $42,968,000,000. By 1946, which finally reflected the influence of World War II, the debt stood at $269,422,000,000. Some reduction was thereafter made by cancellations of war contracts and other financial adjustments. So that on the eve of the Korean war the debt stood at $257,357,000,000. When that war was finally over in 1953, the debt had jumped again $266,017,000,000.[7]

The interest charges on the Federal debt at the end of December 1955 totaled $6,913,000,000 and must be paid currently out of taxes.[8] This amount is approximately $2 billion more than it cost to operate the entire Government in President Hoover's last year, just before the Democrats took over in the interest of the common man.

While these figures are astronomical, they do not amount to a fraction of what these three wars will cost by the time the last dollar is paid on the public debt and the last veteran, his dependents, and survivors are paid off in the distant future. Taxes, of course, are also an important part of war financing and will be treated in the section below devoted to that subject.

Woodrow Wilson in 1916 was elected on the slogan, among others, that "He kept us out of war." Some 5 months later the United States was involved in World War I.

Franklin D. Roosevelt was elected on the Democratic Party platform which declared, "We will not participate in foreign wars, and we will not send our Army, naval, or Air Force to fight in foreign lands outside the Americas, except in case of attack." In a speech delivered in Boston, October 31, 1940, Mr. Roosevelt reaffirmed this pledge in emphatic terms. He said: "While I am talking to you mothers and fathers, I give you one more assurance. I have said this before, but I shall say it again and again and again: Your boys are not going to be sent into any foreign wars."

Footnotes at end of speech.

Historians have since shown that at the time this speech was made, Mr. Roosevelt had already taken enough unneutral steps (many of them secretly) to make our involvement in World War II almost inescapable.

Mr. Truman engaged American forces in the Korean war without ever placing the matter before Congress.

One can hear anguished cries from Democrats that it is unfair to label them the war party in American politics. Senator JOHN J. WILLIAMS, Republican, of Delaware, gave the definitive answer to this outcry in the following words:

"If members of the Democratic Party wish to charge the depression to the Republican Party, a depression which was worldwide but which they wish to charge to the Republicans solely because it happened in a Republican administration, then I want the Democratic Party to take full blame for the wars which occurred in the Democratic administrations. If they boast of the artificial prosperity which accompanied those wars let them have full credit for the wars." [9]

That is fair political rejoinder to a purely political charge. Democrats took political credit in 1916 for keeping the country out of war. Democrats campaigned successfully for more than 20 years on the 1929 depression which they charged to Republicans. But they do not find it so amusing to find themselves on the target end of a comparable charge.

But whether they are responsible for the wars or not, it can hardly be said that the war years in their administrations redounded to the benefit of the "common man."

THE REPUBLICAN RECORD ON WAR AND PEACE

While the campaign of 1952 was being waged the United States was still locked in a stalemate war in Korea. President Eisenhower promised that he would make every effort to end that bloodshed. He kept that promise. Furthermore, he kept the Nation out of another war in Indochina. Despite all the menacing ups and downs in world politics, the American Nation is still at peace and enjoying unprecedented prosperity not based on wars.

President Eisenhower, in sharp contrast to his predecessors, declared his attitude in these words: "I will never be guilty of any kind of action that can be interpreted as war until the Congress, which has the constitutional authority, says so." [10]

These are an attitude and a record which pay substantial dividends in well-being to all the people of the Nation, the "common man" included.

DEMOCRATIC PARTY RECORD ON EMPLOYMENT

At the height of the depression some 12 million or more people were out of work. After the 1932 elections, the Democratic Party took control of the Federal Government and remained in office for 20 years.

In the period 1933–37, the Democrats spent tremendous sums of money on relief, public works, and other Federal projects. They tried every economic nostrum in the books. But at the end of that period the national economy slid back to 1932 levels. Never in the entire period did unemployment fall below 7,500,000. By 1939, there were again 9 million persons out of work.

By that time World War II had commenced. The United States was swept into the war atmosphere first, in rebuilding its own defense which had been neglected for many years; second, in helping Great Britain and her associated allies; and finally, by America's entry—at the end of 1941—into the war itself.

That solved the employment problem for the duration of the war.

In the years immediately after the war, employment remained substantially high because of the pent-up demand for civilian goods released by the ending of war in 1945.

By 1949, however, another sharp economic recession set in and unemployment rose to approximately 4 million persons.

In the summer of 1950 the United States became involved in the Korean war. Once again unemployment fell away to negligible proportions. This continued throughout the remainder of the Truman administration.

Now what do we see here in summary?

One fact stands out: Democratic administrations, with full control of the Federal Government and a practically unlimited treasury of 20 years, completely failed to solve the problem of unemployment, except by war.

Democrats failed in a crucial matter touching the well-being of the "common man."

REPUBLICAN RECORD ON EMPLOYMENT

President Eisenhower's first year, 1953, set all-time records for employment, economic activity, and general prosperity. This is all the more remarkable because the Nation was finally at peace, war spending had tapered off, and the difficult transition was begun from a war economy to a peacetime economy.

The high level of prosperity thus begun continued through 1954 and 1955. It is continuing in 1956.

The one dark spot in an otherwise healthy and prosperous economy is the drop in farm income. Net income of farm operators from current operations dropped from $14.9 billion in 1952 to $11 billion in 1955.[11] The index of prices received and paid by farmers (parity ratio) which had dropped 15 points under Truman (from 107 in 1951 to 92 in 1953) fell another 8 points under the Republican administration to 84 by 1955.[12] However, between April and May of 1956 the parity ratio rose to 85.[13] The parity ratio decline reflected two maladjustments in agriculture: The difficulty in cutting production back from wartime levels, and the high price supports which encouraged increased production to the point where huge surpluses of farm products hang over and depress the market. The Eisenhower administration seeks to return agriculture to a healthy condition by flexible price supports aiming at parity income in the market place, by a soil-bank proposal to take a portion of farmlands out of production, and by other measures short of making the farmer a ward of the Government.

By May 1956, employment on farms, in factories, and in other nonagricultural pursuits stood at more than 65 million.

Personal income in the Nation in April 1956 ran at an annual rate of $317 billion, an increase of $18 billion over the same month a year ago and a jump of $51 billion over April 1952, the last year of the Truman administration. Wages and salaries in the same month of 1956 reached an annual rate of $218.7 billion, or $14.1 billion above the April 1955 rate and $98 billion more than the April 1952 rate.[14]

During the 3 years of the Republican administration the compensation of employees averaged 69 percent of the national income compared with 65 percent during the 7 years of the prior Democratic administration.[15]

Corporate profits on the other hand, after taxes, averaged 6 percent of the national income during the first 3 years of the Eisenhower administration, compared to an average of 7.7 percent during the Truman administration.

The highest gross national product reached in prior Democratic administrations was $346 billion in 1952. Under Republicans it reached approximately $365 billion in 1953, rose to $387 billion in 1955, and in the first 3 months of 1956 it reached an annual rate of $398.5 billion.[16] Constantly higher rec-

Footnotes at end of speech.

Footnotes at end of speech.

ords were set during the period in industrial production, construction, wages, and income.

On January 20, 1956, the Labor Department reported that its Consumer Price Index (often called cost-of-living index) during 1955 reflected the greatest period of stability since the index was started 15 years ago. In 1955, the index changed very little, ranging from 114.2 percent of the 1947–49 average to 115 percent. As the year started, the January figure was 114.6, only three-tenths of 1 percent above that for January of a year ago.

The Department also announced that the gross pay of the average factory worker with three dependents in April 1956 reached $78.99 per week, $4.03 a week more than in April 1 year ago and $13.32 more per week than in April 1952.[17] Net take-home pay for the average factory worker with three dependents set a record of $72.42 in April 1956, compared with $69.20 in the same month of 1955 and $61.81 in April 1952. The purchasing power of the average American worker's paycheck at the end of 1955 was more than 6 percent higher than at 1954's end.

Thus, under Republicans, we have more employment and higher wages than were ever achieved under previous Democratic administrations who like to refer to themselves as the party of the common man.

Democrats talk about benefiting the common man, but Republicans deliver.

TAXES AS A MEASURE OF NATIONAL WELL-BEING

Taxes reflect the cost of government. Every cent the Federal Government spends ultimately comes out of the pockets of the American taxpayer. How has the common man fared in the matter of taxes under Democratic and Republican administrations?

DEMOCRATIC PARTY RECORD ON TAXES

The Democratic Party was in office from 1933 to 1953.

When it came into office in 1933, Federal taxes were approximately $3 billion. When it left office in 1953 Federal taxes reached the enormous total of $65 billion.

In 1932 the so-called "little fellow" paid small or no income taxes. Over the years, under Democratic administrations, the real burden of income taxes shifted to the common man. This is best shown by the number of income-tax returns. In 1932 there were only 1,900,000 taxable returns. After 20 years of Democratic administrations the number of returns increased to 46,800,000. The simple meaning of these two figures is that Democratic Government spending and high taxes shifted the main burden of taxes to the common man.

The plain truth of the tax story is that, since 1913, the income tax has changed from a rich man's tax to everyman's tax. It began as a 1 percent levy ranging upward to 6 percent on incomes of half a million or more. Corporations paid a 1 percent income tax in 1913.

Nowadays the basic income tax rate is 20 percent, and it ranges up to 91 percent on incomes in excess of $300,000 for individuals. Corporations pay 52 percent.

The burden on the little man was further increased by reductions in tax exemptions for himself and family. In 1932 a single person had a tax exemption of $1,000 which Democrats progressively reduced to $600 by 1952. A married person's exemption in 1932 was $2,500 which Democrats reduced to $1,200 by 1952.

In 1932 a single person earning $2,000 paid $32 in Federal income taxes; in 1952, he paid $266. A married couple without dependents with the same income in 1932 paid no taxes; but paid $133 in 1952.

A $5,000 income is more realistic in today's circumstances. In 1932 a single person paid only $140 in taxes; but in 1952 he paid $911. A married couple with no dependents and the same income in 1932 paid $80 in taxes as against $733 in 1952. Owing to the reductions in allowances for dependents, the married couple in the $5,000 income bracket with 2 dependents pays a little more than half as much—$48 in 1932 and $466 in 1952.

The per capita burden of Federal income taxes in 1932, the last year of the Hoover administration, was $170. After 20 years of Democratic administrations this burden was increased to $659, according to official Treasury figures.

During the same span of years excise taxes on almost everything the common man has to buy were greatly extended and in some cases set as high as 20 percent of the price of the article.

TAX INCREASES AND TAX REDUCTIONS

Democrats not only passed the first Federal income tax law in 1913, but they also voted 14 out of 15 tax increases since that time.

Republican Congresses voted 7 tax cuts out of the 10 reductions since 1913.

REPUBLICAN RECORD ON TAXATION

The Republican Party has always pressed for reduced Government spending and lower taxes.

The first Republican Congress since 1932 (the 80th Cong., 1947–48) enacted bills to lower income taxes on three occasions. Three times, Democratic President Truman vetoed these bills. On the last occasion, Republicans won the battle to override his veto and the Revenue Act of 1948 became Public Law 471 on April 2, 1948.

Briefly, this law provided tax relief for more than 40 million American taxpayers. It relieved 7,400,000 taxpayers in the lowest income brackets entirely of income taxpayments. Most of the benefits went to persons earning less than $5,000. Individual income tax rates were reduced by 12.6 percent in low income brackets, graduated downward to about 5 percent reduction in higher brackets. Dependent exemptions were increased from $500 to $600. Married couples were allowed to file joint returns, giving them additional tax cuts. The aged and blind were given additional allowances.

Again in 1954, another Republican Congress made possible the largest tax cut ever given in any single year. The total reduction amounted to $7.4 billion and 62 cents of every dollar in tax cuts went to individuals; almost 25 cents to taxpayers with incomes of less than $5,000 a year. The tax cut included reductions in excise taxes on articles in everyday use. A tax cut of this size would have been wholly impossible if a Republican President and a Republican Congress had not sharply cut Government spending by billions of dollars.

INFLATION

From 1932 to 1952 the Democrats did more than just take a bigger chunk of the "little fellow's" paycheck by way of taxes. Democrats fired the engine of inflation, so that whatever the "little fellow" had after taxes bought less groceries, clothes, and shoes in the market place.

When governments spend lavishly and go deeper into debt each year, as did the New Deal and the Fair Deal, the buying power of the dollar goes down inflation sets in.

In March 1933, the end of the Hoover administration, the buying power of the dollar (with 1935–39 as a yardstick) stood at 111. After 20 years of Democratic administrations, the buying power of the dollar fell to 52 cents. That is why prices are practically doubled for everything people buy today.

Few people realize how inflation robs the average family. Like a sneak thief in the night, it is difficult to see. But, according to a survey of the National Committee on Monetary Policy, Americans lost $158 billion in purchasing power because of inflation between 1938 and 1952. Some $97 billion was lost by holders of life insurance policies, $31 billion by holders of bank deposits, $21.5 billion by owners of Government savings bonds, and $8.5 billion in other channels. This is in addition to the losses in the daily buying power of wages and salaries.

When conditions like this set in, it is the little fellow—not the rich or the corporations—who suffers. Yet the Democrats constantly talk of their sympathetic interest in the common man. If they loved him less vocally at election time and remembered him more often as they dipped into his tax purse, John Q. Taxpayer would be a lot better off today.

Immediately upon taking office, Republicans began to reduce Government spending. Looking over the full 3 years of the Eisenhower administration, Assistant Secretary of Agriculture Earl L. Butz declared: "During the first 3 years of the present administration, the Government will spend $36 billion less than it would have, had the spending policies of the preceding administration been continued. That represents a saving of nearly $1,000 for every farm and city family of 4 in the United States."

At the same time not a single element of security in national defense or social welfare of our people has been sacrificed.

Once again, it is clear that the self-styled Democratic Party of the common man has followed courses of action with results completely the opposite and against the interests of the rank and file of citizens.

What Do Minneapolis People Think on Major Issues?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. JUDD. Mr. Speaker, some months ago I prepared and sent to each resident of my congressional district whose name was listed in the phone book a questionnaire dealing with the major controversial issues facing us today. The response,

totaling almost 13,000 replies, was very gratifying and informative.

In evaluating the replies to the individual questions it may be helpful to know that the Fifth District of Minnesota lies wholly within the city of Minneapolis. It includes the downtown section and what is generally referred to as South Minneapolis. Like most cities, the people range in economic levels from low to considerably above average, but with the preponderance being wage earners, white-collar workers, and professional persons of moderate means.

The returned questionnaires demonstrate reassuringly that residents of my district are vitally concerned with the problems of government and are anxious to help in finding solutions to them. Nearly half took the trouble to add constructive comments alongside the checked answers, some attaching several handwritten sheets. Many added something like this: "This is the first time any officeholder ever asked my opinion on any subject." Or, "I have often thought of writing you my ideas, but never did. Your questionnaire gives me a chance to do so."

Each person was asked to indicate whether he considered himself a Democrat-Farmer-Labor, a Republican, or an Independent. I was disappointed that a smaller percentage of the Democrat-Farmer-Labor's in the district replied than of the Republicans and Independents. Perhaps that was to be expected when the questionnaire was being sent out by a Congressman who is a member of the Republican Party. Or it may have been caused in part by failure to make clear that the questionnaire was being sent to all members of all parties and that the views of members of other parties than my own, or of no party, are just as welcome and as useful and helpful to me.

Even so, the percentage of returns from DFL's and Independents is sufficiently large to give a representative and reliable view of their general thinking on the issues covered.

Highly significant, it seems to me, is the high proportion of issues on which the residents of the Fifth Minnesota District, irrespective of party, are in fairly close agreement. This is particularly true with respect to foreign policy questions. They differ sharply as to how well the administration is handling our foreign relations, but they agree largely as to the policies that the country ought to follow.

This similarity in thinking is found on most major domestic issues. For example, a large majority of both parties believes that the Taft-Hartley Act is not unfair to the workingman; and that it would be unwise to return to high rigid price supports in our farm programs.

The replies also confirm my long-standing conviction that people are more intelligent and more patriotic than the cynics give them credit for. In issues involving the security and the solvency of our country they put concern for national interest above immediate gains for themselves or their pocketbooks. This is demonstrated by the responsible way in which people of all political faiths overwhelmingly place balancing the Federal budget and debt reduction ahead of tax reduction.

The questionnaires point up a problem that too few have recognized—the financial difficulty facing many of our senior citizens. Modern medical advances give people 10 more years after retirement than they used to have. What are they to do and how are they to live in deserved comfort and freedom from anxiety? We have a long way to go in finding adequate answers for the very persons who have been so instrumental in creating the wealth and strength and greatness our Nation has today. In good faith they thriftly made provision for their retirement, only to find now that inflation has destroyed half of the value of their savings or pensions. To many people, rising wages and prices seemed so beneficial at the time. The end results are so cruel now and so inescapable. There is no easy answer to the problem—but a better solution must somehow be found.

Mr. Speaker, these are just a few of the conclusions to be drawn from the summary of replies to my 1956 questionnaire. The replies are most instructive and deserve careful study:

OPINION SURVEY, FIFTH CONGRESIONAL DISTRICT, MINNEAPOLIS, MINN., 1956

Do you consider yourself:

	Number of replies	Percent of total
Democrat-Farmer-Labor	1,261	10
Republican	7,328	58
Independent	3,660	29
Not indicated	376	3
Total	12,625	100

FOREIGN POLICY

1. In general, do you approve or disapprove the way the administration is handling our foreign relations?

[Percent]

	Approve	Disapprove	No opinion
All	74	19	7
Democrat-Farmer-Labor	42	50	8
Republican	87	8	5
Independent	61	27	12

2. In general, do you approve or disapprove the way the United Nations is handling the problems it has to face?

[Percent]

	Approve	Disapprove	No opinion
All	69	21	10
Democrat-Farmer-Labor	68	24	8
Republican	70	19	11
Independent	67	24	9

3. Do you favor or oppose admission of Communist China to the United Nations?

[Percent

	Favor	Oppose	No opinion
All	13	79	8
Democrat-Farmer-Labor	21	72	7
Republican	9	85	8
Independent	20	72	8

4. In general, do you favor or oppose continued United States assistance to other countries in the free world's struggle against Communist aggression and subversion?

[Percent]

	Favor	Oppose	No opinion
All	83	10	7
Democrat-Farmer-Labor	80	12	8
Republican	84	8	8
Independent	81	13	6

5. Do you favor or oppose continued United States assistance to:

DOMESTIC POLICIES

Farm policies

1. In general, do you approve or disapprove the way the administration is handling farm problems?

[Percent]

	Approve	Disapprove	No opinion
All	69	24	7
Democrat-Farmer-Labor	18	77	5
Republican	86	9	5
Independent	57	36	7

2. Do you favor or oppose direct Government payments to farmers who take land out of production as a means of soil conservation and reducing surpluses?

[Percent]

	Favor	Oppose	No opinion
All	51	42	7
Democrat-Farmer-Labor	49	46	5
Republican	53	38	9
Independent	47	46	7

3. Do you favor or oppose a return to rigid price supports for the six basic crops (corn, cotton, peanuts, rice, tobacco, and wheat)?

[Percent]

	Favor	Oppose	No opinion
All	16	74	10
Democrat-Farmer-Labor	50	40	10
Republican	8	84	8
Independent	20	72	8

Government finance

1. In general, do you favor or oppose a policy of reducing the national debt during years of prosperity?

[Percent]

	Favor	Oppose	No opinion
All	93	3	4
Democrat-Farmer-Labor	88	7	5
Republican	95	2	3
Independent	93	4	3

2. Do you favor or oppose reducing taxes this year if:

(a) It means failing to balance the budget?

[Percent]

	Favor	Oppose	No opinion
All	13	80	7
Democrat-Farmer-Labor	25	67	8
Republican	10	84	6
Independent	15	79	6

(b) It means failing to make any reduction in the national debt?

[Percent]

	Favor	Oppose	No opinion
All	16	75	9
Democrat-Farmer-Labor	25	63	12
Republican	13	78	8
Independent	18	74	8

LABOR-MANAGEMENT RELATIONS

1. Check the statement which best expresses your view of the National Labor Relations Act (Taft-Hartley law).

(a) It is unfair to the average working man: [1]

	Percent
All	11
Democrat-Farmer-Labor	34
Republican	2
Independent	19

(b) It is not strict enough in preventing monopolistic practices by some unions: [1]

	Percent
All	32
Democrat-Farmer-Labor	17
Republican	38
Independent	27

(c) It may need some changes, but overall is a good law: [1]

	Percent
All	66
Democrat-Farmer-Labor	48
Republican	71
Independent	65

[1] Columns total more than 100 percent as some checked more than one answer.

2. Do you favor or oppose legislation to impose the same restrictions on labor unions with respect to contributions for political campaigns as are imposed on corporations?

[Percent]

	Favor	Oppose	No opinion
All	79	8	13
Democrat-Farmer-Labor	53	32	15
Republican	86	2	12
Independent	76	12	12

GENERAL

1. Please check the six domestic issues which cause you greatest concern today (arranged according to ranking in total number of replies):

[Percent]

	All	Democrat-Farmer-Labor	Republican	Independent
National defense	57	54	58	57
Communist influence in the United States	57	48	63	46
Balancing the Federal budget	44	23	53	36
Corruption in Government	41	47	38	45
Provision for elderly people	39	54	36	39
Reducing the national debt	39	21	45	33
School construction	39	49	35	45
Labor-management relations	38	36	41	31
Low farm prices	37	52	33	40
Civil rights	33	40	30	39
Federal bureaucracy	32	12	36	30
Tax reductions	32	35	32	32
Cost of medical care	31	43	26	37
Highway construction	30	31	29	32
Slum clearance	27	37	23	31
Public housing	10	20	7	13

NOTE.—Figure indicates the percent of replies on which the particular issue was checked. Some checked more than 6 issues; some checked less.

2. Do you favor or oppose Federal grants to States to construct schools?

[Percent]

	Favor	Oppose	No opinion
All	59	34	7
Democrat-Farmer-Labor	79	17	4
Republican	53	39	8
Independent	65	29	6

3. Do you favor or oppose increasing postal rates in order to reduce the annual post office deficit?

[Percent]

	Favor	Oppose	No opinion
All	71	24	5
Democrat-Farmer-Labor	65	32	3
Republican	73	22	5
Independent	72	23	5

4. Do you favor or oppose legislation granting statehood to:

(a) Alaska:

[Percent]

	Favor	Oppose	No opinion
All	81	11	8
Democrat-Farmer-Labor	86	9	5

Research or Recession

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 14, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include excerpts from a very able address delivered by W. T. Wynn, chairman of the board of directors of the National Cotton Council:

QUESTION FOR COTTON: RESEARCH OR RECESSION?

Twelve million dollars a year or more is needed to help cotton meet competition, W. T. Wynn, Greenville, Miss., told Texas Cottonseed Crushers' Association at its annual convention, "and I am proposing that cotton farmers begin thinking about paying into an industry fund $1 to $1.50 for each bale produced."

Wynn, who is chairman of the board of the National Cotton Council, stressed that he was speaking as an individual—a cotton-grower and businessman—rather than as a spokesman for the council. Having served as treasurer of the council from its beginning until named president 2 years ago, Wynn is thoroughly familiar with cotton's financial needs for research and promotion. "Cotton's Option—Research of Recession" was the title of his talk.

Excerpts from his address, made at the convention of Texas crushers, follow:

"The future of this industry depends in great part on whether we develop, through some means, a research program adequate to our needs.

The plight of the cotton industry, we all recognize, is serious. Cotton's percentage of the fiber market has steadily declined over the past 35 years, from almost 90 percent of total fiber consumption to its present two-thirds of total fiber consumption. Our surpluses, resulting in large measure from intensified competition both at home and abroad, are at record levels. They have forced steady reductions in acreage. Reduced acreages, coupled with increased prices of items farmers must buy to make a crop, have cotton farmers in a squeeze of serious proportions. When we stop to think that acreage being allotted this year in all the cotton-producing States is smaller than that planted to cotton in the State of Texas alone during 5 of the 6 years, 1924 to 1929, we get

an idea of what we are faced with if we do not take all necessary means to expand our markets. Planted acreage in 1956 is actually smaller than any year since 1882."

LOST: 4.5 MILLION-BALE MARKET

"While wool, silk, and linen have shared cotton's losses to the synthetics, most gains by the man-made fibers have been at cotton's expense. In 1920, the domestic consumption of synthetics amounted to the equivalent of about 20,000 bales of cotton; in 1930 synthetics consumption equaled 280,000 bales; in 1940, over 1 million bales; in 1950, 3.5 million bales; and in 1955, nearly 4.5 million bales.

"The synthetic fiber producers estimate that in 1957 the consumption of man-made fibers will be substantially more. These figures cover only a part of our competition; they do not include markets seized by paper, by jute, by plastic films, or by wood or metal products."

TEXAS CRUSHERS CONCERNED

"As Texas crushers, you have a special stake in the survival of the cotton industry. At one time your whole problem was to get enough seed to crush. Now you have another problem. You not only must get enough seed to crush, you must also be sure that the cottonseed oil and meal you produce are as good or better for the money than soybean oil and meal.

"Last year, Texas planted 6,000 acres to soybeans for all purposes, and harvested only 2,000 acres for a total production of a mere 26,000 bushels. Cottonseed production, by contrast, averaged a 1,400,000 tons over the past 10 years. The Texas crushing industry, therefore, like that of New Mexico, Arizona, and California, is a cottonseed crushing industry—and will be for some years to come.

"Through research, the quality of soybean oil has been improved continuously. Today, some refineries consider soybean oil and cottonseed oil to be almost completely interchangeable. In the vegetable oil market, cottonseed has lost to soybeans much as cotton fiber has lost markets to synthetics. In 1939, cottonseed accounted for just under 40 percent of all vegetable oil consumption in the United States, while soybeans accounted for just over 11 percent. During the 3-year period—1952–54—soybean oil consumption increased to 40 to 45 percent of the market, while cottonseed oil consumption fell to between 23 and 26 percent.

"Soybean oil is not your only competitor. Most of us remember when the standard cooking fat was lard. We remember that lard lost out to hydrogenated cottonseed oil, which had superior flavor and superior keeping quality. In recent years, lard has been making a comeback. Through research, lard of greatly improved flavor and greatly improved stability is on the market. So far, its success in the market has been limited, but the meat packers are putting substantial research effort into quality improvement. With further improvement and lard's low price, there is every likelihood that lard will develop into a strong contender for the market."

MUST GROW OR DIE

"There is no such thing in life, or in business, as standing still. Either we grow or we die. The American cotton industry today has entered a crucial phase of its history. Either we must determine to move forward in efficiency, and to offer greater value to our customer, or we must reconcile ourselves to watching our industry recede into near oblivion. Today, technology calls the turn. Our industry already has lost many millions of bales in markets it could have had, simply because it has been outresearched and out-promoted.

"How much have we been outresearched? The council has estimated that all research on cotton, by all agencies, public and private, amounts to about $14 million. The producers of synthetic fibers, they estimate, spend at least $60 million for research and development, and most of them have announced plans for further enlarging their budgets.

"Perhaps the disparity in research will be more meaningful if we look at the operation of one synthetic-fiber producer. The Chemstrand Corp. has two plants. One, in Decatur, Ala., manufactures one-half its capacity of 30 million pounds of acrilan a year. The other in Pensacola, Fla., produces 88 million pounds of nylon a year. This makes a total of 103 million pounds or approximately 250,000 cotton bale equivalents. This just happens to be almost exactly the quantity of cotton raised in Lubbock County, Tex., in 1952 and 1953. Yet this one company has a fiber research budget for 1955 of $3,750,000 and in 1956 of $4,500,000.

"The disparity in promotion is equally sobering. The promotional budget for the producers of synthetic fibers probably amounts to $12 million, whereas their production represents only 4.5 million bale equivalents of cotton. Eight rayon companies have launched an industrywide cooperative program supported by funds which, in their first year, were 50 percent greater than those of cotton in its 15th year. We cannot long live under conditions of such disparity in research and promotion, and I think we are beginning to realize it.

"The National Cotton Council, in the very beginning of its operation, recognized that little could be accomplished by tackling the problem of increasing consumption on a broad, general front. It recognized that every market is different and has different requirements of performance and cost, and very important, that the amount of cotton consumed in each market, and the amount of a competing fiber consumed in that market, depend basically upon three things: (1) relative price, (2) relative quality, and (3) the relative amount of promotion behind each product.

"Our industry recognizes we must meet our competition price-wise. But there is just one way that we can be competitive in price without reducing farmers' incomes, and that is through increased efficiency and lower costs of production. Research is the only way to get this greater efficiency and lower costs.

"Now take a look at the quality factor. Cotton fiber quality is indisputably high, giving more value in more desirable properties than any other fiber. For particular uses, however, research on man-made fibers has enabled our competitors to excel in a few especially important characteristics—enough to displace cotton from the market in these uses. Quality improvement can come only from research. There is no other way in which we can meet and beat our competition on the quality front.

"And what about promotion? The council's promotional program is based on careful market research studies to show: First, those markets in which promotion is needed most; second, the promotional appeals most likely to influence our customers; and third, the effect obtained from promotion. Salesmen must have something new, something different, something better to promote. They get it from research.

"Apparently there is a direct relationship between the amount of money spent on research and the growth of an industry. A recent study of the National Science Foundation points this up sharply. The industry spending the greatest percentage of gross sales on research is the drugs and pharmaceutical industry, which spends annually about 5 percent. From 1939 to 1953, production of drugs increased 600 percent, the greatest increase for any group. The industrial chemical industry, which spends almost 4 percent for research, has increased its production during the same period by 400 percent. Electrical machinery manufacturers, spending slightly more than 4 percent for research, increased production more than 450 percent.

"By contrast, the lumber and food industries, spending less than one-half of 1 percent of total sales for research, have been able to increase production a mere 30 to 60 percent. The cotton industry, spending about one-third of 1 percent of gross sales of fiber alone, has increased mill consumption of cotton fiber by only 30 percent."

MANY RESEARCH PROBLEMS

"Cotton fiber has some real research needs and a great many research opportunities. We need to increase efficiency toward the direction of lower prices. We need to increase the uniformity of staple length. We need a stronger cotton fiber. We must reduce the tremendous loss through insect damage and plant disease. Our cotton marketing system must be more efficient. We need to learn how to gin and clean cotton without damaging it, to process it more efficiently through the textile mills, and to create yarns of greater uniformity, greater strength, less neppiness and better appearance. We need to explore the whole field of cotton finishing to learn how to impart higher degrees of such important qualities as resilience, resistance to heat, resistance to acid degradation and weathering.

"There is already at hand a backlog of research proposals, more than 200 in number, outlining clearly enough research to use effectively many millions of dollars per year.

"Cottonseed oil, despite its high quality, poses some research problems. At its last meeting in New Orleans on April 19, the research committee of the National Cottonseed Products Association pointed out that the oil color—involving gossypol and other pigments of cottonseed—is the major problem in the utilization of cottonseed oil. The committee urged greatly expanded work on pigment identification and removal, and measurement of color to overcome the most important handicap of cottonseed oil in its competition with soybean oil.

"Some farmers feel that the cotton mills should do more research on cotton and that the oil mills and refineries should do more work on cottonseed. This, however, overlooks the fact that the mill, in neither case, has a primary interest in the research. The textile mills essentially are converters who receive fiber of one kind or another and convert it into yarn or cloth. They will process whichever fiber offers the most opportunity for profit. Oil mills generally are not wedded to cottonseed—they can and do process any oilseed.

"If the cotton farmer wants his industry to grow and prosper, he must take a leaf from the book of his competitors and make possible a research program adequate to offset those of his competitors."

(As only two of many examples of what research can do for the products of the cotton plant, Wynn at this point in the address cited the development of "wash and wear" cottons and the improvement in the quality of margarine since World War II. He also mentioned the improvement in cottonseed meal quality through research, leading to wider use in livestock and poultry rations. He, then, continued by citing examples of wha some other commodities are doing, as follows:)

"The American Dairy Association, through voluntary deductions from milk checks, is collecting 2 cents for each 100 pounds of milk. Since 100 pounds of milk sells for about $3.50, this deduction is comparable to $1 per bale on cotton. This research and promotion fund, amounting to about $6 million annually, is being put to good use in national advertising on radio and television, and in magazines and newspapers.

"Or take wool for example: The sheep growers have a program that nets them well over a million dollars annually. They obtained legislation authorizing the Secretary

of Agriculture to act as their agent in deducting 1 cent per pound of wool from Government payments, provided that two-thirds of the producers, either in terms of number of producers or in terms of volume of wool produced, vote to approve such deductions. This money is turned over to the American Sheep Producers' Council to promote increased consumption of wool and mutton.

"WHAT COTTON IS DOING

"These are examples of what others are doing. Now let's take a good look at our own industry. We all recognize that over the years the National Cotton Council has worked hard for an adequate program of cotton research and promotion. The council has sparkplugged the drive for such a program, and the council's influence has been the principal reason we have gone as far as we have in research and in promotion.

"Leadership by the council in this area was never expressed more forcibly than last January, when the organization's delegate members voted unanimously to expand the council's program. While this expansion will not come to fruition until the crop year beginning August 1, 1957, it is our great immediate hope to more aggressively meet the challenge of our competitors.

"Crushers are a vital factor in the success of this undertaking. The extent of your participation, just as the extent of participation of the other segments of the industry, will determine its success. While your financial contribution is highly important, your influence with ginners and farmers is essential. The expanded program needs the crushers, and the crushers need the hard-hitting research and promotion the expansion of the council's operation will bring into being.

"I have mentioned the expansion of the council's program in order to relate it to a proposal I wish to make, a proposal that needs to be considered seriously by all segments of the industry. I make it knowning that we have made great progress and that fine work is being done in Government and private research laboratories, and in our textile schools and textile mills. I make it, however, knowing too that we must continually plan for the future. We cannot think in terms of today alone, or even tomorrow alone. We must think now and plan now of and for the day after tomorrow.

"If the cotton industry is to meet the threat to its existence that is posed by the growing imbalance with the synthetics in research and promotion, if the cotton industry is to insure its long-range future, it seems to me that it must build a fund large enough to be more nearly adequate to cotton's future as well as its present needs. When it comes into being, the council's expanded program, therefore, will be the base from which we can plan and move intelligently. That program will make possible the guidance and developmental work and effective use of much larger research and promotion funds.

"WHAT COTTON SHOULD DO

"I, therefore, am proposing that cotton farmers begin thinking about paying into an industry fund $1 to $1.50 for each bale produced. With an average 12-million-bale crop this would yield $12 million to $18 million for work on cotton and cottonseed problems. Admittedly, $12 million is but a start toward matching the money that is being spent by producers of man-made fibers; but $12 million is enough to get into a really effective program of research and promotion. With $12 million effectively used, we would see results, and I feel sure that, with the results obtained, the industry would subsequently move to enlarge its self-financed program.

"In no other way can I envision that over the long pull we will be able to give cotton a truly adequate research program. In no other way can I see how we are to hold and expand our markets, to utilize effectively our land and capital investments, and to be assured of a prosperous cotton economy in this Nation.

"It is not a new idea for farmers to invest in their future in this way. In the Mississippi Delta where I live, we must protect our lands from the floods of the Mississippi River. For many, many years, we paid for these levees through deductions apportioned by the size of the farmers' crops. In my levee district, cotton farmers paid $1 per bale each year, and they paid this dollar per bale over a period of 50 years, many of which never saw the price of cotton rise above 10 cents per pound.

"The threat to the cotton industry provided by the Mississippi River was no more real, and of not nearly so permanent a nature as is the threat now facing the cotton farmer—the threat that his means of livelihood will be swept away by the onrushing flood of synthetic fiber production. If Mississippi Delta farmers could pay $1 a bale out of $50 when yields per acre were less than half what they are now, certainly farmers can afford $1 a bale today out of the $160 and more that they receive.

"And how could such a fund be collected? There are several possibilities, of course, all of which must be carefully studied. In this connection, you will recall a resolution adopted in Biloxi by the council delegates as a part of the organization's comprehensive cotton program. This resolution reads as follows, and I qoute, that the council * * * 'seek to develop a long-range program to finance from private sources research and promotion in amounts adeqaute to make cotton fully competitive with synthetic fibers and other competing materials.'

"The purpose of this resolution is to make sure that we find exactly the right answer to the question of financing such a program as I envision, and the industry should pursue it vigorously until the right answer is found.

"As many of you know, a bill recently has been introduced in the Congress which incorporates the idea of a greatly expanded industry fund for research and promotion. This bill, as I understand it, would have the farmers vote a levy on themselves when they vote on production controls each year. This is one method at which the industry will be looking. But whether we come out with this method of financing or some other, we can all agree that the time for half measures is past.

"If this cotton industry of ours is going to survive, we must unite our resources and take positive steps to build a research program far beyond what we now have. We have our choice of research or recession. Without research, we can only look forward to a declining annual cotton production, to 10 million, 8 million, 6 million bales over the course of the next few decades. With an imaginative, intelligently directed research program, we should see our market expand from its present total of 11 million to 12 million bales, on up to 15—yes, to 20 million bales in the course of the next several decades.

"We have an option. What shall it be? Research, or recession?"

Midweek Holidays

EXTENSION OF REMARKS

OF

HON. JOHN H. RAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. RAY. Mr. Speaker, under leave to extend my remarks, I should like to insert in the RECORD the following editorial from the Staten Island Advance, of July 3:

MIDWEEK HOLIDAYS

As everybody knows, tomorrow is the grand and glorious 4th of July.

Except for those in essential services, it will be a day off from work, a day to reflect on an inspring period in American history, a day to be with one's family, a day to rest, relax, and rejuvenate.

But as our favorite critic observes, it would be "more better" if the holiday had been yesterday.

For then we would have a 3-day holiday, the equivalent of almost a half week's vacation.

Business wouldn't have had to close down for the weekend, open up for 2 days, close down for another holiday, and then operate for only 2 more days before shutting up for another weekend.

Families could have planned their leisure to better advantage. And youngsters would have felt the summer vacation had begun with a real bang, with dad home for 3 days of celebration.

You see, we're beginning to like the idea of celebrating most holidays on Monday "more better."

Of course there's some opposition, and there may have to be some modification.

Some say 3-day holidays will lead to a greater death toll on the highways. To limit holidays for that reason is to take the most indireot and difficult approach. With such reasoning, we might eliminate weekends, too.

Exceptions to Monday holidays might have to be granted to some religious observances or a patriotic day or two.

Most holidays, though, can easily be tagged on to a weekend.

Congressman JOHN H. RAY is among those campaigning toward that end. His proposal has been in the works for some time. Every now and then he nudges his colleagues with a comment in the CONGRESSIONAL RECORD.

Before Congressmen adjourn for their holiday of politicking and relaxing, they should take some action on the Nation's holidays.

Scientist Blames High Schools, Elementary Schools for "Killing Off Interest" of Students in Science, Mathematics

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. HIESTAND. Mr. Speaker, if the National Education Association, at its convention and thereafter, would direct its attention to some self-examination and self-criticism of the obvious discouragement of mathematics and science, which has resulted in our falling behind the Soviet in this regard, instead of campaigning for classrooms for courses in dating, dancing, basket weaving and so-called social studies, its energy could contribute much to the national welfare.

I insert the remarks of Dr. Arnold O. Beckman, former professor at Cal. Tech., president of Beckman Instruments, Inc., and also of the Los Angeles Chamber of Commerce. I consider them quite authoritative and timely.

In March the Congressional Joint Committee on Atomic Energy published an authori-

tative and disturbing report on Engineering and Scientific Manpower in the United States, Western Europe, and Soviet Russia. Statistics cited in this report should destroy any complacency concerning the superiority of the United States in science and technology.

In 1954, Russia had more than 540,000 engineers, plus about 160,000 scientists in educational and research institutions, a total of 700,000. In the United States there are between 700,000 and 750,000 actively employed engineers and scientists. At the moment, we are about on a par with Russia.

From 1900 to 1950 engineering and scientific professional graduates in the United States increased almost twice as fast as did the population.

Since 1950, there has been a sharp decline: 52,732 first professional or bachelor's engineering degrees were granted in 1950; in 1954, only 22,236 such degrees.

In 1950, 28,000 engineering degrees were awarded in Russia; in 1954, 53,000.

For 1955, the number is estimated at 63,000—to be compared with only 23,000 similar degrees for the United States.

Allen W. Dulles, Director of Central Intelligence, sums up for the decade 1950–60: The Soviets will graduate 1,200,000 in the sciences, while the United States wil graduate 900,000. "Unless we quickly take new measures to increase our facilities for scientific education, Soviet scientific manpower in key areas may well outnumber ours in the next decade."

Russian university students start out with more intensive mathematical and scientific preparation at the high school level. They study harder and longer in college.

The joint committee report states that because of the emphasis on science and the vigorous scholastic competition in the Soviet educational system, Soviet graduates are professionally as competent as scientific graduates in the United States.

More than half of all Russian university graduates are in science and mathematics; only a fifth of United States graduates are in these fields.

In my opinion, the blame rests squarely on our public-education system, especially at the high school and elementary levels.

Our elementary and high schools suffer from pernicious softening of the curriculum. Over the past 2 or 3 decades there has been a marked decline in the number of students required to take subjects such as mathematics, physics, and chemistry, which demand and develop clear thinking and analytical reasoning.

At the beginning of the century 1 in every 5 high-school students studied physics; today only 1 out of about 25 throughout the Nation.

There is no evidence that university students are denied training in science and engineering because of an insufficient number of university professors or inadequate laboratory or classroom facilities.

The technical manpower problem arises from the fact that too few students enter colleges and universities who are interested in and prepared to follow careers in science and engineering.

In 1950 some graduates in engineering and science in the United States represented 25 percent of the entire graduating class. In 1954 they represented 18 percent, and the forecast is that the class of 1960 will have not more than 15 percent of its graduates in engineering and science.

This situation is the inevitable result of a long history of declining interest at the high-school level in mathematics, chemistry, and physics.

It is amazing that this decline should have occurred at a time when the interest of young students in new scientific developments has been at an all-time high. Even some of the most popular comic strips for children are based on pseudoscientific subjects. How have our teachers managed to kill off this interest?

There are several explanations. One is that many science teachers are not interested in science nor competent to teach science.

A number of years ago when a competitive examination was sponsored by the American Chemical Society, I was amazed by the number of high-school teachers who asked for sets of the correct answers so they could discuss the examination later with their students.

An investigation showed that 30 percent of the high-school chemistry teachers had taken no university courses in chemistry. There is little reason to believe the situation is much different today.

Last November Lewis L. Strauss, Chairman of the Atomic Energy Commission, stated, "A survey of 30 States showed that about 1,800 new mathematics teachers were urgently needed, but 700 of the positions had to be filled with unqualified persons, including instructors in music, home economics, and physical culture."

Time magazine reports that of 211 prospective elementary teachers surveyed, 150 admitted a long-standing hatred of arithmetic.

High-school teaching is so bad that 62 percent of colleges surveyed reported a necessity to repeat high-school mathematics in college—5 years ago Annapolis abolished trigonometry as an entrance requirement, began to teach it itself.

"Elementary teachers, for the most part," according to one observer who has taught them, "are ignorant of the mathematical basis of arithmetic; high-school teachers * * * fall in this category also. * * * In the majority of cases, an individual with ambition to teach in an elementary school can matriculate at a teachers' college without showing any high-school mathematics on his record. He can be graduated without studying any college mathematics. And in this condition, he can meet the requirements of most States for a certificate to teach arithmetic. * * * Nearly one-third of the States will license (high-school math) teachers even though they have had no college mathematics at all, and the average requirement for all States is only 10 semester hours."

The whole situation, says the Educational Testing Service, finally boils down to this: "Future teachers pass through the elementary schools learning to detest mathematics. They drop it in high school as early as possible. They avoid it in teachers' college because it is not required. They return to the elementary school to teach a new generation to detest it."

The alarming spread of teacher incompetence throughout our public-school system reflects the powerful influence of teachers' colleges and certain teacher organizations. Rigid restrictions governing teaching credentials, which purportedly guarantee a measure of competence, actually do nothing of the kind, as surveys have shown.

The Committee for the 1955 White House Conference on Education stated, "Teacher preparation programs have the reputation of requiring needless and repetitious courses. This reputation has the effect of deterring brilliant young people from becoming teachers."

Not only are brilliant young people deterred from relieving the shortage of competent teachers, the arbitrary restrictions prohibit many able persons from teaching in our public schools.

Does it not strike you as strange that leading professors in science at famous universities are not qualified to teach their subjects in our high schools, yet a high-school drama or music teacher with no training in science may do so.

If unreasonable restrictions on teacher qualifications were eliminated, hundreds of competent teachers in mathematics, science, and engineering would be available from industry on a part-time basis—teachers of the kind needed now, teachers who can inspire students to enter technical fields because they can speak from firsthand experience of the challenge and opportunities of their profession.

Many able educators have cried out against teachers college overemphasis on methods of teaching versus underemphasis on knowledge of subject.

During the 14 years I was teaching at the California Institute of Technology I had the opportunity to become well acquainted with the product of our high schools and to learn something about our public school system.

The broad socialistic movement shows up in our school system in several ways. One is the attempt to do away with a competitive grading system.

Some schools even attempted to grade pupils upon their performance in relation to their estimated ability. On this standard, a moron who handed in all of his homework, even though it was worthless, would receive a higher grade than a brilliant student somewhat careless in turning in his papers.

In some school districts where indignant parents have demanded that grades be reestablished, the attempt is made to minimize the significance of grades denoting proficiency, by having several other grades for each course. In arithmetic, for example, grades purportedly measure such things as responsibility and self-direction, and relationships with others.

Several years ago the national American Chemical Society took the lead in fighting a move to substitute general science for specific courses in physics, chemistry, and biology. Educators stated that nature embraces all science—however, the courses in general science failed to provide fundamental training in any field of science.

The first step is to interest the student. Inspiration can come only from enthusiastic, competent teachers. Teachers untrained in a subject should not be permitted to teach that subject, regardless of the number of courses he or she may have taken in so-called pedagogy.

To the best of my knowledge, the routine rating of teachers on the basis of actual effectiveness in the classroom is not attempted. Why not?

The tremendous advances in science create vast amounts of new knowledge which must be taught. How can this new information be worked into a curriculum overcrowded today?

Much subject matter of today's elementary and high school curricula could be eliminated advantageously. Many subjects could be taught at an earlier age. Why should foreign languages, for example, be retained for the later years?

Dan Reed's Fight for the American Motorist

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. JENKINS. Mr. Speaker, one of the less well-known aspects of the highway bill which the President recently signed into law was the tremendous fight waged by Representative REED of New York on behalf of the average American motorist. Almost single-handed, Mr.

REED, as ranking Republican member of the House Ways and Means Committee, saw to it that heavy trucks pay a larger share of the tax burden required by the new roads.

In this connection, the Lawyer's Weekly Report of July 2, 1956, published by Prentice-Hall, Inc., had the following to say:

STORY BEHIND A STORY

After a long battle, the $50 billion highway program is finally becoming law. It was a rugged 2-year fight. Nearly everybody was for the proposal creating a 41,000-mile Interstate Highway System. But differences arose on the method of financing and the additional taxes to be borne by the private motorists and the interstate trucking concerns. Pay-as-you-go was the method finally decided on. But one single Member of Congress was the originator and driving force behind the amendment which cost the truckers $390 million more than the truckers thought they ought to pay. That Member is DANIEL A. REED, Republican, of New York.

It happened this way. When the measure was before the House Ways and Means Committee, the committee had agreed on a provision that would have passed more of the tax on to the individual motorist. But the next morning Representative REED, former chairman of Ways and Means in the 83d Congress, offered an amendment to reduce the proposed individual motorist tax and increase the trucker tax. Democrats on the committee smelled a political mouse. They did not want to be placed in the position of voting the Reed substitute down and have G. O. P.'ers charging them with favoring the trucking interests, so they did a complete reversal and overwhelmingly adopted the Reed amendment. In the conference with the Senate, REED again went to the bat after the Senate had reduced the truck tax. Fear of political repercussions again won the day for him. Thus, thanks to DAN REED, over the 13-year span of the program, interstate truckers will pay $866 million instead of the $476 million proposed by the Senate.

In addition, Mr. Speaker, the Washington Daily News carried the following article by Jack Steele in its issue of June 22:

Victories were chalked up for the Nation's motorists and taxpayers as House-Senate conferees reached final agreement yesterday on the highway bill.

The motorists won as the conferees adopted a House-proposed special tax on heavy trucks which will cost truckers an estimated $866 million over the 16-year span of the program.

This tax will assess big trucks for a larger share of the cost of the 41,000-mile Interstate Highway System because of their heavy use and abuse of these roads.

AGREEMENT

The taxpayers won as the conferees agreed on a proposal backed by Treasury Secretary George M. Humphrey to put the highway program on an actual pay-as-you-build basis.

Under this provision, the Federal Government can spend on the highway program in any fiscal year only the money accumulated in a special fund in which revenues from highway-use taxes imposed in the bill will be set aside.

The special tax on heavy trucks was pushed through the House-Senate conference by Representative DANIEL REED of New York, ranking GOP member of the House Ways and Means Committee.

SHIFT

The Senate had tried to shift more of the highway costs to motorists by reducing this special truck tax so it would yield only $476 million.

Thus the action of the conferees will cost truckers $390 million more over the next 16 years.

As agreed upon by the conferees, this section of the bill will impose an annual fee of $1.50 per thousand pounds on all trucks weighing over 26,000 pounds. The fee will apply to the total weight of these huge over-the-road trucks.

The pay-as-you-build provision was strongly backed by Chairman HARRY F. BYRD, Democrat, of Virginia, of the Senate Finance Committee.

OMITTED

The Senate had adopted the Byrd amendment, but it was omitted from the House version of the bill.

House Democrats—although they claimed credit for a pay-as-you-go road bill—strongly opposed this provision.

They objected that it would slow down construction on the Interstate System, which is supposed to be completed in 13 years with taxes to be collected over the next 16 years.

But Senator BYRD refused to sign the conference report without his amendment, so the House conferees capitulated.

The final version of the bill lays out the plans for a highway-building program that eventually will cost over $50 billion.

However, since fund authorizations were limited to 3 years in the bill, the actual price tag on the measure was cut to about $33 billion.

The bill provides that Congress must take a new look at the highway program and reauthorize the funds every 3 years.

The American Idea: Freedom for the Individual

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting an article that appeared in the Wall Street Journal for July 3. It is extremely timely during the anniversary of the 180th birthday of our country:

THE AMERICAN IDEA—ONE HUNDRED AND EIGHTY YEARS OF PROGRESS WAS FOUNDED ON A WISE PHILOSOPHY OF FREEDOM FOR THE INDIVIDUAL

(By William Henry Chamberlin)

One hundred and eighty years is a comparatively short term in the life of a nation. But during that span of years the American Republic which came into existence with the Declaration of Independence has been transformed beyond the imagination of its founders. Thirteen sparsely settled agricultural Colonies have become a unified Nation of 48 States, the leading industrial power of the world. Three million people have become 165 million. More than a century ago the United States reached its natural limits, with oceans for its western and eastern boundaries, and has wisely never sought to expand beyond these frontiers.

The immense material expansion of the United States, a process that is continuous, to which no bounds can be set, is partly a product of science and geography. Few peoples have possessed as a heritage a large and rich continental area. But it is also the outward expression of the American idea, which has set free individual energy on a scale matched nowhere in the world.

The American Revolution was fought and won under the banner of liberty. No other word occurs so often in the writings of the Founding Fathers as symbolizing the desirable state of society. But in the France of Mme. Roland, and in a number of countries of our own time, many and shocking crimes have been committed in the name of liberty. Like all abstract nouns, liberty requires thoughtful definition.

FOUNDATION OF LIBERTY

The Declaration of Independence appeals to "the laws of nature and of nature's God." And belief in natural law, in inalienable rights which men posses independently of government and which no government may lawfully withhold, abridge, or deny, and in the existence of a divine providence that guides the affairs of men, these are three foundation stones of the American conception of liberty.

It is noteworthy that nowhere in the classics of American political theory—in the Declaration of Independence, in the Constitution, in the Federalist Papers—is there any support for the conception of an affirmative government that is to give the people who live under it the good things of life. What one does find is a good many specific injunctions as to what government may not do in interfering with the liberty of the citizen.

The philosophy that stems from the American Revolution is that of individualist self-reliance. Alexis de Tocqueville, shrewdest and most penetrating of the many foreign commentators on the American Republic, often reported the effect of this philosophy, in contrast to the dependence on the state which was more characteristic of Europe, as one of his most lasting impressions of the United States.

The idea that the best service which Government can render to its citizens is to leave them alone permeates the thinking of the Founding Fathers. Thomas Jefferson was regarded as a "leftist" by American conservatives of his time. But modern conservatives would heartily endorse these two among many other similar opinions of Jefferson:

"A wise and frugal Government, which shall restrain men from injuring one another, which shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned—this is the sum of good Government. * * *

"If we can prevent the Government from wasting the labors of the people, under the pretense of taking care of them, they must become happy."

The American Revolution was directed against tyranny, against bureaucratic arbitrariness, against artificial class lines based on privilege and snobbishness. It did not aim at universal leveling. The equality which is part of the American dream is equality of opportunity, not equality of possessions.

In the extensive literature of the American Revolution there is no hint of socialism, no demagogic effort to disparage the right lawfully to earn and acquire property in exalting human rights. The Federalist Papers and other publications of the time recognize the right to own property as a very important human right.

As John Adams wrote: "The moment the idea is admitted into society that property is not as sacred as the laws of God, and that there is not a force of law and public justice to protect it, anarchy and tyranny commence."

HUMAN RIGHTS

So the foundations of the American idea may be summarized as follows: Belief in natural law and in inalienable human rights; intense distrust of any concentration of power in Government; firm rejection of tyranny, whether of a monarch, a dictator or a mob; faith in equality of opportunity.

Insofar as these principles have been respected America has prospered and grown great. It is where they have been most eroded and whittled away that some of the clearest danger signals in our national life are flying. One of these danger signals was foreseen with almost uncanny accuracy by De Tocqueville:

"I seek to trace the novel features under which despotism may appear in the world. The first thing that strikes the observation is an innumerable multitude of men, all equal and alike, incessantly endeavoring to procure the petty and paltry pleasures with which they glut their lives. * * * Above this race of men stands an immense and tutelary power, which takes upon itself alone to secure their gratifications and to watch over their fate. The will of man is not shattered, but softened, bent, and guided; men are seldom forced by it to act, but they are constantly restrained from acting; such a power does not destroy, but it prevents existence; it does not tyrannize, but it compresses, enervates, extinguishes, and stupefies a people, till each nation is reduced to nothing better than a flock of timid and industrious animals, of which the government is the shepherd."

This vision is the welfare state in its last phase of development. It is the totalitarian state, minus police and concentration camp brutality.

The dangers to true liberty vary from generation to generation; an all-encompassing statism, even when this is not associated with acts of flagrant and outrageous cruelty and tyranny, is the greatest danger to liberty in our time.

AMERICA ON BALANCE

For other reasons also the 180th anniversary of the Declaration of Independence cannot be an occasion for unmixed self-congratulation for the American people.

American civilization has not produced cultural values to match its amazing wealth in material gadgets. Not all the problems created by modern industrialism and urbanization have been solved. America's crime rate remains disgracefully high; its quantitative gains in education have been to some extent offset by qualitative failures.

But on balance, and with full allowance for defects and failings, the characterization of America as "one hell of a success" still holds true. If immigration is the sincerest form of flattery, America's prestige among people of many lands seeking opportunities still stands high, higher than that of any country in the world. The American Constitution, which Gladstone called "the most remarkable work known to me in modern times to have been produced by the human intellect," has preserved for the United States the inestimable blessing of liberty under law.

America remains the envy of less happy lands. The American people need only dedicate themselves to the ideals which the men of '76 upheld with their arms and with their minds in order to face with confidence whatever challenge may confront them in this second half of the Twentieth Century.

Also I am inserting herewith an editorial which appeared in the Wall Street Journal for the same date entitled "If We Can Keep It":

IF WE CAN KEEP IT

Mr. Schuur, in our letters column today, presents in pretty able fashion the view of those who are unconcerned about a growth of Federal power. The letter is critical of a recent column by our Mr. William Henry Chamberlin who expressed the concern of many other people about Federal assumption of power from the States.

The basic views of these two gentlemen are not new, of course. They represent two differing philosophies of government about which men argued long before the Constitution was written.

Indeed, the Constitution took its form because of the argument over whether concentrated power or diffused power was best for governing a free people. It was conceived and drafted in the view of the less interference people had from a faraway place the better they might govern themselves. Some power, of course, had to be given a central government, or there would have been no nation. But even after the Constitution was written the people demanded even further restraints on the Congress and they were adopted in the Bill of Rights.

We think it not the "sentimentalism" Mr. Schuur speaks of but hard-headed knowledge that led to this short of a Constitution. We think it was the result of experience with the arrogance of a remote power that led the drafters to build the sort of Government they built.

Mr. Schuur says the Constitution is a "living document" whose greatness lies in its capability to meet the "uncontemplated evolution" the Nation has undergone since 1776. This is certainly true. But we do not think the changes were meant to come by Congress or the courts "construing" the Constitution's plain language to mean one thing today and quite a different thing tomorrow. The changes were meant to come about through constitutional amendment, and the process was deliberately designed to be a slow one. The builders knew that hasty change may cost more in individual freedom than the people receive from the promise of collective benefits that caused the change.

Those who support growing Federal power also support a belief that the more government there is the better off the people will be. Those who support State responsibility argue not only for self-government on the lowest local level, but also that the less government people have to answer to the freer people will remain. They believe that the excessive concentration of Federal power Mr. Schuur fails to find and does not fear can lead only to a government not of the people, not by the people, not for the people, but of, by and for an oppressive government.

Mr. Schuur is plain enough in the way he thinks about these things. "The need of our highly centralized society for good and effective government demands a continuing centralization of power in the Federal Government."

Yet the history of governments shows that as power grows in one place, whether a palace or a parliament, that power is asserted. And it is the people who gave up the power who find in the end that they gave up more than they knew. It was in the knowledge of this history that the Constitution was written with its powers separated and diffused.

The story goes that when the Constitution was drafted, a lady approached Mr. Franklin in Philadelphia and asked him what sort of government the Constitutional Convention had given the people.

He replied, "Madam, we have given you a republic, if you can keep it."

National Security Should Be Divorced From Partisan Politics

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 3, 1956

Mr. HESELTON. Mr. Speaker, I believe the vast majority of the people of this country abhor any attempt to inject partisan politics into matters involving the security and, perhaps, the survival of this Nation.

Presidential and Vice Presidential ambitions are legitimate, even though some who cherish them may have demonstrated their complete lack of qualifications except in their own minds. But the overwhelming majority of the American people know full well the preeminent qualifications of President Eisenhower and his complete devotion to the security of this country. And they will find ways to rebuke resoundingly anyone who places partisan, phony political ambitions on the public record.

The following editorial from the Athol (Mass.) News would be excellent material for such pompous and bombastic individuals:

NO GLOOMY FORECAST

Secretary of the Air Force Quarles, in a vigorous and somewhat warlike address at the new Portsmouth (N. H.) Air Force Base drew a much more optimistic picture of America's ability to retaliate for attack on our shores than he and his uniformed aides gave to Congress during their attempt to get more funds for bases and bombers that the administration has said is necessary.

He said at Portsmouth, for example, that B–47 bombers from the Portsmouth base, in conjunction with aerial refueling from the same point could penetrate "any defense existing today and deliver an atomic attack."

This means, of course, that the swift B–47 should be able to break through Russia's strong antiaircraft and fight defenses and drop atomic bombs on primary targets inside the Soviet Union. He also pointed out that Globemaster transports from the New Hampshire base could transport both troops and equipment for overseas bases quickly and copiously, so that within days and perhaps hours after an attack on the United States, retaliatory assaults by air could be made from bases much closer to the Soviet Union.

The impressive thing about Secretary Quarles' talk seemed to us that he was talking, not about weapons and equipment on order or under construction, but about planes, bombs, and ground force equipment already in existence and combat-ready.

We noticed particularly that he made no mention of the B–52 heavy bomber, which the Air Force has said is in short supply, but rather asserted without strings that the B–47 can do the retaliatory job.

This should minimize the fear that must have been engendered by some of the dire predictions made by General LeMay and other prophets of doom in previous assessments of United States air might. In spite of alleged deficiencies, the Air Force apparently is mighty.

The following editorial from the Springfield (Mass.) Union states some blunt truths of which the people of this country are well aware. It, too, would be worth studying prayerfully by certain individuals who fancy themselves as possible candidates for high office:

ENGINE CHARLIE'S SLIP

The last time Engine Charlie Wilson raced his motor and said bluntly that the attempt in Congress to finagle more money from the Air Force was phony, the New York Times stated editorially that "perhaps, Mr. Wilson is right." Others agree, but are rather silent about it.

For if ever there was a phony it was the attempt to add a huge sum to an already topheavy Air Force budget which crowded every available plan and facility now in force. We may be pardoned for suggesting in this election year that the proposal to use more millions on top of adequate billions, which could not be spent anyway, had an overtone of politics. Can anybody imagine General Eisenhower being so callous to the defense needs of this country, or an industrial genius like Secretary Wilson being so stupid, as deliberately to neglect our defenses?

Everybody knows that the three services, plus the airplane, shipbuilding and other industries, are grabbing for their share, plus, of the $35 billion a year that Mr. Wilson has to pass out, and they are not hesitant about pressuring their Congressmen for a few million extra to slice among them through a phony political move. They are pretty short of issues anyway, as shown by the avidity with which the seize upon and distort Mr. Wilson's bird dog and other slips of the tongue.

Now there are honest differences of opinion among high-minded officials as to the kind or size of Air Force this country must have to offset what General Twining, at least, thinks is an overrated Russian superiority. If politicians who know less than the experts disagree, it does not necessarily mean that the President and his Defenses Secretary are negligent or unaware of the full dangers of falling behind, or are not building what they believe to be an adequate defense with the best possible weapons for the kind of war they believe we should have to wage without bankrupting the Nation.

Secretary Wilson may be blunt and outspoken—a refreshing trait in Washington—but he is tough where we need toughness, of high character, or rare administrative genius, a man who isn't after votes, and whose first consideration is the best welfare of the country. It would be nice if a few outstanding businessmen would make known their belief that Engine Charlie had bluntly told the truth, and had not blundered in trying to defend the taxpayers against the grabbers and politicians.

Sale of Alcoholic Beverages on Air Carriers

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. VURSELL. Mr. Speaker, I am glad to learn that H. R. 8000 has been approved by the Rules Committee, and I am hopeful that this legislation may be scheduled as early as possible for the consideration of the Members of the House.

This bill provides that no air carrier shall sell to its passengers any alcoholic beverages, including wine and beer, for consumption while in flight between points within the limits of the 48 States, and the District of Columbia.

I have received, as other Members of the House have, communications from the organizations representing the airlines' pilots, who have the responsibility of flying these planes and protecting the safety of the public, urging the enactment of this legislation into law.

I believe this speaks very highly for the men, who better than anyone else realize the necessity of this proposal being enacted into law before the close of this session.

I am sure that the great majority of the American people who use the airlines for transportation also favor such legislation. I sincerely hope that this legislation can be considered and written into the law before the end of this session, and, as we all know, time is growing short before its close.

Constitutional Problem

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the New York Times of July 5, 1956]

CONSTITUTIONAL PROBLEM—A REVIEW OF ISSUE SYMINGTON RAISED IN DISPUTE WITH WILSON OVER DEFENSE

(By James Reston)

WASHINGTON, July 4.—The sharp and sometimes personal fight between Secretary of Defense Charles E. Wilson and the Symington subcommittee of the Senate over the Air Force budget has declined into what Senator STUART SYMINGTON, Democrat, of Missouri, calls a grave constitutional problem.

This is whether the executive branch of the Government is obliged to spend the additional $900 million voted by the Congress against the will of the administration to expedite production of heavy bombers (B–52's) * * * to the optimum limit of existing facilities or whether the administration can ignore the appropriation of the extra funds.

"You know," Senator SYMINGTON told Secretary Wilson yesterday, "that you could further increase the production of B–52's beyond present schedules if you so wanted.

"You also know that it is the conviction of the Congress you should do so. Nevertheless, you stated you will put the money in the bank. That is, maybe do nothing * * *.

"In our opinion there is a grave constitutional problem raised by your attitude and conduct—namely, what are the rights and responsibilities of the Congress with respect to raising and supporting the Military Establishment * * *."

Senator SYMINGTON made these comments yesterday when Mr. Wilson gave his closing testimony before the Senate Armed Services Subcommittee on the Air Force. The subcommittee has been inquirying into the relative military strength of the United States and the Soviet Union.

This fight has been going on for a long time between Senate advocates of a more powerful Air Force and the administration. It has involved different interpretations of the rise of Soviet airpower, different concepts of how to wage the new economic and political phase of the cold war, and conflicting ideas about the force levels and missions of the Air Force, the Army, the Navy, and the Marine Corps.

ISSUE IN NEW LIGHT

Only now, however, has the issue been presented in the Senate as a constitutional problem, with the administration asserting its right to reject congresssional advice and funds it does not approve, and powerful Members of the Congress insisting that the Executive is obliged by the Constitution to carry out the intent and decisions of the Congress.

This conflict over the rights of the two separate branches has been a serious point of debate in the United States ever since the days of Jefferson, Hamilton, and Madison. It is an issue subject to many contradictory interpretations and for that reason has usually been avoided if at all possible.

Senator Symington said today, however, that he intended to press the issue, and he has powerful support from Senator RICHARD B. RUSSELL, Democrat, of Georgia, chairman of the Armed Services Committee, which passes on all the Pentagon's defense authorizations, and Senator HENRY M. JACKSON, Democrat, of Washington, who has been making a personal issue of the question in his sharp and often violent attacks on Secretary Wilson in the Symington subcommittee.

Nevertheless, though they have a clear vote by the Congress behind them, it is difficult to see how this issue can be solved except by agreement between the two equal branches of the Government.

The Constitution does not clearly settle the issue. "What the Constitution does, and all that it does," wrote Prof. Edward S. Corwin of Princeton, "is to confer upon the President certain powers capable of affecting our foreign relations, and certain other powers of the same general nature upon the Senate, and still other such powers upon Congress; but which of these organs shall have the decisive and final voice in determining the course of the American Nation is left for events to resolve.

"All of which amounts to saying that the Constitution * * * is an invitation to struggle for the privilege of directing American foreign policy * * *."

That is what is going on here now: "A struggle for the privilege of directing American foreign policy." The administration, exercising the rights of the Executive, has decided on a policy of calculated risk in meeting the new Soviet economic-political phase of the cold war, and the Congress apparently thinks the risk is too great.

The administration has rejected the idea of trying to maintain armies as large as the Soviets. It has rejected the policy of matching the submarine strength of the Soviet Union. It has adopted a policy of what it calls balanced forces, under which it asserts that it is maintaining an overall equality, and in some phases a superiority, over the Soviet air force.

This policy is under attack from two sides, the Symington-Jackson bloc in the Senate disputes the administration's claims of equality with the Soviet Air Force, and argues, not only that the B–36 is obsolete but that the B–47 is losing strength with the weakening position of United States bases overseas. In short, this group advocates a much stronger Air Force, particularly in intercontinental bombers (the B–52), and the Congress has voted the funds to increase B–52 production as fast as possible to the limit of existing manufacturing facilities.

At the same time, the administration's policy is under attack from precisely the opposite direction. That is to say, the Army, and its supporters in Congress, maintain that the administration is preparing for a big atomic war that will never come, but not putting enough money into ground forces and economic foreign aid which, they contend, are vital to the kind of war that is being waged with the Communists right now.

The intensity of feeling on these issues has been demonstrated during the defense appropriation, foreign aid, and Symington subcommittee debates of the last 2 weeks.

In the course of these, Secretary Wilson has been attacked as a vain and inept public servant. Senator JACKSON has invited the Secretary to apologize to the Senate for implying that the efforts to raise the Air Force budget were phony, and Mr. Wilson, in turn, has refused to apologize and suggested that he is the one who is due an apology.

Coincidentally, Senator SYMINGTON has accused either Secretary Wilson or the Joint Chiefs of Staff of "misleading" the American people about the defenses of the country, has implied that the administration was putting economy ahead of security, and finally has charged Mr. Wilson with flouting the intent of the Congress.

While all this has been going on, officers of the Air Force and the Army have been carrying on a running battle behind the scenes over the allocation of funds and military missions, and this fight has been carried privately to influential Members of Congress and the press.

The tendency in the administration has been to say that the motivation for most of the squabbling is political in a presidential election year, and there is undoubtedly something to this. Back of it all, however, is a fundamental cleavage, partly military, and partly philosophical, about how to wage the cold war.

The Symington-Jackson group is convinced that the lull in the aggressive statements out of Moscow and the general prosperity in this country are blinding the administration to the rise in Soviet technical proficiency, the threat of Communist capital development in Europe and Asia, and the relative decline, as they see it, in the overall strength of the North Atlantic Treaty powers.

Thus, they believe that only by the maintenance of superior atomic-air power and a maximum effort in the research and development of new weapons can the Western Powers maintain the capacity to strike a paralyzing retaliatory blow. This, they are convinced, is the best hope of deterring a big war.

The administration's answer to this is that it is now in a position to strike such a blow and will continue to hold that position, even if it does fall behind the Soviet Union in some aspects of air-atomic development.

ATTACKED ON TWO SIDES

Nevertheless, it is being attacked on the one hand for not putting enough stress on airpower and on the other for stressing airpower and atomic power to such an extent that it could not fight a limited war without using atomic weapons and encouraging the all-out atomic war which its whole policy is designed to prevent.

The general feeling here is that these serious questions of judgment can only be made more difficult by raising constitutional questions that have never been settled since the start of the Republic.

The Executive argues that it would be reduced to a rubber stamp if it handed over responsibilities for the development of the armed services to the Congress.

On the other hand, the Congress points out that the Constitution says "the Congress shall have power * * * to provide for the common defense * * * to raise and support armies * * * to provide and maintain a navy" (art. I, sec. 8).

Moreover, while the President is Commander in Chief of the Armed Forces, he has to have the support and confidence of the Congress if he is to get the money to maintain his Military Establishment.

The President has yet to be heard on this subject. The controversy existed before his illness, but it has come to a head during his absence from the White House.

He can stick to his estimate of what is the best way to carry out his constitutional duties to defend the United States, or accept the congressional judgment on the Air Force, or reach a compromise. He is in what for him is a curious position, for his judgment is being challenged in the field of military affairs, where he has heretofore been regarded as unassailable.

The Arab State of Mind Is Understood By Everyone Except Our Secretary of State

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. MULTER. Mr. Speaker, the following item from the May 16, 1956, issue of the Christian Century (undenominational) is most enlightening:

THE ARAB STATE OF MIND

(By J. Coert Rylaarsdam)

(EDITOR'S NOTE.—J. Coert Rylaarsdam has been associate professor of Old Testament theology on the University of Chicago federated theological faculty since 1945. Before that, he taught at the American School for Boys in Basra, Iraq, and at the New Brunswick, N. J., Theological Seminary. Ordained a minister of the Reformed Church in America in 1941, Professor Rylaarsdam is a graduate of Hope College and of the New Brunswick seminary.)

The rude dismissal of General Glubb by Jordan serves as a sign that the situation in the Middle East is a crisis for the West. The stalemate between Israel and the Arab countries is only one symptom of this crisis. The policy that inspired the British evacuation of Suez has failed. It has led to the steep decline of the position and prestige of the West in the Middle East. Britain has officially recognized this. Large sections of American public opinion and of the American press, including Life, are aware of it. Officially, Washington has still to admit it.

The American assumption, explicit since 1953, that the situation in the Middle East can be fundamentally accounted for by "colonialism" and the existence of Israel, or the posture it assumes, is perniciously superficial. The actions based upon it have had disastrous results. They have contributed to the breakdown of the British position. They have led to international anarchy on the part of Egypt and her Arab followers, confirming their suspicion that irresponsible opportunism pays. They have produced guerrilla warfare and made Israel the target for terrorism. They have cost us our capacity to maneuver to a degree that threatens our freedom and our honor. They have permitted Russia to become the sponsor of the Arab spirit and had led to misunderstanding between Britain and America as well as between Israel and America. They may have to be interpreted as the documentation for a policy of appeasement.

I

At the heart of the crisis lies an Arab state of mind that has been fairly constant for more than a generation. Britain has always been aware of this Arab psychological problem and has been partly able to protect itself from it, though unable to make it contribute to constructive purposes. Mr. Dulles gives the impression of being ignorant of it or ignoring it. The bearing of Israel, sometimes called rigid, shows that it understands the state of mind of its neighbors very well. Neither British power nor the creation of the State of Israel produced the basic problem in Arab psychology; they have only determined some of the forms of its expression, as have the policies of Mr. Dulles. General Glubb has recently spoken of "intransigence" as a constant in the Arab record; but this too is only one symptom pointing to a state of mind that reflects the long agonizing struggle of the Arab peoples for the possession of their own soul at the level of nationhood.

One of the more comprehensive and public exhibits of the seemingly endless series of cycles, major and minor, in which this struggle expresses itself is set in Iraq in the early thirties. In 1931 the kingdom of Iraq was a British mandate. Agitation was rife for the termination of this mandate. It expressed itself in strikes, boycotts, guerrilla action, and rallies with addresses that appealed to the sympathy of the world. Iraqis, it was said, in all sincerity, wanted to get to work on their own problems: Illiteracy, disease, and hunger; but they could begin to do so only if they were given a free hand in their own affairs.

In 1932 Great Britain bowed to the demand. Iraq was admitted to the League of Nations and its internal affairs came into national hands; through a treaty of alliance the substance of foreign relations remained under British influence. There was high elation, a 3-day celebration. A new era was announced in plans for education, health service, and irrigation. But faced with the stubborn facts of actual conditions and dampened by an age-old lethargy, the spirit of resolution flickered badly. Excuses for delay and failure seemed necessary. They were provided not by a purifying self-appraisal nor by a realistic analysis of the difficulty of the task, but by the reestablishment of Britain as a scapegoat. It was hinted that the program was failing because the political freedom was still not complete. Then graft, corruption, and venality grew, purpose waned, and the sullenness of agitation returned. But thoughtful Iraqis knew that, without valid excuse, they were walking away from an inescapable challenge.

The real tragedy of the situation was not just the failure of a socioeconomic program but the inability of a nation to come into full possession of its own soul. The spirit that could pay the cost—industry, discipline, steady perseverance—for the realization of a sincere ideal was wanting. Thus the government did not achieve true legitimacy; and to this extent its policies and acts were evoked by an empty opportunism, unqualified by a truly national achievement in process of realization. The only salt left in the situation was a guilty conscience. Whatever may have been Britain's selfish reasons, she did not help the Iraqis bury that. It is perhaps still too early to say that Iraq is finally winning the battle for possession of its soul and attainment of national integrity. But that it is apparently beginning to develop the capacity to dismiss old grievances (including Israel), turn with renewed zest to its internal development and undertake a responsible role in the Baghdad Pact are important signs of promise. One hopes that the psychopathic problem of a perennial adolescence is making way for the health of responsible maturity.

II

Now we have another exhibit, on an even broader canvas, of this poignant drama which is the struggle of the Arab soul. This

scene is laid in Egypt and Abdel Nasser is the central figure.

We see first that the Arab struggle for self-affirmation is not dead. The Egyptian dictator began as a sincere reformer, a spokesman for that element—the intelligentsia and the middle class—that was ashamed of the Egypt of Farouk. He was determined to face facts and deal with the real problems of his people—at home. On his return from the front after the ill-fated war against Israel in 1948, he is reported to have introduced his plan to overthrow the monarchy, saying, "Brothers, our war is here at home, the war against ignorance, disease, and poverty." Sincere, and very familiar.

There was a hopeful beginning. With General Naguib as a front man the coup was a success and Farouk was deposed. A program of land reform was announced. Plans were launched for reclamation through wider irrigation. Education was to be extended. After 70 years the British garrisons had left Cairo. It was the dawn of a new day. Nasser seemed determined to forget the past and its grievances, including Israel. But soon the sky was overcast.

Trying to deal with the stubborn facts of a tradition of lethargy and fatalism was frustrating. The results of the reform program could not be quick and dramatic. There were rivalries, and Naguib, born in the Sudan, was ousted. Almost simultaneously it became clear that the Sudan, newly independent, would decide not to unite with Egypt. Nasser may have felt that this undermined his position. At any rate, the old resentment against Britain flared and he decided to press for the British evacuation of Suez.

In this undertaking Nasser had the powerful aid of the United States State Department and Mr. Dulles. Early in 1953 the President had announced his aim to restore the spirit of confidence and trust between Arab nations and the United States. This seemed a good place to begin. Wasn't Nasser a reasonable man and a man of peace? Under heavy pressure the British yielded. Mr. Dulles spoke of the decision as an epoch-making settlement and an achievement for American diplomacy. He seems to have assumed that, as an equal, Nasser's Egypt would join in a Middle East defense agreement. But this sort of thing would have involved responsible commitments. It seems that just about this time Nasser decided that his war was not at home after all, that he could not face facts or undertake responsibilities that limited his freedom. He was moved to a course of adventurous opportunism. For the time being Egypt had again lost the battle for its own soul. And one fears that, quite unwittingly, Mr. Dulles is helping Nasser and Egypt bury that guilty conscience.

Since the Suez settlement Nasser has moved with the speed of Jonah to escape his vocation. On his trip to Bandung the old mirage of Farouk caught his eye: the leadership of the Arab world. With the Sauds he plotted the end of British and Hashemite power in Jordan. From the Communists he obtained arms and the training needed to use them. To compete, Washington pleaded that he accept American-British funds to build the Aswan Dam. The dictator occasionally assures Mr. Dulles that delay in accepting the offer does not imply refusal. The British are troubled that this comforts Mr. Dulles. Meanwhile General Glubb has been ejected. It took $100 million of (American) Saudi oil money and the exploitation of the refugees by the Communist organizers of spontaneous riots to do it. Today Nasser rides high. He is a hero in the bazaars of Damascus and his broadcasts foment chaos in Africa. His commandos terrorize Israel; he claims an adventurer's license—a luxury a responsible householder like Ben-Gurion cannot afford. Egypt and its allies have lost another battle to possess their own soul. And Jonah has not yet been cast overboard; just now he commands the vessel of his flight.

III

The near-pathological Arab state of mind, so constant since 1920, has complex roots in a long and very mixed history. But it always shows itself by a pathetic inability to face facts and enter into commitments. For failure it compensates with wild adventure or sullenness. Sincerely conceived programs languish, corruption flourishes. In all orders of life—political, socioeconomic, and cultural—it voices the age-old excuse of fatalism and lethargy, "What can one do?" This time the failure of spirit has led to international anarchy. America looks more like a suppliant than like a negotiator. Whether in the Armed Forces or in business and commerce, in the Arab world she does not even dare to claim for her citizens the equality she so proudly boasts at home. She appears weak to a state of mind that admires strength. She has become a victim of her own policy—a policy that has also penalized Israel, however unintentionally.

The nub of the contrast between Israel and its Arab neighbors is that Israel possesses in such full measure the integrity they lack. This is much more important that differences in culture and religion or an unevenness in artistic creativity or technological know-how. Unlike the Arabs, the Israelis possess their own soul. They can make a realistic appraisal of their needs and pay the cost in industry, perseverance and discipline to begin to fill them. When in 1948 the Arab nations invaded their new state, still in process of organization, the Israelis coined the phrase "We must make facts." Even those most reluctant to do so stand in amazement before the creative achievements of Israel in every department of its variegated national life. It is ironical that right now, owing to American policy, she should be at a disadvantage vis-a-vis her Arab neighbors just because she is so provident, responsible, and resourceful as a national housekeeper.

At this moment the whole world is relieved that Dag Hammarskjold has revitalized the truce that dates back to 1949. This provides needed breathing space, but it settles nothing. The peace that should have come years ago is still not in sight. The indefinite postponement of peace is bad for the Arab soul, but it is precisely what Nasser and his followers desire. It is not what Israel either wants or deserves. The world owes Sir Winston Churchill a great debt of gratitude for having pointed out in clear phrases the moral obligation the West assumes toward Israel in the postponement of a settlement.

Egypt can well afford to accept the continuance of the truce, especially since she is not yet ready to fight anyway. She can continue unmolested with the campaign of economic warfare. The renewal of the truce does not end the blockade of Israeli shipping in the Gulf of Aqabah. Nor does it open the Suez Canal to Israeli vessels or to other vessels frequenting Israeli ports. Egypt has ignored the prohibition of this blockade by the Security Council in 1951. She was ready to accept the Hammarskjold mission only with the provision that this violation of international law be kept out of the discussion.

Another example of economic warfare that continues unabated while the truce is extended relates to the utilization of the power and water resources of the Jordan. In 1954 Russia vetoed a Security Council permit to Israel to build a power project on the Jordan. The United States, represented by Eric Johnston, attempted a multination plan of water development. But the Arab States, fearing that acceptance of the plan would mean an implict recognition of Israel, have not accepted it. Israel is ready and waiting to use her share of the Jordan waters; her neighbors prefer to perpetuate chaos. There is no equality in the continuance of such a stalemate. Yet in the very context of the present truce discussions Nasser has again underscored the Arab position that any unilateral action on the Jordan by Israel constitutes cause for war. This sort of dog-in-the-manger tactics, abundantly exhibited by several Arab States during World War II, constitutes a species of luxury open only to those who thrive on anarchy and chaos.

IV

The most cruel and reprehensible aspect of the truce that Nasser does not wish to exchange for a settlement is exhibited by the refugees who have become the chief weapon of Arab propaganda in America. Whoever may have been responsible for the fact that 750,000 Palestinian Arabs became refugees as a result of the Arab war on Israel—even General Glubb recognizes that the question admits of no simple answer—their lot is tragic. But there can be no doubt that today, 8 years later, their status remains unchanged because their own kith and kin do not want it otherwise. The Arabs have used the misery and frustration of their own brothers to build a living cordon of hate around Israel's borders. They prolong the story of their suffering to appeal to the sympathy of the world, hoping to create pity for themselves and ill will for Jews in Israel and in the diaspora. Thus their irresponsibility has extended even to a denial of the brotherhood of Islam's sons.

It is now all but forgotten that the Jewish refugees were as numerous as the Arab. Between 1948 and 1951 alone, 750,000 of them were brought home to Israel. About half came from Europe, the tragic battered and branded gleanings of the Jewry of central Europe, of whom 6 million perished in the Nazi fury. Thanks to a Jewish sense of responsibility these maimed and penniless aliases of many passports, whose vessels could dock nowhere, found a haven at last.

But there were also the Jewish refugees from Arab lands, the other half of the 750,000. The Jews of Yemen and of Iraq, the Jews of north Africa and of other Arab centers were uprooted by the same Arab war on Israel that uprooted the Arabs of Palestine. They had lived much, much longer even than these in the lands they were forced to leave. They too left their property behind them; they too suffered indignity, abuse, and death. Their rehabilitation, in contrast to their Arab counterparts, is due to the fact that their own cared for them. Isn't it ironical that this act of responsibility and compassion should have deprived Israel of a propaganda weapon so cleverly used by its neighbors? Should callousness and opportunism pay? Quite unintentionally, and for want of full comprehension, it sometimes works out that way.

For example, in the Christian Century for April 18 in a paragraph dealing with the Arab refugees we read: "All proposals for relocating them elsewhere have come to nothing. Meanwhile Israel has opened her doors to 750,000 Jews who have taken the refugees' houses, lands, orchards, and businesses * * *." Quite apart from the fact that many of the Arab centers evacuated were left in utter ruin, nothing is said about the fact that the Jews who came in came as refugees who had also left behind "houses, lands, orchards, and businesses." We are not told who took those properties or who may now be developing them. Unfortunately, not the refugees from Palestine. I personally knew Jews in Iraq who were not given even the opportunity to become refugees; they were hanged in the public square. And why have "all proposals for relocating them elsewhere" come to nothing? Actually Israel alone has resettled many thousands more Arab refugees than all the Arab lands put together. Why? Because for the latter to resettle refugees would be equivalent to facting the fact that "Israel is here to stay."

The policy that inspired the evacuation of Suez and issued in the wild adventures of Nasser have indeed failed. It overlooked the real character of the deep, long-standing and agonized struggle of the Arab spirit. While it negotiated concessions it did not insist on a realistic facing of facts and so challenge Nasser to reach for maturity. In the name of kindness and fairness we have really hurt the Arabs and been unjust to the Israelis.

Now we have a breathing space. One hopes that it provides us with one more chance. Even though it is perhaps less likely now than before that the Arab nations will attain their maturity under inspiration from the West, we must not abandon that hope in our plans. For Israel we must seek that strength and security that do justice to her stability as a state and to her confidence in us, implicit in her consent to the further extension of a truce that should have ended long ago. The course of the last 4 years has come to an end; a new policy, more realistic and decisive, is called for.

The Middle East

EXTENSION OF REMARKS
OF

HON. CHARLES B. BROWNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. BROWNSON. Mr. Speaker, although the situation in the Middle East has become less explosive in the last few weeks, a major contributor to the unrest of that region has received less attention than it merits—the problem of the Arab refugees. There is much to be said for both the Arab and the Israeli views on this matter—and there is much understanding that can be gained by taking them well into mind. For the concern and consideration of my colleagues, under unanimous consent, I ask to reprint two articles, the first, Forgotten People, These, and the second, Israel's Side of Refugee Problem, in the Appendix of the CONGRESSIONAL RECORD for this date. I have received requests from distinguished constituents of the 11th District of Indiana that both of these commentaries be thus made available.

The two articles follow:

FORGOTTEN PEOPLE, THESE: ARAB REFUGEES STILL HOPEFUL OF RETURNING HOME

(By R. H. Shackford)

Nimer Muhammad Shurbaji was born in Jaffa, Palestine, 36 years ago. Today he is one of the 900,000 homeless, stateless Arab refugees—innocent victims of the creation of the State of Israel.

The Israel-Arab war forced him to flee his home in April 1948. He and his growing family—a wife and six children, the oldest 10—have lived in refugee camps ever since. The last 5 years the family has existed in 2 rooms in Magazi camp on the Gaza Strip with 7,900 other Arab refugees.

Before 1948 Nimer Muhammad Shurbaji was relatively well off. He owned his home in Jaffa and worked for the Palestine Post Office. Now he hasn't worked for 8 years and is wholly dependent on United Nations relief for bare subsistences.

WAITS

He waits and waits and waits with hundreds of thousands of others just outside Israel's frontiers—still hoping to go back to his home which long since has been occupied by Israeli settlers. He feels grievously wronged.

How much longer will Nimer Muhammad Shurbaji suffer patiently in misery? Maybe not very long. U. N. refugee officials report ominous rumblings among the Arab refugees who talk about staging a mass march back home in June.

Such action could present Israel—still seeking Jewish immigrants from all over the world—a more formidable challenge than an Egyptian army attack.

"Who could stop them if they decided to March?" a U. N. official asked. "You can't shoot hundreds of thousands of people."

Of all the obstacles which block peace in the Middle East, none is so great as the Arab refugees from Palestine. They live in idleness and poverty. About 40 percent of the 900,000 are in camps or tents just outside the borders of what was once home but now is hostile Israel.

ROOM

For 8 years they have waited to go home. The Israelis don't want them; they haven't room even for the Jewish immigrants. The Arab States don't want them.

Settlement of this refugee problem would do more than any other single thing to reduce tension and open the door to Arab-Israel peace. But a new generation of Arab refugees—the population increases 25,000 each year—is growing up, fed on bitterness, hatred, and revenge.

These are forgotten people. The United Nations spends only about $27 a year per person to keep these Arabs alive. Ironically, creation of Israel stemmed partly from a desire to provide a refuge for the Jewish victims of Hitler. Solution of that refugee problem only created another.

Many of these wretched people can look across the border to their former lands and villages. They can watch the new Jewish settlers building a homeland on their old farms and in their old cities.

STATISTICS

Some of the statistics are startling:

Within a couple of years, more than 50 percent of the Arab refugees will be under 15 years of age.

There are about 60,000 pregnancies each year and 35,000 deaths.

There are 905,986 registered with the U. N. as refugees. Of these, about 350,000 live in refugee camps, the rest with relatives or friends or in other accommodations.

Last year 831,794 persons were on U. N. ration rolls. Their 1,500-calorie ration is bare subsistence.

The United States and Britain contribute about 90 percent of the U. N. relief costs.

In the Gaza Strip—5 miles wide and 25 miles long—the refugees (214,601) for outnumber the local population (95,000).

Time and again the United Nations has called on Israel to make a move to end this desperate situation. But no action has been taken.

PROPOSAL

A proposed solution was set forth in a 1948 U. N. Assembly resolution—that Israel offer the Arab refugees a chance to return to their homes, or give those who do not want to return financial compensation for their lost properties.

Israel says the return of any substantial numbers of Arabs to Israel is impossible because they would create a security problem. Certainly many Arabs would be unfriendly to the new Israel Zionists.

The Arab nations, on whose land the refugees are now camped, say they don't want them because they will compete for scarce arable fields, food and jobs. The Arabs have used these pitiful people as political pawns in diplomacy.

U. N. officials say relatively few of the refugees would want to return because Israel would insist that they become Israeli citizens. But the refugees feel Israel must make the offer, to recognize the wrong done them and acknowledge their rights. Then Israel must be ready to compensate the refugees for their property.

COMPENSATION

Compensation, if ever started, is an even greater problem. Israel insists the properties of the Arab refugees have a value of only $35 million; the Arabs say their loss is $1,300,000,000; the United Nations estimate the cost of compensation at about $300,000,000. The most optimistic admit it would take about 5 years to identify the properties and pay off—assuming the legal tangles could be unsnarled.

Neutral observers agree not even a start to break the logjam can come until Israel makes the first move. Once Israel is prepared to make concessions, resettlement efforts can begin in earnest. Israel could use limited numbers of Arabs for agriculture since most of the Jews who migrated to Israel are city folks. The Arab nations must concede that they can use many of the refugees, too.

OUTLOOK

The best outlook for starting new lives for the greatest number of Arab refugees depends on such projects as the Jordan River development program—one that would bring untold benefits to both Israel and the Arab nations, as well as the refugees.

The United States has offered, in effect, to finance not only the compensation of Arab refugees but most of the cost of the Jordan plan. If Arab and Jew would only agree to cooperate on this, it would be worth a lot of American dollars to get it going.

But so far hatred and suspicion prevail over common sense.

ISRAEL'S SIDE OF REFUGEE PROBLEM

(By Julian Freeman, past president, National Council of Jewish Federations and Welfare Funds)

The plight of the Arab refugees, deplorable as it may be, is but one tragic facet of our intricate problem. Our concern should not blind us to the basic problems of the Middle East: The need for peace and the need for stimulating the too long delayed economic and social development of this backward corner of the globe. We should see clearly which are the forces of peace and social order and which are the forces of war and suppression.

Let's look at the whole situation, and not just what's in the headlines.

Israel is not just a new state—carved out of old neighbors. Palestine, Syria, Lebanon, Saudi Arabia, Transjordania all were brought into being almost simultaneously since 1919 upon the dismemberment of the Ottoman Empire. The mandate Britain received over Palestine was conditioned upon the establishment there of a Jewish homeland. Their borders were based on the administrative requirements of Britain and France.

All of these states have in varying degree some identification with the ancient Middle East. But they are in their present form all new states—all phenomena of the 20th Century.

The crisis in the Middle East today still stems from the absolute refusal by the Arabs to accept in any way the principle of a Jewish national homeland in Palestine.

On November 29, 1947, the United Nations decided upon the partition of Palestine. The United Nations established an independent Jewish State and an independent Arab State. There were ample precedents for such solutions. The United Nations arrived at the same decision in India and Pakistan; the same solution was arrived at in Ireland.

Flaunting the United Nations decision, the Arab States from without Palestine launched

a full-scale invasion of the newly established Israel—the purpose, as the Arab League's general secretary put it, "to throw the Jews to the bottom of the Mediterranean Sea."

In various announcements the Arab Higher Committee urged all Palestinian Arabs to leave Israel upon the final withdrawal of British troops and clearly intimated that those Arabs who remained and accepted Israeli protection would be regarded as renegades.

Al-Hoda, the Lebanese newspaper published in the United States, described it: "As the time for the British withdrawal grew nearer, the zeal of the Arab League was redoubled. * * * Brotherly advice was given to the Arabs of Palestine, urging them to leave their land, homes, and property. * * * The Palestinian Arabs had no choice but to obey the advice of the league."

At the same time independent and impartial sources point out that the Israeli authorities did all in their power to convince the Arab civilian population to remain.

The London Economist in October, 1948, describing the pressures by the Arab Higher Committee on the Arab populace of Palestine to flee stated, "During the subsequent day the Israeli authorities * * * urged all Arabs to remain * * * and guaranteed them protection and security * * *."

On April 26, 1948, a high-ranking British police officer reported to British headquarters in Jerusalem: "Every effort is being made to persuade the Arab population to stay and carry on with their normal lives * * * and to be assured that their lives and interests will be safe."

Two days later the same officer reported, "The Jews are still making every effort to persuade the Arab population to remain and settle back to their normal lives in the town."

The Arab war against Israel ended in Israel's victory.

If the partition resolution of the United Nations had been accepted without war, the State of Israel would have had an Arab population of 397,000 or 42 percent of its then population of 1,550,000. The 150,000 Arabs who remained in Israel (now grown to 200,000) have been completely integrated as first-class citizens.

Not a single Jew now lives in any part of Palestine that fell under Arab rule. Syria expelled all of its Jewish population and confiscated all of their property. Iraq's pressures on its Jewish population forced their mass exodus to Israel. Their property was largely confiscated by the government.

Today 895,000 refugees stand idle in Arab refugee camps as a tragic aftermath of a war started by the Arab States to destroy Israel. Today, too, nearly one-half million Jewish refugees from Arab lands are active, vital citizens of Israel.

Can the Arab States absorb these refugees who are of the same culture, the same religion, the same traditions, and the same language? Let the facts speak for themselves.

According to Iraq's own experts, Iraq has "immense areas of cultivable land unused because of lack of workers." These experts believe that the full development of Iraq requires more than 3 million additional workers.

Syria, according to the Royal Institute of International Affairs, can absorb well over 200,000 refugees. In 1951 Syrian officials requested from Egypt a half million Egyptian agricultural workers to emigrate to Syria to develop Syrian land which would be transferred to them. Egypt refused because of an agricultural labor shortage.

The Jordan Valley Authority (the Johnston plan), serving both sides of the Jordan, can, according to American agricultural authorities, solve the entire refugee problem.

But Egypt, Lebanon, Syria, Iraq, and Saudi Arabia refuse to allow refugees to become citizens or to find productive jobs. Of the $700 million the Arab States have received from oil resources, not $1 has been used to ameliorate the condition of the refugees. Syria bears the responsibility for holding up the Johnston plan.

As part of an overall peace settlement, Israel has accepted the principle of compensation for the Arab refugees that fled. Israel has agreed to the Johnston plan. Israel has never said that it would not consider absorbing some of the Arab refugees, but it has stated repeatedly that the problem must be considered as part of an overall peace settlement.

However, Israel cannot ignore the intent of the Arab States to use the Arab refugees as a fifth column in Israel. As a former Egyptian Foreign Minister stated, "Let it be known and appreciated that in demanding the restoration of the refugees to Palestine the Arabs intend that they return as masters of the homeland and not as slaves. More explicitly, they intend to annihilate the State of Israel."

As part of an overall peace settlement Israel has offered Jordan the use of free port facilities at Haifa. It has offered to allow the Arab States to establish communications across its territory. Israel has furthermore indicated a willingness to consider minor border adjustments.

Israel has consistently sought peace. Again and again it has offered to sit down at the peace table with the Arabs. Its only stipulation has been that all the problems must be discussed together and resolved at the peace table. The interrelationship of the problems makes them inseparable.

The Arabs refuse to negotiate peace with Israel on any terms. They refuse to recognize the fact of Israel's existence. They maintain a naval blockade and an economic boycott of Israel. They have closed the Suez Canal to Israeli and Israeli-bound shipping.

The chief obstacle in the way of peace is the intransigent refusal of the Arabs to negotiate in any degree with Israel. The plight of the refugees can be directly ascribed to this refusal.

Juvenile Delinquency: Its Cure

EXTENSION OF REMARKS

OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. BECKER. Mr. Speaker, in these days when we hear so much about juvenile delinquency, it comes as a welcome note to find such an outstanding youngster as Joseph Casson of Freeport, Long Island, N. Y., a student at Holy Redeemer School, who appreciates and has evaluated so meaningfully for all of us those responsibilities which rightfully accrue to us all in trying to eliminate this blight of our age. I feel that this prize-winning essay makes worthwhile reading for everyone. I submit the essay as it appeared in the Brooklyn Tablet under the date of June 24, 1956:

The article follows:

JUVENILE DELINQUENCY: ITS CURE

(By Joseph Casson)

All children are born good but yet somewhere between the age of reason and adulthood there has been the necessity of the use of the phrase "juvenile delinquent." Juvenile meaning youth and delinquent bad.

The words don't seem to fit together somehow, yet they constitute the perfect title for many young Americans. In our land of rights and freedoms these words have been able to find their place. This group ranges from the small child who pilfers pennies to the 18-year-old who steals cars. Although it may seem unfair to put these two cases in the same category, it is necessary because the delinquent who stole the car is the result of the boy who pilfered the pennies, unchastised

This condition prevails in every locality, although some refuse to believe this fact. In many places the question "What can we do about it?" has come up.

ANSWER IS IN THE HOME

The answer to this problem may puzzle some, but the solution is clear to most of our citizens. These people know that the real answer lies in proper religious training and fine upbringing in the home. But these two factors alone cannot fully equip a boy or girl to withstand the powerful evil influences that lead to delinquency. Their lives must also be occupied with sports, hobbies, and other after-school activities that will both interest their minds and develop their bodies, thus leaving no time or even the desire for evil activities.

Delinquency involves everyone and therefore should not be fought only by a select few. The saying "in unity there is strength" can be applied not only to wartime tactics but also to combating the forces of evil prevalent in our times. All persons, the home, the school and the community, each doing its part, must cooperate in this fight against delinquency.

But such a victory will not be won easily. It will be a long, slow fight, but if people are willing to take the time and effort to correct the wrongs of our teen-age group, their efforts will not be in vain.

We should endeavor to realize the fact that as there are numerous causes of juvenile delinquency, so, too, we must use many different methods to combat it.

First and foremost, the parents should shoulder their responsibility by exacting obedience in the home and fostering a respect for all authority. They should show affection for their children and thus gain their confidence.

The school, too, must play its part in teaching high standards of conduct. The community in which the child lives can be a source of good by establishing wholesome means of recreation for youth.

Lastly, our strongest weapon against this evil of delinquency should be religion, for it stands to reason that a child who has been taught to obey the Ten Commandments of God will find it much easier to appreciate and obey the laws of his country.

Delinquency: Adult and Juvenile

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. DEROUNIAN. Mr. Speaker, a young lady in my congressional district, Lorraine Butler, an eighth-grade student at St. Aidan's School in Williston Park, N. Y., has written such an outstanding essay on juvenile delinquency I ask that it be printed in the CONGRESSIONAL RECORD for all my colleagues to read.

Lorraine's essay, which appeared in the Brooklyn Tablet of June 24, 1956, won a well-deserved prize in the annual contest conducted by the Cardinal Mercier General Assembly, fourth degree, Knights of Columbus, among all eighth-grade students of parochial schools in Nassau and Suffolk Counties, N. Y.:

(By Lorraine Butler)

Juvenile delinquency is a terrifyng reality. It frightens children, parents, teachers, leaders in our community, State, and even National Governments. Each tends to accuse the other of being more responsible for the desperate situation. Yet, in a way, each is responsible.

What is juvenile delinquency? It is lawlessness, disregard for the rights of others, dishonesty, hatred, and almost everything that is evil in the adult world reduced to juvenile scale.

A child must learn by example. He should be told that standards of right and wrong do not vary.

If it is wrong for a child to lie, why then should he be forced to listen to the "white lies" of his parents? If it is wrong for a child to steal, it is also wrong for politicians to accept bribes. If it is wrong for a child to cheat, how can one explain a dishonest income tax return? If it is wrong for a child to hate, how can an adult explain the gossip and bad will that the child senses in the adult world?

Opposed to evil is love. Bishop Sheen has said, "God is love and love is God." A heart full of love is left without room for hate. Love is found in the Gospels, Epistles, Scriptures, Commandments, and in the corporal and spiritual works of mercy. We can put love to work through the slogan of Father Keller, "You can change the world." We can change it through love.

A parent's love is not shown through extravagant gifts and large allowances. These things do not help in developing the character, happiness, and personality of the child.

A parent will show his love by giving the child his time rather than his money, his example rather than his gifts. To win the love of a child you must first command his respect. When a child loves and respects his parents he will try to please them by good conduct.

Teachers and Government leaders, too, should realize the importance of God in fighting juvenile delinquency. Today there is a tendency to omit God in classrooms and Government. Educators confuse freedom of religion with freedom from religion. This was not the intention of our forefathers. The preamble of the Constitution speaks of "God-given rights." Lincoln said: "This country under God shall have a new birth of freedom," and Washington prayed for guidance at Valley Forge.

There is only one cure for the evils of juvenile delinquency and that is the love synonymous with God. Clubs, youth forums, and youth organizations will be of no avail if they are not based and conducted on Christ's principle "love one another."

In these words lies the cure for all delinquency—national, adult, and juvenile.

The VFW Bill of Rights for Veterans

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. VAN ZANDT. Mr. Speaker, in view of the great interest displayed recently by so many Members of the House with respect to veterans' compensation and pension, I think they would be interested in hearing about an unusual document printed in the July issue of the VFW magazine, the official publication of the Veterans of Foreign Wars of the United States. The document to which I refer is a bill of rights for veterans. It is unusual in that it asks no special favors or pension benefits for the able-bodied veterans of past wars, and no favors for veterans who are financially independent of the need for Government medical care or hospitalization.

Every policy enunciated in the VFW bill of rights for veterans makes it quite clear that the VFW yields to none in its concern for the obligations of citizenship. In fact, those persons who preach the catch phrase of "citizens first, veterans second" should be the first to endorse this bill of rights—that is, if they are honestly concerned with the Nation's future.

Therefore, Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD the following VFW bill of rights for veterans:

THE VFW BILL OF RIGHTS FOR VETERANS

We, the members of the Veterans of Foreign Wars of the United States, having served honorably in the Armed Forces of the United States on foreign soil or in hostile waters during some war or campaign in which the United States has been engaged, and believing that honorable service in the Armed Forces of the United States constitutes extraordinary service as citizens entitling them to special consideration for special services rendered; in order to strengthen the faith of future generations of Americans in their citizenship obligations, insure continued reverence for the sacrifices of our Nation's honored dead and preserve the people's concern for the welfare of those who have rendered honorable military service; do hereby ordain and establish this bill of rights for America's veterans:

"ARTICLE I

"To provide liberal monthly compensation payments for service-incurred disabilities ranging from 10 percent to 100 percent, and where the disability results from combat the monthly payment shall be increased by 25 percent of the amount otherwise due and payable.

"ARTICLE II

"To provide unlimited and first-class hospitalization or domiciliary care and medical treatment, including outpatient treatment, for those veterans suffering from service-incurred disabilities for which they are in need of treatment; necessary hospitalization or domiciliary care and medical treatment where beds are available, as well as outpatient treatment, for other veterans who are unable to pay for private treatment with a priority of admission extending to (1) veterans with combat service, (2) veterans with overseas service, and (3) to any other otherwise eligible war veteran.

"ARTICLE III

"To provide a liberal system of survivor benefits, including monthly death compensation payments to the widow, orphans, and dependent parents of those servicemen who die in the service, or who later die as a result of service-incurred disabilities.

"ARTICLE IV

"To provide educational aid and assistance to the orphans of those servicemen who die in service, or who later die as the result of wartime service-incurred disabilities.

"ARTICLE V

"To provide a pension program for the disabled and aging veterans of World War I subject to age and/or disability requirements, as well as a modest income limitation.

"ARTICLE VI

"To provide for a liberalization of the pension program payable to World War II and Korean veterans, subject to age, disability, and income limitations; together with a continuation of the existing pension program applicable to Spanish-American War veterans.

"ARTICLE VII

"To provide for a continuation and liberalization of the monthly pension payments applying to the widows and orphans of deceased war veterans, with the same eligibility requirements for the widows and orphans of World War I, World War II, and Korea.

"ARTICLE VIII

"To liberallize the payment of a burial benefit, as well as the issuance of an American flag to drape the casket, in the case of all deceased war veterans who were discharged under conditions other than dishonorable.

"ARTICLE IX

"To continue and strengthen the modest preferences for war veterans, wives of badly disabled war veterans, widows of deceased war veterans and certain mothers of service-deceased war veterans in the Federal classified civil service.

"ARTICLE X

"To provide a system of readjustment benefits, including educational aid and training; business, home and farm loans; and and unemployment compesation for a reasonable period of time to veterans of each war in which the United States becomes engaged."

Thirty-fourth Annual Slovak Day, Wilkes-Barre, Pa., July 4, 1956

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

ADDRESS BY MR. FLOOD AT 34TH ANNUAL SLOVAK DAY HELD AT SANS SOUCI PARK JULY 4, 1956, WILKES-BARRE, PA.

Reverend chairman, clergy, the route from Washington to Wilkes-Barre and return covers a little over 500 miles. My willingness to travel that distance to address this splendid gathering is in some small way a measure of my esteem for the thousands of Americans of Slovak extraction living in the congressional district which I have the high honor to represent at the seat of our Federal Government. It is a rare privilege for me to be here, and I am grateful to Father Matircho and his committee for extending me this gracious invitation.

This occasion in reality is a quadruple celebration. This day marks the 34th annual Slovak Day in historic Wyoming Valley and it is the 180th anniversary of the signing of the American Declaration of Independence. Moreover, this year also marks the 150th anniversary of the incorporation of Wilkes-Barre, and for a span of over three-fifths of its incorporated life, Slovak immigrants and their descendants have played an outstanding role in the civic and cultural life of the community. You have also gath-

ered here to commemorate that great moment in history, when the intrepid and beloved Sts. Cyril and Methodius left Macedonia to bring the religion of Christ to your forefathers in the shadows of the Tatra Mountains more than 1,100 years ago. Just as the Irish venerate St. Patrick, the Poles cherish St. Stanislaus, and the Welsh revere St. David, so do the Slovaks pay deserved tribute to Methodius, first bishop of their beloved Nitra, and to his scholarly brother Cyril, the inventor of the first Slavic alphabet.

And it is particularly fitting that Slovaks should combine a religious anniversary with a patriotic celebration. Anyone who knows them as well as I do, who has grown up with their descendants, is familiar with their magnificent history and has drunk deeply of their folklore in song and story, could not expect them to do otherwise.

For to a Slovak, religion and freedom are concomitant; love of country and devotion to God go hand in hand. In all of their turbulent and colorful history, Slovaks have held steadfastly to the faith, and no amount of oppression, however long or arduous, has been able to stamp out their yearning for liberty and freedom.

It is now more than 90 years that immigrants from the land of Slovakia began arriving in the United States in large numbers. But this land we now call America has felt the Slovak leaven long before the Civil War. Slovak ingenuity and craftsmenship were highly valued by the redoubtable Capt. John Smith, when on September 25, 1608 the sailing ship "God Speed" sailed into Jamestown harbor with 6 skilled craftsmen on board, 2 of whom, Juraj Mata and Jan Bogdan, were Slovaks. These men, with the 4 Poles, Lowicki, Stefanski, Zrenica, and Sadowski, came in answer to an urgent plea by Captain Smith to his London agents, to "send 30 carpenters, blacksmiths, and bricklayers rather than a thousand of the kind we have here." It was largely due to the skilled efforts of these craftsmen that the Jamestown colony was able to secure a foothold on the American continent.

And in the War of the Revolution, Slovak love of liberty was exemplified in the military exploits of Count Maurice Benovsky who served with Pulaski at Savannah and who was born in storied Nitra, that ancient See of St. Methodius. Shortly after the first shot was fired at Fort Sumter, Slovak immigrants living in Chicago, under the leadership of Gejza Michalovich, petitioned the President of the United States for permission to organize the Lincoln Brigade which served so valiantly on the side of the Union Army. Hundreds of Slovaks served in the United States forces in the Spanish American War, and of course, thousands were doughboys in World War I and more thousands served as GI's in World War II and Korea.

It is clear therefore, that the thread of slovak history in the New World is long and unbroken from earliest colonial times to the present. And nowhere have Slovak immigrants and their descendants taken firmer root than in the mining communities of northeastern Pennsylvania. Here the first Slovak churches were organized. Here were founded the first fraternal societies, and the earliest schools, social groups and cultural organizations. The roots of the Slovaks are deep in the soil of Wyoming Valley, and it is heartening to recognized that the third and fourth generations are carrying on in the footsteps of the early arrivals.

When your Slovak forefathers disembarked at Ellis Island by the thousands in the period between 1860 and 1895, it was not just chance that saw them endowed with solid potentials for American citizenship. For one quality they had in abundance—faith. Religion for them was not an isolated phenomenon; their devotion to God was an integral part of their lives and the more than 300 parishes in America founded by Slovaks and their descendants serve as eloquent testimony to a rich spiritual heritage. And it was this very heritage, coupled with the Slovakian love for liberty that enabled the early pioneer leaders, the Furdeks, the Rovnianeks, the Novomeskys, the Jankolas and their later compatriots like Murgas, Onda, Porubsky, and Mamatej—to integrate themselves so firmly in our American democracy and imbue their followers with the essentials of loyal citizenship. A good Slovak could not help but be a good American because he has always known his true relationship with God. Like the 56 men who prepared and signed our Declaration of Independence, your pioneer Slovak forefathers knew that man is a creation of God and is graced with qualities that are his, at birth, as a special gift from God.

In these days of intellectual and moral confusion, we ought to ponder the illustrious words that comprise the Declaration of Independence. Nations come and go in history, their real strength powered by a spiritual dynamism. Their decay is rarely the product of material deterioration or defeat in armed conflict. These are just results, not causes. A nation really decays when it begins to weaken its spiritual motivation. To exist, a nation must have faith in its traditions if it is to have faith in itself. All lovers of liberty can well emulate those doughty inhabitants of Slovakia today. Notwithstanding the pratings of dictators and the mouthings of Communist bosses, the gallant sons and daughters of Slovakia know there is no substitute for true democracy, even if it is enclosed in an attractive package with a red wrapper on it.

It is indeed heart-rending to contemplate the cruel Communist yoke under which the 3½ million Slovaks in the old country are constrained to live their lives. But knowing the Slovaks as I do, I know that the glory of Slovakia will not long be dimmed, and that the Slovaks unquenchable thirst for liberty, freedom and democracy will prevail. Just as liberty-loving Slovaks have refused to live under enslavement by the Turks, Magyars, and other conquerors, so will they in the end repudiate the hammer and the sickle for the torch of liberty. I proclaim this confidently: The flaming spirit of the Slovaks that nurtured the magnificent Janosik, whose exploits live in song and story, will no more yield to Communist domination than the Janosiks succumbed to thei oppressors. You thousands of Americans of Slovak descent should take heart and have abiding faith, for you have come from ancestors who have rejected enslavement of the spirit even when the flesh was in bondage.

My friends, in these turbulent days of the mid-twentieth century, we Americans can hold our heads high, humbly proud in the knowledge of the heritage that is America. That heritage is in good hands when it is entrusted to the likes of the more than 1½ million Americans of Slovak descent. You can have no nobler destiny as Americans than this, that following in the footsteps of your intrepid pioneer ancestors, and heeding the example of the framers of the Declaration of Independence, you too hold aloft the banner of freedom, love of God and sound Americanism.

Party Rule in Congress

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. SIMPSON of Pennsylvania. Mr. Speaker, President Eisenhower, in his state of the Union message delivered on January 6, 1955, referred to the fact that the Democrat Party, as a result of the 1954 elections, was responsible for the organization of both Houses of Congress. He said:

Our quest for peace and freedom necessarily presumes that we who hold positions of public trust must rise above self and section—that we must subordinate to the general good our partisan, and our personal pride and prejudice. Tirelessly, with united purpose, we must fortify the material and spiritual foundations of this land of freedom. As never before, there is need for unhesitating cooperation among the branches of our Government.

At this time the executive and legislative branches are under the management of different political parties. This fact places both parties on trial before the American people.

In less perilous days of the past, division of governmental responsibility among our great parties has at times produced indecision approaching futility. We must not let this happen in our time. We must avoid a paralysis of the will for peace and international security.

Now in the traditionally bipartisan areas—military security and foreign relations—I can report to you that I have already, with the present leaders of this Congress, exchanged assurances of unreserved cooperation. Yet, the security of our country requires more than maintenance of military strength and success in foreign affairs; these vital matters are in turn dependent upon concerted and vigorous action in a number of supporting programs.

As the session draws to a close, observers of the congressional scene are examining the record of "both parties on trial before the American people." The record clearly shows that this has been a do-nothing Congress. It has accomplished little toward the advancement of President Eisenhower's comprehensive program.

Mr. Speaker, the July 4 issue of Newsweek contains an article by its distinguished columnist, Raymond Moley, which reviews the support afforded the President's program by the Members of this body on those issues where the party lines were drawn. Mr. Moley divides the issues before the Congress into two groups. The first includes those issues on which the party leaders were united in supporting the President. These issues do not reflect party support for the President's program. The other group of issues are those on which the Republican and Democrat leaders of the House were divided and were attempting to rally their followers either in support or in opposition to the President's program.

On these issues, which included the farm bill, the tax bill, and the atomic energy revision of 1954, the parties were sharply divided. The Republicans did support President Eisenhower, and the Democrats were united in their opposition to him.

A review of the votes on the divided issues clearly shows the necessity for the election of a Republican Congress in November. The President must be given the opportunity to complete his program for peace and prosperity during the next 4 years. This can only be accomplished with a Republican Congress.

Mr. Moley has provided every precinct worker with facts which should assist him in convincing his neighbors that they have a responsibility to go to the polls and elect a Republican Congress in November.

Mr. Speaker, I ask unanimous consent that the text of Mr. Moley's article in the July 4 issue of Newsweek may be included in the RECORD as a part of my remarks.

The article follows:

PARTY RULE IN CONGRESS

(By Raymond Moley)

Last week I presented in this space a study of voting in the United States Senate in the 83d Congress and in the 1st session of the 84th Congress. This study was concentrated on the votes on issues in which the leadership in the two parties were definitely in opposition to each other—in short, on issues on which the party line was sharply drawn. The record showed that there is genuine two-party government in the Senate. My conclusion from this is that, since President Eisenhower has clearly defined himself as a Republican who believes in party discipline and loyalty, these votes show the degree to which the President if reelected can expect cooperation from Democrats. This disposes of the fallacy that Mr. Eisenhower would do about as well with a Democratic Congress as with a Republican Congress.

This week I shall show that the same situation prevails in the House as in the Senate.

DOWN THE LINE

During the 83d Congress there were 147 yea-and-nay rollcalls, and in 39 of these there was a genuine party division in which Majority Leader HALLECK and Whip ARENDS were opposed by Minority Leader RAYBURN and Whip MCCORMACK. Among those issues were agriculture, atomic energy, and taxes.

The individual positions taken by members who voted on those issues totaled 15,708. Republicans who followed their party leadership accounted for 6,832 of those positions, and Republicans who opposed their leaders accounted for 1,252. Democrats following their leaders accounted for 6,023 positions, and Democrats crossed the party lines on 1,601.

The same pattern was followed in the 1st session of the 84th Congress. Here, since the speakership changed hands, my guides for leadership are the votes of Minority Leader MARTIN, and HALLECK and ARENDS on the Republican side and of Majority Leader MCCORMACK and Whip ALBERT. Members took 9,595 positions on 23 issues on which the party line was drawn. There were 3,499 Republican positions in support of their Republican leadership and 966 Republican positions across the lines. Democratic positions supporting their leadership were 4,361, with 769 deviations.

It is interesting to note that the party in control seemed to have better control of its Members than its opposition had in both Congresses.

In the 1st session of the 84th Congress the Republican Party's leadership received perfect support from Representatives ALLEN of Illinois, BENTLEY, BUDGE, CLEVENGER, COLE, GAMBLE, KILBURN, REED of New York, TABER, WILLIAMS of New York, LAIRD, UTT, and SIMPSON of Pennsylvania. On only one issue did the following deviate: BATES, WIGGLESWORTH, CEDERBERG, DONDERO, FORD, HOFFMAN of Michigan, MEADER, THOMPSON of Michigan, WOLCOTT, DAVIS of Wisconsin, GWINN, DEROUNIAN, ST. GEORGE, JACKSON, YOUNGER, KING of Pennsylvania, MUMMA, MCGREGOR, MASON, VURSELL, REECE of Tennessee, SCRIVNER, and DEVEREUX.

On the Democratic side, the nondeviators were ADDONIZIO, RODINO, TUMULTY, STEED, ANFUSO, BUCKLEY, CELLER, DAVIDSON, DOLLINGER, KLEIN, POWELL, ROONEY, ZELENKO, ASHLEY, VANIK, BAILEY, BURNSIDE, BLATNIK, BOLLING, CARNAHAN, CHRISTOPHER, BOYLE, KARSTEN, GORDON, KLUCZYNSKI, MURRAY of Illinois, PRICE, DIGGS, GRIFFITHS, LESINSKI, MACHROWICZ, RABAUT, DOYLE, KING of California, MILLER of California, MOSS, SHELLEY, ELLIOTT, METCALF, PFOST, PERKINS, and REUSS.

CROSSING THE LINE

The extent to which Republican leadership and the President enjoyed Democratic support is shown by the number of times certain Democrats voted with Republican leadership. But the number of the cases in which those certain Democrats crossed party lines indicates that they were only about as helpful to the President as the Republicans who were most likely to desert their leadership. Among those Democrats who helped the President, most were from Virginia and Texas.

This record of party cohesion should induce both Republicans and Democrats to labor just as hard to elect a Congress of their party as a President. A President is entitled to a sympathetic and responsive Congress. That makes for responsible government.

Numbers Aren't Strength

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. OSTERTAG. Mr. Speaker, in the current debate over the adequacy of our Armed Forces and programs, the New York Times has ably pinpointed the crux of the matter. Numbers are not strength. We need overall strength in our Military Establishment, and it should be balanced strength. But it is as dangerous and unwise to try to outbuild the Russians in every category of weapons as it is to try to oppose them at every spot on the globe where they instigate disorders. Let us not be talked into a national anxiety neurosis by politicians in or out of uniform.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD the aforementioned editorial from today's New York Times, entitled "Numbers Aren't Strength":

NUMBERS AREN'T STRENGTH

Presumably everybody involved in the argument over B–52's agrees that for the security of the free world and the safety of the United States we have to maintain armed forces that, in the large, are inferior to none. The military menace of Communist imperialism is just as great as ever, in some ways made even more dangerous by the progression from a cold into a smiling war. The United States can and must continue to build its strength to preserve a fully balanced armed force ready to meet potential Communist aggression in the form of either a nuclear or a conventional war. The only way to insure against such a development is a well-rounded preparedness that is not based upon anybody's pet theory or any statesman's pet politics or any service's pet propaganda.

The advocates of a speed-up and expansion of B–52 (heavy jet bomber) construction may be right. But if they are, it isn't because the United States must exceed Russia in every category of the entire weapons arsenal. We may need more B–52's (or any other type of arm) than we are getting, in order to bring our whole defense posture into better balance. We don't need them just to prove that we can outbuild the Russians, or just to be able to say that we have more heavy jet bombers than the Russians have.

The cardinal point to remember in the argument over the size of our Air Force (as over the size and relative strength of each of the other services) is that our country doesn't need to prove its superiority in numbers of weapons. With our allies, we do have to have superiority, and to maintain that superiority in total strength and in total readiness for any kind of armed conflict. There is a big difference between numbers and strength; and it is one that some generals and some politicians evidently need to be reminded of again and again.

A Minister Looks at the New Russia, by Rev. David H. Newson, Watchung Presbyterian Church

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include a timely and significant article by Rev. David H. Newson which appeared in the Independent Press of Bloomfield, N. J., on June 21, 1956:

A MINISTER LOOKS AT THE NEW RUSSIA

(By Rev. David H. Newson, Watchung Presbyterian Church)

I'm exicted about the new Russia, Krushchev's denunciation of Stalin is a turning point in history if I ever saw one—not that Khrushchev or any of the other leaders in Russia look upon it as such. To them it is just another tactic to dupe their own people and to outwit the world. The Russian bear has not become a lamb, it has simply killed one of its cubs—a cub who was taking more than his share of the honeycomb. Why then am I so excited and why do I think this is a turning point in history? Because this tactic no matter what its objective may be, has recognized the popular appeal for moral structures in society and has condemned the immoral structure of the old regime. I am not saying that the present leaders intend to pursue their objectives now on a moral foundation. I am only saying that they have seen the need to pretend to do so and this is something which to me speaks volumes concerning the state of affairs in the heart of the common people of Russia.

It leads me to believe that there must have been emerging in Russia in the last

few years a powerful universal feeling of nausea for the conduct of government by the Communist Party. I say nausea for the party rather than for Stalin—for Stalin had rather effectively set himself up as a hero and all his crimes were easily identified with lesser men and party committees. Of course with Stalin's death he was more a hero than ever but the party continued to bear the blame for the past and to accumulate it in the present until it felt compelled to seek out a scapegoat and channel off this rising tide of hate into a harmless reservoir. Stalin himself seemed the perfect choice. Choosing him they not only were able to destroy the myth of past heroes but also prevent new ones from emerging. Whether they have actually been able to channel off this rising tide of hatred in the direction of Stalin is a debatable question. At least it has instilled in the common man's heart the hope that things will go differently from now on. This whole action is demoniacally clever and I dare say they have high hopes—that is the party leaders—that their scheme will take care of the present generation and a new scapegoat can be found for the next.

One thing they overlook in their thesis. Granted hatred is an emotion which can be channeled off if given a suitable object but we who live in the moral climate of religion know that a moral structure is something which man hungers for. You may well get rid of his hate in periodic releases but you don't get rid of his hunger for love in the process. Marx taught that religion was the opiate of the people. This was a grave error. It is not an opiate but a food and a food which is essential to all men and they will seek after it desperately no matter who they are or where they live.

For some time communism represented a kind of religion—without the Communists knowing it. It had a creed, even a God—the common man, a discipline—demanding personal sacrifice and courageous action but it made the fatal mistake of presuming that the common man, once given his proper place in the sun would from out of himself produce a morality which would be the Kingdom of God itself. This never happened and never will happen and so communism which began as a kind of religion died as a religion and grew as a machine. This meant that it no longer satisfied, even within its own party membership the desperate need for the food of religion. Although the Communists have tolerated churches in Russia on the basis of an opiate for its people—in this toleration—its people have been fed—not an opiate but food. They have been fed not hatred but love, even although the structure of the Russian Orthodox Church has been drastically changed to conform to party wishes. The same is true of the Russian Baptist Churches. What I am saying is that the Kremlin is dealing with more than the force of hatred—it is dealing with the force of moral need—and they have not found a channel where this can flow off harmlessly.

One other observation. When they destroyed the myth of Stalin as a hero they did something else as well. I remember well a few years back when at Christmas time we heard that the Russian children were given Stalin to worship instead of Jesus Christ. This horrified me at the time but it comforts me now. Stalin did his best to become a God—a God by the way who did not have to be crucified. Now that they have destroyed him in that myth—there is a wonderful chance that our great hero—the Lord Jesus Christ might enter in to fill the dreadful vacuum. This is what excites me, for it is Jesus Christ who as always creates the turning points in history.

Appeasing Soviet Menace

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, under unanimous consent, I want to call to the attention of the Congress an article appearing in the Newark News on July 1, 1956, entitled "Appraising Soviet Menace." Mr. Arthur Sylvester's analysis of the status of NATO and of the threats posed by the new Soviet tactics is, I believe, excellent and worthy of our attention.

APPRAISING SOVIET MENACE—SECRETARY DULLES' SOMEWHAT ROSY VIEWS CONTRASTED TO THOSE EXPRESSED BY GENERAL GRUENTHER

(By Arthur Sylvester)

WASHINGTON.—How you view the state of the world today depends on where you sit.

If you sat in the State Department auditorium last week and listened to Secretary Dulles' press conference, things sounded great. So far as communism in the Soviet Union, its satellites, and in the world ouside was concerned, it seemed as if all we had to do was sit back and wait for the apple to fall in our lap.

But if you sat with the governors of the 48 States and 5 Territories in Atlantic City, as this correspondent did, and heard Gen. Alfred M. Gruenther, NATO commander, it sounded as if we are in much greater peril than Mr. Dulles suggested. The burden of General Gruenther's remarks was that Soviet "sinister dedication" still confronted the West with most dangerous possibilities despite the new smiles it is wreathed in.

The unusual presence of television cameras at Mr. Dulles' press conference, taken in conjunction with the prepared statement the secretary opened with, left no doubt that the optimistic character of his remarks represented a considered and propaganda viewpoint. The picture presented was one in which the Soviet Union, perplexed and at internal odds, has been suffering lean years so far as victories in the cold war with the West is concerned.

Yet no such rosy view was sketched by General Gruenther. His recital of the strains on the North Atlantic Treaty Organization, whose defense he heads up, stressed the gains being made by the Soviet as a consequence of its new tactic. The general admitted that as of today NATO cannot fulfill its military mission of holding western Europe against a combined Communist attack that no one actually expects, much less exploit its political and economic potentialities.

OTHER DISTURBING FACTORS

But there are other disturbing factors Mr. Dulles chose to omit. The new mild attitude of the Moscow Communists has made their penetration of the world outside the Iron Curtain vastly easier in Asia and the Middle East. In the latter region the Soviet simply leaped over the NATO defense barrier to woo Egypt with an arms deal and economic offers.

Thus in the area most vital to the Atlantic nations the Russians have achieved an advantage they never had before, and one that is obviously being exploited with great danger to the West. The implications of Egypt's arms deal with the Soviet bloc and the growing uncertainty about oil supplies from the Middle East have given the greatest concern to the British, if not to the United States Secretary.

Mr. Dulles minimized the renewed kissing-cousin relationship of Yugoslavia's Marshal Tito with the Kremlin leaders. But it's a factor a NATO commander cannot regard as a gain for the West. The Soviet smiles are making life difficult for General Gruenther in Greece, a NATO partner particularly important from the military standpoint, and in France where relaxation from defense burdens will be hard to resist if communism no longer appears aggressive, as Moscow is working to make it appear.

IN WEST GERMANY

In West Germany, Chancellor Konrad Adenauer's government has run into increasing opposition. General Gruenther emphasized to the governors, as he has done on other occasions, that the heart of the NATO defense against an attack from the east is the employment of atomic or hydrogen bombs against massed land forces.

The theory is to construct a military shield so impregnable that the Soviet Union would have to concentrate its forces to break through. Such concentrations would then become the natural target of atomic weapons. But a German contribution of at least 500,000 soldiers is needed before NATO can present so stout a defense line. It is the raising of forces of such magnitude that is giving Dr. Adenauer difficulty.

Probably it is inevitable that Messrs. Dulles and Gruenther should see the world scene in different lights. The Secretary's job is to create the conditions that allay the fear of war. The general's job is to prepare for the situation that would follow if the Secretary failed in his effort. Every time Mr. Dulles sees the world through rosy glasses it makes it more difficult for General Gruenther and his associates to convince NATO members, including the United States, that the Soviet menace persists and there should be no relaxation in military posture.

THE CASE OF ICELAND

The case of Iceland makes the point. It joined NATO in 1949 on the understanding no foreign troops were to be stationed there. Then came the Korean war with the evidence of Soviet and Red Chinese willingness to resort to violence. In the face of this Iceland consented to the establishment by the United States of NATO bases. These became a vital anchor in General Gruenther's defense system.

Now, with the Communist threat apparently receding and the fears born in 1950 allayed, Iceland wants the bases evacuated. From General Gruenther's standpoint, the loss of the Iceland bases would constitute a grave setback to his defense plans. But Mr. Dulles says, "Certainly, I would say it does not indicate any great victory for communism."

Federal Aid for School Construction

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram from Mr. Clarence Mitchell, director,

Washington Bureau, NAACP, to the editor of the Washington Post and Times Herald, Tuesday, July 3, 1956:

THE EDITOR, THE WASHINGTON POST AND TIMES HERALD,
Washington, D. C.:

Had you attended the 1956 convention of the NAACP which met in San Francisco last week, I doubt that you would have written the second part of your editorial of July 2 entitled "School Encumbrance." At that convention we heard the stories of persons who have been fired from their jobs, personally intimidated and, in some cases, forced to flee to other communities for safety. These people have merely sought to encourage court action to implement the United States Supreme Court decision in the school cases. You would also have been able to talk with citizens from South Carolina, Georgia, and other States who would have told you that they reject the theory that new schools, even if Jim Crow, are better than what their children attend now. They rightly concluded that unless the Powell amendment is approved recalcitrants will use Federal funds to build totally segregated schools. Our delegates also passed a resolution declaring that those who opposed the Powell amendment are, in reality, voting to give money for what they know will be more segregation. When we strip this issue of all the fine words and lofty statements it is found to be this: Some are for the school bill for political reasons; others are for it because they sincerely want to see the children of the Nation go to classrooms in better buildings. In both instances, however, they are willing to sacrifice the civil rights of colored people in order to obtain these ends. No amount of editorial writing or speechmaking will change this dreadful truth.

CLARENCE MITCHELL,
Director, Washington Bureau, NAACP, Washington, D. C.

Questions for an American

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. MULTER. Mr. Speaker, the following article by Donna M. Dickinson from the Christian Science Monitor of July 2, 1956, is must reading for every American.

QUESTIONS FOR AN AMERICAN
(By Donna M. Dickinson)

BANDUNG, INDONESIA.—The name of Lucy has a familiar ring to Indonesians, 80 million people whose skin colors range from golden beige to dusky cocoa to black. For any American visitor here there are embarrassing questions to answer.

In an English language class for labor leaders, a distinguished white-haired gentleman asked, "Is it possible to have a longer conversation period today?" Although he asked in a kindly way, I braced myself to face what was coming. "Why is it," he questioned with concern, "that Americans dislike colored people?"

A Javanese mother of four university students and the wife of one of Indonesia's 80 engineers asked, "Are there any brilliant Negroes?"

A third-generation Chinese Indonesian, who with the writing of his thesis will become the second in this country to gain a Ph. D. in nuclear physics queried, "I can't remember but which party is it—the Republican or the Democratic—which stands for segregation?"

The newspapers had been full of reports from Alabama—covering student riots and a faculty decision to oust one Negro girl who wanted an education at her State university. One editorial commented on the furor at Tuscaloosa, "Little do they realize that if there is anything that has disgraced their university finally and forever, it is their behavior."

Unlike most editorials on this theme, this one ends on a cheerful note, "It is well, too, that the hoodlums who started the riots do not have the unanimous backing of their fellow Americans. Indeed, even some of the newspapers in the United States are bitter in their condemnation of the Alabama affair."

From where I sat on the visiting instead of the home team's side, it all began to sound like Armageddon. Like Will Rogers, all I know is what I read in the papers and it seemed as if every street corner in the United States must have a crowd and 2 squaring off, 1 black and 1 white. Of course, it was only a small number of students and a large number of outsiders who rioted when Autherine Lucy tried to attend classes. And I am sure that many newspapers in the South as well as the North condemned the affair.

But Asians do not have this perspective. To those who live on this far island of Java the United States of America was founded on the proposition that all men are created equal. The existence of even a small minority who act like they do not believe this raises doubt in the minds of men whose skin is not white.

It is 2 years since the famous Supreme Court decision to reinterpret the 14th amendment—"nor shall any State * * * deny to any person within its jurisdiction the equal protection of the law." This interpretation was lauded round the world. But it brought questions too. Why is it necessary for the highest court in the world's most famous democracy to make a statement that "separate but equal" schools are generally unequal? Does America have first- and second-class citizens?

For many months we have watched this daily preoccupation with the Negro question. Miss Lucy is one link in a long, long line. There have been reports that several legislatures will pass laws to protect their sovereign rights from infringement.

An inordinate interest was shown in the wolf-whistle lynching. In the words of one editor, "He is dead because he whistled at a white woman. Mind you—he whistled at her."

An officer of the NAACP was murdered and burned in his car on a lonely road in Texas.

The Indian ambassador to the United States was refused a table in an airport restaurant and ushered to "separate but equal" quarters in the back. "I didn't know he was an ambassador," the hostess explained.

Nat King Cole, whose records are sold in hundreds of Javan shops, was attacked on a Birmingham stage by six white men.

There have been accounts of a revival of daylight Ku Klux Klans, organized to "resist by all legal means, and without violence, any radical change in the southern way of life."

The questions is repeated, "How does the United States Government feel about Negroes?" Our Government is represented in the minds of Asians by the words and actions of all Americans.

A young Indonesian publisher on a State Department grant was waiting between trains in a southern station. He had heard about separate restroom accommodations. "But, still, I was a little surprised to see the signs," he said. "I started in the door of the colored restroom. But a man stopped me. He pointed to my black velvet pitchi hat and asked where I came from." Mr. G's eyes sparkled with amusement. "When I replied, Indonesia, he said, 'You go in the other door.'"

Sensitivity to this unalterable gift, the color of one's skin, has not been acquired recently. It came first with Hinduism and the caste system from ancient India in the first century A. D. and it has remained. The Brahman caste was the whitest and the group outside Hindu society—lower than the lowest—was the outcaste group and it was the darkest.

A beautiful Javanese mother told me, "You know I am too dark to be considered beautiful by own people. The whiteness of the skin is important here."

During colonial times if an Indonesian baby was light-skinned, friends would complicent the parents by saying—seperti belanda—like a Dutch baby.

At the Afro-Asian conference in Bandung in April 1955, one Indonesian newspaperman pointed out that in spite of the fact that this was "the prayer meeting of the colored peoples of the world," there were color lines drawn. The whitest people from the Near East were the most condescending. The very dark from Africa had little to say about the administration of the conference.

These are the sins of our fathers and their mercantile system of empire is plaguing us now to the third and fourth generation.

The American dream is still a vision of glory to the world. All the propaganda and prevarication of the cold war, even glimpses of incidents like Miss Lucy's, cannot change the wonder of it. There is a land of self-evident truth and equal men under God. The Indonesians want to believe and so the questions keep coming: "It is true that Negroes may only live in certain sections of your cities? Does the color of one's skin exclude one from certain jobs? Why do restaurants 'reserve the right to refuse service to anyone'? Is it true that in some States large numbers of Negroes are not allowed to vote? I know some Negroes are wealthy, but that isn't everything. Do they still feel inferior?"

It is a strange experience to stand out because of the color of one's skin. But now I know. I have experienced a poke which could have been intentional. I have experienced a discomfort at finding it necessary to defend and explain my country and an uneasiness at being outnumbered 1,000 to 3 in a crowd neither friendly nor hostile, and heartache when the husband of a friend refused to acknowledge an introduction.

Carlos Romulo has observed, "It is not enough that we have finally risen to the top. We must be mature enough to be nonviolent to the real minority of the world—the white people."

It is indeed a time for maturity and thought—for seeing ourselves as others see us. It is a time to act for right. Dreams cannot be built by men who only stand and wait. And it must be a time for nonviolence and prayer—a prayer taught us by one from a Middle Eastern country. "Forgive us our trespasses as we forgive those who trespass against us."

Inviting Air Collisions

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I

include the following editorial from the Washington Post of Wednesday, July 4, 1956:

INVITING AIR COLLISIONS

In the aftermath of the air tragedy in the Grand Canyon, it is worth noting that the dillydallying of the administration over a second Washington airport is an invitation to similar accidents here. The hazard of midair plane collisions such as apparently occurred over Arizona had been regarded as negligible (though the danger increases with the amount of traffic, and the accident calls both for new exploration of the feasibility of a nationwide ground radar collision warning system in connection with current airways studies, and for another look at the safety of the Civil Aeronautics Administration practice of clearing planes to fly visually 1,000 feet above the weather roof). The hazard at the Washington National Airport, however, is real, obvious, and imminent.

Considering the restrictions on the traffic pattern, National is probably the most congested of any airport in the country. Good luck has complemented the extraordinarily skillful work of tower crews in preventing accidents. But the string of good luck cannot be expected to last, particularly with the advent of jet transports and the demand to cut down bad weather delays. The sensible way to minimize the chance of accident here is to proceed with construction of the Burke Airport, which has been recognized for more than 5 years as the only practicable solution.

So far the Department of Commerce has not forwarded the CAA's estimates to Congress, presumably out of a wish to avoid further budgetary burdens during fiscal 1957. But the Administration cannot consistently seek to improve the Nation's airways and yet refuse to take the most essential step for relief in Washington. Even if an appropriation were obtained now, it would be months before construction could start and years before there was any reduction of the load at National. Meanwhile congestion—and the accident hazard—will grow. To procrastinate further would be worse than shortsighted; it would be well nigh criminal.

Future Program of the Inter-American Bar Association

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. FASCELL. Mr. Speaker, I commend to my colleagues the recent address of William Roy Vallance, assistant legal adviser, Department of State, and Secretary General of the Inter-American Bar Association at the annual meeting of the Florida bar.

It was significantly appropriate that the future program of this inter-American organization was discussed in Florida. Florida has always been in the forefront in fostering and promoting the solidarity of South and North America. We in Florida have long had the realization that solidarity of the Western Hemisphere is the bulwark upon which rests the free world.

I am proud that this organization of the honored law profession has had the active support of my own bar associations of Dade County and Florida. I extend my congratulations and the good wishes of many constituents to Prof. David S. Stern, University of Miami School of Law, and Marshall J. Langer of the Dade and Florida Bar, who have been elected member of the council and Assistant Secretary General, respectively.

I am happy to bring to the attention of my colleagues in the House this report on the Inter-American Bar Association. Its objectives are noteworthy not only for the benefit to the profession but also because of the tremendous potential available for assisting and aiding that understanding and cooperation between North and South America which is so essential to our existence.

The address by Mr. Vallance follows:

FUTURE PROGRAM OF THE INTER-AMERICAN BAR ASSOCIATION

(Address of William Roy Vallance, assistant to the legal adviser, Department of State, and secretary general of the Inter-American Bar Association at the annual meeting of the Florida bar)

Mr. Chairman, distinguished guests, and members of the Florida bar, it is always a privilege for legal officers of the Department of State to have an opportunity to discuss with members of the bar some of the problems which are of mutual interest. When I learned that our distinguished Assistant Secretary of State, Henry F. Holland, due to circumstances beyond his control, would not be able to participate in the present meeting as he had planned to do and that I might pinch hit for him, I welcomed the opportunity to be with you and to discuss the subject in which I am deeply interested, namely, the future program of the Inter-American Bar Association. I realize that it is difficult for me to substitute for the vigorous Texan who was to have addressed you on this occasion, and I trust that on some future occasion you will have the privilege of hearing one of his learned and interesting addresses.

As you know, I have recently been in Texas attending the Ninth Conference of the Inter-American Bar Association and consequently I am very enthusiastic about the capable Texans who made the plans and carried out the arrangements for this highly successful meeting of judges and lawyers from nearly every nation in this hemisphere. It was inspiring at the rollcall at the opening of the conference to have lawyers respond who had traveled many thousands of miles to participate in that meeting, which was attended by members of our profession from Canada to Argentina and by representatives from other parts of the free world. Those present were especially moved when the 23 delegates and official representatives from the free Government of Argentina arose and received an enthusiastic welcome from the other delegates.

Our brilliant leader, President Robert G. Storey, reported at the close of the Conference that some 563 delegates had participated in it and that approximately 1,000 persons, including members of families and other interested persons had taken part in some of the meetings. The joint meeting in honor of past President Herbert Hoover [1] was attended by over 2,500 persons who listened intently to his address on the subject "World Experience With the Karl Marx Way of Life."

Upon visiting this great State of Florida which has so many important contacts with Latin America and so many citizens related to residents of other parts of the Americas, it is especially interesting to note the rapid development that has taken place here in recent years, especially along cultural lines. The attractions of outdoor living in Florida have been depicted in many recent publications and it is only natural that we should look forward to a time when our colleagues from other countries of this hemisphere may have an opportunity to visit your great State at a conference of the Inter-American Bar Association, similar to the one which has just been completed in Dallas. Officers of the association were greatly pleased and highly honored to receive such an invitation at the close of the Dallas conference for 1959 and it is my sincere hope that our friends from the North and the South may have an opportunity to find out for themselves the relative advantages of Florida and Texas. In the circumstances, it seems quite appropriate for me to tell you something about the future program of this great association to which you have extended an invitation in order that you may have some conception of the size of the group and the general nature of the guests who may accept your cordial invitation 3 years from now.

HISTORY

Accordingly, I will give you a brief résumé of the history of the Inter-American Bar Association and then discuss some of the projects which this organization has undertaken to study and present reports on at later meetings.

The Inter-American Bar Association was founded at Washington, D. C., on May 16, 1940, and consequently will be 16 years old in another week. For several years discussions had taken place in North and South America about the desirability of establishing such an organization of lawyers of this hemisphere. Dr. James Brown Scott and Col. John H. Wigmore had presented papers on the subject and the American Bar Association at its meeting at Kansas City in 1937 adopted a resolution on the subject. In South America, Dr. J. Honorio Silgueira, who was president of the Argentine Federation of Bar Associations, proposed in 1926 to the Institute of Brazilian Lawyers that a closer relationship should be developed among the bar associations of Argentina, Bolivia, Brazil, Chile, Paraguay, Peru and Uruguay. The subject was also discussed at Pan American conferences. Consequently, when the Eighth American Scientific Congress met in Washington in May 1940, a group of distinguished lawyers who were members of Section Nine on International Law, Public Law and Jurisprudence of that congress, proceeded to consider a draft constitution for an Inter-American Bar Association which had been prepared by a committee of the section of International and Comparative Law of the American Bar Association of which I was chairman. This draft as revised, became the constitution of this organization which now has 80 members, chosen from among the legal organizations of this hemisphere.

When the American Bar Association met in Philadelphia in 1940 [2] it ratified the action of its representatives who signed this constitution. Since then its presidents have attended nearly all of the nine conferences that have thus far been held and its section of international and comparative law has actively supported the objectives of the organization. We were greatly pleased to have Hon. Smythe Gambrell, present president of the American Bar Association, carry forward this practice at the meeting of the association in Dallas at which he delivered an impressive address.

FLORIDA JOINS

It is especially worthy of note that the Florida bar became a member on January 1, 1942, pursuant to a resolution of the board of governors dated October 10, 1941. The

[1] For complete address of Mr. Hoover see the CONGRESSIONAL RECORD, vol. 102, No. 67 for Wednesday, April 25, 1956, pp. A3351–A3353.

[2] ABA reports, vol. 65, section action, p. 329; house of delegates action, p. 96.

constitution was accordingly signed by President Robert R. Milam and attested by Edwin R. Bentley, executive secretary. The Dade County Bar Association became a member on September 8, 1943.

An outstanding citizen of Florida, Cody Fowler, of Tampa, participated in our first conference at Habana and was of great assistance to the officers in making that meeting a success.

PURPOSES

The purposes of the association are of special significance in view of the recent developments in some of the nations beyond our southern border. Article I of the constitution sets forth these purposes as follows:

"To establish and maintain relations between associations and organizations of lawyers, national and local, in the various countries of the Americas, to provide a forum for exchange of views.

"To advance the science of jurisprudence in all its phases and particularly the study of comparative law; to promote uniformity of commercial legislation; to further the diffusion of knowledge of the laws of the various countries throughout the Americas.

"To uphold the honor of the profession of the law; and to encourage cordial intercourse among the lawyers of the Western Hemisphere.

"To meet in conferences from time to time for discussion and for the purposes of the association."

The association has great potentialities for accomplishing these constructive purposes. Closer ties of personal friendship and increased mutual confidence among the leaders of the bars of the Americas has contributed to improvement in the administration of justice. The exchange of legal literature has been useful in the consideration and drafting of new legislation. The small differences and great similarities between the civil and common law are being revealed to practitioners who become familiar with both systems. An intelligent understanding of such diversity as exists in the customs and procedures employed to achieve justice by resort to reason and to use pacific means of settlement of disputes will serve to strengthen both systems of law. The meetings of the association provide special opportunity for the lawyers of the new world to cooperate in strengthening the foundations of democratic institutions so that they may be maintained free from the abuses of autocratic governments.

Dr. Fernandez Supervielle, the first president of the association, at its first meeting expressed its aspirations when he said: "The war we are witnessing is a struggle between the unbridled fury of the material forces of man, applied to evil by the selfish and criminal instinct of a group of men, and the supreme effort made by peoples who aspire to carry the spiritual and moral progress of human beings to a higher degree than has been so far reached. The struggle must end in the triumph of spirit over matter, and then a new era and a new life is to begin for humanity • • • Let us hope that • • • with the help of God, the lawyers of this continent will be able to apply their greatest efforts to the task of leading these young and vigorous American countries to the forefront in world affairs, and over the road to a more peaceful, more secure, more worthy and more Christian life—over the road of a true civilization."

MEMBERSHIP

In many of the American nations associations of lawyers have been organized, some on a national basis and others on a city or State basis. It was decided to admit to membership only approved lawyers' associations, with the understanding that individual members, members of a member association may participate in the activities of the association, as delegates to conferences or as members of committees or sections.

A member association may be represented at conferences by as many delegates as it desires, but each delegation is limited to one vote.

At Dallas, an important amendment of the constitution was made whereby individual membership was authorized, consisting of four categories, namely, junior, senior, associate and life membership. This important amendment does not change the fundamental structure of the association as composed of bar organizations but permits individuals to participate in the work of the committees and other activities.

ORGANIZATION FOR CONFERENCES

In connection with the proposed conference in Florida it is desirable for interested members of your association to become familiar with the organization under which conferences have functioned. The association has held nine conferences, namely, Habana, Cuba, 1941; Rio de Janeiro, Brazil, 1943; Mexico City, 1944; Santiago de Chile, 1945; Lima, Peru, 1947; Detroit, Mich., 1949; Montevideo, Uruguay, 1951; Sao Paulo, Brazil, 1954, and Dallas, Tex., 1956. At the Detroit conference in 1949 an organization structure was adopted, providing for 14 committees dealing with the following subjects:

Public international law.
Private international law.
Constitutional law.
Municipal law.
Civil law.
Civil and commercial procedure.
Commercial law.
Criminal law and procedure.
Administrative law and procedure.
Social and economic law.
Legal education.
Legal documentation.
Activities of lawyers.

At the seventh conference in Montevideo a junior bar section was organized and it has taken a very active part in the Dallas conference.

On recommendation of the Argentine lawyers a committee on laws relating to natural resources was established at the eighth conference in Sao Paulo. From this summary statement, you will realize the wide scope of subjects which are considered at our conferences, the interest which specialists in particular fields of the law have in the preparation of papers and in attendance at these meetings and the significance of the resolutions that are finally approved. I should point out that the council of the association is its governing body and is composed of 50 members chosen in part by the member associations and in part at each conference. This council carefully examines resolutions coming from the various committees to make certain that they are not in conflict with each other, that they have been adequately studied and should be promulgated as the considered views of the organization. As a result of this process of discussion in committees and review by the council, 41 resolutions were adopted at the Dallas conference.

It is a pleasure to advise you that at the close of the Dallas conference, Prof. David S. Stern, of Miami University School of Law, was elected a member of the council, and Marshall J. Langer, as assistant secretary general.

TENTH CONFERENCE ARRANGEMENTS

Dr. Adolfo Bioy, president of the Argentine Federation of Bar Associations, extended a cordial invitation to the delegates in Dallas to hold the tenth conference in Argentina, probably in November 1957 or early in the following year. Dr. Eduardo Augusto Garcia, Argentine Ambassador to the Organization of American States, supported this invitation with a message from his government expressing the hope that it would be accepted. Accordingly, it was decided to hold our tenth conference in Argentina with the Argentine Federation of Bar Associations as host. The following Argentine lawyers were elected to the offices indicated:

Dr. Adolfo Bioy, president.

Dr. Horacio Premoli, vice president for Argentina.

Dr. Mauricio A. Ottolenghi, member of the executive committee and of the council.

Dr. Alberto G. Padilla, assistant secretary general.

Looking into the future from this background, what course may we expect the Inter-American Bar Association to follow during the next 15 years? The role of a prophet is always a risky one. I recall that the Prophet Elijah was carried up to heaven in a chariot of fire and his associate Elisha was fed by the ravens. Consequently, I have no desire to follow the fate of these two prophets and shall therefore be cautious in my predictions. Believing, as I do, in the firm hold which the Inter-American Bar Association has established in the hearts and minds of the many lawyers of this hemisphere, who have been participating in its conferences, I believe it is wise to expect that this association will continue in its course of uniting the lawyers of this hemisphere, in strengthening bonds of understanding, mutual respect and friendship. Accordingly, I predict:

1. That the tenth conference of the Inter-American Bar Association will be held in Buenos Aires in November 1957 (or early in 1958) and will supply an opportunity for the lawyers from other countries to join with their colleagues in Argentina in carrying forward the program for recognition of the fundamental rights of the individual man and the elimination of injustices which have occurred there under the recent regime.

2. The Buenos Aires Conference will provide an opportunity for completion and adoption of a uniform code of ethics for judges and practitioners. The studies already conducted in this field under the leadership of the distinguished Mexican jurists, Miguel S. Macedo and the late Carlos Sanchez Mejorada, have had beneficial results in some countries.

3. The studies that have been conducted in regard to a uniform negotiable instruments law, under the leadership of the distinguished Peruvian lawyer, Dr. Felix Navarro Irvine, will be further advanced and may result in the adoption of a model project on this subject.

4. Legal education in the Americas will be greatly advanced by studies and discussions between deans of law schools, professors and officers, interested in the exchange of students among the law schools of this hemisphere. The excellent report prepared by Dean Claude Horack through the cooperation of the Department of State with this association, provides a basis for finding a solution to this difficult problem. The law schools of Florida are already cooperating actively in the exchange program and I wish to recognize particularly the good work that Dean Russell Rasco has accomplished in this respect. The Buenos Aires Conference will supply an opportunity to bring together the deans of law schools in the Southern Hemisphere to consider this important subject, as the Dallas conference provided a forum for the law school deans of North America to discuss it.

5. Collection and the translation of the commercial laws of the Americas will be an important phase of the Buenos Aires Conference. At the Sao Paulo Conference some progress was made in acquiring knowledge about corporation laws of the Americas as a result of a paper presented by Ray Garrett, of Chicago, and progress was made in this field at Dallas as a result of intensive studies made under his leadership with the assistance of personnel from the Inter-American Law Institute and the Law Institute of the Americas:

6. Investment of capital in the development of resources throughout the Americas requires protection from excessive taxation and possible expropriation. It has been brought out that the proper climate must be established in order to plan investments and to have them thrive and produce results. To accomplish this, laws are required to protect private capital and private investments from confiscatory action or expropriation. Developments are taking place in the field of double taxation as pointed out by the excellent paper presented at the Dallas Conference by Mitchell B. Carroll of New York, a recognized expert in this field. Studies are also being made in respect to taxation at Harvard Law School under the leadership of Prof. William S. Barnes. The future prosperity and progress of this hemisphere depend to a large extent upon these measures for the future encouragement of private initiative.

7. The protection of patents, trademarks, and copyright is another important field in which I believe progress will be made through the activities of the lawyers functioning in this association. Progress in the collection, translation and compilation of laws in these fields has been advocated by this association and Mr. A. Arnold Brand, of Chicago, has taken an active part in initiating this project, as a delegate of the American Patent Law Association. The extent to which our material progress is based upon the protection given to the work of inventors and authors is well recognized. The importance of extending such protection to persons in other parts of this hemisphere cannot be overemphasized and it is believed that through this association progress will be made in the years ahead.

8. The developments in aviation have had special significance for the Americas. Areas that previously were inaccessible have been opened up. Under the leadership of William A. Roberts, of Washington, D. C., resolutions relating to this subject were adopted at the Dallas conference and it is believed that further developments and regulations will be aided by our subsequent activities.

9. All of these material projects, however, will be of no avail if the governments in this hemisphere fail to resist the insidious efforts of communism to infiltrate into their agencies and to take control of the functions of government. Addresses delivered at the Dallas conference strongly presented the need for maintaining resistance to these Communist efforts. As stated in the purposes of this organization, we desire "to uphold the honor of the profession of the law and to encourage cordial intercourse among the lawyers of the Western Hemisphere." The friendships which are established during these conferences among the leaders of our profession constitute one of the basic means of fighting Communist efforts to bring about dissent and misunderstanding between our respective countries. Dr. Eduardo Salazar of Quito, Ecuador, chairman of our executive committee, in an address at the opening session of the Dallas conference made the following important statement about the duties of the lawyer:

"A lawyer who is not willing to fulfill this higher duty to his society is a mere earner of a livelihood. He fails in that case to repay his debt to the society which created him.

"But the task before us is not an easy one. The fight for freedom and justice under law is not a comfortable one but the life without such freedom is certainly worse. We have dozens in this room who have made and are making that fight. Some will ask, however, if the lawyer owes this duty to society, certainly he owes it only to his own. But what shall be the measure in this shrunken world of ours to strike the frontiers of that society. I submit that it is no longer his city, no longer his State, no longer his nation but his hemisphere. Each of us practices a profession that cannot live without liberty and none of us can survive when that liberty is challenged, impaired, destroyed and trampled upon in any part of the whole—no matter how remote or distant it might seem."

10. Our greatest objective is to promote the maintenance and preservation of peace, especially in this hemisphere. This organization, through the study of international law problems is contributing to the adoption through discussion of greater uniformity in the principles of international law. We are proud of the accomplishments of the Organization of American States and are confident that excellent results will be accomplished under the leadership of Dr. Jose A. Mora, a distinguished lawyer who has been of great assistance to this association in connection with its seventh conference in Montevideo and in other activities.

In concluding this résumé of some of the things that I believe will receive emphasis in the work of the Inter-American Bar Association in years that lie ahead, I should emphasize the fact that there are a number of other matters which deserve recognition and comment but cannot be dealt with in the time that is available. Many persons have contributed greatly to the success that has been achieved thus far and only by continued team work and cooperation can those objectives be attained. My last prediction is that Miami will be the place of our 11th conference in 1959.

Thank you for the opportunity of discussing these subjects with you.

Danny Kaye

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. MULTER. Mr. Speaker, Brooklyn is always proud of its citizens who make their mark in the world, regardless of the field of endeavor.

It is particularly proud of those who, while doing so, make a substantial contribution to the welfare and well-being of our country. We have even more right to boast when one of our citizens secures for himself a place in our hearts by making that contribution on a world-wide scale. Such a Brooklynite is Danny Kaye.

In that connection, I am pleased to call the attention of our colleagues to the following editorial which appeared in the Washington Post of July 4, 1956:

O. K., DANNY

There is a moment of special magic in the entrancing show which Danny Kaye and his audience have been giving together for the past fortnight at the Carter Barron Amphitheater. At a signal from him, all the footlights and floodlights go out and everyone present strikes and holds aloft a match. The tiny flames illuminate and enhance the sylvan beauty of the setting; and some thousands of spectators are drawn closer together in a shared delight. Danny Kaye is a magician at drawing people together; he makes his audience perform with him and sing with him and laugh with him; he lifts them out of themselves, uniting and refreshing them in fulfillment of the immemorial function of the clown.

When this zany entertainer comes to the close of his booking at the Carter Barron on Saturday night, he will be off at once to Paris to start work anew on the TV film he has been making for the United Nations International Children's Emergency Fund. He has been all over the world on this generous undertaking, freely giving of his prodigious energy and talent so that life may be made brighter and more hopeful for youngsters of every nationality and race. He will leave behind him in Washington a host of friends grateful for his gifts and his warm giving of them—grateful for what he has done here and for what he is doing as a civilized member of the human family.

Slovakia's Brave Fight for Freedom

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I received from Dr. Stefan G. Lukats, vice chairman, National Committee for Liberation of Slovakia, Munich, Germany, which is an extremely interesting and forceful narration of the continuing fight that the brave and patriotic Slovaks are making and have been carrying on for some years against Communist tyranny:

The Honorable DANIEL J. FLOOD,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN FLOOD: Today I want to talk about an Iron Curtain country, a country still struggling for freedom and independence despite a stranglehold yolk of totalitarian oppression. A brave country, a desperate country. A country not yet without hope. And I mention its plight because hope cannot hold out forever against machine guns.

You in America have grown used to freedom and it is hard for you to imagine what life would be like without it. Sometimes you don't think about the have-nots often enough and that is why I am taking this opportunity to remind you rather than acquaint you with the facts.

The brave country I am going to tell you about is Slovakia and I choose the Fifth of July, because today is a religious feast for the Slovaks and for Slavs generally. In the year 863 two Saints, Cyril and Methodius, carried Christianity to Slovakia. These holy missionaries consolidated what for Slovakia was a new religion.

The Slovaks remember this and that is why today is of special significance for them.

It is also of special significance at this time that Communist tyranny is now attempting to obliaterate that significance. Having found it impossible to annul the anniversary altogether, they are distorting it and molding it to their own purposes—not as a Christian celebration but under the guise of a feast day celebrating the unification of the Slav nations. A unification, I might add, forced rather than fostered upon the Slav peoples.

This Communist propaganda, calculated to tighten the ties between the smaller Slav peoples such as the Slovaks, the Poles and the Ukrainians with the Rusian bloc, is another deceptive Kremlin method aimed at subjugating these oppressed and captive nations. However, the Slovak people are not easily misled in their pious adherence of the

ideals set forth by St. Cyril and St. Methodius.

They see no reason or special need for any kind of cooperation with the Kremlin. On the contrary, they seek only new ways to shatter the Iron Curtain that separates them from the West.

And theirs is no passive resistance.

The first record of resistance goes back as far as the first beginnings of Communist tyranny, as far back as the Communist revolution of 1917 in Russia. Immediately after they took over in Russia, the Communists tried to incite similar revolutions throughout Europe. Slovakia in those days was part of the Austrian Empire and the Communists thought they could incite a revolt in Slovakia by promising her the right of self-determination.

They didn't succeed.

The Slovaks, then as now, refused and refuted such an offer because communism was not, is not, and never will be in line with the ideological concepts and Christian traditions consolidated more than 1,000 years ago by the two missionaries whose feast they will try to celebrate today.

The Communists, however, persisted in their efforts to woo their southern neighbor, demanding for them since 1924 the application of self-determination for Slovakia.

It is not surprising then, that in 1939 when Slovakia did become independent, that Russia was among the first to recognize that independence in the form of a republic.

In fact, the U. S. S. R. appointed a Soviet envoy based in Bratislava, hoping he would be able to create conditions and circumstances whereby, sooner or later, that independence would become enmeshed within the Soviet sphere of influence.

The Slovaks as a whole, however, have resisted Soviet blandishments—even in an hour of great need when they needed help in an armed uprising against the Nazis in 1944, they refused too close a cooperation with the Kremlin and spilt blood rather than compromise or gain political advantage.

They knew too well there could be no true cooperation with a political system that threatens the very foundations of any Christian culture or civilization and which today threatens or throttles the entire world.

Only a few sympathizers, collaborators and traitors were at the command of the Kremlin in Slovakia up to 1945 and even after the Communist coup d'etat in Prague during the February of 1948. I know it is true to say that only political opportunists and morally corrupt men jumped on the Communist bandwagon in Slovakia. The great mass of the people remained staunchly anti-Communist and profoundly Christian.

It is significant and heart-warming that whereas the Slovaks have steadfastly refused aid toward self-determination from the Communists, they have just as steadfastly pleaded with the United States of America for that aid. They recognize that our country, ever the champion of human rights, represents real freedom and independence. It is their wish, this captive people's wish that the United States of America help them regain what they have lost, the blessing of liberty.

They would if they could demand America's aid. But they can only ask—although taking into consideration the fact that the United States of America is ever preaching freedom, they could almost take this country at its word.

They could almost demand a guaranty that, should the opportunity at any time arise, the United States will be ready to aid in any way whatsoever. They need assurances that the United States of America will stand stalwart and unafraid in its great strength to speak for those who are allowed no voice.

The feast day celebrating the coming of St. Cyril and St. Methodius to Slovakia is a day on which the Slovaks not only commemorate their religious foundation, it is a day on which they rededicate themselves to the rights of independence and democracy. This is the day when Slovaks behind the Iron Curtain and also Americans of Slovak ancestry commemorate the past, consider the present and look to the future for the honor and respect and dignity a nation needs.

And since this is primarily a day of dedication to those ideals America holds dear, I could not let this day pass, without calling upon you to assure Slovaks everywhere that America is not blind to their misfortune and not unaware of their persistency in fighting communism.

I call upon you to assure them that America will not stand unfeelingly on the sidelines when the time comes for Slovakia to regain her full freedom and independence.

Today, in Slovakia, is a Christian feast, a religious celebration and whether or not the religion celebrated there is yours, whether or not you believe in what they believe, you must believe the Slovaks have a right to that belief and to freedom and democracy and the right of self-determination.

I urge you, dear Congressman FLOOD, to protect these rights and guard them as jealously as though they were your own, for a disease with the potency of communism is contagious and must be stamped out.

With kindest regards, I am, sir.

Respectfully yours,

Dr. STEFAN G. LUKATS,
Vice Chairman, National Committee for Liberation of Slovakia.

MUNICH, *July 1, 1956.*

Under God the People Rule

EXTENSION OF REMARKS
OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, July 5, 1956

Mr. CARLSON. Mr. President, a young man from the State of Kansas by the name of Truman Clark, of Sublette, Kans., is a junior in the Christian College at Dallas, Tex. As a part of his school work in a class on government, he selected the name of the senior Senator from South Dakota, KARL E. MUNDT, as a subject for one of the papers he had to prepare as part of his class work. It is a very execllent paper, describing the background and some of the work of our distinguished colleague. As it is a very fine paper, I shall ask unannmous consent to have it printed in the Appendix of the RECORD.

I noticed one particular comment which I thought was very interesting, which tells of the Senator's work. It reads:

In addition to the farm bill and the election reform amendment, Mr. MUNDT had this spring spoken on very few subjects. I find this commendable in him—he does not speak when he has nothing important to say, but rather listens.

I think that probably is a very important statement for other Members of the Senate to take note of.

I ask unanimous consent that the composition be printed in the Appendix of the RECORD.

There being no objection, the composition was ordered to be printed in the RECORD, as follows:

UNDER GOD THE PEOPLE RULE [1]

The General Beadle State Teachers College, in Madison, S. Dak., never was a very famous college, and if it still exists, certainly is not now a very well known school, but back in the years 1927 to 1936, this little school had a social science and speech teacher named KARL E. MUNDT.

Today, Mr. MUNDT is a very outstanding Member of the United States Senate, where he is serving his second term, after five terms as a Member of the House of Representatives.

He represents his native State, South Dakota, where he was born June 3, 1900, in the town of Humboldt. Today, he lives in Madison, where he once taught, when not in Washington. He has been married since 1924.

KARL MUNDT is a well-educated man, having received his bachelor of arts degree in 1923 from Carleton College, in Minnesota, and 4 years later, his master of arts degree from Columbia University, in New York City.

His is a varied and distinguished background. He has been a farmer, a member of the South Dakota Game and Fish Commission, a high school teacher and superintendent, and has been in the real estate and insurance business, in addition to the already-mentioned college faculty position. He was once the national vice president of the Izaak Walton League, and is now the national president of the National Forensic League (of which he is a cofounder).

Mr. MUNDT has further proved his versatility in his writing; he has written articles for such widely varied magazines as Liberty, Collier's, Country Gentleman, Nation's Schools, The Christian Advocate, U. S. News and World Report, and Tomorrow.[2]

While a Representative, KARL MUNDT was a member of two very prominent committees, the House Foreign Affairs Committee and the House Committee on Un-American Activities. He sponsored the Voice of America Act, which was passed by the 80th Congress, coauthored the Mundt-Nixon anti-Communist bill, and was the author of the congressional resolution which led to the forming of UNESCO.[3]

Since becoming a Senator, he has continued through the years to be a leader in progressive legislation, having coauthored the famous, yet ill-fated Mundt-Coudert bill which had to do with election reform, in 1950. Today, this bill has come back as a subject of congressional debate, as we shall soon see.

This spring, Senator MUNDT has concentrated his efforts on two main issues: the farm bill, and the Presidential election reform amendment.

In the farm bill issue, MUNDT began the congressional year with a firm stand on it, and has worked diligently for the things he believes should be in it. He is a member of the Committee on Agriculture and Forestry which referred the bill, after an 8-to-7 vote, to the Senate. Incidentally, he is a minority member of that committee, and commented in one speech that he was proud of the way politics was kept completely out of the work of that committee, since there was never a straight party vote in it.[4] I believe this illustrates what I feel is one of Senator MUNDT's greatest asset—his ability to look beyond party lines, even though he is proud of his party, and to make his work a matter of representing the people, not the Republican Party.

The first major speech MUNDT made this spring concerned the farm program. On January 9, he commended President Eisenhower's farm message to Congress in emphatic terms: "* * * the President's farm message to Congress presents bold, positive, and constructive new changes in our overall farm program. It gives bright hopes for a better future for our American farmers."

Footnotes at end of speech.

He went on to say that the soil-bank proposal should receive complete support from Congress, and then outlined the reasons why he felt the soil-bank would help—these he called its five constructive features.[6]

Finally, he returned, in his speech, to the farm program in general, and again lauded the President's proposed program, noting that it was not a "piecemeal" program, but rather that it offered a direct solution to each separate problem. He closed with another plea for prompt congressional action.[6]

That plea was answered, and largely through Senator MUNDT's committee work the Agriculture Act of 1956 (S. 3183) became a big part of the senatorial debate during February and March, continuing into April.

During all this discussion, Mr. MUNDT expressed, from time to time, his views as to what things would adequately solve the farm problem. He believed that the soil bank and price supports would work together.[7] Further, he believed that these price supports should right now be rigid, and for 2 years should be 90 percent price supports, to allow the farmer a period of security.[8]

He readily admits that both flexible and rigid price supports have in the past failed to solve the farm problem, but says they did so because always there was a reduction of acreage whenever a visible surplus was at hand.[9] He said this when he was fighting to keep in the bill the 90-percent price supports, but his efforts along this line failed, and the final bill had no such provisions.

Senator MUNDT also wanted this farm program to be on a voluntary basis, not forced on the farmers, but attractive enough to them to gain good cooperation.[10]

Another thing Mr. MUNDT fought for was his constituents—the wheat farmers. On March 13, he deplored the fact that while most other farm products had been given a boost by good legislation, nothing had yet been done to improve the lot of the wheat farmer. He urged the passage of an amendment to remedy this (the amendment was introduced by Senator FRANK CARLSON of Kansas, another wheat-minded legislator), and it succeeded in becoming part of the bill.[11]

A very noticeable characteristic of Senator MUNDT is the fine way he works with his fellow Senators in committee and on the Senate floor. Especially he does so with Mr. CASE, the other Senator from South Dakota, and the other Plains State Senators from Kansas, Nebraska, and North Dakota. They and their constituents all have primarily the same interests and needs in legislation, being from very similar areas of agriculture and finance.

Another amendment to the farm bill which MUNDT backed was one to increase the industrial use of agricultural products. He felt that this would help whip the surplus farm-goods problem.[12]

Senator MUNDT believes in getting the job done, and he showed this very thoroughly on March 19, when he said, "I think Congress needs an Easter recess; but I think America needs a farm bill worse than Congress needs a recess."[13]

He said this even though he believed that the farm bill was not too good: "Personally, I do not think it is as good a bill as it was when it was brought to the floor of the Senate from the Committee on Agriculture and Forestry."[14] However, he still backed it, for, as he later stated, he believed it was the best one that could be gotten during the present session of Congress.[15]

Mr. MUNDT asked for action, and on that same day he got just that. The farm bill was passed, by a 93 to 2 vote (1 Senator was ill).[16]

Since then, we know, President Eisenhower has vetoed it, but I feel that if KARL MUNDT had been allowed to lead the actions of the Senate the bill would have been a much better piece of legislation, both in Mr. Eisenhower's opinion and in solving the farm problems of America.

The other main issue in which Senator MUNDT played an important role during the past 3½ months was the joint resolution for an amendment to the United States Constitution which would reform the election of the President and Vice President.

This was a compromise between the two widely known plans of reform, the Lodge-Gossett (or Daniel-Kefauver) proposal, and the Mundt-Coudert plan.[17] Mr. MUNDT calls this compromise the "so-called Daniel-Kefauver-Mundt-Thurmond substitute".[18]

KARL MUNDT spoke at length on this resolution several times, and itemized what he felt were the advantages of the compromise amendment. First, he said it would restore the proper balance between rural and city areas in a national campaign, eliminating the unit vote in the electoral college and forcing the campaigns to operate on a national basis.

Second, he pointed out that it would keep unusual events of nature (such as blizzards, floods, etc.) or any local election fraud from determining the outcome of a national election.

Third, it would provide equality of votes among citizens, so that a person in New York would not be voting 45 electoral votes to only 4 electoral votes for a person in Delaware, as it is now, since now the total electoral votes go to the winner, even if the winner carried that State by only 1 vote. Mr. MUNDT pointed out the unfairness of this situation very well, with a humorous, imaginative, yet shockingly possible story of one drunken bum in New York City accidentally winning the presidential election for some candidate, over all the combined votes of several small States. I thought this, incidentally, served to show another prerequisite of a good public servant which Mr. MUNDT has—a good sense of humor.

Fourth, he showed how it would provide a safeguard against dishonest elections by eliminating the temptation to cheat in a heavy electoral area.

His fifth point was that it would encourage a two-party system in places where there is now only one party, for all practical purposes. Yet, on the other hand, it would tend to discourage the third or "splinter" party, except on a nationwide basis.[19]

In explaining just why all this should be done, and why he feels the Constitution should be changed in this matter of presidential elections, KARL MUNDT said: "It should be changed because by the compromise amendment we go as far in the direction of the popular vote for President as we can go and still maintain the concept of this Republic being a commonwealth of States."[20]

In addition to the farm bill and the election reform amendment, Mr. MUNDT has this spring spoken on very few subjects. I find this commendable in him—he does not speak when he has nothing important to say, but rather listens.

However, on March 1, he did introduce a fairly important bill, especially so on this year—a bill relating to campaign contributions. This bill would require each candidate and each political committee in a State primary campaign to file (in Washington, with both the Secretary of the Senate and the Clerk of the House of Representatives) the same records on campaign funds which they are required under State law to file.[21]

Senator MUNDT believes that this law would stimulate States to strengthen their laws regulating State primaries and conventions. This, in turn, would keep people from being forced to pay for the campaign of a party or candidate they did not prefer, as a labor union, etc.[22]

Throughout this paper, we have pointed out why Mr. MUNDT is such an able Senator. He has had many years of experience as a Congressman, yet is still progressive minded. He makes sound, logical arguments, not relying on sarcasm or mudslinging. He is a good, hard-working member of two more committees than the one already mentioned, the Committee on Government Operations, and the Appropriations Committee.[23]

All these and other things can be said of KARL MUNDT, but I believe he paid himself the finest tribute that can be said of a Senator, when on March 8 he commented, "I went out to South Dakota and consulted with a great many farmers on the question. * * *"[24] It matters not what the question was, or what answer he got; what matters is that he went to the people.

I hope the people of South Dakota never forget this man KARL MUNDT, and how well he has upheld their motto—"Under God the People Rule."

East Coast Case

EXTENSION OF REMARKS
OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1956

Mr. DODD. Mr. Speaker, in a few days the Civil Aeronautics Board will hear arguments in the long-pending east coast case. For many Atlantic seaboard Members of this body, the Board's forthcoming decision is of vital, if not crucial importance.

We represent areas along an airway that is the most heavily traveled in the Nation, perhaps in the world. For years, we have had to endure utterly inadequate north-south air transport. This is a matter of record. I speak also from personal experience, on your part and mine.

Between Boston and Miami, only one carrier offers through, one-plane service. Between New York and Miami, this company shares as much of the traffic they can accommodate, with limited operations in and out of intermediate points.

This promises to be the year when the Civil Aeronautics Board will act to designate a third, and perhaps a fourth carrier to meet the urgent need for additional and improved service between the Northeast and Florida.

It is in this latter connection, Mr. Speaker, as a Member from the New England region, that I speak today. The Civil Aeronautics Board is clearly a quasi-judicial agency, independent of the legislative branch. But it is my hope that the Board will fully weigh the merits of the case it is now considering in terms of the intent and will of the Congress, as set forth in the Civil Aeronautics Act of 1938.

The declaration of national air transportation policy embodied in that statute and the criteria established by the Congress call for rulings in the public interest, convenience, and necessity.

I submit that the New England region, the oldest industrial area of the Nation, and the home of the first domestic airline established at what is now Logan International Airport in Boston in 1925, is deserving of greater consideration than was indicated by the Board's examiner, Mr. Thomas L. Wrenn, in his recommendation last April 3.

In his report, Mr. Wrenn proposed that Delta Airlines, which already flies between New York and Atlanta and provides connecting service to Miami, be certificated to make direct New York-Miami flights as the third carrier on the East coast route.

The New England congressional delegation reacted with dismay to this finding, Mr. Speaker. So did some of our New York City and Baltimore colleagues, as I recall. A number of our southeastern members were equally unhappy about Mr. Wrenn's rejection of the applications of two other carriers who, I believe, should receive more favorable treatment in the impending hearing before the board.

I refer to Northeast Airlines, one of the original certificated carriers and New England based, and to Pan American World Airways, which pioneered in international service.

The New England delegation has been on record in urging the Board to reverse Mr. Wrenn's recommendations insofar as Northeast is denied its application for extension of its route southward from New York to Miami. In the House of Representatives, virtually all regional members share this view. This is particularly true of those from the northern New England States, which depend only on Northeast for scheduled air transportation.

In reference to Pan American World Airways, I speak for myself, Mr. Speaker, and for what I believe to be the best interests of my State, my region, and the national convenience, necessity, and advancement.

It is a fact that a high percentage of United States air passengers flying southward to Florida along the Atlantic seaboard are international passengers, bound for the Caribbean and ports of call throughout South America.

It is a fact that New England, which has played a major role since the dawn of the Union in the expansion of inter-American trade and the prestige of our Nation abroad, is more closely linked to sister nations of this hemisphere than ever before. Something more than 40 percent of all foreign investments in Latin America is New England capital.

It is a fact that in 1954 a substantial percentage of total New England industrial employment was in enterprises dependent largely on imports from Central and South America.

New England is intensely aware of its great stake in Latin America's future, thanks to such alert forces as Pan American, which inaugurated the first United States international airline in 1927, flying between Key West and Habana, Cuba, a 90-mile route which enjoyed a brisk business. From this evolved Pan American's Latin America system and its worldwide service into some 80 countries.

Pan American would offer New Englanders a direct, one-plane service from Boston to all major Latin American cities, via Miami and intermediate points, just as Pan American now flies from Logan International Airport in Boston to the major cities of Western Europe.

I submit, Mr. Speaker, that there is sufficient traffic between the Northeast and Florida to enable as many as four competing airlines to operate profitably. I suggest that the density of traffic on this route during the peak season would not only improve immeasurably the quality of the available accommodations—thanks to the stimulus of competition—but also would eliminate the subsidies now required by Northeast and Pan American.

In Pan American's case, the end happens to be in sight for subsidies, should the company obtain authorization for expanded operations. Northeast Airlines receive proportionately high subsidies for good reasons: This small trunk carrier, 1 of the original 13 to be certificated by the Federal Government, is the only one which serves numerous communities in New England which would otherwise be without air transportation. Moreover, its short-haul routes are unprofitable for obvious reasons, and its losses due to bad weather heighten its financial problem.

Objections have been raised to Pan American's bid to enter the northeast Florida market on various grounds. It is pointed out that Pan American is the largest overseas carrier, and therefore should be kept out of the domestic routes. Mr. Wrenn, in rejecting Pan American's argument to link its European and Latin American systems by service between the northern coterminals at Boston, New York, Philadelphia, and Baltimore-Washington, and Miami, cited what he termed a "disadvantage."

Pan American's case, he observed, was based largely on the difficulty the company has "in lacking direct access to the primary sources of traffic in the United States, particularly in relationship to its Latin American services, while its competitors have superior access to those sources of traffic."

Why should Pan American be restricted by such "disadvantages" if the chief victims of such barriers to competition are the people of New England, the Middle Atlantic States, and the Baltimore-Washington area? They are clearly protesting the status quo, and it is in complianee with the public interest, convenience and necessity that the Board must make its determination.

The Board is cognizant of its duty to rule on the best means of expanding and improving northeast Florida air transportation commencing this year, in 1956. Within the airline industry, it is acknowledged that Pan American Airways is admirably equipped to inaugurate schedules immediately, in DC–7 Clippers, including the new DC–7C model, the ultimate in piston-engine airliners for long-range, high-speed travel. It is my information that these new airplanes which are currently being delivered to Pan American, can reduce flight time on the east coast route by 1 hour and 45 minutes; on the fastest transoceanic routes, by 3 hours.

We also know that Pan American is the first of the United States carriers to usher in the jet age with United States-built jet airliners now on order.

In closing, Mr. Speaker, I would like to quote Examiner Wrenn's most interesting substantive finding as to Pan American's qualifications for serving the Nation's foremost route—a finding which he seems to have ignored in denying the company's application.

Pan American, he wrote, "should offer 18,103 long-haul passengers, accounting for 46 million passenger miles (based on 1954 figures), their first one-carrier service would use the latest type equipment and, with equipment on order could also put jet equipment into operation as soon as it is available, would provide first-class and coach service of the best quality, could satisfy seasonal demands better than any other applicant by drawing upon its other operations, has greater net worth than any other applicant, and, according to its estimates, could provide more benefits to the taxpayers in the form of subsidy reduction than any other applicant."

I trust, Mr. Speaker, that the Board will keep Mr. Wrenn's foregoing statement in mind when it undertakes to reverse him in the public interest.

On United States Reds "Must Go" List

EXTENSION OF REMARKS

OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. SCHERER. Mr. Speaker, the members of the Committee on Un-American Activities are subject to constant attack by the Communists and the extreme left-wing. Every effort will be made in the coming election by these groups to defeat the members of this committee whether they be Democrats or Republicans.

In the Los Angeles area a campaign has already been started against my col-

league on the committee, DONALD JACKSON. In this connection, I call your attention to George Todt's column in the Wednesday, June 6, issue of the Los Angeles Valley Times in which Mr. Todt discusses the slogan being used by the Communists against my colleague, namely, "DONALD JACKSON has got to go." All patriotic Americans should know that we on the committee feel that for the good of the country "DONALD JACKSON has got to stay."

The article follows:

GEORGE TODT'S OPINION—ON UNITED STATES REDS MUST GO LIST

"What is a Communist? One who hath yearnings
For equal division of unequal earnings.
Idler or bungler, or both, he is willing,
To fork out his copper and pocket your shilling."

—*Ebenezer Elliott.*

"DONALD JACKSON has got to go." That is what the well-heeled Communist lady told the overflowing leadership dinner meeting of the comrades recently in a plush Hollywood clubhouse. Among those who wildly applauded and cheered this Red pronouncement was an anti-Communist agent planted in the audience. Afterward I heard a part of the story from the observer.

"The Communists really hate Congressman JACKSON," the agent told me. "They are out to beat him at the polls this time—and they are loaded. I have seldom heard such vulgarity and obscenity displayed against another California political candidate in all my experience. He must be hurting them somewhere where it registers. They are absolutely rabid about him."

Good for DON JACKSON. There is no better patriotic recommendation than to be loathed by such vermin as these. According to their mastermind, J. Peters, who wrote the Communist Handbook on Organization for the Communist Party of the United States, every one of them must subscribe to a traitorous oath upon entering the party. It says in part, "I pledge myself to rally the masses to defend the Soviet Union, the land of victorious socialism. I pledge myself to remain at all times a vigilant and firm defender of the Leninist line of the party, the only line that insures the triumph of Soviet power in the United States." Trojan horses? Quislings? Traitors? What do you think?

Now J. Peters writes that everyone—repeat, everyone—must subscribe to this oath upon entrance into the Communist Party of the United States. Whether this is done publicly and before witnesses is unimportant. The point is that it is an ideological requirement to submit to this treachery against the American people—or one cannot enter into the party in the first place. This includes Communists wherever they may be found—and never mind how kindly their appearance or facial expressions may be. They are not harmless, whether covering their activities by masquerading as the benevolent college professor, or the benign minister, or the circumspect public servant—or a host of other occupations useful to them.

We are insane if we do not stop quibbling about the way to handle the Reds with silk gloves or velvet ones—and get on with the real job of stamping out this domestic menace to our national safety in the world jungle we are living in today. It's time to stop the bluff. Most of the comrades could be quickly rounded up and jailed whenever the Department of Justice might give the capable J. Edgar Hoover, director of the Federal Bureau of Investigation, the signal. They should be jailed, or deported to Mother Russia. And their American citizenship should be withdrawn. If any thinking person imagines this is being too hard on these skunks, please re-read the portion of the deadly Communist oath I have just given you in this column. These are Americans? This is a "political" party? Or are they the same kind of Red butchers who took over the satellite countries in Middle Europe? How many patriotic "reactionary" American citizens are already in their anti-American or Gestapo-type secret files? What numbers of our people have they earmarked for liquidation and extinction? Why should we help to play their game?

No, men like Congressman DON JACKSON must not go from the Washington scene. He knows the score concerning the Reds, and the only pity of it all is that there are not more of his stripe on Capitol Hill. For those of us who can find a little time to spare from our busy schedules and our own local political campaigns—here's a suggestion. Let's do whatever we can to see that the Communist lady I mentioned at the start gets the bird instead of the word. It couldn't happen to a more deserving person. We need Mr. JACKSON to stay on against the Reds.

Tyranny in 1956

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Tyranny in 1956," which appeared in the July 4, 1956, issue of the Chicago Sun-Times:

TYRANNY IN 1956

Americans on the Fourth of July should reread the Declaration of Independence proclaimed to the world 180 years ago today. It will remind them of the kinship they have with the people of Poland and all other countries which in this 20th century are living under the kind of tyrany our forefathers overthrew to establish our free land.

Tyrany in 1956 is harder to dislodge than in 1776. The Minutemen had a fighting chance against the Redcoats. But today a few workers armed with only small guns and stout hearts are no match for jet planes and tanks.

A revolt such as the Poles staged last week in Poznan is a desperate way of calling attention of the world to the plight of the oppressed.

The plight is similar to that which moved the signers of America's Declaration of Independence to action; the methods of tyranny change only in degree over the centuries.

The Poles were driven to their desperate action because they have been ruled by the minions of a foreign power and the fruit of their factories and farms taken to strengthen that power. Our forefathers complained: "He [the king] has erected a multitude of new offices, and sent hither swarms of officers to harass our people, and eat out their substance."

The Poles—and others behind the Iron Curtain—are subject to rule by soldiers who, on the pretext that any resistance is a crime against the state, can commit legal murder. In the Declaration of Independence, Thomas Jefferson wrote:

"He has kept among us, in times of peace, standing armies without consent of our legislatures.

"He has affected to render the military independent of, and superior to, the civil power.

"He has combined with others to subject us to a jurisdiction foreign to our Constitution, and unacknowledged by our laws; giving his assent to their acts of pretended legislation.

"For quartering large bodies of armed troops among us.

"For protecting them by mock trial from punishment for any murders which they should commit on the inhabitants of these States.

"For cutting off our trade with all parts of the world.

"For imposing taxes on us without our consent.

"For depriving us, in many cases, of the benefit of trial by jury."

The American Declaration of Independence, which pledged the signers' lives, fortunes, and sacred honor to the rebellion, inspired oppressed people all over the world—and still inspires them.

It contained a philosophical idea that has a greater hold on the minds of men than Marxism ever could have: That men are endowed by their Creator—not by governments—with unalienable rights. And that these rights can be secured only by governments that operate with the consent of the governed.

This idea, based on Judeo-Christian religious principles, is stronger than tanks or jet planes. It is behind the ferment of rising nationalism in so many countries of the world, and must be one of the problems that are plaguing the present rulers of the Kremlin. It is the only basis for a system of government that can give true freedom and prosperity and the one that inevitably must prevail in the world.

Respect for Supreme Court Going Fast

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. DAVIS of Georgia. Mr. Speaker, criticism of the United States Supreme Court is increasing day by day because of the Court's departure from reason, law, and the Constitution.

The following article from the Texarkansas Gazette for June 12, 1956, points out that never have so many people held the Supreme Court in such low regard as they do at this time:

RESPECT FOR SUPREME COURT GOING FAST

One needs only to read the newspapers to conclude that never have so many people held the Supreme Court in such low regard as they do at this time.

Here are a few examples picked at random from local and big city newspapers:

James F. Byrnes, a former associate justice of the Supreme Court, says the court "must be curbed."

"Power intoxicates men," Byrnes said in a copyrighted article in the U. S. News & World Report. It is never voluntarily surrendered, it must be taken from them, the Supreme Court must be curbed. With strong southern support the National Association of Attorneys General wants Congress to limit the United States Supreme Court's power to determine whether Federal laws supersede State statutes. The National Association also adopted a resolution

favoring nullification of a Supreme Court decision holding that the Federal Smith Act supersedes the Pennsylvania sedition laws. The decision prevents the State from prosecuting subversives under its own laws.

Senator STENNIS, Democrat of Mississippi, urges that Congress revalidate State sedition laws which were virtually nullified by a recent Supreme Court decision.

STENNIS said the decision was the latest in a series of cases in which the Supreme Court has disregarded established precedent to achieve further centralization of government.

A Waxahachie district judge says that political decisions by the United States Supreme Court likely is one reason the public generally has lost a lot of respect for courts and lawyers.

Criticism of the High Court came from District Judge A. R. Stout of Waxahachie in a talk before the Dallas Criminal Bar Association.

Judge Stout denounced recent decisions by the High Court as warning clouds of an end to free government.

He referred to the High Court's decisions as being made by "men more distinguished in politics than they ever were in law." He said that judges should be "fearless and able—not political experts."

These stories may reflect the feeling of lawyers generally over the country.

Not even the Supreme Court of the United States can function efficiently with so much ill will.

The Farm Problem

EXTENSION OF REMARKS
OF
HON. CHARLES B. BROWNSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. BROWNSON. Mr. Speaker, Rainbow Farm consists of nearly a thousand acres of land and produces about 1,400 meat hogs and 240 beef cattle yearly. Daniel I. Glossbrenner, who, with his son, owns and operates it, considers himself, and is considered, a farmer—and by necessity—a businessman. Needless to say, the present surplus storage and distribution problem affects him on all sides. He sells his swine and beef at the prices supply and demand puts upon them. But he must purchase feed at prices unnaturally created.

This former chairman of the Indiana State Agricultural Credit Commission now sees the need for this problem to be put into the hands of a Federal Agriculture Board. But Colonel Glossbrenner states his case most effectively in a letter he addressed to me the 20th of June. Under leave to extend my remarks, I ask that this letter be printed in its entirety in the RECORD so that it might receive the attention and consideration of my colleagues.

The letter follows:

RAINBOW FARM,
Indianapolis, Ind., June 20, 1956.

HON. CHARLES B. BROWNSON,
Member of the House of Representatives,
New House Office Building,
Washington, D. C.

DEAR MR. BROWNSON: As politically discussed today, the farm problem is an all embracing Agriculture problem affecting the lives and security of each citizen. It is comparable only to the credit and money control problem as governed and controlled by the Federal Reserve Banking System through the Federal Reserve bank. The organic act establishing this system was passed by Congress in 1913, and amended in 1935.

Today, the accomplishment factors in the individual farmer's and rancher's problem consist of (1) know-how, based on experience; (2) movement of tonnage on and off the farm.

Over these two factors he has some degree of control. He has no control over his result, which expensively accumulates en masse in:

A. Storage: Domestic and export.

B. Distribution: Domestic and export and the cost thereof.

These two resulting factors can only be handled by an agency of the Federal Government at the highest level, having continuity of management.

The political parity price we get with each Congress is unfair and penalizes operations and encourages destruction of our soil. There must be some sane consideration given to—"Who pays the Parity Price." In this 5-million-farmer group in the United States of America no distinction is made. The land-owning cattle, hog, sheep, poultry and dairy men pay the parity price to the cash crop man, on every pound, bushel, or ton of feed, grain or supplement we buy. No Member of Congress has presented the case of the livestock man who buys feed on a controlled price base, and has to sell on the hoof on the uncontrolled price base. We are the biggest customer in the United States of America. As exists today, we would feed stored 1953–52 old corn if we could buy on the open market but it is locked up by a law that Congress made. A Federal agricultural board should have the power to release this storage at market prices when we need it. Why and how long will the livestock man pay the parity tax?

The basic principles of the soil-bank program, i. e., to pay farmers to withhold land and crop production and under certain conditions to divert it to "lower order" uses, has apparently met wide acceptance and may be an important feature of farm programs in future years.

Views differ widely, however, on important details. Some believe the program will only be of aid to farmers in the long run. Who owns this soil bank? "Bankers reported that about three-fourths of the farmland is purchased by farm owners and tenants and about one-fourth by nonfarmers. These proportions are identical to those reported by bankers in October 1953 and are quite similar to the proportion reported by the USDA for the nation early in 1955. The only noticeable change reported in buyers of farmland between 1953 and 1955 is that tenants have been purchasing relatively less and farm owners have purchased relatively more. This shift is probably a reflection of the keen demand by farm owners to purchase land for farm enlargement and the decline in farm income which in turn has slowed the accumulation of funds for down-payments by tenants."

The effect on the foreign policy of the continuance of the agriculture mess and frustration is exactly what the Iron Curtain policymakers want. They want us to argue about "Parity, percents, and losses due to storage." Indirectly and in our own Departments of Government they are preventing us from selling and shipping to our friendly allies, aid assistance exports. They laugh at us in the world wheat pool accepting a Winnipeg price base and ask if the St. Lawrence Waterway will change our base to Chicago? A board could do what is best for us.

The world economic war started before Stalin died. It is in high gear today, with Russian oil now being delivered in continental Europe. We should have the best storage plant in the world for our domestic reserve located on the Mississippi River and the Great Lakes. We should store our export reserves at the several ports of embarkation at the time of harvest and under license control of the board. Private capital should be encouraged to improve and erect new export facilities and aided, if need be, to make, barter, and trade deals to move surplus. Give a Federal agriculture board the power to barter and trade the Soviet Union out of the free world.

It is time to take the agriculture problem out of politics by separating the "storage and distribution problems" and policy future direction, from the Department of Agriculture. For 30 years or more each Congress has given the Secretary of Agriculture more to do and tied his hands tight. Agriculture has grown up on research in the last 10 years, and is now rolling on rubber. Each political change of Government of new Congress sinks us on the farm deeper to the axles.

I am summarizing my recommendation for the establishment of a Federal agriculture board:

By congressional action, establish an independent executive department to be known as Federal agriculture board consisting of nine men, landowners, too, appointed for the same term of years as the Federal Reserve Board; to control storage, distribution, and prices for all commodities, and meat and meat products in storage, and to coordinate the farm credit policy through the Federal intermediate credit banks with the Federal Reserve Board. This board must be on the same Federal Government level as:

1. Federal Reserve Board, established 1913.
2. Interstate Commerce Commission, established 1887.
3. Federal Power Commission, established 1920.
4. Federal Communications Commission, established 1934.
5. Federal Trade Commission, established 1914.
6. Federal Securities and Exchange Commission, established 1934.

The board should be charged with the accumulation, storage, and control of the domestic and export reserves, with power to establish the prices per unit—pound, bushel, bale, ton, at parity or less. They must have the power of decision to sell, release for sale, or barter at parity or less. This instant power of decision is vital to our economic life, if we are to compete in our world export markets against bureaucracy.

It is further recommended that the President specifically recommend to the country in a national TV speech, "That time and change in our economic position in the world demands the immediate establishment of a Federal agriculture board to operate for agriculture on the same level as our Federal Reserve Board.

"That he will cause the Secretary of Agriculture and request the House and Senate Agriculture Committees to, jointly, draft a bill separating all policy and control activities, markets, storage, credit and finance, from the Department of Agriculture and transfer same to the new board having powers of decision and action comparable to the Federal Reserve Board.

"That he will submit this recommendation to Congress in advance of their meeting in January in order that it may be considered at once on a patriotic basis, for earliest possible action."

It is as vital to our existence to govern and control our living food reserves, as it is to stockpile ammunition, and build our Air Force. Faced with the rapid increase of our population, we must establish this board at once.

Yours respectfully,
DANIEL I. GLOSSBRENNER.

Four Philosophies of Modern Times

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. RAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to bring to the attention of Congress and readers of the RECORD throughout the country a thoughtful and timely address delivered by Rabbi Charles E. Shulman at the Rotary Club on Staten Island on June 5 last. I am a member of that Rotary Club and was present at the meeting of Dr. Rabbi Shulman's talk impressed me so much that I asked for a copy in order that I might place it in the RECORD. All who read the address will join in paying tribute to the wisdom and patriotism of Dr. Shulman.

The address follows:

FOUR PHILOSOPHIES OF MODERN TIMES

(By Rabbi Charles E. Shulman, Riverdale Temple, New York)

This period of world's history which the poet W. H. Auden has called "Age of Anxiety" has had its effects upon American citizens. We cannot live in a world of confusion and tension without being disturbed by the course of its events. Some of the effects on Americans indicate that they may have forgotten the paths their fathers trod in the search for adequate living. They are seen in the things we value, in the thinking we do, in the manner in which we view our world, in the purpose or lack of purpose in our lives, in the kind of gods we serve, in the way we face the nations across the seas.

We do not lack bread in America. Nor shelter. Nor comfort. Our standard of living is the highest in the world. Our basic problem in these times is not an economic one—not when 63 million Americans are employed and our national income is estimated annually at more than $400 billion. Not when business flourishes and trade unions are firmly established and respectable in their acceptance by society. These signs of wellbeing are physical ones. They might be called evidences of the quantitative character of our American civilization. But these external symbols of national development cannot hide some of our present deficiencies. The richer we become as a nation the more tense we seem to appear, the more insecure. Here we are, wealthier than ever before and becoming daily more wealthy, and yet we are devoting less and less of our great wealth to public welfare. Our national income rises, our stores are filled with gadgets and gimmicks, our consumer goods are enormous in quantity. But our schools are more crowded and dilapidated than they ever were before. Our teachers are more weary and underpaid. Our playgrounds are more jammed and dirty. Our national parks are more neglected. Our law enforcement bodies are more overworked and harassed. And we wonder why we have more prejudice, more selfishness and more juvenile delinquency than formerly.

We have physical abundance—houses, automobiles, televisions and frozen foods to suit any taste. But our spiritual problem is greater than it was a generation ago. We are desperately looking for peace of mind, peace of soul, peace of heart and peace of all else; we are buying popular religious books by the thousands to give us inner security that we so badly need. We definitely seek to better the quality of our lives, to match our physical quantitative blessedness and to teach us how better to use our gadgets of the new atomic age. We need aid of the kind that will help us be a noble influence for freedom and justice and decency both in our wonderful land and in lands abroad. It is high time that we went beyond the necessities of living which our national abundance affords us so well, beyond the physical preoccupation with a job, a square meal, a new suit of clothes, an automobile and a house in the suburbs, and thought some about individual dignity and individual character in our society in this period when we tend to become indifferent to our neighbor's existence. It is time we added some vision to our life, that we remember clearly that where there is no vision the people perish.

Our real problem in this period of physical change in our living due to wonder drugs and airplanes that fly 1,500 miles an hour, and television and hydrogen bombs in a shrunken world is to know what to do with what we have, to help others to live so that this abundant physical life may be shared more, to emphasize the things of the spirit that have been so greatly neglected in recent years, to turn our minds to the primary purpose of our existence, to develop individual and national character. We must think more about such things as education and religion which stress intelligent and noble living and turn our gaze on such individual and social needs as greater opportunities for minority groups, better planning for our cities and suburbs, slum clearance, decent housing, improvement of life for the sick and the aged, a sense of justice toward people abroad who long for the good life that we do, and the necessity of helping democracy in other places on earth. Let us face up to our responsibilities as free people. Our treatment of the Negro in this country must sooner or later honor the decisions of our own Supreme Court of the United States, if we are to survive as a Nation. Our concern for the freedom of the Jewish people in the State of Israel must be as important as our respect for the income from Arabian oil and Arabian dictators who purchase arms from the Soviet Communists for war purposes that could conceivably be turned against us if our free world is to exist. Our interest in Asia must be governed by more enlightened policies than pure trade and commerce if we are to have the good will of the people of India and Indonesia and others who can be our friends and allies in making our world order secure and peaceful. If we concentrate only on the material things, if we persist in thinking only of the quantitative factors in our national life that give us physical comfort and pleasure we will forget the warning that one of America's distinguished poets, the late Stephen Vincent Benet uttered a few years ago:

"You will not be saved by General Motors,
You will not be saved by prefabricated houses,
You will not be saved by dialectic materialism,
You will not be saved by the Lambeth Conference,
You will not be saved by Vitamin D,
You will not be saved by the expanding universe,
In fact you will not be saved."

There are four philosophies in our time that are followed by men. One of them is cynicism. One is nihilism. One is materialism. And one is idealism. In our brief survey of these philosophies we may be able to see more clearly the causes that underlie some of the confusions and tensions of the day.

The philosophy of cynicism is tied to an ancient group called the cyrenaics, founded by the Greek philosopher Aristippus of Cyrene. Their course was called Hedonism—self-indulgence. The end and aim of existence or such people is pleasure. They are indifferent to their neighbors, indifferent to their civic duties, indifferent to world events. Their religion is one of comfort. Their attachment to any cause is only in terms of their own convenience. As freemen they will exercise their ballot on election day only if it is not raining or if it is comfortable for them to do so. They are not aroused by the social ills of their time. They put their faith in gadgets and more gadgets. Of such people a clergyman, Reverend Edward Ziegler, of Roanoke, Va., thought when he rewrote the Twenty-third Psalm in terms of the gadgets of our day:

"Science is my shepherd, I shall not want,
It maketh me to lie down on foam-rubber mattresses
It leadeth me beside six-lane highways
It rejuveneth my thyroid glands
It leadeth me in the path of psychoanalysis
For peace of mind's sake.
Yea, though I walk through the valley of the shadow of the Iron Curtain
I will fear no Communist for thou art with me
Thy hydrogen bomb comforteth me.
Thou preparest a banquet for me
In the presence of the world's billion hungry people
Thou anointest my head with home permanents
My beer glass foameth over
Surely prosperity and pleasure shall follow me all the days of my life
And I will dwell in Shangrila forever."

2. The philosophy of nihilism. This is a philosophy of power leading nowhere socially or politically. There are individuals who live and dream of naked power for its own sake. They constitute one of the problems of our time because of the shrunken nature of the universe. And they vitally affect our life and thinking in America because of the instability they can create in the life of peoples everywhere. We fought World War II because of this philosophy in Germany under Hitler and Italy under Mussolini and Japan under Togo. If you would appreciate the consequences of this dreadful philosophy when it assumes authority you can find it in Norman Cousins' evaluation of Hitler's book Mein Kampf which was the bible of Nazi Germany. Cousins tells us that for every word in that book 125 lives were lost in the world. For every page in that book 4,700 lives were lost. And for every chapter in that book 1,200,000 lives were lost.

We are witnessing the recrudescence of that philosophy of nihilism in Egypt today, ruled by a handsome young power-driven dictator and the dictators of the Arab States who are in league with him. How else can we judge the cynical course of these Arab nations in the Middle East whose rulers turn one face toward the oppressed and illiterate masses whom they control, and tell them that Communist Russia is their only friend because it is supplying millions of dollars worth of arms with which to destroy the young state of Israel, who spend millions of dollars of the royalties paid them by the oil companies of the Western World to set up antidemocratic and anti-Semitic propaganda agencies in the United States accusing Americans of double loyalties in their American citizenship because they support the state of Israel and help this young democratic nation attain its peaceful goal. The second face of these Arab dictators is turned to America and to the free world with the pious statement that they have bought arms from the Communists to protect themselves against Israel. But if you make a pact with the devil you will not easily escape from the clutches of the devil. Communist Russia does not grant favors without demanding something in return. And the Arabs with their philosophy of nihilism, while enjoying

their power and their new weapons of destruction, will awake one day to find themselves puppets of Soviet Russia and against interests of free people everywhere.

3. The philosophy of materialism. This is the twisted heritage of Karl Marx that rules half the population on earth today in Russia and its satellites in China, Indochina, parts of France, Italy, North Africa, and in the Mediterranean lands. What does it stand for? Its philosophy is that the history of all existing society in the world is the history of class struggles, freeman and slave, patrician and plebian, lord and serf, guild master and journeyman, oppressor and oppressed—all carry on perpetual warfare. Also that the production of the immediate requisite material means of existence and therewith the extant economic development phase of a nation or an epoch constitutes the foundation upon which the state institutions, the legal outlooks, the artistic, even the religious ideas of those concerned have been built up.

The trouble with this philosophy is that it fails to account for the obvious differences between people which are in the same stage of economic development. It leaves out of account such vital factors as race, religion, and nationality. It does not reckon with the vast importance of human personality. It is doubtful whether a single historical event could be interpreted in terms of this theory.

And this philosophy of materialism has been buttressed by dictatorship and slavery and oppression and cruelty and violence and bloodshed. The state as an octopus has swallowed the individual. The dictator is supreme. The few rule the overwhelming majority and the majority is silent. The whims of the oligarchy prevail. One day it is Lenin who is the top figure. Another day it is Stalin. Today it is Khrushchev.

We have learned a great deal about the way in which this philosophy is forced upon people from above. The silent masses can do little about it without suffering torture and death. The dictators will not brook questioning of their course of conduct. When Khrushchev was challenged by the British labor people during his visit to England to release the prisoners who differ with him he grew furious and told the Englishmen to mind their own business. The American Protestant mission of churchmen who just returned from Russia reported to their fellow Americans that the antireligious campaign is not quite as crude as it was some 20 years ago in Soviet Russia, that Mr. Khrushchev has just issued a secret directive to the Communists to stress more subtile means of oppression against all religion in the country. And like the smiles of Khrushchev and Bulganin in their meetings with Western leaders this policy of deceit is all the more dangerous than outright hostility. Now these godless Communists who are so cruel and intolerant of the religions of men in their own lands which they dominate are posing as the protectors of the religion of the Arabs in the Near East.

We have a way of measuring the success of the materialistic philosophy of communism as it is practiced by the dictators who rule with an iron hand. That way is through the stories that filter out of the Iron Curtain from time to time. One of them used to be told about the Fascists in the thirties of our century. It tells about Khrushchev entering a movie theater and sitting incognito in the back row. Suddenly his picture was flashed on the screen and everyone stood up in salute. He sat back enjoying the scene when an usher tapped him on the shoulder and whispered: "You'd better get up too. I don't like him any better than you do, but get up. It's safer." Another story concerns the schoolteachers in Soviet dominated lands. They have had to postpone the history examinations in schools and colleges because they won't know the correct answers for a while. Still another story concerns the classroom where each child was given a picture of Prime Minister Bulganin and told to take it home and hang it in a corner of the home. The next day a little girl appeared with the picture. She had brought it back. "What's the matter?" asked the teacher, "don't you like Bulganin?" "Oh, yes," she answered. "I like Bulganin all right but we don't have any corner in our room. We live in the middle of the room." A fourth story concerns a new jet plane that transported a citizen in Russia from Pinsk to Minsk in 4 minutes 32 seconds flat. The citizen was overwhelmed. He rushed to the home of a friend in Minsk and cried: "What a country. What a government. Not only the greatest constitution and the greatest leaders, the greatest army and the greatest ideas, but now we have a wonderful jet-plane that brought me here from Pinsk in less than 5 minutes." The friend refused to be impressed. "So you got here from Pinsk in less than 5 minutes. What good did it do you?" "What good?" he answered, "It enabled me to be the first in line to buy a pack of matches."

4. The philosophy of idealism. This is the philosophy of the potential in each human being as an individual. It is the philosophy on which America has been founded and built. We can thank God that it still prevails in our midst as a guide to us and our children. So much has been said and written about American shrewdness and inventiveness, American concentration on material things, that it would be good to weigh our national achievements in our brief history on the scales of their true merit.

In the year 1897 Dr. Charles Eliot of Harvard University, one of the truly great educators of his day and the originator of the famous 5-foot book shelf of Harvard Classics, spoke on America's 5 great contributions to civilization. He pointed out that under our philosophy of idealism property has never been safer in any form of government, that no people have ever welcomed so ardently the new machinery and new inventions generally, that religious toleration was never carried so far and so universally, that nowhere have the power and disposition to learn been so general, that nowhere has governmental power been more adequate or more freely exercised to levy and collect taxes, to raise armies and to disband them, to maintain public order, to pay off great public debts—National, State and town, that nowhere has property been so widely diffused, that no form of government has ever inspired greater affection and loyalty or prompted to greater personal sacrifices in supreme moments. This is essentially true of America and American idealism.

Dr. Eliot then spoke words that should be remembered by every living American who values this country and all that this country represents in his life. He said:

"The ultimate effects of our American inventions are quite as much intellectual and spiritual as they are physical and they are developing and increasing with a portentous rapidity which sometimes suggests a doubt whether the bodily forces of men and women are adequate to resist the new mental strains brought upon them.

"Five contributions of America constitute our heritage—the keeping of the peace, religious toleration, the development of universal suffrage, the welcoming of newcomers, the diffusion of wellbeing—I hold to have been eminently characteristic of our country and so important that despite the qualifications and deductions which every candid citizen would admit with regard to everyone of them they will ever be held in the grateful remembrance of mankind. They are reasonable grounds for a steady, glowing patriotism. They have much to do both as causes and effects with the material prosperity of the United States. But they are essentially 5 moral contributions, being triumphs of reason, enterprise, courage, faith and justice over passion, selfishness, inertness, timidity and distrust. Beneath each one of these developments there lies a strong ethical sentiment, a strenuous moral and social purpose. It is for such work that multitudinous democracies are fit.

"In regard to all 5 of these contributions the characteristic policy of our country has been from time to time threatened with reversal—is even now so threatened. It is for true patriots to insist on the maintenance of these historic purposes and policies of the people of the United States. Our country's future perils, whether already visible or still unimagined, are to be met with courage and constancy founded firmly on these popular achievements in the past."

America's philosophy of idealism has guided our inventions and our free enterprise. America's moral aspiration has touched and inspired the peoples of the world in days past. We must not forget this as we contemplate our present-day association with the nations of the world—the people who are still free and who look to us as examples of the kind of free men and women they would like to follow if given the opportunity. We must help the world to know better what American stands for. The defense of this great Nation, as Norman Cousins has reminded us, rests today as it did all along, not on arms, but on what we stand for in the world. The first front is the moral front. What other people see when they look at America. The kind of hope that comes to life at the mention of our name. The crisp conception of justice inside America and in our dealings as a nation; any ideas we may have about the pooling of sovereignty in the creation of effective world law—all this is what counts. Military preparedness without it is motion without action.

When we become weary of things, confused by the conflicting philosophies of our time, when we wonder about the future of democracy in a world of such disintegration and tension and change it would do us good to read our immortal American documents once again. Among these is the Constitution of the United States and its famous preamble, "We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

The philosophies of cynicism and nihilism and materialism ignore the general welfare. Our problem today and tomorrow is to revive strongly in this Nation the conception of the general welfare, a conception that has tided us over many wars and crises in the centuries of our existence. It was dear to the Founding Fathers of this Republic. It is indelibly stamped in the preamble of the Constitution of our land. It teaches us that under this general welfare clause we have developed from small colonies to the greatest nation on earth. But we must heed its instruction. We cannot expect equality abroad to be effectively taught by us if we restrict equality at home. We cannot expect to confer on others the blessings of liberty if we deny them at home. We cannot export democracy elsewhere unless it functions adequately in the United States. We must have a fighting faith in the philosophy of idealism as did those who preceded us on these shores. And in God's good time that faith will kindle a flame that will light up the fires of democracy everywhere on earth.

The School-Construction Bill

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. MULTER. Mr. Speaker, an editorial in today's Washington Post sounds a fair warning that if the Powell amendment is adopted there will be no school-construction aid this year.

The editorial follows:

SCHOOLROOMS DENIED

Members of the House evidently would rather have school integration as an abstract issue than additional schoolrooms as a practical fact. That is the sad conclusion to be drawn from the 164-to-119 teller vote adding the Powell amendment to the school-construction bill. This amendment would deny funds to States which have not desegregated their schools. Representative DAWSON, a veteran Negro legislator, courageously warned his colleagues in what may unhappily be an epitaph: "If you tack the Powell amendment on this bill you'll have no school-aid program this year."

One can respect the principle of those who felt they had to vote for the Powell amendment out of conscience and still deplore their lack of pragmatism. The Powell amendment stands no chance of passage in the Senate, and the dismal prospect is that it will serve to kill the entire school bill there; but, even if somehow it were enacted into law, it would not solve the school-segregation problem one whit faster. The Supreme Court has declared school segregation illegal, but it has left to Federal courts the determination of what constitutes "all deliberate speed" in individual circumstances. That approach, which respects differing conditions, is far more likely than legislative fiat to encourage compliance.

The Powell amendment, in fact, would work a double penalty. The States which would be denied funds are precisely those which are in greatest need of compassionate help in providing additional facilities for adjustment; and the practical effect of the effort to exclude noncomplying States would be to deny Federal school-construction funds to all States. Meanwhile there is more and more testimony that the United States is lagging behind Russia in technical training, and that the country is simply not keeping up with the increasing educational load. If Members of the House, reinforced by those returning from the Fourth of July holiday, will take a statesmanlike look at the compelling need for classrooms quite apart from the inflammatory and extraneous racial issue, they will reconsider in the formal vote today and pass a school-construction bill without the red flag of the Powell amendment.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Daily Digest

HIGHLIGHTS

Senate passed numerous sundry bills, clearing seven for President.

House rejected school construction bill and disapproved two reorganization plans.

Senate

Chamber Action

Routine Proceedings, pages 10678–10693

Bills Introduced: 7 bills and 2 resolutions were introduced, as follows: S. 4169–S. 4175; and S. Res. 304–S. Res. 305. Pages 10679–10680

Bills Reported: Reports were made as follows:

H. R. 6218, relating to Federal assistance to Menominee Tribe of Indians to prepare for termination of Federal supervision (S. Rept. 2411);

H. R. 9280, to provide for formulation of plan for control of property of Menominee Indian Tribe (S. Rept. 2412);

H. R. 9974, to amend act regarding cutting of timber on Menominee Indian Reservation, Wis. (S. Rept. 2413);

S. 3926, authorizing Secretary of Interior to charge for special services to purchasers of timber from Indian lands (S. Rept. 2414);

S. 3927, conveyance to Indian tribes of certain improvements or facilities on tribal lands, with amendments (S. Rept. 2415);

S. 147, to require that international agreements other than treaties, hereafter entered into by U. S., be transmitted to Senate within 30 days after execution thereof, with amendments (S. Rept. 2416);

S. 3227, authorizing construction, operation, and maintenance of Little Wood reclamation project, Idaho, with amendment (S. Rept. 2417);

S. 3556, providing transfer of title to movable property to irrigation districts for operation and maintenance, with amendment (S. Rept. 2418); and

S. 3658, to authorize the subsurface storage of oil or gas in restricted Indian lands, tribal or allotted, with amendments (S. Rept. 2419). Pages 10678–10679

Bills Referred: 23 House-passed bills were referred to appropriate committees. Page 10678

Boy Scout World Jamboree: Senate concurred in House amendments to S. 2772, authorizing loan of certain Armed Forces equipment to Boy Scouts of America at World Jamboree. This action cleared the bill for White House. Page 10692

Sundry Bills Passed: Senate took from calendar and passed 12 sundry bills, as follows:

Without amendment and cleared for President:

NATO Parliamentary Conference: H. J. Res. 501, to authorize participation by U. S. in parliamentary conferences of NATO;

National park concessions: H. R. 3897, to relieve the Secretary of the Interior of certain reporting requirements in connection with proposed National Park Service awards of concession leases and contracts, including renewals thereof;

Coastwise vessels: H. R. 6025, to amend the shipping laws to prohibit operation in coastwise trade of vessels rebuilt outside U. S.; and

Private bills: Two private bills: H. R. 3350 and 3351.

With amendment, to be sent back to House:

Distilled spirits transfers: H. R. 11714, extending for 2 years existing authority of Secretary of Treasury in respect to transfers of distilled spirits (with floor amendment by Senator George adding language concerning treatment by shareholders in a regulated investment company of undistributed capital gains);

Coast Guard promotions: H. R. 11402, to extend existing application of Temporary Promotion Act of 1941 to the Coast Guard;

Metal scrap duty: H. R. 8636, to extend for 1 year the suspension of duties and import taxes on metal scrap; and

Private bill: H. J. Res. 580.

With amendment and cleared for House:

Advisory Committee on Arts: S. 3419, providing for establishment of a Federal Advisory Committee on the Arts;

Homestead and desert-land entries: S. 3458, to grant leaves of absence to homestead entrymen and to permit suspension of cultivation and improvement operations on homestead and desert-land entries; and

Shipbuilding surveys: S. 3705, requiring periodic survey of national shipbuilding capability.

Pages 10693–10704

Memorial Addresses: By unanimous consent, it was agreed that on Monday, July 9, at conclusion of routine morning business, Senate will hear memorial addresses

Appendix

Suggested Aids for Small Business Enterprises

EXTENSION OF REMARKS
OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, July 6, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a letter signed by George J. Burger, vice president of the National Federation of Independent Business, and addressed to Dr. Arthur Burns, Chairman of the President's Cabinet Committee on Small Business.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NATIONAL FEDERATION OF INDEPENDENT BUSINESS,
Washington, D. C., July 5, 1956.

Dr. ARTHUR BURNS,
Chairman, President's Cabinet Committee on Small Business, Executive Office Building, Washington, D. C.

DEAR DR. BURNS: I am glad to have the privilege to discuss with you and your associates on the President's Special Cabinet Committee To Strenghten the Economic Position and Foster and Sound Development of Small Businesses, the following subject matters that have been directed to us by our nationwide membership, comprised exclusively of independent business and professional men, all voting members. I believe the total membership will disclose the federation to be the largest business organization of its kind in the Nation, numbering approximately 102,000 members.

Any position we take is on direct nationwide instruction of our members and no officer or group of officers can speak or act officially for the federation until they receive the instructions from the membership.

At the time the President made the announcement of the creation of this Special Cabinet Committee, we commended the action of the President. We also said we trusted that this was not a partisan move, and we further stated that the No. 1 proposition to be considered by the Committee was "antitrust law enforcement and strengthening of these laws."

ANTITRUST

We know from practical experience of owning and operating an independent business establishment that the key to success or failure of a small business enterprise, whether at the production or distribution level, rests largely in the enforcement of these major laws to protect the free-enterprise system.

We believe there is need for strengthening amendments to these laws, such as is proposed in the present Congress, which will curb deliberate and continual violations of antitrust laws. We find that fines are no deterrent.

It doesn't make much difference how efficient small business may be, or how well financed they may be—if these laws are ignored, or there is weakness in the enforcement, it then means certain destruction to small business of this Nation.

As a help also in this direction, the local United States Government attorneys should be utilized in detecting violations at the local level.

To bring about impartial, sincere, and vigorous enforcement of the antitrust laws it is our belief that the Antitrust Division of the Department of Justice should receive increased appropriations, earmarked for antitrust enforcement. Through this competent personnel would be attracted, which would result in the Department continuously being staffed with well-informed personnel having full knowledge of our economic situation.

The procedure in the Federal Trade Commission should be reviewed, and the agency should confine itself to major economic cases or questions before the Commission, so that relief could be secured at the local level for small business through the free-enterprise system. This agency, too, should receive increased appropriations which would attract competent personnel, resulting in the agency continuously being staffed with well-informed personnel having full knowledge of our economic situation.

CONGRESSIONAL SMALL BUSINESS COMMITTEES

During their existence these past 15 years they have proved invaluable to the future welfare of small business. It can be said without fear of contradiction that through the creation of these committees by the Congress many of the Government agencies, for the first time, took the proper steps in creating departments within the agencies on small business problems.

We believe these committees should be strengthened by giving them full standing committee status, with full legislative authority.

SMALL BUSINESS ADMINISTRATION

We have closely observed the operation of this agency. It has made progress in aiding small business. It can make greater progress providng the agency is made a permanent agency of the Government, and the full control rests in the hands of the Administrator, subject to review by the Congress.

It is our belief that the agency should exercise its right in going in and taking prime contracts and subletting them to small business institutions. We make this recommendation in view of the fact the following report appeared in the Senate Small Business Committee Newsletter of June 30, 1956:

"Small business share of defense contracts dropped to new low point in 9-month period ending March 30. Report released by Department of Defense shows small business has received only 19.7 percent of the dollars spent by Defense thus far in fiscal 1956. In fiscal 1955 small business got 21.5 percent of the dollar value of all prime contracts awarded to business firms for work in the United States. In fiscal 1954 the small business share was 25.3 percent."

TAXES

Some definite recommendation should be made by the committee that immediate steps be taken by the Congress in enacting legislation which will permit small business to set up necessary reserves so that they may be able to have funds available to take care of their business requirements during normal or lull periods in our economy.

Such legislation has already been introduced in the present Congress and this could be used as a pattern in bringing about this due recognition for tax relief for small business.

GOVERNMENT IN BUSINESS

It is our belief that proper steps should be taken for the Government to cease its operations in those fields where it works a tremendous disadvantage to small business.

We believe that the armed services should carefully scrutinize the operations of the Government ship stores and post exchanges, and determine whether under present mass distribution of products such branches of the Government, during peacetime, are a necessary adjunct of the Government.

TARIFFS

It is well to realize that reciprocal trade with other nations must continue, but this should be carefully scrutinized as to each and every arrangement so that it doesn't work a hardship on our domestic economy.

Many large corporations in the Nation are operated on an international basis so they gain no matter what way the regulation is put into effect, but, on the other hand, reciprocal trade might result in destruction, or an unfair competitive condition for all types of businesses in our Nation's economy, other than the international corporations.

GOVERNMENT FORMS

We realize that in some instances the numerous forms now required by Government law for businesses of all descriptions to complete sometimes give invaluable information to the Government, but at the same time recognition must be given to the fact that in many instances small business establishments are unable to fulfill the requirements of completing such a maze of forms. It requires outside help, which adds greater expense to the small business operation, or places an undue hardship on the owner of a small business establishment should he attempt to complete the forms himself.

LABOR

On behalf of our members we have repeatedly urged, in our appearances before the platform committees of both political parties, in 1948 and 1952, that labor be brought in under the full provisions of the antitrust laws. This must not be misunderstood as being antagonistic to organized labor because such is not the case, but we do believe, with the increasing concentration in labor leadership, it is necessary today that they be brought in under the antitrust laws, which, in itself, could even be a help to the constructively organized labor movement.

On this subject matter, we also think that the Wage and Hour Law Division of the Department of Labor could stand some reviewing in its enforcement of the wage and hour law as it applies to small business.

We live with this situation daily in our contacts with our nationwide membership. Small business is not asking for any preferential treatment, but we do believe there is necessity for fair and equal administration of the labor laws.

The above subjects are the major subjects for consideration during our conference, and

we trust that appropriate action will be taken by the committee in reporting out recommendations along the lines of the above outlined subjects.

Sincerely yours,

GEORGE J. BURGER,
Vice President.

Saving of Money for Taxpayers

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, July 6, 1956

Mr. SCHOEPPEL. Mr. President, on Monday, July 2, 1956, the Miami Herald published an article entitled "'Timid Taxpayers' Saved Money as WILLIAMS Tracks Down Fakers," by Jeanne Bellamy.

I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DELAWARE SENATOR IS CAREFUL, METHODICAL INVESTIGATOR—TIMID TAXPAYERS SAVED MONEY AS WILLIAMS TRACKS DOWN FAKERS

(By Jeanne Bellamy)

WASHINGTON.—Are you a timid taxpayer? If so, you might be minus a lot of money today but for Senator JOHN J. WILLIAMS, of Delaware.

Here's the way he tells the story:

Three men working for the Internal Revenue Service had a bright idea. It was based on the knowledge that people are afraid of income tax men.

They spotted timid taxpayers, as they called them. Then they faked tax assessments, collected the money and put it in their own pockets.

They aren't working for the Government any more. They're in the penitentiary because WILLIAMS got a tip that something fishy was going on in their office.

He is the Senator who has been blowing the whistle on wrongdoers for the past 8 years.

It doesn't come naturally to WILLIAMS. He is a blue-eyed, jut-jawed ex-farmboy from the poultry country of southern Delaware.

WILLIAMS isn't a lawyer or a detective. He is a grain merchant, partner in a Millsboro, Del., firm that sells chicken feed in hundred-pound sacks.

WILLIAMS wasn't out gunning for anybody when he came to the Senate 10 years ago.

"I had no idea I would ever get mixed up in that kind of work," he said. "When I started it, I had no idea it would branch out."

But it did, and WILLIAMS has a report on 214 indictments of Treasury employees or ex-employees or people who gave them payoffs.

"There have been 101 convictions, a few were freed by juries and the rest are pending," he says.

WILLIAMS disclaims credit for much of that. He does think his speeches in the Senate, citing names, dates, and figures, encouraged the cleanup.

Such speeches are WILLIAMS' way of yelling, "Stop, thief."

He's no orator. Fellow Senators say they can hardly hear him when he reads one of his exposés.

People shrugged at first. Some thought he had been sold a bill of goods, as WILLIAMS recalls.

Nobody takes his charges lightly any more. He gets action.

That's because WILLIAMS never goes off half-cocked.

He got started back in 1947 through suspicion that an embezzlement was going on in the Internal Revenue Office in Delaware.

"I was doing a little checking, and got a fellow from the General Accounting Office to help," WILLIAMS related.

The approach was to check delinquent accounts. That involved asking people to open their tax records, which many were reluctant to do.

"In the process, I found my own name on the list of delinquent accounts. It was a bit of a shock because I had paid all my income taxes.

"I didn't have any trouble persuading myself to open my tax records, and I had made all my payments by check, so we took it from there. We soon closed the case out, and the fellow went to the penitentiary."

His statements in the Senate about that one brought WILLIAMS a flood of tips. They came by mail, by phone, and in person.

The biggest was about the tax-fixing ring. It came from a man who walked into WILLIAMS' office and "sat here for 3 hours, letting the girl take down his report on condition I would never use his name."

Has he got any new ones coming up?

"I have never said that I would have another report," is his answer. "I don't like the idea of saying, 'Look out, I'm a-coming later.' When I get a case done and am satisfied it is right, I put it out."

He gets a good deal of mail praising what he has done. He also has letters criticizing him for accusing certain individuals. Neither rocks him.

"The fact that I accuse a man doesn't mean he is guilty," he says. "That is for the courts to decide."

His theory is that corruption in Government occurs in waves. When it's exposed, those who are tempted get wary and the people have their eyes wide open.

"It goes that way for a while, and then there's a letdown. Let's hope there won't ever be another letdown."

Massachusetts Cranberries

SPEECH
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

(Mrs. ROGERS of Massachusetts asked and was given permission to address the House for 1 minute.)

Mrs. ROGERS of Massachusetts. Mr. Speaker, I hold in my hand a very attractive basket which was presented by the National Cranberry Association. In it are some delicious cranberries grown in the district of my colleague from Massachusetts [Mr. NICHOLSON]. It only shows how active my colleague is for his constituents whether it be for the sale of cranberries grown in his district; whether it be for veterans' legislation; whether it be for the saving of the textile industry for which he has worked so hard or for rivers and harbors, or for the Great National Guard installation in his district. I like to draw attention also to the fact that my colleague from Massachusetts works constantly for what he considers to be for the good of the country, and he is a great fighter for everything that he believes in, just as he was a great fighter in World War I in France. I am very grateful to him, and the Commonwealth of Massachusetts, and the Nation also should be grateful to him.

Mr. NICHOLSON. Mr. Speaker, will the gentlewoman yield?

Mrs. ROGERS of Massachusetts. I am glad to yield to the gentleman.

Mr. NICHOLSON. I am at a loss for words at the sentiment the gentlewoman is expressing. The gentlewoman must have a great deal of admiration for me.

Mrs. ROGERS of Massachusetts. Yes, I do; and I also have a great deal of admiration for your wife.

Mr. NICHOLSON. I assure you the admiration it mutual. The gentlewoman is very kind and I want to thank her for the opportunity to give some of this cranberry sauce to the Members, and I think after today they need it.

Mrs. ROGERS of Massachusetts. In closing I congratulate the gentleman and statesman on the great services he has achieved during his career. I was glad to see the very fine picture he had taken at the White House a few weeks ago with President Eisenhower.

Declaration of Independence, 1776–1956

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, we have just celebrated our greatest national holiday, July 4, or, as it is sometimes called, Independence Day.

It might be well at this time to renew acquaintance with the document that was the result of pioneer action in declaring the 13 United States free and independent.

Under leave to extend my remarks, I am including the Declaration of Independence as originally executed:

THE DECLARATION OF INDEPENDENCE, 1776—IN CONGRESS, JULY 4, 1776—THE UNANIMOUS DECLARATION OF THE THIRTEEN UNITED STATES OF AMERICA

WHEN in the Course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the Laws of Nature and of Nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed,—That whenever any Form of Government becomes

destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness. Prudence, indeed, will dictate that Governments long established should not be changed for light and transient causes; and accordingly all experience hath shewn, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security.—Such has been the patient sufferance of these Colonies; and such is now the necessity which constrains them to alter their former Systems of Government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute tyranny over these States. To prove this, let Facts be submitted to a candid world.

He has refused his Assent to Laws, the most wholesome and necessary for the public good.

He has forbidden his Governors to pass Laws of immediate and pressing importance, unless suspended in their operation till his Assent should be obtained; and when so suspended, he has utterly neglected to attend to them.

He has refused to pass other Laws for the accommodation of large districts of people, unless those people would relinquish the right of Representation in the Legislature, a right inestimable to them and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public Records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved Representative Houses repeatedly, for opposing with manly firmness his invasions on the rights of the people.

He has refused for a long time, after such dissolutions, to cause others to be elected; whereby the Legislative powers, incapable of Annihilation, have returned to the People at large for their exercise; the State remaining in the mean time exposed to all the dangers of invasion from without, and convulsions within.

He has endeavoured to prevent the population of these States; for that purpose obstructing the Laws for Naturalization of Foreigners; refusing to pass others to encourage their migrations hither, and raising the conditions of new Appropriations of Lands.

He has obstructed the Administration of Justice, by refusing his Assent to Laws for establishing Judiciary powers.

He has made Judges dependent on his Will alone, for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of New Office, and sent hither swarms of Officers to harass our people, and eat out their substance.

He has kept among us, in times of peace, Standing Armies without the Consent of our legislatures.

He has affected to render the Military independent of and superior to the Civil power.

He has combined with others to subject us to a jurisdiction foreign to our constitution, and unacknowledged by our laws; giving his Assent to their acts of pretended Legislation:

For quartering large bodies of armed troops among us:

For protecting them, by a mock Trial, from punishment for any Murders which they should commit on the Inhabitants of these States:

For cutting off our Trade with all parts of the world:

For imposing Taxes on us without our Consent:

For depriving us in many cases, of the benefits of Trial by Jury:

For transporting us beyond seas to be tried for pretended offenses;

For abolishing the free System of English Laws in a neighbouring Province, establishing therein an Arbitrary government, and enlarging its Boundaries so as to render it at once an example and fit instrument for introducing the same absolute rule into these Colonies:

For taking away our Charters, abolishing our most valuable Laws, and altering fundamentally the Forms of our Governments:

For suspending our own Legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever.

He has abdicated Government here, by declaring us out of his Protection and waging War against us.

He has plundered our seas, ravaged our Coasts, burnt our towns, and destroyed the lives of our people.

He is at this time transporting large Armies of foreign Mercenaries to compleat the works of death, desolation and tyranny, already begun with circumstances of Cruelty and perfidy scarcely paralleled in the most barbarous ages, and totally unworthy the Head of a civilized nation.

He has constrained our fellow Citizens taken Captive on the high Seas to bear Arms against their Country, to become the executioners of their friends and Brethren, or to fall themselves by their Hands.

He has excited domestic insurrections amongst us, and has endeavoured to bring on the inhabitants of our frontiers, the merciless Indian Savages, whose known rule of warfare, is an undistinguished destruction of all ages, sexes and conditions.

In every stage of these Oppressions We have Petitioned for Redress in the most humble terms: Our repeated Petitions have been answered only by repeated injury. A Prince, whose character is thus marked by every act which may define a Tyrant, is unfit to be the ruler of a free people.

Nor have we been wanting in attentions to our Brittish brethren. We have warned them from time to time of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which, would inevitably interrupt our connections and correspondence. They too have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity, which denounces our Separation, and hold them, as we hold the rest of mankind, Enemies in War, in Peace Friends.

WE, THEREFORE, the Representatives of the UNITED STATES OF AMERICA, in General Congress, Assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the Name, and by Authority of the good People of these Colonies, solemnly publish and declare, That these United Colonies are, and of Right ought to be FREE AND INDEPENDENT STATES; that they are Absolved from all Allegiance to the British Crown, and that all political connection between them and the State of Great Britain, is and ought to be totally dissolved; and that as Free and Independent States, they have full Power to levy War, conclude Peace, contract Alliances, establish Commerce, and to do all other Acts and Things which Independent States may of right do. And for the support of this Declaration with a firm reliance on the protection of divine Providence, we mutually pledge to each other our Lives, our Fortunes, and our sacred Honor.

New Hampshire: John Hancock, Matthew Thornton, Josiah Bartlett, Wm. Whipple; Massachusetts Bay: Saml. Adams, John Adams, Robt. Treat Paine, Elbridge Gerry; Rhode Island: Step. Hopkins, William Ellery; Connecticut: Roger Sherman, Sam'el Huntington, Wm. Williams, Oliver Wolcott; New York: Wm. Floyd, Phil. Livingston, Frans. Lewis, Lewis Morris; New Jersey: Richd. Heyward, Junr., Edward Rutledge, Thomas Lynch Junr., Arthur Middleton; Georgia: Button Gwinnett, Lyman Hall, Geo. Walton.

Public versus Private Power at Niagara

EXTENSION OF REMARKS
OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Westfield (N. Y.) Republican, of recent date:

PUBLIC VERSUS PRIVATE POWER AT NIAGARA

One could search the Congress of the United States from end to end without finding a single Representative or Senator who would not assert with great emphasis his belief in private enterprise and his abhorrence of socialism in any form. Yet, actions speak louder than words. On a clear cut issue of socialism versus private enterprise, the Senate recently voted for socialism.

Investor-owned private utility companies pioneered the development of power from the Niagara River in New York State some 60 years ago. Today by virtue of a treaty with Canada, more water from the Niagara is available for conversion into power. A group of five private companies who know the river and have the resources in hand to undertake its further development have been eagerly seeking permission from the Federal Government to do so. Their proposal has been opposed by the lobby that never sleeps—the public power lobby which has been trying for 25 years to squeeze out private utility companies wherever possible and place control of power production in Government hands.

Initially, when the Federal Government began to intrude into the field of power production and distribution, public advocates sought to justify this action on the basis of flood control, reclamation, irrigation, and navigation—all purposes which are properly within the Federal authority. Dams were necessary for these purposes and the production of electric energy was supposed to be an incidental byproduct. As long as the water was flowing over the Federal dams so the argument went, it was a shame to let it go to waste.

In the Niagara situation even this pretense is cast aside. No reclamation, irrigation, flood control, or navigation is involved. Electric power production, pure and simple, is the sole purpose. The argument now is that flowing water is a resource which belongs to all the people and therefore it should not be harnessed for private gain.

This argument overlooks the obvious fact that flowing water is flowing water and nothing more. It does not become valuable energy until someone invests the money to build the dams, the spillways, the power stations, the generators, and the distribution lines which will turn it into electricity and distribute it to homes and industries.

This takes a lot of money and much planning, patience, and engineering skill. In the case of the Niagara project, some $400 million of venture capital will have to be invested.

It is specious to argue that Niagara's water belongs to the people and that private parties seek to use this resource for their own interests. The true question is: Does Congress really believe in the free economic system of this Nation, or will it allow itself to become entangled in the sophistries of the Socialists.

If the privately owned companies are allowed to risk their stockholders' money in the venture, they will create facilities which would pay to the Federal Government over $20 million in taxes each year. If the Government of New York State builds and operates these facilities there will be no tax revenue, but hidden deficits which will have to be made up by taking money from taxpayers.

Businessmen everywhere have as much at stake in the Niagara project as the five investor-owned utility companies directly involved. The Nation, including particularly its lawmakers, expects private business to provide steadily increasing economic activity and more jobs. But competition with its own citizens by a Government supposed to be devoted to economic freedom is a sure way to discourage the growth and development of business on which the future prosperity and well-being of the Nation depend.

Businessmen would be justified in rising as a body to protest to the House Committee on Public Works, where the bill now rests, and to individual Members of the House of Representatives, this gross disregard of the principles which are essential to the dynamic growth and effective functioning of the free economy of this Nation.

Foreign Aid Benefits American Industries

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. CHIPERFIELD. Mr. Speaker, regardless whether the foreign-aid programs are justified from a national security standpoint they do benefit our economy.

Eighty-two percent of all the money appropriated is spent right here in the United States and the remaining American dollars must eventually be spent in this country.

I have the distinct honor of representing what is often referred to as the farm equipment capital of the world. A close examination of purchases made under foreign-aid programs discloses that the farm equipment industry and allied manufacturers in this area benefited to a large extent under these programs.

In the period May 1949 through December 1955, the International Cooperation Administration and its predecessor agencies have financed orders from the following companies in the amounts shown:

J. I. Case	$11,330,000
John Deere	15,248,000
International Harvester	75,454,000
Minneapolis Moline	1,448,000
Caterpillar	62,714,000
R. G. Latorneau	7,547,000
Butler Manufacturing Co	2,200,000
Clearing Machine Corp	6,648,000
Rockford Machine Tool	638,000

The United Nations High Commissioner for Refugees—Is He Friend or Foe?

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mr. SHEEHAN. Mr. Speaker, Mr. Julius Epstein, of New York City, testified on May 18 before the Senate Internal Security Subcommittee and offered a further written statement on June 26.

In his statement of June 26, Mr. Epstein points out the case of the United Nations High Commissioner for Refugees, Dr. G. J. van Heuven Goedhart. The background of the United Nations High Commissioner for Refugees would seem to me to raise a question as to whether or not he is able to perform his job.

Mr. Epstein's statement is as follows:

On May 18, 1956, I testified before the Senate Internal Security Subcommittee (chairman, Senator JAMES O. EASTLAND, of Mississippi). In my testimony I revealed that the present United Nations High Commissioner for Refugees, Dr. G. J. van Heuven Goedhart had written in 1946 an introduction to the Dutch edition of the book by M. Sayers and A. E. Kahn, "The Great Conspiracy Against Soviet Russia." In this introduction Dr. van Heuven Goedhart highly praised the book, written by the two well-known American Communists. The book was enthusiastically welcomed in the Daily Worker by William Z. Foster, national chairman of the American Communist Party as well as by the Soviet press and the Communist Party newspapers and periodicals around the world. The book by Sayers and Kahn was also required reading for American prisoners of war to be brainwashed by Chinese and North Korean Communists. It is, of course, a 100-percent defense and justification of Soviet imperialistic policy and especially a complete justification of every crime Stalin had ever committed.

As a result of my testimony of May 18, 1956, Senator JAMES O. EASTLAND wrote a letter to Ambassador Henry Cabot Lodge, Jr., the Representative of the United States of America to the United Nations, on May 18, 1956.

Ambassador Lodge answered Senator EASTLAND'S letter on May 21.

On June 5, 1956, Dr. van Heuven Goedhart held a press conference in The Hague, Netherlands. According to a report, released by the Netherlands news agency, ANP, on June 6, 1956, Dr. van Heuven Goedhart wholeheartedly defended his endorsement of the pro-Communist book by Kahn and Sayers. I quote from the press release: "As regards certain reproaches made against him in the United States in connection with a preface he wrote to the book The Great Conspiracy Against Russia in 1946, Mr. van Heuven Goedhart said he thought it was one of the best he had ever written. 'I do not think there is the slightest occasion to defend myself against the nonsense uttered with regard to this preface,' he said. If some United States Senators thought he was a Communist then he was in the same company as Professor Oppenheimer."

Dr. van Heuven Goedhart's remarks made at his press conference on June 5, 1956, clearly show he still holds the same pro-Soviet and especially pro-Stalin views as expressed in the book by Sayers and Kahn and fully endorsed by van Heuven Goedhart in 1946.

On June 22, 1956, Senator EASTLAND addressed another letter to Ambassador Lodge, calling his attention to Dr. van Heuven Goedhart's statement of June 5, 1956. In this letter Senator EASTLAND wrote:

"In other words, as late as June 6 of this year, Mr. van Heuven Goedhart regarded the statements in his introduction to The Great Conspiracy Against Russia as some of the best he had ever written. And as for his views on communism, Mr. van Heuven Goedhart considers himself in the same category as J. Robert Oppenheimer—whose security clearance was withdrawn by the Government of the United States after his intimate, extensive, and dangerous connections with Communists and communism had been established.

"I will appreciate being advised whether you consider that this latest statement by Mr. van Heuven Goedhart affects in any way his qualifications to serve as the United Nations official in charge of its program for refugees from Communist oppression and tyranny." (Full text of Senator EASTLAND'S letter is attached as exhibit 5.)

Only with Dr. van Heuven Goedhart's introduction to The Great Conspiracy Against Russia and his statement of June 5, 1956, in mind can we now understand why Dr. van Heuven Goedhart, as U. N. High Commissioner for Refugees, participated in the Soviet-sponsored repatriation of refugees from countries behind the Iron Curtain. In his speech before committee 3 of the 10th General Assembly of the United Nations in New York on October 4, 1955, Dr. van Heuven Goedhart said: "There are, as the members of this committee know very well, three different possible solutions. [Of the refugee problem.] One is the decision to go back, the repatriation. One is the resettlement in another country and three is the integration into the economy of the country where the refugee has found asylum. The first solution—repatriation—can nearly always be easily realized. * * * Looking back for 1 more second upon those 10 years (1945–55), Mr. President, I would like to note that millions and millions more refugees have been repatriated in the course of those 10 years than ever have been resettled or integrated."

The U. N. High Commissioner for Refugees, Dr. G. J. van Heuven Goedhart, is the first official who ever described repatriation of refugees from Communist tyranny as a solution, even as the number one solution to the refugee problem. His reference to the millions and millions of refugees who have been repatriated since 1945, is especially repulsive since a very large fraction of those millions of refugees repatriated since 1945 were forcibly repatriated in violation of the Geneva Convention as well as of the American tradition of ready asylum for political exiles.

Dr. van Heuven Goedhart's participation in the repatriation of refugees to Iron Cur-

tain countries—by sending his representatives together with the Soviet repatriation missions into the diplaced-person camps—is contradictory to the American policy of preventing redefection of refugees from Communist countries. How can we expect those refugees to have any confidence in the U. N. High Commissioner for Refugees if he is pioneering redefection and if he has just reaffirmed his pro-Communist and especially pro-Stalinist views as late as June 5, 1956? We cannot expect any confidence in him.

I wish to make it abundantly clear that I do not desire to deprive refugees of any assistance which they might receive if Congress were to appropriate funds to UNREF to be administered by the U. N. High Commissioner for Refugees, Dr. van Heuven Goedhart. However, until a more suitable High Commissioner for Refugees succeeds to the post presently held by Dr. van Heuven Goedhart, I believe that it is defeating the purposes of the Congress and of the American public to appropriate funds to be administered by him. Until there is a change in the personality presently holding the post of U. N. High Commissioner for Refugees I urge that the $2.3 million requested as the United States contribution for the program administered by the U. N. High Commissioner for Refugees be appropriated to the Department of State (Bureau of Security and Consular Affairs) or to the President of the United States to be used to assist the American voluntary agencies which work abroad with refugees to overcome the Soviet redefection campaign. By so doing, the Congress will fulfill the hopes of the refugees and will serve the best interests of the United States.

Mallinckrodt Chemical Works at St. Louis Did the Impossible in Nation's Atomic Energy Program

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a very fine article on the pioneering the Mallinckrodt Chemical Works of St. Louis did in the atomic energy field. The story was written by Mary Barrett and appeared in the July 1, 1956, issue of the St. Louis Globe-Democrat.

As a member of the Joint Committee on Atomic Energy I have had the opportunity on several occasions to visit the Mallinckrodt atomic operations. To this fine organization I extend my personal congratulations, proffer my best commendations on its magnificent performance in the Nation's atomic energy program.

The article follows:

OLDEST CHEMICAL WORKS WEST OF THE MISSISSIPPI DID THE IMPOSSIBLE IN NEW ATOMIC ERA

(By Mary Barrett)

St. Louis, which has been accused by uninformed observers of being old-fashioned and slow to change is, perhaps, more than any other city in the Midwest, in step with the atomic age. The company that deserves much of the credit for this is Mallinckrodt Chemical Works, the oldest chemical company west of the Mississippi, whose smoke-stacked buildings sprawl over 35 acres at 3600 North Broadway.

Mallinckrodt's initial contribution to the atomic era was necessarily kept quiet for a long time, but it is now known that the company did the impossible and did it well.

In producing the first bulk pure uranium dioxide used in the Manhattan atom bomb project, Mallinckrodt achieved the highest degree of purification ever achieved on a commercial scale by the chemical industry, and did it in recordbreaking time.

In 1942, when atomic energy seemed possible and the Government found that enough impure uranium oxide concentrates were available to construct an atom bomb, the next need was for a refiner. It was known that ether extraction could be used to provide pure uranium dioxide on a small scale, but large-scale production was called for.

Mallinckrodt was already famous for producing pure chemicals and for handling ether, and the St. Louis company was assigned the job of refining crude uranium ore for the Manhattan project. From April to July 1942, production leaped from test-tube size to 1 ton of dioxide a day. This was done with no guideposts from the past, no precedents to go by.

After project 42–17, as it was called, was completed and the A–bomb had fallen, the Smyth report commented.

"It was a remarkable achievement to have developed and put into production on a scale of the order of 1 ton per day a process transforming grossly impure commercial oxide to oxide of a degree of purity seldom achieved on a laboratory scale."

Mallinckrodt's AEC operations now represent a substantial investment by the AEC, with a $39,800,000 expansion program in process. This includes the building of a $33,300,000 plant at Weldon Spring.

The reputation for producing pure chemicals which brought Mallinckrodt the AEC work has been 89 years in the making. The high standards established by the three Mallinckrodt brothers in 1865 have never been relaxed.

When Gustav, Edward, and Otto Mallinckrodt started to produce fine chemicals in the fall of 1867, there was not another plant like theirs this side of Philadelphia and no wholesale druggist between St. Louis and California. Most chemicals were imported from Europe.

When it began, Mallinckrodt chemical works consisted of 3 small buildings where 4 employees produced a few items such as bromides, bismuth salts, acetic and butyric ethers. Most of these medical products were produced by purification of commercial grade chemicals and preparations of a few simple organic compounds. Mallinckrodt was one of the first manufacturers of bromides in the United States and was the first to produce chemicals in easy pouring granulated form instead of the old large crystals.

In the late nineties the company began manufacture of the alkaloids, cocaine, and morphine, which it still supplies. A little later the manufacture of products of nutgalls was started: gallic acid, tannic acid, and pyrogallic acid. During the early 1900's one of Mallinckrodt's most important steps was taken: The development of the highest grade of ether for anesthetic purposes. It was partly because of the company's development of this line that it was chosen for the AEC work.

Mallinckrodt Chemical Works began manufacturing photographic chemicals in 1883, while portable cameras were still a novelty and 2 years before the roll film appeared. Their latest development in the graphic arts field is synthetic etching powder, which replaces the old dragons blood.

The first large venture in the industrial branch of the fine chemicals industry was introduction of burnt alum for use in baking power in 1876.

Today, Mallinckrodt sells over 1,500 chemicals in quantities up to millions of pounds. More than 200 industries depend on the company as a source of chemicals.

Products turned out by Mallinckrodt fall into seven general categories: Industrial chemicals, bulk pharmaceutical chemicals, medical specialties, photographic chemical supplies, turf fungicides, reagent chemicals, and uranium products.

Between 400 and 500 basic organic and inorganic chemicals are put through a variety of processes to make many industrial products. Stearates, sold by tonnage in carload lots, are used in plastics as mold release agents, in oil and grease as jelling agents, in the paper industry to improve coatings, in the cosmetic industry in face powders and anything that needs smoothness, in the paint industry as a flatting and suspending agent.

Electronic chemicals, also used in industrial products, go into radio and television tubes and other electronic devices.

Pharmaceutical chemicals, with which Mallinckrodt began its operation, are still an essential part of the business. The company furnishes ingredients for drugs in bulk supply to pharmaceutical manufacturers. These include such things as iodides, mercurials, iron salts, bismuth compounds, phenobarbital and theophylline.

The company has led the field in development of X-ray contrast media, containing iodine, that are given intravenously to permit X-ray of internal organs.

Mallinckrodt's newest product in this line, Miokon sodium, is notable for its success as a contrast medium and for the absence of side effects in most of the clinical tests.

Perhaps the most important of the company's medical specialties is pure ether used for anesthesia. It is vital to the patient's welfare and comfort that ether be as free as possible of peroxides and aldehydes, and Mallinckrodt has long been famous as a leader in this field. Their research has been so extensive that the company even developed a special ether container freer of impurities than older ones had been. High standards of purity are especially important in reagent ether used in laboratories.

Soda lime, another Mallinckrodt product used in the operating room, absorbs carbon dioxide, permitting the reuse of ether. After much research, Mallinckrodt Chemical Works developed the first successful indicating type of soda lime, which shows when it can no longer absorb carbon dioxide efficiently by changing color.

In the photographic field, Mallinckrodt produces basic chemicals for professional and advanced amateur photographers, including such items as developers and fixers, silver nitrate and etching powder which the company invented. Until Mallinckrodt developed it in 1935, the very crude dragon's blood was used. It is estimated that more than three-quarters of all etchers now use the company's uniform synthetic product.

Mallinckrodt helps keep golf course greens green with their turf fungicides which control such green-keeper bugahoos as brown patch, snow mold, dollar spot, copper spot, and red thread. It is possible to lose a $5,000 green in one summer to one of these blights, without preventive use of turf fungicides. In addition to the three types previously developed by the company, Mallinckrodt has produced a new one, Kromad, which is nonmercurial. This makes it nonpoisonous to grass and safer to use than old varieties.

Purer than pure are over 400 reagent chemicals produced by Mallinckrodt for use in laboratories. The extra-pure "AR" (analytical reagents) grade chemicals are used to test the purity of other chemicals. In 1912 Mallinckrodt manufactured for the National Bureau of Standards the first chemical primary standard to be prepared on a commercial scale in the United States.

Work with uranium continues to expand at Mallinckrodt. A small plant at Hematite, Mo., will be in operation soon for commercial production of uranium oxide used in the manufacture of fuel elements for atomic powerplants.

Work with uranium has led to production of other special metals, such as columbium, thorium, and rare earth, for which a new plant was recently put into operation. Ore in large quantities arrives here from the Northwest and from it Mallinckrodt extracts such products as their respective oxides.

Production alone is not the only concern at Mallinckrodt. Research in many areas of chemistry is constantly in progress. Chemists are at work in a bright new organic research laboratory on such things as contrast media, analgesics, reserpine. A chemical-control laboratory tests the quality of a sample of each lot before it is sent out to customers.

Since 1946, about $10 million has been spent on capital improvements at Mallinckrodt, for increased warehouse space, new laboratories, and expanded manufacturing facilities.

Safety protection is just one of the several outstanding personnel practices at Mallinckrodt. Guard rails, ventilation, fire-prevention rules are important. The company maintains its own fire department.

In 1931 the company instituted a pension plan for its employees, when only 750 such plans existed in the country. Mallinckrodt pays for employee hospital-surgery insurance in addition to a group insurance plan in which it pays part.

There is an unusually low rate of turnover in personnel at the company, indicating its good working conditions. Mallinckrodt employs 2,700 people: 2,250 in St. Louis, the rest in its New York and New Jersey plants.

Looking to the future Mallinckrodt intends to expand both its medicinal lines of diagnostic, analgesic, and anesthetic chemicals and its activity in the uranium and special-metals fields, according to Charlton MacVeagh, vice chairman of the board and treasurer.

MacVeagh sums up the forward look of St. Louis' oldest chemical company:

"I feel we are equipped to meet the challenge of the needs of medicine, pharmacy, industry, and what they call the atomic age."

Sale of Surplus Vessels

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. RAY. Mr. Speaker, I am introducing today a joint resolution to permit the sale of two transport and cargo vessels to any citizen who has sufficient financial strength and operating experience to undertake the project and secure approval by the Federal Maritime Administrator. The purchaser must recondition the ships at his own expense in American yards and must operate them under the American flag on essential trade routes 3 and 4. These routes run between the United States and Cuba and the United States and Mexico. The ships are now idle in the reserve and have been declared surplus by the Government. They can be repossessed by the Government if needed. Use of these ships will restore the American flag to these essential groups and should help expand our trade with Cuba and Mexico.

I think passage of the resolution will be very much in the public interest, and I hope the resolution will receive widespread support among the Members of this House.

Better Living Under President Eisenhower

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mr. YOUNG. Mr. Speaker, partly as an outgrowth of the great depression, the Federal Government—and, in fact, government at all levels—has assumed a degree of responsibility for the economic and social well-being of the individual not envisioned by our Founding Fathers. The Eisenhower administration has placed this enlarged responsibility in proper balance and focus and has given it life through a program of action.

The most significant landmark of action in the changed concept of the Federal Government's role in the field of social welfare was the establishment of the Department of Health, Education, and Welfare, one of the first accomplishments of the Eisenhower Republican administration. By this action the everyday human problems of health, education, and welfare were given Cabinet status. Significantly, this was the first new executive department to be created in 40 years.

The Eisenhower administration's emphasis on people and human values has been marked by a concentrated drive to strengthen and expand Federal-State activities for the improvement of the health, education, and the social and economic security of the individual. This has been done in a manner which has sought to encourage individual self-reliance without fostering a spirit of dependence on government.

From the earliest days of the Eisenhower administration, a persistent effort has been made to secure more funds for the most important activities which were brought into the new Department of Health, Education, and Welfare. In fiscal 1957 the administration sought a 24 percent increase in the Department's appropriations. This included $450 million for programs provided for by new legislation. The Department sought these additional funds in order to strengthen its activities and provide for new or improved research in every field within its responsibility.

The Eisenhower administration has asked Congress for the largest increase in funds for medical research ever recommended in any one year—some $27 million. Much of this money will be used to expand the activities of the National Institutes of Health, the principal medical research activity of the United States Government. Another goodly portion of these additional funds will increase the Federal Government's grants to medical schools, hospitals, health agencies, and skilled scientists for the conduct of medical research.

The administration has proposed a new program of Federal grants-in-aid to medical schools and other nonprofit research institutions for the construction of additional research and teaching facilities. This proposed program would cover a 5-year period and calls for Federal grants totaling $250 million. These grants would have to be matched by the recipient institutions.

Passed by the Senate and still pending in the House is the Eisenhower administration's request for legislative authority to expand and improve its programs for the training of practical nurses, professional nurses, and public health personnel. This authority, if granted, would set in motion a procedure to provide more personnel in the nursing field, and to release doctors and other skilled medical personnel to duties which more efficiently use their higher skills.

The administration has opened a determined attack on mental illness by its request for authority from the Congress to establish a system of grants-in-aid to finance special demonstration projects to develop improved methods for caring for the mentally ill. This program will set in motion a new Federal-State assault on one of the Nation's most vexing health problems.

In the field of education, the Eisenhower administration sought $6 million for operating expenses for the Office of Education in fiscal 1957—an increase of about $3 million over fiscal 1956. These additional funds would expand the services of the Office of Education and would provide a far-reaching program of cooperative educational research. The objective is to throw light on the problems which have been retarding the progress of education in America.

The Eisenhower administration has proposed that the Congress authorize a program of Federal assistance for school construction. This program is one which would encourage greater school building efforts by States and local communities. It would distribute Federal funds where the needs are greatest and the financial resources are weakest. The program guarantees against Federal interference in the conduct of our public school system. It would authorize the use of Federal funds in such a manner as to avoid creating a political pork barrel.

In the area of social security, the Eisenhower administration requested and received from the Congress in 1954, an increase in social-security benefits for everyone covered by the system. In addition, social-security protection was extended to some 10 million workers not theretofore covered. The system is being operated with commendable efficiency and further expansion and improvement in the program that is being sought by the Eisenhower administration.

The Eisenhower administration, from its first days in office, has sought ways and means of reducing the cost of medical care to the individual. A request for legislative authority designed to encourage the expansion and improvement of private voluntary health insurance programs is pending before the Congress.

This proposal seeks to improve the benefits of private health insurance and thus to encourage more individuals to secure such coverage. It proposes to do this without putting the Government in the insurance business.

The Eisenhower administration has been seeking authority to authorize a system of grants to strengthen and improve State and local programs to control and reduce juvenile delinquency. A concerted Federal-State-local attack on this problem is envisioned.

An increase in funds has been recommended for enlarged Federal grants for basic child-welfare services. This request includes a suggestion that the law be amended to allow the use of child-welfare funds wherever they are needed. The law, as it now stands, restricts the use of such funds largely to rural areas.

The vocational rehabilitation amendments sponsored by the Eisenhower administration, which became law in 1954, expanded and improved the Federal vocational rehabilitation program and provided more funds, more facilities, more research, and more training for skilled personnel. This new emphasis is already bringing about a steady increase in the number of persons who are conquering physical handicaps and returning to productive lives.

The Eisenhower administration is sparking a national "employ-the-older-worker" program. In 1954, there was created in the Department of Labor, a "Committee on the Older Worker." On April 2, 1956, President Eisenhower established a Federal Council on Aging to coordinate the interdepartmental policies and programs of the Federal Government concerned with the problems of older people. A Federal-State Conference on Aging was held in June, 1956, to bring together some 250 State and Federal officials concerned with the problems of older people. Thus, the Federal Government, through a program of cooperation with the States and with private individuals and institutions, is leading an assault on age barriers to employment and the other special problems of older persons, including health and housing.

The healthy economic climate, which has been fostered by the Eisenhower administration, has produced a rising level of life in America. This, when added to sincere interest in the social well-being of the individual, is providing a more satisfying life for the American people.

The Late Harley M. Kilgore

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mrs. KEE. Mr. Speaker, Monday the Members of the United States Senate will pause from their important legislative duties to pay fitting, appropriate, and justly due tribute to the memory of two outstanding late Members of the United States Senate—former Vice President Alben Barkley, and the late United States Senator, Harley M. Kilgore, of West Virginia.

On February 28, 1956, our dearly beloved and highly respected counselor and friend, Harley Kilgore, was called to join his Father in the land of rest and peace.

While I am not capable of adequately paying just tribute to the memory of this illustrious West Virginia son, who has done so very much for all of us, I pause for this moment of respect to our tried and true friend.

Time being the great healer it is, the first shock of grief has passed since Harley Kilgore raised his voice for the last time in the United States Senate Chamber. However, the emptiness is still here. Every true son and daughter of West Virginia still feels a great sense of loss at the passing of this great American. The word "great" is used advisedly, for no man has labored more valiantly for the principles of this Nation than our late beloved friend, Harley Kilgore. His outstanding leadership and his accomplishments were a tremendous source of inspiration to all who new him.

Because of his proven ability, the senior statesmen of our country often turned to Harley Kilgore for sage counsel. Now that leadership and counsel are missing, never to be completely replaced.

While our personal loss has been overwhelming, while the loss to our home State of West Virginia, our Nation and the freedom loving people the world over has also been great, I know that we are each and every one better off because of the life and work of Harley Kilgore. He was extremely fortunate in that he enjoyed the comfort of a wonderful wife who did so much to help him along the way. Mrs. Kilgore is a lovely, charming, intelligent, and understanding lady who was always by Harley's side and anxious to do everything possible to help him.

Senator Kilgore's son Bob, and his daughter Eleanor, were the most loyal children a man could have. Their children, the Senator's grandchildren, were the refreshing joy of his life.

Equally comforting for us to know, the Senator had the satisfaction of knowing the full meaning of the words, "Well done, thou good and faithful servant."

Harley Kilgore was a modest man, never one for too much talk. He believed that a man was as he did, not as he said. There stand many monuments to him today in our home State of West Virginia. They are not of marble nor of bronze. These monuments are living flesh and blood—young men and women whom he helped to find their way into a productive role in society. As long as he lived, he believed that the greatest gift of mankind was its youth, and with that thought as his guide, he lived a full and useful life under God with His Divine help and inspiration.

When Harley Kilgore passed away, the world lost a leading statesman, the Congress lost an outstanding Senator of experience and proven ability, and West Virginia lost a great Christian leader, an impartial jurist, a powerful spokesman and a compassionate son.

In closing, Mr. Speaker, may I say that I strongly feel that it is up to us to redouble our efforts, to do our job better, in order to justify the friendship Harley Kilgore so generously gave to each of us.

"Smear Politics" Decried

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mr. DINGELL. Mr. Speaker, I rise today to insert into the CONGRESSIONAL RECORD an article by the distinguished columnist, Mr. Roscoe Drummond, appearing in today's Washington (D. C.) Post and Times Herald.

In his column, Mr. Drummond effectively treats the vicious smear tactics which have been used during the past several elections by the Republican Party, and by many of the high officials of government belonging to that party.

I hope that all our citizens will read this excellent article which goes so far to show the basic falsity and viciousness of this form of campaigning. I am sure that the American people will again reject this form of slander at the polls, as I hope the Republican Party will between now and election, for its own good, if for no other.

"SMEAR POLITICS" DECRIED—GOP INNUENDOS ON REDS ASSESSED

(By Roscoe Drummond)

Really now, in the kind of world we are living in today, hasn't the time come when American national politics ought to get up out of the mud puddle and shed the low blow, un-American tactics of trying to smear your political opponent with the innuendo that he is enmeshed with the Communists?

I am convinced that United States voters distrust these smear-the-whole-landscape, mud-pack charges, disbelieve them, are bored by them, and will, in the end, penalize the politicians who think they can survive by feeding on them. They did in the 1954 congressional elections.

But it is a trade still plied by some and the latest example is a memorandum released by the staff of the Senate Republican policy committee proclaiming that the Communist Party in the United States wants "the Republicans defeated" and hopes for "a Democratic victory" this fall.

This is a tricky, dishonest, and dishonorable thing. No wonder it was coldly and angrily condemned by leading Democratic Senators on the floor this week and that Senator WILLIAM F. KNOWLAND, Republican leader, had the good grace—man of integrity that he is—to repudiate it unreservedly.

But this kind of carefully circulated insinuation has been made before, and after its sponsors think it has done its dirt, withdrawn. It will take more than Senator KNOWLAND'S and Senator ALEXANDER SMITH'S disavowals to free the Republican Party from the taint of very shoddy tactics.

There can be no doubt that the staff of the Senate Republicant policy committee knew what it was up to. It attached a cagily worded disclaimer to its release. The disclaimer read: "Note: Neither the members of the Republican policy committee nor other Republican Senators are responsible for the statements herein contained except such as

they are willing to endorse and make their own."

There are only two things wrong with such a half-hearted disclaimer. Republican Senators may not be responsible for staff statements they do not themselves endorse, but they are responsible for actions of the policy committee staff. Second, the staff must think there are Republican Senators who will want to endorse these statements and make them their own or the staff wouldn't prepare them. Is the staff of the Republican policy committee employed to publicize statements so their superiors can repudiate them?

Actually this Republican staff memorandum does not bear out its own assertions. It puts a title on its release which asserts that the "Communist Party pleads for Democrats to win" and in the first paragraph it claims that "the official Communist line has now been announced" and that the Communists consider "a Democratic victory is essential."

The fact is that the official Communist Party line has not been announced and the Republican memorandum quotes just one State Communist functionary who suggests that Communists pursue "an independent course which influences the direction of the Democratic Party."

Finally, how do Republicans think they are serving the Nation or themselves by suggesting that the Communists are to be believed or that they say what they are going to do or do what they have been saying? Communists are required to be liars and I shouldn't think that Republican Senators would want to pay their staff to persuade us that they are not.

The Republican committee staff seems entranced by the syllogism which they suggest but do not prove: The Communists want to hurt the United States; the Communists—so they claim—support a Democratic victory; therefore a Democratic victory would hurt the United States. Let us see where that kind of reasoning carries them.

The Communists have imprisoned and liquidated more socialist leaders than they have capitalist leaders. Is this Republican staff trying to persuade us that because the Communists hate socialists we ought to approve socialism?

The Communists indorse the Supreme Court's public school desegregation verdict and Vice President NIXON described Earl Warren, after delivering he verdict, as a great Republican Chief Justice. Is this Republican staff trying to call Mr. NIXON pro-Communist?

They are doing all these things if their logic in the first instance is to be accepted.

I would hope that at his next press conference President Eisenhower would use his great moral influence to strike these un-American tactics from the hands of his party as un-Republican.

Supporters of Senate Resolutions 85 and 86 Have Unusual Backgrounds

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, July 5, 1956

Mr. MARTIN of Iowa. Mr. President, on many occasions I have voiced my objections to international commodity agreements designed to stabilize the prices and volume of raw materials involved in international trade. Chapter VI of the now defunct Habana Charter for an International Trade Organization provided for such agreements.

President Eisenhower and Secretary Dulles have clearly indicated their disbelief in economic panaceas which would attempt to stablize the world markets at the expense of the freedom of all producers and consumers.

On May 28 and 29 of this year, a subcommittee of the Senate Committee on Foreign Relations conducted hearings on Senate Resolutions 85 and 86. The proposals embraced in these resolutions were condemned by the Departments of State, Interior, and Agriculture. The resolutions were endorsed by a number of organizations, including the National Farmers Union, the Americans for Democratic Action, and the United Automobile Workers.

I have just read an article, published in the magazine U. S. A.; the article was written by Alice Widener, the editor of the publication. She has assembled some interesting background data on the supporters of these resolutions, which I am sure will enlighten my colleagues as much as it startled me.

I have been advised by the Public Printer that the article is estimated to make approximately 2⅓ pages of the CONGRESSIONAL RECORD at a cost of $179.67.

I ask unanimous consent that Mrs. Widener's article entitled "A Key Resolution," from the magazine U. S. A., may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A KEY RESOLUTION

(By Alice Widener)

On May 28 and 29, 1956, a subcommittee of the Senate Committee on Foreign Relations, with Senator HUBERT HUMPHREY, Democrat, of Minnesota, as chairman, conducted hearings on Senate Resolution 86 which was introduced in the 84th Congress, March 1955, by 23 Senators led by Senator JAMES E. MURRAY, Democrat, of Montana.

A typically impractical and dangerous product of leftwing economic and social thinking, Senate Resolution 86 proposes that the President should enter into negotiations through the United Nations to establish an International Food and Raw Materials Reserve. This resolution further provides that efforts should be made to effect international stabilization of prices of food and raw materials.

In reality a proposal for socialistic economic planning, Resolution 86 was advanced by its proponents as a means of getting rid of agricultural surpluses and feeding hungry people in underdeveloped countries.

A novel aspect of the plan is that currencies paid to the International Food and Raw Materials Reserve by purchasers of materials may be used to assist in the financing of approved economic and social development programs, including universal education—public, general, and vocational—universal literacy, public health, and medical care. In other words, the reserve is to be transformed into a world cureall. Even for alchemists, such a transformation would be a rather tall order.

VAGUE IDEAS, SPECIFIC AUTHORITY

The 23 Senators sponsoring Resolution 86 include such New Deal stalwarts as MURRAY, DOUGLAS, HUMPHREY, JACKSON, KEFAUVER, LEHMAN, NEELY, NEUBERGER, and SPARKMAN. Having no precise idea of how the reserve-into-panacea alchemy could be accomplished, they merely express in the resolution the idea that it is "the sense of the Senate" that the administration should "enter into international negotiations for the purpose of preparing a specific plan."

The resolution then provides that "the plan and agreement, or agreements, developed in accordance with section 3 hereof (authorizing executive negotiations through the U. N.) together with full supporting material and information on operating methods, shall be presented to the Senate of the United States for approval."

At the May 1956 hearings on Resolution 86, the Humphrey subcommittee heard administration testimony given by Deputy Assistant Secretary of State Thorsten Kalijarvi, by Assistant Secretary of the Interior Felix Wormser, and by Assistant Secretary of Agriculture Earl Butz.

Each of these officials pointed out the complete impracticality of the concept for an International Food and Raw Materials Reserve. They testified that the President is sympathetic to the objective of relieving hunger, but believes that international machinery of the type proposed would be unworkable and wholly ineffective.

LONE VOICE

On May 29, nongovernmental witnesses appeared before the subcommittee. In opposition to Resolution 86 was Simon D. Strauss, vice president of American Smelting and Refining Co., who appeared on behalf of the American Mining Congress.

CHORUS IN UNISON

In favor of the resolution were the following witnesses:

James G. Patton, president of the National Farmers Union.

Paul Sifton, national legislative representative of the United Automobile Workers, who appeared for Walter Reuther.

John Gunther, legislative representative of Americans for Democratic Action, appearing for Robert Nathan, chairman of the ADA executive committee.

Benjamin Graham, economist.

Study of the background and viewpoints held by the foregoing list of witnesses favorable to Senate Resolution 86 is helpful in trying to gage the quality of their economic judgment.

TENOR

Mr. Benjamin Graham, for example, would like to monetize the world's commodities in place of gold. His unusual economic theories were included in the report Commodity Trade and Economic Development, prepared by a group of experts appointed by the Secretary-General of the United Nations pursuant to U. N. General Assembly Resolution 623 (VII) adopted in December 1952.

This U. N. resolution was opposed by the United States.

Nevertheless, the U. N. Economic and Social Council, acting in 1954 on the experts' report, established a Commission on International Commodity Trade.

Fortunately for Americans, the United States Government voted against the establishment of this U. N. Commission and has refused to take part in its deliberation.

At the May 29 Humphrey subcommittee hearings, the other witnesses favorable to resolution 86—James G. Patton, Paul Sifton, and John Gunther (representing Robert Nathan)—suggested that creation of the International Food and Raw Materials Reserve is a way to stop communism.

This suggestion naturally leads to inquiry about the witnesses' attitude toward communism and the degree of their own aversion to it.

VOICE FROM THE PAST

On May 29, 1956, Mr. Paul Sifton testified before the subcommittee that the attitude

of administration witnesses unfavorable to the resolution on the previous day "reminded me, if I may say so, of the attitude of the twenties and the thirties."

Since the witness himself brought up the past, it is enlightening to study what was Mr. Sifton's own attitude in the 1930's, an attitude which might be taken into account by Senators considering resolution 86 and weighing the value of Mr. Sifton's endorsement of it.

Mr. Sifton used to be a playwright.

In a revolutionary play, 1931, urging the use of violence, Paul and Claire Sifton began the script with the authors' note:

"1931 is concerned with an individual in the tidal movement of a people caught in a situation which they can neither explain, escape, nor exorcise. As the play develops, the contrapuntal design of the 10 interludes suggests a ground swell that is bearing Adam, his group, and the audience itself, on to revolution of one sort or another."

The finale of Paul and Claire Sifton's 1931 is even more dramatic;

"Suddenly onto the stage spills a streaming crowd of men and women, Adam among them. They are not singing. The singing continues offstage. The song is not the Internationale, it is that and more, a wordless battle hymn of ferocious desperation.

"They walk steadily across, eyes ahead. Halfway across, gunshots start. Two fall. Two waver, turn, and run. The others go on; more shots; they go on. As they near the other side, machine-gun fire begins."

CURTAIN

For Fight magazine, November 1933, official organ of the American League Against War and Fascism (described by the House Un-American Activities Committee as "strictly under the control of the Communist Party until 1937," and listed as subversive by the United States Attorney General) Mr. Sifton wrote:

"UNCLE SAM WANTS YOU

"(By Paul Sifton)

"Hey, there, Big Boy, Uncle Sam wants you for the next war. He wants you to take $30 a month (less payments for bonds and thrift stamps, and so on) for doing this:

"Saying yes, sir, to bright boys in officers' pink pants;

"Packing 60 pounds of clothes, shoes, hardware, and food on your back through mud, ice, dust, and heat;

"Digging trenches in the ground like a half-witted woodchuck while your family back home scratches around for food and fuel;

"Shooting holes in men like yourself across a line;

"Getting wounded yourself, in the leg, or arm, or chest, or guts;

"Getting gassed so that your skin curls up like bacon on a fire and you cough up your lungs;

"Dying all at once or by inches or maybe living to stand in breadlines after it's over.

"How's that? 'Like hell,' you say? Then speak up, say it now. Say it loud. Back it up with action before the leading citizens can get the war started, before they begin slapping you around with bayonets.

"You do the leading; set the fat boys back on their bottoms and keep them there; keep them blocking; keep them ducking; don't let them tie you up with their bull about patriotism.

"Ask them how close to the front they got in the last war—in any war; ask them how much money they made while you, or your brother or father, were fighting to make the world safe for Mellon and Insull and Krueger and Krupp.

"Tell them you know that they know they're sunk unless they can start a war * * *; tell them they and their fancy pieces of paper and the whole capitalist shell game can sink and be damned.

"Tell them that we've got another war on, closer home, a war to establish a workers' peace, a workers' government.

"(They know this anyway, but they hate to be told.)

"If you want to make it snappy, just tell them the workers have been played for saps long enough. Tell them to go to hell. Then make it stick.

"Remember, all the bankers, politicians, generals and admirals in the world can't fight a war until they've kidded, lied, and terrorized the workers into dying for them. What do you want, a workers' peace or a bosses' war? It's up to you.

"You've got to move fast to stop it. Already they've kidded lots of you into thinking that another war with Japan, or maybe Germany—'would be a good thing for prosperity.' Whose prosperity? Not yours.

"Don't be a mug. Make up your mind what you want and then go after it."

As well as having written the foregoing article for the official organ of a subversive organization, Mr. Sifton is shown in the records of the House Un-American Activities Committee as having been associated with the American League Against War and Fascism, the Congress of American Revolutionary Writers, and the National Committee for the Defense of Political Prisoners. All these organizations were listed as subversive by the Attorney General of the United States, April 29, 1953.

During the Roosevelt Administration, Paul Sifton was appointed as Assistant Administrator of the Wages and Hours Administration in the Department of Labor under Secretary Perkins. Later he became Legislative Representative for the National Farmers Union wherein he evidently gained experience for his present post of lobbyist for Walter Reuther's UAW.

The National Farmers Union has had a rather colorful history, and it is not surprising that both its former employee, Paul Sifton, and its present president, James G. Patton, appeared before the Humphrey subcommittee, May 29, 1956, on behalf of an essentially Marxist plan: the creation of an International Food and Raw Materials Reserve.

THE UNDERLYING THEME

The name James G. Patton occurs in several reports and quotations of testimony issued by the House Un-American Activities Committee. In its report, No. 1115, 80th Congress, the Civil Right Congress as a Communist-Front Organization, there is the following statement on page 19:

"It is worthy of note that subsequent to the formation of the Civil Rights Congress in Detroit on April 27–28, 1946, and the enlistment of additional sponsors, the names of a number of members of the initiating committee, having served their decoy purposes, disappeared from the organization's letterhead, among them being James G. Patton."

Also worthy of note is the fact that the president of the Civil Rights Congress, George Marshall, was head of the Robert Marshall Foundation which was an abundant source of funds for the Communist Party. On September 7, 1950, the House Un-American Activities Committee revealed that the National Farmers Union was receiving $7,500 a month from the Marshall Foundation.

Another House committee report (No. 1951, 81st Cong.) shows that Mr. James G. Patton was a sponsor of a testimonial dinner in honor of former Senator Claude Pepper, Democrat, of Florida, held by the American Slav Congress, which is listed as a subversive organization by the Attorney General.

On March 31, 1950, James G. Patton appeared before the House Committee on Un-American Activities and gave a statement in opposition to passage of the Mundt-Nixon bill, H. R. 7595, predecessor to the McCarran Act which established the Subversive Activities Control Board designed as a vital protection of our Nation's internal security.

Concerning the Mundt-Nixon bill, Mr. Patton testified:

"By this time, it should be clear to everyone that repressive legislation of the kind before this committee not only does not achieve the objectivity it is designed to achieve but actively interferes with the fulfillment of the American traditions.

"H. R. 7595, the Mundt-Nixon bill, has been before Congress some time now. Its provisions are well known and it is not necessary at this time to go at length into its specific provisions.

"The National Farmers Union always has regarded this legislation as unconstitutional * * *

"Aside from the constitutional objections, we also feel that such bills as the Mundt-Nixon bill inevitably tend to cast the American people in the image of totalitarianism. * * *

"As for H. R. 3903, the Wood bill, we have somewhat the same objections but on a minor scale to this bill as we have to H. R. 7595. H. R. 3903 is the same type of legislation. Its provisions for barring Government workers from contributing to organizations officially labeled as subversive appears to us to be simply another way of cluttering up the statutes. * * * we believe that the so-called loyalty check program itself is an extravagant misuse of Government power. * * *

"As to the provisions in the bill which attempt to extend this kind of screening to private employees of firms obtaining governmental defense contracts, we regard them as wholly fantastic. The establishment of the kind of comprehensive snoopery that would be required to enforce such a provision would involve an enormous amount of useless expense to the Government, wholesale invasions of personal liberties, and a genuine foundation for an American police state. * * *

"In summary, we urge that the committee permanently table both of these measures."

Fortunately, Congress protected our country against subversion through passage of the McCarran Act embodying many features of the Mundt-Nixon bill, and disregarded leftwing opposition including that of James G. Patton.

Judging by his record, it is not surprising that he uses his position as President of the National Farmers Union to favor socialistic measures such as those proposed in Senate Resolution 6 which favors international price control of agricultural products and raw materials.

ADA WIELDS BATON

Of course, it is to be expected that the leftwing Americans for Democratic Action should favor Resolution 86, as is revealed in the May 29 testimony of ADA Legislative Representative John Gunther, who appeared on behalf of ADA Executive Committee Chairman Robert Nathan.

It is enlightening to study the background of Mr. Nathan, for he plays such an important role in ADA, an organization closely allied with many members of the Democratic Party leadership, including Mr. Adlai Stevenson.

Immediately after World War II, Robert Nathan formed his own business firm and chose as an associate Laughlin Currie, a former assistant to President Roosevelt. In its issue of April 9, 1956, Time magazine reported as follows about Currie, who was born in Nova Scotia:

"In 1948 Elizabeth Bentley told the House Un-American Activities Committee that Lauchlin Currie had aided the Communist underground in Washington; Currie hotly denied her accusations, but his name kept turning up in FBI reports and congressional investigations.

"In 1950, Currie left the United States, became an economic adviser to the Columbian Government * * *. Last week the State Department said that Lauchlin Currie, by staying abroad 5 years, had automatically forefeited United States citizenship."

In 1952, the Senate Internal Security Subcommittee report on the Institute of Pacific Relations stated on page 170: "All three (Hiss, Currie, and Rogov) have been charged with being connected with the Soviet intelligence apparatus."

Surely, Mr. Robert Nathan's judgment was extremely faulty in choosing Laughlin Currie as a business associate.

Since 1946, the firm of Robert Nathan Associates—according to files of the Foreign Agents Registration Division within the Department of Justice—has entered into business relations with several foreign principals. From November 29, 1946 to October 31, 1948, the firm acted as agent for the Polish Supply and Reconstruction Mission to North America. This was a mission of the Communist Polish Government.

Robert Nathan Associates has also represented the French Government, the Indonesian Republic, the Jewish Agencies of Palestine, and the Israeli Embassy in the United States. The firm was also a participant in a contract not to exceed a maximum dollar cost of $1.5 million made by the Economic Cooperation Administration in 1951 for technical assistance to the Government of Burma. On August 11, 1951, the American Metal Market reported: "The contract calls for the presence in Burma of Robert R. Nathan, economist, during the preparation of the general economic studies of the national economy under the preliminary survey."

It seems fair and reasonable to ponder on whether Mr. Nathan's keen interest in channeling United States and U. N. aid funds to foreign countries is wholly altruistic.

WHO'S TO PLAY FIRST FIDDLE?

It also sems fair and reasonable to suggest that the entire Senate, in considering Resolution 86 which calls for an International Food and Raw Materials Reserve, should ponder on the May 28–29 testimony before the Humphrey Subcommittee of the Senate Foreign Relations Committee.

Will the Senate heed the well-founded warnings of the administration's witnesses: Deputy Assistant Secretary Kalijarvi, and Assistant Secretaries Wormser and Butz?

Will the Senate heed the wise advice of Mr. Simon D. Strauss, vice president of the American Smelting & Refining Co.?

Or will the Senate permit themselves to be influenced by the Socialistic views of U. N. consultant Benjamin Graham, James G. Patton of the National Farmers Union, Robert Nathan of Americans for Democratic Action whose statement was read by John Gunther, and Paul Sifton of the United Automobile Workers?

SIFTON SINGS IN TUNE

Mr. Sifton's prejudice against the American system of free enterprise is clearly shown in his testimony before the Humphrey subcommittee concerning the United Nations Special Fund for Economic Development (SUNFED).

Though the 1953–55 national conventions of the National Foreign Trade Council formally declared opposition to the creation of SUNFED and any other international agency or mechanism designed "to funnel American taxpayers' money into dubious economic channels," Mr. Sifton testified as follows about SUNFED on May 29, 1956:

"Mr. SIFTON. Sitting here yesterday, I just had a sense of total unreality, Mr. Chairman. What month was it, what year, what century are we in, when we hear a straight isolationist doctrine preached that says anything done through the U. N. is difficult, and bilateralism is the thing to do? * * *

"Mr. Patton said [today] the issue is scarcity in war, abundance in peace. That is right. That is what is back of this, and I am glad that the chairman of this committee has got the impatience and the indignation of youth, and that the chairman——

"Senator HUMPHREY. Thank you.

"Mr. SIFTON (continuing). Intends to offer an amendment for SUNFED is great news for organized labor, for the AFL–CIO and for the UAW, for the International Confederation of Free Trade Unions, all of whom have put this right up near the top of their international-affairs program because they realize that if you do not take that step of economic development—and food can be used as live capital in that—you are in effect with the other agencies, the technical assistance and the World Health Organization, and all the other specialized agencies of the United Nations, you are getting people trained up, educated, healthier, and filled with ambition, they are getting all dressed up and all eager, with no place to go to work." (Transcript of hearings, pp. 199–200, May 29, 1956.)

"Mr. SIFTON. Mr. Chairman, I think we have part of the answer to your question: Why is anyone against SUNFED?

"I have from the CONGRESSIONAL RECORD a statement inserted in there by Mr. Robert F. Loree, the chairman of the National Foreign Trade Council, in which he states, and I only read one sentence out of it, but I think it does explain why some people are against it: 'The proposed special fund,' said Mr. Loree, 'by encouraging underdeveloped countries to believe that their needs for development capital would be met from international public funds provided through grants or on easy terms, would remove the compulsion'—I repeat—'compulsion on these countries to establish the proper environment if they are to attract the investment of productive private capital.'

"What does this amount to? This [Mr. Loree's statement] amounts to a proposal to put the banana republic system on a global basis." (Transcript of hearings, pp. 202–203, May 29, 1956.)

As anyone can see who is familiar with oft-repeated Communist slogans, Mr. Sifton's use of the hackneyed anticapitalist smear "banana republic system" is most revealing.

THE HARMONIOUS AMERICAN WAY

Also as anyone can see, who is familiar with the reality of conditions in the underdeveloped countries, the best economic way of rendering them real assistance is through an increased flow of private investment. The idea that the job can be done by American taxpayers, constituting only 6 percent of the world's population, is a delusion. Even if American taxpayers were willing to lower their standard of living and undertake such a job, their sacrifice would be unavailing. The plain truth is that the job can't be done in such a way.

Achievement of desired economic development and industrialization in underdeveloped countries can come only through creation of a proper climate of investment in which these countries' own funds can be channeled into productive employment.

It is highly significant that no witnesses from the National Grange and the American Farm Bureau Federation, or from any other outstanding conservative farm organization, endorsed Senate Resolution 86 as a measure to get rid of agricultural surpluses.

In considering congressional and United Nations resolutions in favor of a U. N. International Food and Raw Materials Reserve, and in favor of SUNFED, members of the legislative and executive branches of the United States Government will surely face economic facts as they really are.

What, really, is Senate Resolution 86?

It is a Marxist-made key.

This key resolution would enable Socialists to open the United States national safety deposit box and squander Americans' assets acquired by their hard work and thrift under the free system of popular capitalism, a mainstay of the American way of life.

Educational Benefits to World War II and Korean War Veterans

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1956

Mr. MACDONALD. Mr. Speaker, on June 26, 1956, I introduced a bill to amend Public Law 346, 78th Congress, and Public Law 550, 83d Congress, which laws grant, among other things, educational benefits to World War II and Korean war veterans.

I stated at the time that certain deficiencies in these two laws should be corrected at once. Also, I pointed out that these deficiencies came to light early this year when a Senate subcommittee investigating the Communist ownership of GI schools, discovered that under existing provisions of these laws the Veterans' Administration was required to expend Federal funds for tuition of veterans attending schools which are Communist-owned. In fact, over $3 million was paid out by the Veterans' Administration to four schools, which were the subject of the subcommittee hearings, and which, because of Communist connection, should be ineligible to participate in the veterans' training program.

The bill I introduced—H. R. 11955—was a companion bill to S. 4078 introduced by Senator MCCLELLAN and all the members of his Senate Permanent Subcommittee on Investigations.

In essence, the bill would require private schools, below the college level, which are training veterans or seeking approval to train veterans, to submit to the Administrator of Veterans' Affairs affidavits signed by the owner or owners and by the members of the governing body that he is not and never has been a member of the Communist Party or any organization that believes in or teaches the overthrow of the United States Government by force or by illegal unconstitutional methods.

Mr. Speaker, I would like to take this opportunity to bring to the attention of my colleagues a very illuminating editorial which appeared in the Washington Evening Star, under date of July 2, 1956, written by one of the very distinguished journalists, Mr. David Lawrence. As is customary with Mr. Lawrence, he not only expresses his thoughts in a clear and persuasive manner, but documents his observations with facts.

Mr. Lawrence's editorial should be read by every Member of Congress. It will remind us of our responsibilities in the field of education. It will also call to our attention what I believe to be a dereliction of duty on the part of the Veterans' Administration. For a period of 9 years the Veterans' Administration failed to recommend corrective legislation or at least apprise Congress of the deficiencies of these laws. It resulted in an inexcusable expenditure of Federal funds in support of Communist-owned schools. It is for this reason that I joined Senator MCCLELLAN and his colleagues in intro-

ducing legislation to correct this situation.

The editorial follows:

VETERANS' ADMINISTRATION INACTION—$3 MILLION OF TAXPAYERS' MONEY PAID TO COMMUNIST-OWNED SCHOOLS

(By David Lawrence)

The United States Government used more than $3 million of taxpayers' money from 1946 to 1952 to pay for the education of war veterans in four schools owned wholly or in part by members of the Communist Party.

This conclusion was reached by the Senate's permanent subcommittee on investigations, of which Senator MCCLELLAN, of Arkansas, is chairman.

Clumsy administration in the veterans' agency in those years and, to some extent, lack of alertness on the part of State agencies which had approved the schools were responsible for the situation.

More than $2 million in Federal funds were expended to a private high school in New York City that had in it many pro-Communist teachers, but the bulk of the veterans were trained at the school even after the Veterans' Administration was aware that it was Communist-dominated.

The Senate committee has called for new legislation by Congress to prevent any further Federal support of Communist-owned schools. It is apparent that some of the existing laws are inadequate to take care of the situation.

Most significant in the subcommittee's report—which, incidentally, is unanimous—is the statement made concerning the importance of confidential informants. The subcommittee does not reveal just what handicaps the investigating agencies of the Government may have been under in connection with the ascertainment of the facts concerning the influence of the Communists in the schools, but the subcommittee says:

"These hearings have served to re-emphasize to this subcommittee the important contributions that may be made by confidential informants to the exposure of the Communist conspiracy before the courts and congressional committees. To this end they have made extreme sacrifices of which the American public generally is unaware.

"It is to be expected that Communists and Communist sympathizers will lauch smear campaigns against these former party members who have a unique knowledge of the real purposes of the Communist Party, U. S. A. However, the subcommittee is particularly disturbed by a recent increase in similar unjustified attacks from misguided quarters avowedly anti-Communist. By such activities they are either unwittingly or deliberately promoting Communist causes.

"The result of such attacks has been an increasing reluctance on the part of former members of the Communist Party or undercover agents to testify in courts or before congressional committees. This Government is thus being deprived of its best source of facts concerning an organization dedicated to its overthrow by unconstitutional means.

"It is of interest that those groups attacking informants are not heard from when informants on non-Communist matters are involved.

"The very nature of the Communist conspiracy has always rendered its exposure exceedingly difficult. Now that the party has gone underground, that difficulty has greatly increased, necessitating an even greater dependence on confidential informants within the party in order to keep abreast of its activities and at appropriate times to publicly expose its real objectives.

"Reckless and unjustified attacks against all confidential informants and their use by our Government are strongly condemned by this subcommittee. They accomplish nothing except the rendering of assistance to the Communist Party.

"This subcommittee is firmly opposed to the expenditure of Federal funds for institutions owned or controlled by Communists."

Maybe the Justices of the Supreme Court who inveighed against confidential informants in one of their decisions recently will read what the Senate subcommittee has just said on the subject.

The subcommittee, incidentally, points out that, under existing laws, the Veterans' Administration "did not have and does not have legal authority to discontinue payment of Federal funds to schools reliably reported as Communist owned." But the Senators point out nevertheless that the Veterans' Administration "was on notice as early as 1946 of the deficiencies in this area" of public law.

The criticism of the Veterans' Administration is phrased this way:

"For a period of over 9 years, the Veterans' Administration failed to recommend corrective legislation or at least apprise Congress of the deficiencies of these laws. Such inaction is strongly condemned by this subcommittee. It resulted in an inexcusable expenditure of Federal funds in support of Communist-owned schools."

It is interesting to note that the new bill to correct the situation is sponsored by the full membership of the subcommittee, which means Democrats as well as Republicans.

Observations on Russia

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, July 6, 1956

Mr. BENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the second of two articles appearing currently in the Cleveland News, and written by one of its feature staff writers, Miss Doris O'Donnell.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Cleveland News of June 7, 1956]

DORIS O'DONNELL IN RUSSIA—LEARNS NEW FREEDOM STILL MEANS BONDAGE FOR PEOPLE

(Editor's Note.—News Reporter Doris O'Donnell, first Cleveland journalist to visit Russia since World War II, is back in Cleveland. The News today publishes the second installment of the exciting story of her adventures and observations, written without restriction from the exhaustive personal diary kept by Miss O'Donnell during her tour of cities and rural areas of the Soviet Union.)

(By Doris O'Donnell)

Moscow, U. S. S. R.—Freedom today in Russia is like the freedom of people taken out of solitary confinement, but kept in prison.

This is the impression I got every place I went in the Soviet Union.

No matter whether I talked with an engineer, interpreter or teacher, it was the same—the bondage of people without an independent voice.

The Russians have no conception of freedom as we know it in America.

They have been beaten over the head by czars or dictators so long that the opportunity to talk with an American seems to them daring. But they are doing so, on cue from the top political leaders.

When a Russian registers at a hotel, he turns in his identification card. Until a few weeks ago, he could not change jobs. Today he applies for permission 10 days in advance of quitting.

Rarely does a single Russian leave the U. S. S. R. Russians travel outside their orbit in groups or delegations.

A Russian lunching with a foreigner is also a rarity. I had met two Russians in Cleveland in April. One was the cellist, Rostopovich, and the other was his interpreter, Edward Ivanian, of the Soviet Ministry of Culture. Both had expressed eagerness to show me Moscow when I arrived.

I telephoned Mr. Ivanian and invited him to lunch. He said he was busy and would return my call. I never heard from him again.

A Russian teacher of French at the Stalingrad Agricultural Institute said she longed to visit France.

"Why don't you?" I asked.

"Well, perhaps someday," she said, adding hastily, "This summer, though, we can get free passes to Poland and Czechoslovakia."

The Soviet concept of freedom as measured against ours was illustrated during the recent visit of French Premier Guy Mollet and other French officials.

Some 3,000 French-Armenians begged the French to intercede for their return to France. These people had been lured to the Soviet Union by visions of a Communist paradise.

Now, disillusioned, they want their French citizenship back. The matter is under consideration by the Kremlin.

My freedom—and I use the word loosely—was a dubious thing here in the realm of the hammer and sickle. I would have liked the comforting thought that I could leave any time I wanted to.

I was not sure this could be done. My passport was taken by the night clerk at the National Hotel the moment I arrived. In fact, most of the time my passport was not in my hands.

I do not know that I was shadowed or followed or spied upon, but I suspect all my movements were jotted down by my interpreters and filed in the dark crenelated pigeonholes of the Kremlin. With all the foreign, and particularly free western, visitors coming to Russia this year, the espionage agents are going to get a big workout.

A foreigner, particularly an American woman, is so conspicuous on a Moscow street that it is impossible to travel anywhere unobserved.

High-heel shoes are as sensational as a neon sign, of which there are few in Moscow.

By contrast, the Russian women wear flat-soled shoes, or shoes with 1-inch high broad cork heels. The men's shoes are thick-soled styles, although many men wear cast-off military boots.

Further, in Moscow and to a lesser degree in other cities I visited, Russia militiamen are stationed at every intersection. Some are traffic policemen. Some patrol the streets. Others perch in sidewalk cubby-holes that look like over-size Mason jars.

From their elevated positions they sharply watch the street scene and keep a finger on who is coming and going. I did not see inside the glass jar, but there must be telephones connecting the vast police network.

I don't know whether airmail letters sent to the United States were opened or not. Nor do I know whether my incoming mail was tampered with.

But I do know two nonneurotic Americans who have become students of Russian glue.

They absolutely swear their mail is opened and reglued with a thick heavy yellow mucilage like nothing produced in America.

One American opened two letters from Florida, both written on tissue air mail stationary. He contended the regluing was so

messy parts of the letters were obliterated. All I can say is, they were the most glued-up letters I ever saw.

If the Soviet postal system is censoring mail, it gives a funny mental picture of clerks sitting around steaming open letters.

Believers that mail is censored aid their cause by pointing out the seven to 14-day time lapse for letters to reach here from New York.

Any foreigner can sink into a cloak-and-dagger mood in Moscow, which is a grim-looking city where even new buildings look like old warehouses.

For instance, rooms assigned to American, French, British, German and Canadian correspondents and tourists are the best, the kind of layout ordinarily reserved for a visiting Congressman. Microphones—if they exist— are behind wall ventilators. Well, you can't prove it by me.

My room at the National Hotel had a huge sitting room full of Victorian plush furniture, a small bedroom with a mahogany veneer wardrobe, and bath. There was a perfect view of Red Square, the Kremlin, Lenin Museum, St. Basil's fairy-like cathedral and the henna-marble mausoleum where the bodies of Lenin and Stalin are on public view.

Whether my room had electronic eavesdroppers or not, I am certain that Intourist knew where I was all the time.

First of all, the foreigner here must rely almost entirely on the services of Intourist, the official Soviet travel agency.

There are Intourist offices in the three hotels used for nonsatellite foreigners. They are the National, Savoy, and Metropole. The real swanky Moscow hotels are the Moscow on Red Square and the Sovietskaya, about 10 miles from Red Square.

It took a while to realize the importance and scope of Intourist. I was ready to brush it off. But a visit to the press department of the Foreign Ministry changed my mind.

Mr. Popov, assistant to the press chief, let me understand that it is Intourist that handles all visits to schools, hospitals, etc.

"You must ask Intourist," he said in his British-accented English, in answer to my requests.

"How about getting photographs of buildings and people?" I inquired.

"Ask Intourist," he said.

"I would like to interview Madame Bulganin, Madame Khrushchev, and Madame Furtseva," I said.

"You will write letters to them. Intourist will handle the letters," Popov said.

The three women whom I was anxious to see were English-speaking Mrs. Bulganin, wife of the Soviet premier; Mrs. Khrushchev, wife of the top man in the Supreme Soviet; and Ekaterina Furtseva, somewhat of a mystery woman to foreigners. She ranks nearly tops in the Communist Party, and is the only woman on the presidium, holding the post of alternate member.

The Russians have a telephone system, but it seemed more business was transacted by letter.

The visit to the Foreign Ministry building, a 20-story skyscraper (and one of Moscow's best-looking buildings) was the result of a letter to Leonid Ilychev, head of the press department.

A telephone call followed the letter and by appointment I was led by a young woman through a soldier-guarded door in the Foreign Ministry to the press office.

I've read about the psychological advantage of light shining upon a person's face during a questioning period, and it happened to me.

I was directed by Ilychev's assistant, Popov, to a seat opposite the only window in the room. Popov sat in the shadows on my left, and his assistant, Morovioff, faced me. I was conscious of my bright lipstick getting the full force of daylight. Few Russian women wear lipstick or rouge.

What seemed like hours of silence was a few moments, but neither man spoke. They offered me no encouragement to ask questions, although the air was full of them.

Finally I plunged into my purpose for being in Russia. I wanted, I said, to find out how the Russian people lived, how they dressed, how they worked. I said American women are intensely interested in the Russian women, especially in the wives of the leaders.

"Our women do not come before the public as yours do," Popov said.

"But," I insisted, "the American women know nothing about Madam Bulganin, for instance, and everyone knows about Mrs. Dwight D. Eisenhower."

Morovioff made notes of everything I said, including a list of things I wanted to do. Popov finally suggested I visit the editors of the magazine Soviet Woman, and talk with members of the Women's Anti-Fascist League.

Abruptly and rather awkwardly the interview ended. There was no chitchat.

An Intourist ZIS, a big luxury car similar to an American pre-World War II Packard, had brought me to the Foreign Ministry, but I had dismissed it. That was wrong, Morovioff indicated, as he called for another to return me to the National Hotel.

It is common to keep a chauffeured Intourist car or even an ordinary cab waiting, even 2 or 3 hours. The drivers usually sleep on the front seats.

From then on, Intourist was my right arm. I gave its offices a list of places to go, people to see, and hoped for the best.

There are a half-dozen girls in the National's Intourist office, plus their chief, Mr. Rogov. Two speak English, one, French, one, German, and the other two handled the telephone calls in Russian, directed by the others.

It was never easy to get a direct answer about anything.

"Yes. We will let you know," was the stock phrase.

Intourist arranged my visits to middle schools, nurseries, a polyclinic, a hospital, plus interviews with several people. I had bought coupons in New York, a requirement for travel here. For $30 a day on the "luxe" plan, I got my room, 3 meal tickets, plus 1 for tea, and the services of a car, driver, and interpreter.

On the trip to the ZIS auto works, where the ZIS limousines are made on special order, there were 4 Americans and 2 Russian interpreters. Our group included a correspondent, a New York student, a Connecticut businessman, and myself.

This arrangement was time consuming. Each of us had questions, and the interpretations for all were long and tedious.

Joseph Livingston, financial columnist for the Philadelphia Bulletin, had struck up a warm friendship with his male interperter. Driving back from the ZIS works, the interpreter pointed out his apartment.

"Let's stop and visit your wife," Livingston said.

"Oh, no," the interpreter replied. "That is not done. My wife must have time to get the house ready. In Russia, we call up our friends and ask whether we might visit."

He was embarrased by Livingston's request. To cover his confusion, he hauled out his wallet with snapshots of his pretty children and wife.

The Russians, I learned, deem it both socially and, I presume, politically incorrect to call unannounced. This may be a result of overcrowded living conditions. Anyway, I did manage to call unannounced at two apartments, as I shall tell about later.

Every place I was taken by Intourist guides I found conditions as perfect and as flawless as the Russians could manage them. In fact, the kindergartens and nurseries were so spotless and orderly it appeared no one ever used them.

This kind of freedom—where a foreigner can visit schools and hospitals—is a big thing to the Russians, I feel sure.

Many never met an American before. I was genuinely surprised at the number of Russians studying the English language and their eagnerness to practice it on Americans. In fact, I thought most of the guides had never spoken English outside the Institute classrooms.

But their kind of freedom and mine are as far apart as the moon and the earth. I only hoped as I met and talked with teachers and doctors that they could learn about our brand of freedom.

Proxy Solicitations Under Revised Proxy Rules of Securities and Exchange Commission

---

EXTENSION OF REMARKS
OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, July 5, 1956

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by J. Sinclair Armstrong, Chairman of the Securities and Exchange Commission, before the 10th annual meeting of the American Society of Corporate Secretaries, on the subject Proxy Solicitations Under the Revised Proxy Rules of the Securities and Exchange Commission.

I am informed by the Public Printer that the manuscript will make approximately 2⅓ pages, at an estimated cost of $179.67.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PROXY SOLICITATIONS UNDER THE REVISED PROXY RULES OF THE SECURITIES AND EXCHANGE COMMISSION

(Address by J. Sinclair Armstrong)

After 2 years of intense study, in January 1956 the Securities and Exchange Commission adopted revisions of its proxy rules designed to clarify and make more specific the intent of the rules as they relate to contests for the election or removal of directors.[1] The revision constituted amendments to the Commission's regulation X–14, adopted under section 14 (a) of the Securities Exchange Act of 1934, applicable to corporations, the securities of which are listed on national securities exchanges.

Prior to these amendments adopted by the Commission in January 1956, the proxy rules did not contain provisions specifically directed to the many disclosure problems arising in proxy contests for control of listed corporations. The more general disclosure requirements of the rules, which were primarily directed to solicitations for the usual meeting of security holders for the purposes of electing directors or for taking other appropriate corporate action, were applied on a case-by-case approach to the problems which arose in proxy contests.

When I addressed your annual meeting a year ago at Bretton Woods, I told you how our work in revising the rules were going forward. I will review that briefly and tell you of our progress since that time.

Footnotes at end of speech.

At the end of the 1954 proxy season, in August of that year, the Commission directed that the proxy rules be reviewed by the Division of Corporation Finance from the point of view of the problems presented by proxy contests and that proposals for amendment be submitted for its consideration. It was felt at that time, however, that additional experience to be gained under the rules then in effect during the 1955 proxy season would assist in the development of the new rules for proxy contests which would be suited to the changing patterns of proxy solicitations, particularly in contests for control.

A proxy rule revision proposal was first announced by Commission release in August 1955,[2] but prior to that time I had discussed the problems and some of the proposals in February 1955 before your Chicago chapter, and also in June 1955 in my statement to the Subcommittee on Securities of the Senate Committee on Banking and Currency. Following the public announcement in August 1955, we had the benefit of many well-considered and constructive comments from the public. We received and reviewed comments submitted in writing upon the original August 1955 amendment proposal and the modified proposal published December 14, 1955, and those advanced orally at a public hearing held November 17, 1955. We also considered all of the testimony, proceedings, and reports of the Senate Banking and Currency Committee, and its Subcommittee on Securities, bearing on the proxy problem and resulting from that committee's 1955 Stock Market Study. Thus the Commission's action in adopting the revision in January of this year was the culmination of several years' concentrated study and review of soliciting material filed in connection with proxy contests during that period.

The amendments reflect in large measure codification of the administrative interpretations and practices of the Commission in the proxy contest cases under the general rules as they had been in effect. In addition, the rules were amended more precisely to define and to elicit detailed information about persons deemed to be participants in a proxy contest.

In announcing the adoption of the revision in January, I stated my belief that the amendments of the proxy rules represented an important step forward under the Federal Securities Exchange Act for protection of investors in securities listed on national securities exchanges. Proxy fights for control of corporate management represent contests for the power to direct the use and disposition of significant aggregations of capital represented by corporate assets and credit. These, in turn, are represented by billions of dollars of outstanding securities held by public investors. The savings of the public investors, channelled through our capital markets into the securities of corporations, have provided the capital funds by which the American system of free private enterprise has been built and developed. As owners of the corporate enterprises, public investors should have the right at the very least under our free enterprise system to be fully and fairly informed about the interests which seek to elect directors and about the nominees who offer themselves or are offered by others to assume responsibility for management.

As owners of the businesses, with billions of dollars of savings invested, public investors have a great stake in the outcome of all corporate elections. The careful and intelligent exercise of their voting rights is of the utmost importance if persons best qualified, by reason of background, experience, and ability, to advance the best interests of the corporation and its stockholders are to be selected. This is particularly true in proxy contests, as opposing factions vie for the stockholders' favor and statements and counterstatements, charges and countercharges, sometimes are more confusing than enlightening.

The revised rules are designed to aid and protect public investors in the exercise of their voting rights by assuring detailed factual information about the participants, both the nominees for elections as directors and those actively participating in their election campaign. This includes information about their identity and background, their interest in securities of the corporation, and certain other important information having a bearing upon the contest.

The revised proxy rules established for the first time uniform ground rules governing preproxy statement solicitations, a significant development of recent years, and defining in more precise terms than did the prior rules the types of disclosure required in contests for the election or removal of directors.

Under the new rules, in a proxy contest, no solicitation of proxies by an opposition group may be commenced unless a statement concerning each participant in that solicitation is first filed with the Commission and each national securities exchange with which any security of the corporation is listed. This statement must set forth the detailed information required by a new schedule provided by the rule (schedule 14B). If the solicitation is by management in opposition to another group or in anticipation of opposition by another group, the information required by the new schedule 14B with respect to management participants must be filed promptly after the first solicitation. The term "participant" includes, in addition to the corporation and its directors, and any nominees for directors, all persons and groups primarily engaged in, financing and responsible for, the conduct of the proxy solicitation. Those taking the initiative in organizing a stockholders' committee or group or contributing more than $500, or lending money or furnishing credit for the purpose of financing or otherwise influencing the contest, are included in the definition of participant. These provisions should make available to the security holders information about the background and the financial and other interests not only of all persons who are nominees for election as directors, but also of all persons who may represent the real interests behind the formal nominees, and should reduce substantially the difficulty we have had in the past with undisclosed principals, or "fronts."[3]

Each participant is required to disclose, in the document filed in response to schedule 14B, his occupational background and personal history, the amount of the corporation's securities he owns, the transactions in which the securities were acquired, the circumstances under which he became a participant in the solicitation, and any arrangement or understanding respecting future employment or other transactions with the corporation. A summary of this information concerning participants must be included in the respective proxy statements of the contesting groups.

These disclosures are vitally important for the protection of investors in contests for corporate control. When persons seek to be appointed fiduciaries of the property interests of security holders, conflicts of interests should be identified and disclosed. In the past, participants in proxy contests have sometimes attempted to conceal their background, financial interests in the corporation and activities in the solicitation for proxies.

In contests for the election of directors, the proxy statement is also required to include a description of the methods of solicitation and the material features of solicitation contracts, the anticipated cost of solicitation, and whether reimbursement for solicitation expenses will be sought from the corporation.

Many of the more difficult problems in any proxy contest spring from the fact that a considerable portion of the corporation's outstanding shares are often held in street names and their ownership is constantly changing. Participants in a proxy contest no longer can rely on being able to communicate with the beneficial owners indirectly through solicitation of the stockholders of record. Therefore, the widespread use of paid advertisements, prepared press releases, press interviews, and radio and television broadcasts, has become common in attempting to reach security holders and to sway the opinion of the public and persons who may advise security holders with respect to giving, revoking or withholding proxies. Whether statements are written or oral, are prepared in advance or are spontaneous they nevertheless constitute part of a continuous plan to influence stockholders and are deemed subject to the Commission's standards of fair disclosure and, specifically, to the rule prohibiting false and misleading statements.[4]

It would be impractical for the Commission to scrutinize in advance of publication all statements made to the general public by participants in an election contest. The new rules require, however, that copies of soliciting material in the form of prepared speeches, press releases, and radio and television scripts must be filed with the Commission promptly after their use. As an administrative convenience to the public, such documents may be filed, and if filed, will be reviewed by the Commission, in advance of use.

The new rules continue to require that all advertisements used as soliciting material in a proxy contest be filed with the Commission prior to publication. Reprints or republications of any previously published material used in soliciting proxies also must be filed prior to use, together with a statement identifying the author and any person quoted in the article and disclosing whether the consent of the author and of the publication to use the material has been obtained, and if any consideration has been, or will be, made for its republication.

The annual financial report of a corporation to its security holders is not usually considered to be proxy soliciting material and is not treated as a "filing" with the Commission. However, if any portion of the annual report discusses the solicitation of an opposition group, that portion is made subject to the proxy rules by the 1956 amendments and must be filed with the Commission prior to distribution.

The basic theme, flowing through specific provisions of the type I have mentioned, is the statutory standard, expressed in the rules,[4] that no solicitation shall be made which contains any statement which, at the time and in the light of the circumstances under which it is made is false or misleading with respect to any material fact or which omits to state a material fact necessary to make statements made not false or misleading.

The Commission has given examples of statements which, in the heat of proxy fights, may be made and which, depending on the particular facts, may be misleading. These include:

(a) Predictions as to specific future market values, earnings, or dividends.

(b) Material which directly or indirectly impugns character, integrity, or personal reputation, or directly or indirectly makes charges concerning improper, illegal, or immoral conduct or associations, without factual foundation.

(c) Failure to so identify a proxy statement, form of proxy and other soliciting ma-

Footnotes at end of speech.

Footnotes at end of speech.

terial as to clearly distinguish it from the soliciting material of any other person or persons soliciting for the same meeting or subject matter.

(d) Claims made prior to a meeting regarding the results of a solicitation.

In the heat of bitter struggles for control, argumentation of this type in proxy soliciting material may tend to confuse and mislead security holders and the public and impair the free and fair exercise of the corporate franchise.

The statutory authority of the Securities and Exchange Commission to regulate the solicitation of proxies, as well as Commission rulemaking and administrative policy in this respect, has become increasingly important and the subject of much discussion, in the Congress, in the press, and generally. In part this has been caused by the public interest in a number of highly publicized and bitter contests for control of several large, well-known corporations. So it is appropriate for me again to state the role and function of the Commission. The Commission, as a bipartisan independent regulatory agency of the Government, objectively and impartially scrutinizes the proxy material of participants for the purpose of enforcing the standards of fair and adequate disclosure to investors which are clearly set forth as primary objectives of the Federal securities laws. The Commission makes no attempt to guide, control, or interfere in the strategy of participants in a contest for control. The Commission does not undertake, in fact we avoid, any attempt to shape or define issues except as they may be a byproduct of fair disclosure. These are matters for the parties themselves to choose and develop. The Commission is and must be scrupulously neutral; it neither takes sides nor plays favorites in proxy contests. The objective of the Commission in prsecribing rules under the Securities and Exchange Act to govern proxy solicitations is to obtain for investors and stockholders the fair disclosure of material facts and to prevent, by seeking appropriate injunctive relief in the Federal courts as the statute provides when necessary, the dissemination of false and misleading statements.

It has been suggested, in proceedings connected with our administration of the rules, that in view of the apparent similarity of proxy contests to political campaigns the clash of debate, the charges and countercharges, rebuttals, and sur-rebuttals of the opposing groups will bring out enough of the facts to enable the shareholders to form an adequate judgment as to the merits of the competing parties. There has been challenge in the courts of the Commission's jurisdiction in cases of stockholders' disputes with management. The argument has been advanced that in such cases the various groups soliciting proxies should be free to engage in the same type of campaign oratory as that of participants in a political contest.

The legislative history of the Exchange Act indicates that the Congress was concerned with the abuse of proxies by seekers of corporate power as well as by management. One of the congressional reports states that "the rules and regulations promulgated by the Commission will protect investors from promiscuous solicitation of their proxies, on the one hand, by irresponsible outsiders seeking to wrest control of a corporation away from honest and conscientious corporate officials; and, on the other hand, by unscrupulous corporate officials seeking to retain control of the management by concealing or distorting facts."[5]

In this connection, it is also interesting to note the recent decision of the United States Court of Appeals for the Second Circuit, rejecting such contentions. The court of appeals affirmed an order which granted the Commission a preliminary injunction against a group soliciting proxies in opposition to the management, enjoining further solicitations in violation of the proxy rules by means of false and misleading statements and without disclosing all of the persons on whose behalf the solicitations were being made.[6] Although these proceedings were brought under the Commission's proxy rules as in effect prior to the January 1956 revision, the court held, among other things, that schedule 14A of the rules requires disclosure of all persons who in fact are leading factors in the opposition group's formation and activities notwithstanding the circumstance that some of such persons are not technically designated committee members or nominees.

Two paragraphs of the opinion of the court of appeals are most important. The first is as follows:

"Appellants argue that section 14 (a) of the Securities Exchange Act of 1934 (15 U. S. C., sec. 78n (a)), and regulations adopted thereunder are unconstitutional as unauthorized delegations of legislative power and otherwise, but these contentions have no merit. *American Power & Light Co.* v. *S. E. C.* (329 U. S. 90); *Yakus* v. *United States* (321 U. S. 414). Furthermore, the Commission's proxy rules as applied either to management or to insurgent stockholder groups are clearly authorized by the statute."

The word "otherwise" refers to appellants' contention, made in the argument before the Court, that the proxy regulation provided for censorship by the Commission and abridged the constitutional guaranty of freedom of speech. This the Court rejected.

The second paragraph of its opinion I want to emphasize says:

"Appellants' fundamental complaint appears to be that stockholder disputes should be viewed in the eyes of the law just as are political contests, with each side free to hurl charges with comparative unrestraint the assumption being that the opposing side is then at liberty to refute and thus effectively deflate the campaign oratory of its adversary. Such, however, was not the policy of Congress as enacted in the Securities Exchange Act. There Congress has clearly entrusted to the Commission the duty of protecting the investing public against misleading statements made in the course of a struggle for corporate control."

It was particularly pleasing to me to have this decision rendered by a court of very high standing sustaining our rules against the challenge that they violated constitutional guaranties of freedom of speech and press because of fears expressed in the press, which I believe have now been allayed, that the act of the Congress imposing standards of fairness and accuracy of disclosure with respect to certain corporate acts such as proxy soliciting in some way impinged on these traditional and deeply cherished constitutional liberties.

Legislation[7] now pending in the Congress would extend the financial reporting, proxy solicitation, and "insider trading" provisions of the Securities Exchange Act to about 1,205 corporations, the securities of which are not listed on a national securities exchange but in which there is a substantial public investor interest. Generally, the corporations which the bill would bring within these provisions of the Exchange Act are those which meet Federal jurisdictional requirements, and which have 750 or more stockholders of record of a class or debt securities of $1 million outstanding in the hands of the public and total assets of $2 million. Of the 1,205 companies, 963 have more than $5 million of assets and 673 have more than $10 million of assets. The aggregate assets of the 1,205 corporations is over $35 billion.

In connection with this legislative proposal, the Commission has made a study with respect to the financial reporting and proxy soliciting practices of these corporations. This study developed the fact that the proxy soliciting material and practices of most of the corporations which would be subject to the bill are wholly inadequate to furnish investors with the information necessary to exercise an informed vote when judged by the standards of disclosure established by the Commission's proxy rules under section 14 of the Exchange Act. This deficiency in information is particularly striking in connection with the election of directors. Typically, only a notice of meeting and a form of proxy are furnished their security holders by these corporations, and nothing resembling a proxy statement is provided. In three-fourths of the cases, not even the identity of nominees for election is disclosed, let alone pertinent information concerning them. In many cases where proposals are submitted for stockholder action, no ballot is provided on the form of proxy by which the stockholder can vote for or against the proposal.

Taking into consideration the data contained in our report to the Senate Committee on Banking and Currency on the study, and on the basis of our continuing study of the problem, we have advised the Congress that we believe enactment of the bill, subject to certain changes we have suggested, would be in accord with the basic purposes of the Federal securities laws and that the principles and objectives of the bill are sound. The legislation would provide additional protection to investors in corporate securities, in which there is broad public investor interest and which are sold and traded in the interstate securities markets, by requiring fair disclosure of the business and financial facts pertaining to the corporations issuing them, thus contributing to the stability of the markets and the protection of investors against fraud and deception.

Parenthetically, I should say that we have recommended that the Congress defer the extension of section 16 (b) of the Exchange Act of these corporations until further information can be developed on the effect which the application of this section, which provides for the recovery by the corporation of profit from short-swing (6-month) trading by directors, officers and 10 percent stockholders, would have upon the maintenance of adequate over-the-counter trading markets and new capital markets for the securities of these corporations.[8]

Another problem of the regulation of proxy solicitations involves the giving of proxies by brokers and dealers for listed securities registered in their names but owned by customers.

Section 14 (b) of the Exchange Act makes it unlawful for any such member, broker, or dealer to give a proxy with respect to a listed security carried for the account of a customer in contravention of such rules and regulations as the Commission may prescribe as necessary or appropriate in the public interest or for the protection of investors. The report on stock exchange practices which was issued by the Senate Committee on Banking and Currency at the time when the Securities Exchange Act was passed, in referring to this provision, states:

"The rules and regulations [of the Commission] will also render it impossible for brokers having no beneficial interest in a security to usurp the franchise power of their customers and thereby deprive the latter of their voice in the control of the corporations in which they hold securities."[9]

Section 14 (b) has never been implemented by rule.

The Commission is seeking to develop a workable rule which will prevent brokers from assuming or usurping their customers' voting rights and which at the same time will not interfere with the orderly solicitation of proxies and the voting of shares.

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

We are considering the adoption of a rule which would set out the conditions under which members of a national securities exchange and brokers and dealers who do business through members, may give proxies covering securities listed on an exchange and carried for the account of customers.

The Commission first circulated for public comment a proposed rule, X–14B–1, on this subject in May 1955. Many thoughtful and helpful comments were received. After consideration of these comments, a revised proposal was circulated in April 1956. The revised proposal clarified and simplified the proposed requirements and covered a number of practical problems raised in the comments. Further suggestions have been received and we are now considering them. A good deal of careful thought is going into our effort to achieve a workable rule which will give the owners of stock held in the names of brokers and dealers a more effective voice in the affairs of the corporation in which they have invested.

Excerpts From Speech of Representative Hugh Scott, of Pennsylvania, Present General Counsel and Former Chairman, Republican National Convention, at the 47th Annual Convention of the National Association for the Advancement of Colored People, San Francisco, Calif., June 29, 1956

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks I would like to insert the following speech in the RECORD:

EXCERPTS FROM SPEECH OF REPRESENTATIVE HUGH SCOTT, OF PENNSYLVANIA, PRESENT GENERAL COUNSEL AND FORMER CHAIRMAN, REPUBLICAN NATIONAL COMMITTEE, AT THE 47TH ANNUAL CONVENTION OF THE NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE, SAN FRANCISCO, CALIF., JUNE 29, 1956

I intend here to contrast the Republican record of 3 years of promises kept with 20 years of Democrat deceit, doubletalk, and demagoguery.

Just the facts, ladies and gentlemen, just the facts.

The Republican Party of 1956—the party of peace, prosperity, and progress—is also the party of performance within the area of its pledges.

As Americans we are blessedly fortunate to be living in peaceful, prosperous days—days that are better than the "good old days" that never really were—and we are living in days when the last barriers to the fullest freedom for every single American are crumbling away, are falling down.

How did this happen? What happened to one of the political parties—the Republican Party—where in the past on the Washington level both parties had looked the other way in the face of injustice, discrimination and second class citizenship?

What happened? The times cried out for a man to really lead us all to face the facts: that freedom isn't freedom unless it's freedom all the way—for everybody. We found that man in President Eisenhower.

He said in 1952: "In a time when America needs all the brains, all the skills, all the spiritual strength and dedicated service of its 157 million people, discrimination is criminally stupid. I pledge to devote myself toward making equality of opportunity a living reality for every American. There is no room left in America for second-class citizenship for anybody."

Nearly 4 years have passed. The Republican Party has quickened its pace, faced its responsibilities, kept its promises, and became the first political party in this century to do important things as a united party to roll up a genuinely good record of things done in the area of civil rights.

The Democratic Party is still split hopelessly—its candidates frantically wearing two faces for purposes of geographical interchangeability, its Congress in control of the southern Do-Naught-Crats. Some of its committees, such as Education and Labor, do not dare to hold meetings for fear of the specter of civil rights. And when such meetings are held, on rare occasions, civil-rights proposals are filibustered to extinction by southern Democrats.

Their candidate, Mr. Stevenson, is so afraid of losing the vital support of the Talmadge-Eastland bloc in the Democratic committee that he proposed on February 12 (Lincoln's Birthday) in Portland, Oreg., that the desegregation issue be removed from the campaign. He was already in hot water for pussyfooting in California, where on February 7 he told a Negro audience in Los Angeles that if he became President he would not deprive segregated schools of Federal funds. He also ducked interposition by saying he didn't understand it. He then topped off his speech by offering a target date for integration of January 1, 1963. I quote him: "Government power should be used only to the extent that the public will support such use. I favor a cautious temperate approach to the whole problem."

Instead of helping him, these and other west-coast statements of Stevenson drew the fire of Roy Wilkins, your executive secretary, who felt Mr. Stevenson had already put the question of civil rights into the campaign himself by calling for gradualism and a target date of January 1, 1963, for its termination.

So at Timberline Lodge, Oregon, on February 13, Mr. Stevenson was very hurt and registered surprise that Roy Wilkins or any Negro leader would charge him with advising Negroes not to claim their rights or to do so gradually. This is what he said: "I have never suggested * * * I agree with Mr. Wilkins that 'this problem can be solved by good will, good deeds, and with understanding and forbearance.' That is exactly what I have been saying." Mr. Wilkins used those words in his comment, but he also called for "determination to obey the law." Mr. Stevenson very adroitly left this part of the Roy Wilkins statement out. Nor did he comment on this part of Mr. Wilkins' speech: "The Negro himself is American enough to resent and reject the suggestion that any American should refuse to claim those rights which have been declared to be his under the Constitution."

George Meany, president of the new AFL-CIO joined with Mr. Wilkins. He felt Mr. Stevenson is running away from the school segregation question. Meany said he favored patience in letting States gradually desegregate so long as they made continuing planned progress in that direction, but Stevenson's position seemed to favor "postponing things forever, and that's nonsense to me." I might note that Mr. Meany's position is that of the Supreme Court. It is also the position of President Eisenhower and the only lawful way under the Court's decision.

Mr. Stevenson, whose solution for ending the Korean war was: Patience and negotiation and whose solution for civil rights is to postpone the whole thing for 7 years (that is, until the eve of the 1964 presidential campaign) hopes to befuddle the whole problem of civil rights until he can plump into his basket the delegates from northern cities and southern citizens councils.

With this odd combo he plans to skid by the hard issues, doubletalk himself out of the tough question of what he would do, and hopes to come across the line first.

If he should—which God forbid—who would he owe his election to, if not to the southern governors and their delegations who alone can now make possible his selection as nominee?

Would Stevenson, as President, do anything for the Negro citizen? Anything for civil rights? Or would he keep his promise to you to postpone the whole problem for 7 years until July 4, 1963?

Stevenson counts on you to lie down and take it while he gets in bed with those who would deny you the full rights of free citizenship. He figures that you voted for him before and that you will again—so he dares to risk a virtual sellout to the segregationists.

Paraphrasing Mr. Churchill: "What kind of people does he think you are?"

Now, let's turn to a much brighter picture.

While Stevenson was forgetting you for 4 years and postponing you for 7 more, what was the record on civil-rights progress in Washington?

There President Eisenhower and the Republicans blazed new trails, set up new recognition for you and for all Americans, regardless of color.

Here are some of the things we Republicans achieved which had never been accomplished by the Democrats:

The first action of the President of the United States was to put his own immediate house in order, by which I mean the executive department. There, by precept and example he showed the way to others responsible for decent government. He established a long series of first, including the first Negro administrative assistant to the President, the first Negro secretary in the office of the Assistant to the President, the first invitations to stag dinners of Negroes in substantial numbers. These may seem to be small things in themselves, but they had not happened before, and they set the climate and the atmosphere and indicated the direction in which the new administration intended to move.

Moreover, in the armed services the abolition of practices of segregation were completely eliminated, a process which had begun in an earlier administration but the vast burden of which had been assumed by the present administration in carrying to completion provisions for the elimination of all segregated responsibilities involving the difficult problems in human relations concerned in the integration of such areas as the Norfolk and Charleston, S. C., Naval Bases, which bases are the principal industries in those communities. The impact of this action and of similar action elsewhere has been tremen-

dous in its effect on community relations. This administration has also abolished segregation in all Federal facilities, and in the District of Columbia a notable example is found in the Thompson Restaurant case which opened up the restaurants and hotels upon a completely integrated base. The nature of the job involved in ending segregation in the District of Columbia may be illustrated by the fact that 84 separate executive operations were required in order to end segregation in each and every separate branch and subdivision of the District Government. This was a monumental task which had never before been even attempted.

Furthermore, this administration found 2½ years ago that 47 hospitals operated by the Veterans' Administration were segregating veterans according to color. Today not one hospital under the Veterans' Administration is segregated. And this administration believes and has put into practice its belief that those who fought in our wars together are entitled to equal medical and hospitalization facilities wherever Federal moneys are spent.

Today, under this administration no new construction can take place on airports if such contracts have been placed on a segregated basis. The President's Committee on Government Contracts has functioned as an action committee under the leadership of Vice President NIXON, Secretary of Labor Mitchell, John Roosevelt, and with the cooperation and guidance of such prominent figures as George Meany and Walter Reuther. This Committee enforces the nondiscrimination clauses in Government contracts. In addition the President's Committee on Government Employment Policy is actively operating to end discrimination and discriminatory practices in Government itself. The good faith shown by the Department of Justice in the prosecution of cases for the Government such as the Thompson Restaurant case and the school segregation case for both of which the NAACP worked tirelessly, are the direct result of the announced policy of President Eisenhower.

We Republicans are proud, too, of the request of Attorney General Brownell for workable civil-rights legislation. This legislation provides for the establishment of a bipartisan Commission on Civil Rights, with power of subpena, to investigate racial tensions and the establishment of a separate Civil Rights Section in the Department of Justice under a full-time Assistant Attorney General.

The bill (of which I am one of the three authors in the House of Representatives) also provides for important changes in "right to vote" laws:

1. Addition of a section which will prevent anyone from threatening, intimidating, or coercing an individual in the exercise of his right to vote, whether claiming to act under authority of law or not, in any election, general, special, or primary, concerning candidates for Federal office.

2. Authorization of the Attorney General to bring injunction or other civil proceedings on behalf of the United States or the aggrieved person in ay case covered by the statute.

3. Eliminate the requirement that all State administrative and judicial remedies must be exhausted before access can be had to the Federal courts.

That legislation has been delayed, first by Democrat filibustering in the Judiciary Committee, then by Democrat delays in the Rules Committee (where all Republicans favor the bill and one-half the Democrats oppose it bitterly).

This is in keeping with the Democrat record; although in control of Congress for 22 out of the last 26 years, they never acted on a single civil-rights bill—not even in the 75th Congress where northern Democrats greatly outnumbered southern Democrats.

In very sober truth, remember this: A vote for the Democrats this year in San Francisco, Los Angeles, Chicago, New York, Philadelphia is a vote for a southern Democrat control of Congress, it's a vote for the Democrat control of the House Rules Committee where civil rights bills get the suffocation treatment.

And a vote for any Democrat in a Federal election is a vote for EASTLAND.

Your votes furnished the margin in 1954, in all probability, which put the southern Democrats in control of the committees where the laws you want die on the vine.

You forged the iron for the very beartraps set out to slow you down.

Will you do it again?

Will you vote to keep EASTLAND on top of the Judiciary Committee?

A vote for Stevenson will fix your feet for 4 years more.

Will you do it?

I sincerely hope you won't.

If you cast a Democrat ballot, that choking sensation you feel will be you strangling yourself.

I hope you will turn to the party which, at this time in our history, has advanced your progress and the progress of all Americans, economically to new heights, politically to new horizons.

These words of President Eisenhower on April 17, express our position in this day of stress. "* * * The Republican Party must be inspired by a concern that comprehends every American; that sets up no walls of birth or creed or party; that ranks all men and women of decency and good will equal in their dignity. Under God, we espouse the cause of freedom and justice and peace for all people."

Thanks to the decency and the inherent goodness in the character of President Eisenhower, his administration has registered the greatest advance for the rights of racial minorities since the Emancipation Proclamation itself. Nor has his administration sought to postpone consideration of this question or of its many difficult phases. The time to meet injustice is not on July 4, 1963 because it happens to be the 100th anniversary of the Emancipation Proclamation The time to meet injustice, the time to oppose evil with good, constructive, honest legislation is not at any time in the future.

The time is now.

Fire Island Inlet

EXTENSION OF REMARKS
OF

HON. STUYVESANT WAINWRIGHT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 3, 1956

Mr. WAINWRIGHT. Mr. Speaker, a running dispute of local interest has been going on for some time in regard to the Fire Island Inlet. A well-known daily newspaper, Newsday, has given this dispute excellent coverage. Their treatment has been fair and unbiased. Probably the best article on the subject has been written by Tom Morris. The following article appeared on Monday, June 25, 1956. On Tuesday, June 26, I presented my arguments in behalf of a comprehensive study. This is also set forth.

Robert Moses, chairman of the Long Island Park Commission, claimed in dramatic fashion that there was no dispute. Newsday devoted a blank page to dramatize Mr. Moses' unwillingness to recognize any viewpoint but his own. In other words, they used the entire left centerfold of the paper to present my viewpoint and the right centerfold of the paper appeared blank.

I am also setting forth two editorials on this subject, one appearing in Newsday and the other in a chain of newspapers owned and operated by the former Republican Congressman from the area, W. Kingsland Macy. Mr. Macy has never been overenthusiastic, to say the least, about any program in which I have been interested. However, he has, as a public service, allowed me freedom of a news column in his papers. My viewpoint on this subject has appeared in that column on several occasions.

[From Newsday of June 25, 1956]

STORM OVER FIRE ISLAND INLET

(By Tom Morris)

The tides keep rolling in and the sands keep piling up, but nobody yet has figured out what to do with Fire Island Inlet.

For nearly 100 years the creeping sands have moved west, threatening to cut off the Atlantic Ocean from the Great South Bay. And for nearly 100 years everybody has said: "Something ought to be done about it."

They're echoing the same words now. Meanwhile, the inlet—the South Shore's most vital waterway—is choked with treacherous sand bars and is being closed up fast. Imbedded in the shifting sands are the problems of Federal, State, and Suffolk County governments as well as the many organizations and thousands of boatowners and beach dwellers.

All the groups have boiled down to two separate points of view: Should the inlet be dredged out again? Or should surveys be continued to find a way of cutting a new inlet through western Fire Island?

The plan for dredging the inlet generally is called the stabilization plan. Those in favor are behind a bill now before Congress which calls for the spending of $2 million to get the job started. That bill has just been unanimously passed by a House subcommittee and soon will be brought up before the House Public Works Committee.

Those favoring the new inlet have found a champion in Representative STUYVESANT WAINWRIGHT. The Wainscott Republican, while in general accord with the stabilization plan, said he wants further surveys made of the entire shore. He believes John Q. Public may well get a better long-term financial shake if a new inlet is cut. He also feels the people will be freed from future worry about sand build-ups that way.

The stakes are big. What the outcome will be is uncertain. There are possible solutions to the inlet problem. Fire Island Inlet, born centuries ago, has always been a precocious child of nature. Long Island can't live without it, but living with it has been a headache for 50 years.

The bill now before Congress is sponsored by Senators IRVING M. IVES, Republican, New York, and HERBERT LEHMAN, Democrat, New York, in the Senate, and by Representative FRANK J. BECKER, of Lynbrook, in the House. The legislation grew out of a 10-year study by the United States Army Corps of Engineers and the Long Island State Park Commission.

If Congress assents, the Army would begin this summer to dredge 2.5 million cubic yards of sand from the inlet. The sand would be pumped through an underground pipe to the badly eroded Oak Beach and Cedar Beach shore on the north side of the inlet. The bill calls for $85,000 a year for maintenance during the next 15 years, if it is necessary.

AREA'S FUTURE IN THE BALANCE

Everyone from Park Commissioner Robert Moses, to WAINWRIGHT, to fishermen and boaters wants an inlet at Fire Island as a link between the ocean and Great South Bay.

But the problem is over how to get one—permanently. Many persons, including WAINWRIGHT, fear the Army-Park Commission project is being unnecessarily hurried to cover past inaction. Many think any permanent solution still lies hidden in the drifting sands.

The immediate and long-term future of property owners, commercial fishermen, pleasure craft operators, oil tanker concerns, and the entire area hangs in the balance as the answer is sought.

On one side there is plenty of support for surveys on cutting a new inlet. It centers around middle and Eastern Suffolk, where fears are high that Moriches and Shinnecock Inlets may suffer if a large amount of Federal money is funneled to Fire Island Inlet. On Fire Island itself there is heavy pressure from the Fire Island Antierosion Committee in favor of a more general beach rehabilitation project.

Threaded into the opposition to the Army-Park Commission plan is a feeling in some quarters that the proposal is being jammed through by State and Federal officials with deaf ears to other points of view.

The suspicion isn't new. Many Fire Islanders, for example, live in fear of State construction of a bridge across the present inlet. They say such a bridge would divert money that could be used for beach erosion and also destroy the cherished rusticity that has made Fire Island one of the world't best-known summer resorts.

Plans to build such a bridge eventully were dusted off by Sidney M. Shapiro, chief park commission engineer, last September 9 in an address at Hofstra College. He said: "Ultimately, the 5 miles of oceanfront at Fire Island State Park, reached by an extension of the Captree Causeway across Fire Island Inlet in place of the present shuttle ferries, will be developed."

Others have said the stabilization plan has "unspoken undercurrents."

Joseph Glancy, of Northport, operator of a Sayville oyster firm and a student of the inlet problem, charged: "The park commission wants this new dredging and sand-pumping plan to get the new sand moving toward Jones Beach."

"Inlet troubles killed the oyster industry in Great South Bay. This new plan is short-sighted and a mistake. The whole county would be better off with a new inlet to facilitate tidal flow. WAINWRIGHT is the only guy with guts enough to stand up and say so."

Joseph Meade, of Babylon, former beach-condition expert for the Navy and Coast Guard on Long Island, said the new plan would not work unless a huge jetty were built west of the mouth of the inlet. He argued that the fast, erosive tides in the inlet were partially caused when the park commission in 1930 closed down an inlet east of Cedar Beach, cut through in 1910 by a storm. Meade said this inlet was closed to build the Ocean Causeway, now endangered by erosion.

Capt. Eugene Osborn, of Center Moriches, district Coast Guard commander from 1931–35, and Long Island commander in World War II, said: "Serious consideration should be given a new inlet west of the lighthouse." He said: "Natural forces from the bay and ocean may well open an inlet there again."

But for all the misgivings about the Army-Park Commission plan, there is heavy support for it. Leading the fight is the Fire Island Inlet Committee of Nassau and Suffolk, which has more than 100 member organizations and claims to represent 1 million persons in Suffolk and Nassau.

Capt. Eric Westerlind, of West Islip, committee chairman, said it would be foolish to cut a new inlet because of the cost. He said a big ditch would disturb the natural northeast-southwest migration of fish that makes the area a sportsman's mecca.

In 1948, Secretary of the Army Kenneth C. Royall told Congress a new inlet would cost $9,280,000. "In addition," he said, "the effect of closure of the natural inlet on the shoreline cannot be predicted, in view of the immense changes to nature that would occur."

Also backing the stabilization plan, supervised by Army Gen. Theron D. Weaver, are Gen. William F. Cassidy; Col. Clarence Renshaw; Thorndike Saville, dean of engineering at New York University; Morrough P. O'Brien, dean of engineering at the University of California; Dr. Lorenz G. Straub, director of the hydraulic laboratory at the University of Minnesota; Gov. Harriman, the Suffolk Board of Supervisors; and Babylon and Islip townships.

MOSES SEES NO DISAGREEMENT

Moses has refused to recognize that any disagreement within the stabilization plan exists. But WAINWRIGHT, caught in the cross-currents is under pressure from both sides.

He said he had asked Moses if he would agree to a new-inlet study in return for support of the stabilization. "He refused," Wainwright said, adding that he "sincerely felt," in the interests of erosion at Oak Beach, that the stabilization plan should be carried out. But, he added, if the bill came to a house vote, he could throw it to a rules committee by getting three objections, which would be easy. As to whether he would try to hold up the project that way, he said, "I'll cross that bridge when I get to it."

In the meantime, the Wainscott Republican hopes Moses will see the light of day.

Today's worry over the right thing to do is as justified as it is old. The inlet is used by 1 million persons a year and by 5,000 boats. Though 2 miles wide as a body of water, the navigable channel for most boats is only 250 feet wide. Tankers, about 4 of them daily, must snake through a course 90 feet wide to avoid menacing bars.

Add to the imposing commerce of the inlet the concern of thousands for a waterway integrally laced to the romance of coastal living and the reasons for disagreement multiply.

The inlet is a boon when it is clear, a carrier of death and ruin when filled.

Why is it such a blessing in disguise? Chiefly because the natural drift of shore sand on Long Island is from east to west. Fire Island presumably began its southwest journey because of prevailing wind and tides.

By 1858, when the Federal Government built the present lighthouse at Democrat Point, the point was the western tip of Fire Island. Since then, Democrat Point has crept west at an amazing speed, threatening to seal off the ocean from the bay. By 1900 it had begun to spell trouble.

In 1906, Congress first received, and rejected, a request for Federal aid. The same thing happened in 1927. Eleven years of inaction passed and then the 1938 hurricane struck Long Island.

With the inlet in desperate condition, a $900,000 jetty, now almost buried in sand, was built in 1939 at Democrat Point by the Federal and county governments. Since 1940, the situation has grown steadily worse. Spot dredging was tried several times but did little good.

ANSWER OR DEATH TRAP?

By 1949, proposals for a new inlet plan were again in vogue. It first had been seriously suggested in 1934 by transportation tycoon Bertell W. King, of Babylon. The Army rejected the idea in 1947 though the Suffolk supervisors favored it. Harry T. Tuthill, then county highway supervisor, had prepared plans for a new inlet to be located near Kismet. He made the plans at the confidential request of former Representative W. Kingsland Macy.

The controversy has dragged on, in one degree or another, since. Some said the new inlet would be a final answer. Others said it would be an insane death trap.

From April 1949, to February 1954, a plan proposed by the Army to spend $228,000 for dredging the inlet and $85,000 for annual maintenance bogged down in Congress despite efforts by former Representative Ernest Greenwood and then Wainwright to get it through.

In February 1954 the Army agreed to keep the channel 250 feet wide and 10 feet deep until the survey that produced the stabilization plan was finished. Congressional haggling had been silenced by the storm of November 6–7, 1953. The Army said it would be "flying in the face of God" not to "finish what nature started." After November 1954 a temporary truce in the Battle of Fire Island Inlet was called.

But the bars quickly began to form and drove the channel into the Oak Beach shore, where there are 190 homes. Amid general concern, the Army-Park Commission plan was unveiled last July.

The Federal Government appropriated $840,000 for the work, the State $580,000, and the county $580,000. The inlet plan is part of a $6 million project extending from Jones to Fire Island Inlet. A separate study is underway by the United States Beach Erosion Board on what to do about erosion from Kismet to the Hamptons.

Most observers predict that the stabilization plan will pass in Congress. Yet not even the strongest supporters of the plan predict it will head off nature's incessant challenge. They hope that a portable land dredge proposed for Democrat Point will be able to keep the inlet clear at a reasonable yearly cost and work faster than the erosion.

Weaver recently told a House committee: "Unless something permanent is done, Fire Island Inlet will be closed and part of Fire Island itself will be cut through by tidal action." But, will "something permanent" result from more stabilization, by continuing the study of a new inlet, or by both?

[From Newsday of June 26, 1956]

WAINWRIGHT, MOSES GIVE

(By Representative STUYVESANT WAINWRIGHT)

At the outset let me emphasize two points. I am not opposed to the technical features of the Moses plan as I am not an engineer. Also, I am now and always have been a vigorous advocate of a proper inlet. One of my proudest possessions is the plaque presented to me 2 years ago by the Fire Island Inlet Committee for having obtained maintenance funds for this project. Incidentally, neither my predecessor, Mr. Greenwood, nor I ever had one word of encouragement or support from Mr. Moses during the battle in behalf of this project.

The question before us is not whether the Moses plan is good or bad. The question is why does Mr. Moses refuse to consider studies or any other plan. You will note that I do not say the Wainwright plan, nor for that matter do I suggest any set proposal. My proposal is that the Army Engineers be allowed to determine whether the Moses plan is the best answer to a permanent inlet. Before we pour a possible $8 million of our tax money into a Rube Goldberg experiment, new to the field of engineering, I urge a study of all other possibilities. At no time during the research on the Moses plan were the Army Engineers ever allowed to study the advisability of relocating the inlet. In fact, Mr. Moses refused to consider such an idea, advising me that he called such a study "reckless."

Why is Mr. Moses so bitterly opposed to studying this project? For two reasons: He feels it would jeopardize his plan, that his

plan might be ruled out; and, two, that the result of a further study might call for the cutting of a new and permanent inlet. To answer Mr. Moses' first objection, I suggested that his plan and my study proceed simultaneously. He rejected this. As for a new inlet, he says it was studied years ago and ruled out. This is absolutely false in that the Army has never built the necessary Vicksburg model nor given anything more than a cursory opinion. This opinion, arrived at 10 years ago, was heavily influenced, so I believe, by Mr. Moses' personal intervention. It was not an unbiased study.

What were the old objections to a new inlet? There were but two given; that the salinity of the water would be changed; and two, that it would cost too much money. As to the first objection, since the date of the report (1946) the Moriches Inlet has come into proper operation. This has improved the saline content of the water to a great degree. It would be ridiculous to suppose that the flushing of the bay would be destroyed by the building of a permanent inlet.

The second objection must, perforce, be abandoned by Mr. Moses because of the cost of his own project. A new inlet according to House Document 762 (80th Cong.) would cost $9,280,000. Mr. Moses' plan may cost well beyond that before it is finished. The principal purpose of the Moses plan is to put sand on Oak Beach. The present inlet is trying hard to close (at the rate of over 240 feet per year). Should the inlet close, he would not need the sand for Oak Beach. But before the inlet closes by act of God, we would obviously have to build a permanent and stable cut with a 12-foot draft.

What are some other advantages of a permanent inlet? Stability, security, and safety. The inlet has posed a problem for each generation of Long Islanders. It has never been tackled on the grounds of "Let's build something that will last, something we won't have to pour maintenance money into each year." Why shouldn't the people of Long Island be entitled to know that they have an inlet on which they can count on as being there. Give the fisherman and boatman this necessary and desirable security. Provide him, too, with a safe inlet; not one where he risks his life every time he goes through the opening.

Long Islanders will soon need this stability, security, and safety. When Mr. Moses rejected any studies of a new inlet our population in Suffolk alone was well under 300,000. In a few years we will reach the million mark. We will need a really good inlet to supply our fast growing business enterprises with their necessities. These are but a few of the economic reasons why we are entitled to a first-class inlet rather than a patchwork temporary job which regularly comes apart at the seams.

In closing let me point out one important item. Mr. Moses says the benefit from the erosion phase would greatly aid property in Nassau County. Yet Suffolk County is asked to bear the entire local cost. Don't you think the tax load should be evenly spread according to the benefits to be derived? You see, there are so many reasons why we should not be steamrolled into doing something which we will regret in years to come. Unfortunately, those responsible will probably no longer be holding public office. There will be no recourse. Now is the time to review the problem in the typical American way. Consequently, I urge Mr. Moses not to avoid a study.

Let's put all the cards on the table.

[From Newsday of June 28, 1956]

BENEVOLENT DESPOT AT WORK

Park Commissioner Robert Moses is a benevolent despot. Few people could quarrel (or would dare to) with his record of extraordinary accomplishment. In the hundreds of jobs he has done for the State—and Long Island—he has carved out a permanent record of achievement. But his standard method of operating is clearly despotic. He decided what to do, puts his head down, rallies allies and charges until the job is done. If anyone gets in his way, Moses drives his opponents into the ground like so many tent pegs.

There is some merit in his method; he gets things done and a great deal would have gone undone had Moses not been so bulldogged. But Moses' tactics are also fraught with danger. The trouble with a benevolent despot is that he may start doing things that should not be done. Then his benevolence fades and only his despotism is left.

The current fight over the Fire Island inlet is just such a case. The issues are complicated. But basically they involve the question of what is to be done to prevent the creeping sands of the Fire Island inlet from cutting off the Great South Bay from the Atlantic Ocean. Moses has put his full weight behind the Army Engineers' "stabilization plan" to dredge the inlet and keep it open. Now—he thinks—he will get the $2 million needed to start the job.

In typical Moses fashion, he has insisted that everyone is solidly behind the scheme. Moses says everybody is; his formidable battery of aids, assistants and batmen all chorus that there is no opposition to the plan. But their claim is patently false. Suffolk Republican Congressman STUYVESANT WAINWRIGHT, who frankly concedes he is no engineer, charges that Moses is using "steamroller" tactics. "The question before us," says WAINWRIGHT, "is not whether Moses' plan is good or bad. The question is why Mr. Moses refuses to consider studies of other plans." When Moses was invited to reply to WAINWRIGHT's sharp attack on him printed in Newsday, Moses characteristically and disdainfully replied: "I have heard of no controversy with regard to the United States Army Engineers' plan for the stabilization of the Fire Island inlet."

Moses has heard of the controversy. Wainwright has consistently maintained—and Moses knows it—that the stabilization plan may be a "patchwork," which the Army engineers have approved because they were "heavily influenced by Mr. Moses' personal intervention." Wainwright further charges that the investigation which led to Moses' plan was "not an unbiased study." We have no idea whether Wainwright is right. But it seems to us he makes a perfectly valid proposal, which Moses refuses even to acknowledge. The Suffolk Congressman wants the possibility investigated of an inlet being dredged in an alternate place as a permanent solution to the Fire Island Inlet problem. Perhaps the inquiry will prove that Moses is right. But without such a study no one will ever know whether Moses is right or not.

Yesterday Moses won a big victory. The House Public Works Committee voted out to the floor of Congress the plan he backs. The bill includes no provision for really investigating further the possibility of creating an inlet any place but the area that Moses wants it. Last night, Wainwright reiterated his opposition to the bill because, he charges, it offers no guaranty of a "permanent solution."

Wainwright stands very much in the minority. Moses has rallied supporters from Governor Harriman down. But in the minority is not always a bad place to be. Wainwright's objections deserve a public answer. Moses' refusal to even recognize any disagreement with his own scheme is despotism at work—and we are not even sure it's benevolent despotism at that.

[From the Suffolk Consolidated Press of July 4, 1956]

WAINWRIGHT AND MOSES

County officials are beginning to see that State Park Commissioner Robert Moses is pushing his beach protection and Fire Island Inlet stabilization plan for the sole purpose of safeguarding State property west of the inlet; that he wants to unload a State obligation on the county and Federal governments. Congressman WAINWRIGHT is opposed to the Moses plan and so is County Board Chairman Phil Hattemer, even though the supervisors went along with the Moses plan in the hope that some of the Government money eventually would help bolster the beach east of the inlet.

To date WAINWRIGHT's is the only voice raised loudly against the Moses project approved last week by the House Committee on Public Works and which, incidentally, has not heard of the suggested new cut across the Great South Beach to take the place of the ever-shoaling inlet.

WAINWRIGHT's voice must be thin, indeed, if a House committee goes over his head and takes the assertions of a Nassau County Congressman as gospel. It has long been known that Moses had and has powerful political friends in the neighboring county. That Suffolk's representative is ignored, therefore, does not come as a surprise. And it all can be blamed on the close Nassau-Suffolk ties of the past 5 years—ties that would relegate Suffolk to a second-rate entity.

Just because Moses says "this is it," doesn't mean that a better plan cannot be found. But he wouldn't be averse to throttling an idea other than his own. For this reason he wants to hear nothing of WAINWRIGHT's demand that a study be made of the feasibility of a new cut as suggested some years ago.

The big thing just now is for WAINWRIGHT to impress on the Washington legislators that they are being asked to provide funds that should be made available by the State solely for the protection of State property.

As for county money, Hattemer might do well to reappraise the situation and ask to have the recent resolution rescinded until such time that thorough studies and surveys are made.

New York State Is Doing Something About Its Housing Problems

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. MULTER. Mr. Speaker, New York State, under the leadership of Governor Harriman and his very able State housing commissioner, Joseph P. McMurray, is making real progress toward solution of that State's housing problems.

I am happy to call to the attention of our colleagues the following item by Charles Grutzner, which appeared in the New York Times of July 5, 1956, which indicates the fine job being done there:

TWO HOUSING PROJECTS HERE SHARE IN NEW STATE LOANS—MIDDLE-INCOME BRONX CO-OPS AIDED BY $6,324,736 OUTLAY—50-YEAR MORTGAGES MADE FROM $50 MILLION FUND

(By Charles Grutzner)

A new source of mortgage money is being tapped for private construction of middle-income housing in 2 sections of the Bronx and in 2 upstate cities.

State Housing Commissioner Joseph P. McMurray announced yesterday that he had issued commitments for $6,324,736 in State loans. This is the first money made available out of the $50 million mortgage fund

set up to implement the Mitchell-Lama Act, which was passed by the 1955 legislature to encourage building at rents of $19 to $25 a room for families with incomes up to about $7,500 a year.

The 50-year, low-interest mortgages—up to 90 percent of the development costs—are available to private builders and cooperatives who agree to a 6-percent profit limitation.

The mortgages announced yesterday are:

$2,802,736 to the Park-Reservoir Housing Corp., which will build a 288-apartment cooperative costing $4,503,420 south of Van Cortlandt Park. Average monthly carrying charges will be $17.96 a room after down payment of about $625 a room. There are to be one 12-story building at Orloff and Van Cortlandt Avenues and two 14-story structures near 238th Street, between Cannon Place and Sedgwick Avenue. About 10 percent of the apartments will be specially designed for the aging.

$1,550,000 to the Woodlawn Veterans' Mutual Housing Corp., which will build a nine-story structure of 99 cooperatively owned apartments costing $1,717,991 on Katonah Avenue between 234th and 235th Streets. Average monthly carrying charges will be about $20 a room after down payment of about $400 a room.

$1,489,000 to the Love-Weichman Limited-Profit Housing Co., Inc., for construction in Buffalo of a two-story garden-type development of 124 apartments to rent at an average of $19.90 a room. The project cost is estimated at $1,654,000.

$483,000 to the Senior Citizens Housing Co., Inc., for construction in Rochester of a one-story, garden-type development of 60 apartments costing $537,000. Rental will be to elderly persons only, with rents averaging $16.02 a room. There will be 30 apartments of 2½ rooms and 30 of 3½ rooms. The 6 buildings will cover only 12 percent of the 9½-acre site.

ALL SITES ARE VACANT

All four sites are on vacant land. This will make is possible, Mr. McMurray said, for construction to start as soon as final plans are completed, within a few months.

It will also obviate the touchy problem of tenant relocation, which has brought much criticism of the Federal-city program of tearing down the homes of slum dwellers who cannot afford to pay the rents of the new apartments built on the sites of their old homes.

Additional commitments will be issued in the next few weeks, here and upstate. Mr. McMurray said the entire $50 million would be out on loan within the next 4 months. Among local projects under consideration are another in the Bronx, 1 in Manhattan, 3 in Brooklyn, and 2 in Queens.

Applications for mortgages from all parts of the State already exceed $50 million. These can be met in full and other projects initiated if the voters approve in November a proposed additional $100 million bond issue for the loan fund.

The law making the State loans possible was sponsored by State Senator MacNeil Mitchell, Manhattan Republican, and Assemblyman Alfred A. Lama, Brooklyn Democrat-Liberal. The $50 million bond issue was approved in a referendum last November.

The 1956 legislature voted to enlarge the mortgage fund by $100 million and Governor Harriman signed the measure. It is this proposition that will come up for referendum in November's general election.

The mortgage loans are made without cost to the State, yet the private developers get the advantage of the low interest on State bonds. They pay the same interest rate on the loans that the State pays on the bonds. This is now less than 3 percent. The builders pay for the administrative services that the projects receive from the State division of housing.

No cash subsidies are involved, but some of the projects are able to keep rentals within a desirable range for middle-income families by taking advantage of local tax abatement.

Mr. McMurray has received informal approval from the board of estimate for tax abatement, amounting to 40 percent of the value of the projects, for the two Bronx projects announced yesterday and for several of those for which mortgage commitments are pending.

One of the latter projects is Senior Village, to be built in the Brownsville section of Brooklyn, between Linden Boulevard, Rockaway Avenue, Hegeman Street, and Bristol Street.

Plans were announced recently by the Amalgamated Meat Cutters union, which will sponsor the 400-apartment cooperative. A $4,600,000 State mortgage commitment is in the works for this project, which will have carrying charges of $19.97 a room after down payment of $300 to $350 a room.

Mr. McMurray has agreed, at the request of Borough President Hulan E. Jack, to set aside $6 million in mortgage funds for a project in Manhattan. The site has not yet been determined.

The State, in taking the 50-year mortgages, is requiring of the builders standards of design and construction to assure what Mr. McMurray called "good living for at least a 50-year span."

The standards include cross ventilation and good vistas for every unit, living spaces off foyers, bedrooms in remote, quieter areas.

Address Delivered to Annual Independence Day Luncheon of the Hi Hatters Club, San Diego, Calif., by Capt. David L. Martineau, United States Navy, Assistant Chief of Naval Personnel for Special Projects

---

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

ADDRESS DELIVERED TO ANNUAL INDEPENDENCE DAY LUNCHEON OF THE HI HATTERS CLUB, SAN DIEGO, CALIF., BY CAPT. DAVID L. MARTINEAU, UNITED STATES NAVY, ASSISTANT CHIEF OF NAVAL PERSONNEL FOR SPECIAL PROJECTS

Members of the Hi Hatters Club and distinguished guests, it is indeed a real pleasure to be here with you today. I have been hearing fine things about the Hi Hatters Club for a number of years. Not since the days when I was a junior officer have I had the pleasure of duty in the San Diego area. So I have not had the privilege of knowing you better until today.

Certainly it is a real tribute to the San Diego area that more people in the Navy, officers and enlisted, active and retired, prefer to live here than in any other place. Just before leaving on this trip, I decided to verify what I have known to be true for a long time. So I inquired within the Bureau of Naval Personnel and ascertained that on the shore duty eligibility list for enlisted men, San Diego still stands first in their preference by a wide margin.

I feel particularly honored to have been asked to speak to you on this occasion of your annual Independence Day luncheon, and also one that honors the many distinguished officers who are your guests today.

I would like to tell you something about some features of the naval personnel program, particularly about what is being done to improve career incentives for both officers and enlisted men within the naval service.

Our national policy calls for maintaining an active duty military force far larger than during any previous time, short of war. An overall force that numbers some 2,900,000 officers and men in the Army, Navy, Air Force, and Marine Corps.

But within this force, 1 million men are leaving each year. That means that we must replace and rebuild nearly one-third of the total force annually. It would be difficult, to say the least, for any successful business or industry to maintain itself on such a basis.

Everyone recognizes and agrees that our Nation is in the midst of a tremendous transition period in technology. It is a transition that is having a profound effect on our weapons, old and new, and our entire national security.

It is also at the bottom of the long debates that have been conducted recently in the Congress on the matters of defense appropriations and the development and employment of weapons. And it has also served to fire up some new and rather bitter controversy within the armed services themselves, especially between the Army and the Air Force, though I should add that they seem to have been confined largely to those at the Indian level.

So far, the Navy has managed to keep clear of this interservice quarreling. There is a story going around Washington regarding the recent debate and action in the Senate on the Defense Appropriations Bill, that the Air Force got $1 billion while the Navy got a Good Conduct Medal.

Be all that as it may, a Good Conduct Medal is still a very good thing to have, and I for one feel that the Navy has been following a very wise course.

With it all, however, one subject on which everyone is completely unified and agreed, personnel is the No. 1 problem.

There are seated within this audience today many officers who are occupying key positions of command and responsibility in the Pacific Fleet and in the San Diego area. They are the ones who must operate and support the Fleet. They are the ones who must grapple each day with the difficulties and problems in personnel.

Today, as the representative of Vice Admiral Holloway, the Chief of Naval Personnel, I would like to pay a tribute to these officers and to the magnificent job they are doing. I would like, also, to assure them that they enjoy the highest admiration and support of everyone in the Bureau of Naval Personnel, even though there may be moments when some doubts may enter their minds about that.

So much has been said, particularly during recent weeks, about the negative side of the personnel picture. Today I would like also to tell you something about its positive features and about some of the important corrective measures being taken in the legislative area.

But first, let us look at how the size of the overall military force relates to the problem.

I can still recall the year 1932 shortly before I was commissioned when the number of officers on active duty in the Navy was less than 7,000; we had an enlisted strength of under 80,000 and the total naval appropriations for that year amounted to $300 million. In 1937, shortly before the outbreak of World War II, the entire active duty force for all the armed services had increased to about 300,000, or approximately one-tenth of its present size. During World War II, the

total armed services strength at the peak of mobilization stood at some 12 million.

In the years immediately following World War II, the total active-duty forces were cut to something less than a million and a half. With the advent of the Korean war, they were expanded rapidly to about 3,700,000. During the past 2 years, we have been stabilized at approximately our present strength of something under 3 million including 900,000 in the Navy and Marine Corps.

This stabilization in strength of forces has definitely been an improvement over the fluctuations of previous years.

Without the stimulus of a fighting war, or compulsion of the draft laws, it is extremely doubtful that we could ever maintain the present size force on a wholly voluntary basis—whatever the inducements. The problem is further accentuated during periods of high economic prosperity and peak industrial employment—such as the present. Nevertheless, we must maintain this force on active duty for the long haul—and at a higher state of combat readiness than ever before.

Surely, we must take every possible step to reduce personnel turnover to a minimum. But we must also learn to accept the fact that we cannot eliminate it. If we continue with the present size force, the number of men who reenlist is not always going to be as high as we would like.

It was just 2 years ago in 1954 that reenlistment rates had dropped alarmingly to their lowest points. The overall rate in the Navy fell to below 10 percent. Including only the first cruise men, it was below 4 percent.

These low rates were partially explained by the fact that enlistments were expiring of all those who had entered service during the rapid Korean expansion, including very large numbers who had never intended to remain in the Navy. They had patriotically carried out their obligation and were returning to civilian life.

But it was also a fact that we had expected more of them to stay. Most alarming, however, was the fact that the reenlistment rate of our career personnel had fallen sharply to a point below 50 percent. By career personnel, I mean those who had previously enlisted one or more times. Normally, they reenlist at rates well above 75 percent.

The other services were also experiencing similar difficulties. Something was wrong.

It became clearly evident, not only to the armed services, but to the Congress and to the President, that remedial measures were called for. The losses of both officer and enlisted personnel had reached prohibitive proportions, and the increasing rate at which career regulars were leaving was particular cause for concern.

The principal factors causing these excessive losses of trained personnel in the Navy could be summarized something like this:

The inherent nature and inconveniences of naval life, as opposed to the lure of greater comforts and more stable opportunities in civilian life.

Such factors as the long periods of enforced absence from their families, when contrasted to the more attractive advantages of civilian employment, were producing pressures and personal problems that were causing men to leave the service at higher rates than ever before.

At a time when the operational demands on our personnel had become heavier than during any other so-called peacetime period in our history, the unfavorable disparity of military pay with that offered by industry continued to widen.

Furthermore, industry was offering more of the nonwage benefits which at one time, and not so long ago, had been unique to a military career. Prior to World War II, for example, such career benefits as a favorable retirement system, adequate medical care for servicemen and their families, survivor protection, and housing, were some of the principal military benefits that were seldom enjoyed in industry. But since the end of World War II, these and other benefits were being overtaken by industry. Consequently, many of the former advantages of career military service steadily reduced in comparison to those of industry.

In early 1955, in a special message to the Congress, President Eisenhower carefully reviewed and pointed up this serious situation. He outlined a program for increased compensation to servicemen more in line with that offered by industry. He further recommended that the traditional service benefits be considerably strengthened in recognition of the unusual difficulties being faced by the serviceman and his family.

Just prior to this time, the Career Incentive Task Force had been formed for the purpose of planning, coordinating, and accelerating the necessary legislative program through the Congress. It was a special team composed of members from each of the armed services, and one that has since proven highly successful in speeding up action on the various bills within both the executive branch and the Congress. In doing so, it has also provided an excellent example of effective unification.

The first bill to be handled by the task force was the Career Incentive Act of 1955 which provided selective increases in basic pay, also in hazardous-duty pay and per diem, and a new dislocation allowance.

But this bill did not provide any pay increases for those officers or enlisted men who are merely performing obligated service. It was a career bill and the first one ever to give special recognition to career service. As such, it marked a break with the traditional military pay pattern which many seasoned Washington observers said could not be accomplished.

As a result of the prompt consideration and action given to it by the Congress, the first increased paychecks were being cashed within 2 months from the time committee hearings had been commenced.

The pay legislation of last year marked an important step forward in several respects. But quite understandably, there were those who thought the proposed increases should have been greater, even at the risk of incurring stronger opposition to the bill.

That brings to mind a story told by the late Senator Barkley. It was about a certain employer. One day, he decided to surprise one of his old employees by giving him a bottle of whisky. Several days followed before he saw him again.

Finally, when they did meet, the boss asked him, "How did you like that bottle of whisky I gave you the other day?"

The old fellow replied, "Well, I'll tell you. If it had been any better, I don't think you would have given it to me. If it had been any worse, I don't think I could have drunk it. It was just right."

And it was generally agreed by the experts that our pay bill was about the best deal that could be made at the time. But since then, there has been a lot of pressure to provide pay differentials for technicians and specialists who are in scarce supply. Another extensive study of the entire pay structure by a high-level board is already underway.

Earlier this month, the President signed into law another very important career incentive measure—to provide improved medical care for the dependents of service personnel. Prior to its enactment, at least 40 percent of the dependents were unable to receive adequate medical care. This was caused largely by the shortage of doctors and the overcrowding of service hospital facilities.

Family medical care has long been one of the traditionally military benefits. The failure during recent years to provide it on a reliable basis has been one of the major deterrents to career service.

Now, for the first time, specific statutory authority exists to provide medical care to the dependents of both active and retired personnel in any military or Public Health hospital to the extent that they are available.

Of particular importance is an entirely new feature in this law that will authorize the use of civilian hospitals and facilities for the wives and children of active-duty personnel—whenever they do not have convenient access to military hospitals, either in this country or abroad.

The cost to a service family for each admission to a civilian hospital will be limited to a payment of $25, or an amount equivalent to the subsistence charge in military hospitals, whichever is the greater.

The remaining cost will be carried by the Government under a medical service or insurance plan to be contracted for with private agencies by the Secretary of Defense.

This new law will become fully effective by next December upon the completion of the necessary arrangements now in progress. It marks a big step forward in making career service more attractive.

We should all take special steps to highlight and stress the positive advantages of this and other types of beneficial legislation, for it amounts to a very substantial career inducement. And we should also appreciate that Congress has been given splendid help and support to this entire career incentive program.

We are fortunate that one of the best and strongest committees in the Congress is the House Committee on Armed Services. Having worked with and seen a lot of this splendid group, I can tell you that one of its most able and effective members is Congressman BOB WILSON.

BOB WILSON is a very active and well-informed supporter of the Navy and of the other armed services. He is an exceptionally fine person in every way, and a very great credit to his district and to the people who have elected him.

I should like now to say a word about the Doctors' Career Incentive Act which became law in April of this year.

This was must legislation to prevent the imminent dissolution of the hard core of experienced doctors who are vital to the health and readiness of the Navy.

At its present strength, the Navy requires some 3,600 physicians on active duty. Less than one-third of these are Regular Navy career doctors, and these have been resigning in prohibitive numbers during the past 3 years. The ratio of resignations to appointments during the past 3 years in the Medical Corps has been 7 to 1; the Dental Corps, 4 to 1.

Since only a very few Reserve doctors apply for active duty, the remaining number must be drafted. Young doctors just out of medical school can be obtained under the general draft law. But in order to obtain a sufficient number of experienced doctors, they have had to be drafted under the Special Doctors' Draft Act, which is due to expire next year. But even if this unpopular and discriminatory legislation were to be extended, the pool of experienced doctors eligible to be drafted will be depleted.

It was, therefore, clearly evident that unless drastic measures were taken to reverse the present trend, the Navy, together with the other armed services, was faced with the grim prospect of its active duty doctor strength consisting of conscripted "green" doctors fresh out of medical school.

The bill, as it went to the Congress, provided that all doctors be given promotion and longevity credit for the years spent in medical school. By doing so, it merely placed

them on a par with their line contemporaries and corrected an injustice of long standing. All doctors have been 4 to 5 years behind their college contemporaries in the line, because of the years they must spend in medical or dental school in order to even qualify for their commission.

We should also remember that the potential doctor must finance entirely his own medical education following his graduation from regular college, during which time his line contemporary has a military status and receives a salary.

In considering the bill, Congress concluded that the proposed corrections did not constitute sufficient inducement to meet the critical medical situation. The bill was then amended to provide increases in special pay for those doctors who remain voluntarily on active duty after completion of their obligated service.

I believe we should recognize the fact that doctors perform a very personal and essential service in caring for the health of our personnel, both active and retired, and also for the dependent members of their families. While a doctor's training is a long and expensive one, his services are in particularly great demand everywhere. His financial opportunities in private practice are usually far greater than we can ever provide under military pay structure.

This bill has definitely stemmed the heavy losses of career doctors in the Navy.

The survivor-benefits bill is a career-incentive measure of far-reaching importance to all service personnel, present and future, and to their surviving widows, children, and dependent parents. It will provide more adequate and stable benefits to the dependents of service personnel whose deaths occur while on active duty, or on inactive duty if service connected. It will also remove many of the inequities and inconsistencies existing under present law and will greatly improve the overall survivorship structure.

The widow of any regular, whatever his rank or length of service, is presently entitled to only $70 per month from the Veterans' Administration if her husband's death was service-connected and occurred in peacetime—$87 when such death occurs during wartime.

On the other hand, the widow of a reservist may be entitled to as much as $525 per month under the Federal Employees Compensation Act which applies only to reserves. This unintentional but glaring affront has long shouted the question: "Why be a Regular?"

For the present flat payments, the new bill will substitute a much more reasonable benefit and one that bears at least some relation to attained pay at the time of death.

The widow of any serviceman whose death occurs while on active duty would be entitled to monthly compensation amounting to $112 plus 12 percent of his basic pay.

This will provide a range of payments from $112 to $266, to continue until the widow dies or remarries.

Full social security benefits will be permanently extended to all active duty personnel—and on the same contributory basis that is applicable to all other citizens under social-security coverage.

Social-security benefits will also be related to basic pay, up to $350 maximum wage credit allowed. They will provide monthly payments to a widow and minor children up to $200. In addition to the compensation from the Veterans' Administration.

The bill in its present form will also authorize the payment of social security old-age benefits to a serviceman and also his wife, after they attain age 65, up to a maximum of $162 monthly.

While no further Government insurance will be written under this bill, let me emphasize that it does not in any way affect any existing rights—under either Government or national service life insurance. Nor does it change in any way, the present Contingency Option Act whereby retired personnel may elect annuities to be paid after their death to their widows and minor children.

The only cost to the serviceman for this excellent type of family security and protection, will be that payable to social security. This will amount to 2 percent of basic pay up to a maximum payment of $7 monthly.

This bill has already passed the House and has been favorably reported by the Senate Finance Committee. Its final passage by the Senate this session is clearly indicated.

It will be a No. 1 morale builder, when it is fully understood, and a very important new incentive for career service.

It is quite in order that I should tell you at this time that the Navy has led the way in originating and emphasizing the great need for these three vital career incentive bills. As the Chief of Naval Personnel, Vice Admiral Holloway has given these bills the strongest kind of support and is personally responsible in a large measure for their success.

The improved career incentive program, together with the vigorous measures being taken at all levels within the Navy during the past 2 years has produced results. This can be seen from the improved reenlistment rates and the reduction in officer resignations.

The overall reenlistment rate has now increased from below 10 percent in 1954 to 33 percent at the present time. That of first-cruise men has increased from 4 to 12 percent over the same period. These are still not high enough by any means. But they do show progress.

The reenlistment of career personnel is highly satisfactory, being well above 90 percent.

Our most serious enlisted personnel problem lies in the fact that in certain critical skills we are still losing men at an excessive rate. In the aviation electronics and radar ratings, for example, we are presently able to fill only 70 percent of the petty officer requirements, and the first-cruise men are reenlisting at the rate of only 6 percent.

These are quite typical of other critical-skill areas where we are having considerable difficulty in retaining enough capable and expensively trained technicians beyond their first enlistment. The training and experience they have obtained in the Navy are also in great demand in industry. While we are making some progress, their reenlistment rates are still far below what they should be.

All in all, we have made a lot of progress since 1954. Congress has given us some very beneficial legislation and more is on the way. Navy life has been improved in many respects. The downward trend in reenlistment rates has been checked, and fewer officers are seeking to resign.

We are definitely on the upgrade and reaching a position where we can make a much stronger case for a naval career to the competent, able men we must have.

Very oftentimes—success is a journey more than it is a goal.

All of us, including our many fine civilian friends and supporters such as you gentlemen, have an important responsibility to take positive and effective action to highlight the beneficial and favorable aspects of the Navy's personnel program, especially as they have been recently improved. By doing so, we will also be acting to dispell some of the negative attitudes that have become much too predominant during the recent years—both in and out of the Navy.

Take a look at some of the advertisements in the service journals and newspapers. You will see that a number of private companies in their efforts to entice our trained personnel are taking full advantage of these negative attitudes. Here are some deplorable examples of what they proclaim:

"Slipping on a tweed jacket is just one of the enjoyable details in becoming a civilian again" or

"Service made you a man—Alcoa can make you successful."

We should strive to discourage this type of advertising.

The Secretary of Defense has just recently appointed a high level advisory committee on technical and professional compensation. It is made up of some very distinguished and well-informed civilian and military members. Its chairman is Mr. Ralph Cordiner, the president of General Electric Co.

That committee will give particular attention to the difficult question of whether pay differentials should be authorized for the various types and degrees of technical specialties. Specific recommendations are also expected regarding pay adjustments in the area of command and management responsibilities. Proposed legislation implementing the committee's recommendations, as finally approved, should be ready for submission to the next Congress.

At the first meeting of his committee held earlier this month, Mr. Cordiner told of an extensive survey of employee attitudes made at the General Electric Co. by an independent research group. These included what the employees held to be the most important aspects of job satisfaction. I am sure they will be of interest to everyone of you here, because you will recognize them as having universal application in any organization. Here they are:

First, a feeling of belonging—the sense of pride and continuity in one's job.

Second, individual rights and dignity—the status and respect accorded an individual, as opposed to complete mass uniformity.

Third, good bosses—superiors who command respect, maintain firm discipline, and treat people fairly.

Fourth, compensation and benefits—to maintain a reasonable standard of living and status in one's community.

It would be quite impossible to solve our personnel problems in the Navy, or anywhere else for that matter, if pay alone was the sole dominating factor. But we know that it is not. Surely the attitudes I have mentioned reflect the very vital and far-reaching influence of effective leadership. At all levels in the Navy, leadership is called for to a higher degree than ever before if we are to attract and retain for career service the high-caliber, dedicated personnel we must have.

In closing, let me leave with you a thought expressed recently by Admiral Burke:

"There are many who say all our good people are leaving the service—but I say, 'The best ones are staying.'"

Poland

SPEECH

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 3, 1956

Mr. McCORMACK. Mr. Speaker, I yield to the gentleman from Massachusetts [Mr. WIGGLESWORTH].

Mr. WIGGLESWORTH. Mr. Speaker, All of us appreciate the brilliant and courageous record of the people of Poland over the centuries. All of us appreciate the indebtedness of this country to the people of Polish descent who have contributed so greatly.

It is an inspiration to all that Poland and the Polish people have consistently refused to compromise with evil.

We all appreciate the unbelievable suffering which they have undergone under Communist domination.

They have our heartfelt sympathy.

We are confident that the indomitable spirit of Poland and its people will ultimately triumph.

Ike's Choice

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks, I am inserting Mr. Edward T. Folliard's column of July 3, 1956, as it appeared in the Washington Post and Times Herald:

IKE'S CHOICE—NOBODY WILL HAVE TO SHOVE HIM INTO RACE

(By Edward T. Folliard)

Perhaps the greatest political fallacy of the times is the notion that President Eisenhower is being dragooned into running for a second term—that shrewd and callous Republicans are sacrificing him so that they can hold onto the levers of power.

It makes a good story, and undoubtedly carries conviction for some people. This would be true especially of those who find it hard to understand why a man of 65, with a secure place in history and in the hearts of his countrymen, would want to continue in a job like the Presidency after a heart attack and an abdominal operation.

The trouble with the story is this: It just doesn't square with the facts in the case.

The No. 1 fact is that President Eisenhower likes his job and wants to hold on to it. He had a taste of retirement at Gettysburg while convalescing from his heart attack, and he didn't relish it.

It was not necessary, therefore, to pressure him into throwing his hat in the ring for the 1956 race. But suppose that it had been: Who would have brought the pressure?

Not many men would have the gall to tell a soldier-statesman like Dwight D. Eisenhower where his duty lies, especially after a heart attack. Not only that, but there is something about the office of President—an aura, a splendor—that discourages presumptuousness and forwardness.

The man in charge of the Republican Party's fortunes this year, National Chairman Leonard Hall, has said that he never broached the question of a second term in talking to President Eisenhower after his heart attack. There is no reason to doubt Hall, and every reason to take him at his word.

White House staff members say that they wouldn't have dared to bring pressure on the President to run for a second term. They say further that they never mentioned politics to him unless he himself first brought up the subject. Anyone who knows how they feel about the "Boss" would find that easy to accept, too.

Nevertheless, the story persists that in some way an unidentified Republican inner circle virtually compelled General Eisenhower to declare for another 4-year term.

Stephen A. Mitchell, former chairman of the Democratic National Committee, made a speech in Denver on June 16 and credited a "select inner circle of Republican politicians, businessmen, and advertising agents" with pushing the President into a second-term race after his heart attack.

Referring to the President's abdominal operation, Mitchell said that the "Republican secret high command" has put out propaganda that his health in the future will be better than ever.

"They are determined," Mitchell said, "to make the President do their bidding and (carry) the Republican Party load for them regardless of what it costs nim. * * *

"They know they have little or no chance of winning the November election without the President as a candidate. They have, therefore, determined to go to any length and to any cost to him or to them to make him run for reelection. * * * It means nothing to these men that another man and his family might be sacrificed to their political purposes. * * *"

The question arises: Is Steve Mitchell saying things like this because he thinks it is good Democratic politics, or does he really believe that President Eisenhower wanted to retire but allowed himself to be talked into running again?

If Mitchell was under the impression that the President was eager at one time—before his heart attack—to leave the White House and settle down in Gettysburg after a single term, he had plenty of company. The President himself said things that encouraged this view.

But a month or so after President Eisenhower arrived at his Gettysburg farm to convalesce from his heart attack, some of his friends noticed a significant change in him. They said he had tried out the so-called delights of retirement and didn't like the experience. They said he found himself bored, restless, and eager to get back at his desk at the White House.

"They believe," the Washington Post and Times Herald reported on December 26, "that the Chief Executive's disillusionment—his boredom and restlessness in his final weeks at Denver and later at Gettysburg—points strongly to a second-term race next year, provided his doctors tell him he can do the job."

Asked about the boredom talk at a news conference a month later, the President sought to explode it by saying he had "a thousand things to do in this world."

However, Robert J. Donovan in Eisenhower—The Inside Story, a first-rate book on which he had White House help, says this about the President's convalescence: "For Eisenhower, Gettysburg came close to being 5 weeks of torment."

"His morale slumped," Donovan says. "His spirits were low. He fretted over Government affairs. * * * He was tense and nervous and stalked about the house with a golf club for a cane."

Donovan goes on to tell how, by the time the President got back to the White House 5 days before Christmas, he was itching to do more work.

Apropos the increasing demand for the President to run for a second term, Donovan says that the pressure had little or no effect on him.

"Eisenhower," he says, "did not feel that he owed the leaders of the Republican Party any obligation to run again, and he followed his own thoughts."

But the President, Donovan says, was very much impressed by the argument that he might, by serving a second term, be able to make a contribution to world peace.

It is a fantastic thought, but there are some who believe that General Eisenhower was thinking seriously of retiring after a single term, but changed his mind after his heart attack.

Anyway, this much is certain: Nobody had to twist his arm to get him to throw his hat in the ring.

The South Won't Surrender

EXTENSION OF REMARKS
OF
HON. HENDERSON L. LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mr. LANHAM. Mr. Speaker, with leave to extend my own remarks in the RECORD, I am including an article written by John Temple Graves which appears in the American Mercury for July 1956. The article is entitled "The South Won't Surrender."

This is one of the finest things I have seen concerning the South's position on the momentous question of segregation. I agree wholeheartedly with what Mr. Graves says and just hope that the people of the United States generally can be brought to realize the South's position and its determination to maintain the separation of the races in our public schools.

The article follows:

THE SOUTH WON'T SURRENDER

(By John Temple Graves, editor of the Birmingham (Ala.) Post Herald)

With fellow Conferedates who have a Little Bo-peep philosophy of the South today, I don't confederate.

"Leave us alone," they say, "and we'll come home, wagging our tails behind us.

"Give us time, don't push, and gradually we'll get to be exactly like Chicago, Detroit, Los Angeles, New York or some other heaven-on-earth, and glory be."

It isn't true. There are respects in which the South isn't coming home at all. It proposes a tmenty-and-a-half-century home of its own and to house the region in it—a home with touches of Williamsburg and My Old Kentucky Home and a glint even of the Suwannee River—but with fixtures modern beyond what current modernity knows.

Our United States is earth's great place, but if you travel it as I do, you can see that it hasn't yet written the last words on everything. We are modestly convinced we can write some in the South. Especially on labor and race relations.

On labor relations because, coming late to industry, we don't have to be southern editions of certain damnations of Detroit and other northern cities. Our industry is powered by electricity, oil, and gas, not steam. These are decentralizers. Requiring no huddles, they make no eyesores and heartburns. You have room to breathe, grow, and be free and fair in the South, to be separate and individual. You don't have to be a Socialist or a slave or a faceless item of an eating society.

On race relations, we think, we can write some last words, too. That is because we live where the races live, where the masses of them are, and we have been living here together a long time. It's our peculiar problem, the most delicate and difficult with which any people anywhere have ever had to deal. It is a police problem, a biological one, a cultural and an economic, and we are passionately certain that it can be served only in terms of that separte but equal philosophy for which the Supreme Court stood through half a century until it forsook precedent, Constitution, and commonsense in 1954, in favor of Swedish sociologist Gunnar Myrdal.

We may be wrong, but this is the way we are. What keeps America a nation of so many economies, geographies, origins, and accents "one and united," is respect for the

varieties making it up. Respect, sometimes, for their right to be wrong.

The South's program against racial integration is for more than delay and mere resistance. It is for magnificent American succession. It is for winning America to Americanism (yes, we call it that). The South believes resistance by delay can be continued until the rest of the country sees the Constitution and the Star-Spangled Banner by some dawn's light. Already there's half-light in the Saturday Evening Post, the United States News, Newsweek, the Wall Street Journal, the American Mercury, and some other national periodicals, as well as in columnists like Dorothy Thompson, David Lawrence, Westbrook Pegler, and, in his fashion, Walter Lippmann.

We see nothing un-American in a racial separation that has existed from the first days and before, and continues all over the country today. And we see much that is American in opposing too much government too far from the governed, in prizing quality in individuals, and in saying with our Constitution that there are things 51 percent of us just simply can't do to 49 percent—or even to a fraction of 1 percent.

For this the South is "interposing"—and invites other interposers. "Interposition" is a word currently popularized by young James Jackson Kilpatrick, successor to Douglas Freeman as editor of the Richmond News-Leader, for what Jefferson and Madison did in the names of Kentucky and Virginia in 1798 against a Federal sedition law that they deemed contra to the Constitution and the compact with the States. They said in the name of sovereignties remaining in their States that the law was void and would remain so until a constitutional amendment might effectuate it. Nothing happened. Nobody undertook to force Virginia or Kentucky, and 3 years later the author of Kentucky's resolution, Thomas Jefferson, became President of the United States.

Nothing has ever happened, in fact, when interposition (or nullification) has been declared throughout our history. Calhoun's South Carolina declared it in 1832 against the tariff of that year, and all that happened was that a new tariff was drawn up. Georgia declared it in 1838, when ordered not to move the Cherokee Indians, and not only did nothing happen but President Andrew Jackson, siding with Georgia, said "John Marshall had made his decision, now let him enforce it." Wisconsin declared it against the Dred Scott slave decision just before the Civil War, and nothing happened.

Right down to today, nothing has happened. Within the year, both Georgia and Virginia have refused to abide by orders of the Supreme Court, asserting State sovereignty, and nothing has happened.

But interposition as talked and declared in the South now doesn't mean actual nullification (except in Mississippi—they mean business there). In Virginia, where the movement originated and was planned to mean nullification, the assembly has confined itself to asserting the unconstitutionality of the desegregation decisions without calling them void. In my Alabama, an interposition bill which has been passed is only a protest. What interposition has come to mean in the South is not nullification but the total of all the things employed, planned or imaginable for preventing mixture of races in the public schools.

It includes placement laws giving school boards a right to assign pupils on a basis of aptitude, public order and, in reverse, that psychology on which the Supreme Court leaned for Myrdal's sake. It includes private schools in lieu of public ones, three-way schools, public funds to individuals, local juries which will say "not guilty" (under our Anglo-Saxon tradition, juries, with their local opinion and understandings, outrank even the Supreme Court), and the gerrymandering of school districts. It includes old-fashioned legal filibustering, too—every delay, obfuscation, subterfuge and multiplication the law allows.

The Court's decision having tortured the Constitution, the South is torturing the decision. If any cry shame, the South says the Court has tortured the Constitution's welfare clause, its interstate commerce clause, its 10th amendment, its forgotten 9th, its separation of Federal powers, its fundamental original promise that sovereignties (like education) not granted to Washington should remain in the sovereigns that formed the Union.

If we are violent, we don't mean to be—honestly. We are only human, like New Yorkers, Detroiters, and Chicagoans. "Moderation" in southern resistance now doesn't mean what Adlai or Ike mean and, of course, isn't in mention-distance of Estes and Averell. It doesn't mean "gradualism" for us but law-abiding, nonviolence, decency, and intelligence in "neverism." Even though sectors of the outside press cry havoc at the fall of a southern rock and (even as they ignore racial and industrial blood in their own backyards) neverism is remarkably free of violence so far. God knows what may have happened before this is printed, for provocation multiplies and human nature continues human, but as of now, the only monstrosity is the Till murder in Mississippi.

That was a monster in anybody's book or town, reflecting low life all around and shame on everybody, North and South. For the rest, the awful Autherin Lucy disorder (after the NAACP insisted not only on her admission but on maddening ballyhoo with the admission) scored only one broken window's worth violence. The "terrible bus strike" in Montgomery has been all piety and peace. The attack on Nat (King) Cole in Birmingham resulted not only in no damage to Nat but in universal local condemnation of the hoodlums responsible and, better yet, in discrediting to near-dissolution an outlaw and fascist element of the Citizens Councils there which had already been denounced by genuine councils whose rosters in Jackson, Miss., and many Louisiana, South Carolina, and Alabama centers read like Rotary Clubs for respectability.

How do we sober and respectable citizens of the modern South get this way? What has created among us this determination so solid, meaningful, and immense? What is so awful—actually—about integration?

We are this way, as I said before, for reasons of (1) police necessity, (2) culture, and (3) biology. And we ask that the record show we don't mean (not any longer) injustice, discrimination, denial of franchise, or other civil rights, legal or economic inequality—or hate. The hate is in Chicago, Detroit, Los Angeles, and such. We don't even mean total segregation, not any longer. In notable respects, many bars are down and many others were going down until the Supreme Court's decision stopped every stoppable advance.

What we mean is public-school integration of the southern masses. We won't consent to this, immediately, gradually, or ever.

We are certain it would mean public disorder, at the schools, among parents, and throughout the community. We are certain, too, and cite the District of Columbia's experience, that it would mean cultural and scholastic debasement.

Differences in morals, in mental aptitude, sanitation, etc., which were pointed out by Editor Tom Waring of the Charleston News and Courier in his epochal article in the Atlantic Monthly, admittedly result in part from underprivilege. But they exist, and generations of privilege will be needed to remove them.

Many southerners believe there are differences other than ones which result from underprivilege—profound racial differences. That, of course, is unscientific in the estimate of those who share Lysenko's now discredited contention in Russia that environment is everything and you can make rye out of wheat if environmental pressure is right. We have Americans just as insistent as Stalin was that science must fit ideology and sentimentality.

"Oh, Mr. Graves, if only you knew anthropology!" Langston Hughes, Negro poet and fellow traveler, lamented over me in an America's Town Meeting of the Air debate in New York some years ago. What he should have said was, "If only anthropology knew!" Science simply doesn't know or pretend to know.

We believe that bloodshed or mixed blood or both would come if white and colored masses of the South were forced together as the NAACP proposes to force them under the Supreme Court mandate. And we believe both are bad. Is it contradictory to say there is a natural antipathy which would make a police problem of putting the races massively into the same southern schools, and to say at the same time that putting them in those schools would mongrelize the South?

What did Abraham Lincoln mean when he made that little-noted nor long-remembered comment that "there is a physical difference between the two races which in my judgment will forever forbid their living together. * * *"? Did he mean bloodshed or mixed blood? Since he was no scientist (and since Science itself doesn't know), his remark is noted here only for the record. Some believe there is a natural antipathy and that Nature has a use for it, just as she has for the natural attraction between sexes.

But you can't have it both ways, at any rate. If you deny the antipathy and the police problem, you must admit the biological problem. If you say that the affection that white southerners profess for Negroes denies antipathy, you don't know the affection. It isn't physical. If you argue against antipathy—that babies are not born with it, that it has to be taught—you forget that neither are they born with sex attraction.

The South doesn't expect the rest of the country, with its comparatively small Negro population, to agree on the need of public-school segregation where there are great numbers of both races. It doesn't expect either political party or any President to agree. What the South does hope to win is national appreciation of the width, immensity, and unanimity of its convictions—like none since the Civil War—and of its common cause with Americans who believe that the Constitution meant the South to decide for itself.

It is not arrogant or immodest for the South to think it is coming to a power that may give it a certain right of might, too, on these things. Out of the reconstruction darkness, out of following decades of defamation, false report, political underprivilege and economic oppression by freight rates, steel price differentials, tariffs, and such, the South is coming at last to industrial power, solidly based on a resurrected agricultural power. New industries—notably chemicals, paper, steel, lumber, metals and (of course) textiles—are pouring in. Their measure is the decentralizing electricity which makes our industrial prospect so different from steam-made huddles of industry in the North and East.

The Southern Co. has just reported electric sales up 113 percent since 1947, customers 80 percent, capital 108 percent. By all economic indices, the South is growing faster than the rest of the country, and the Deep South fastest of all. President Lewis M. Smith, of the Alabama Power Co., expects his company's generating capacity to be increased 40 percent by 1959. Average per capita southern income has increased from 47 percent of the average elsewhere before the war to 64 percent now.

All things considered, the greatest potential new market in the Western Hemisphere

is the South's as its purchasing power mounts to the national level. Industry is coming now for customers and taking steps to manufacture customers, where once it came only for raw materials and cheap labor. There is equal revolution in agriculture—truck, wheat, fruit, and small grain where once was only one crop; livestock income actually exceeding cotton and tobacco in some States; terraced and contoured hillsides, power dams, irrigation ditches—holding for use the priceless waters that have run to waste and destruction; lespedeza, kudzu, crimson clover, saving the soils; tractors moving over acres where man and mules have sweated through other decades; and best of all, the southern farmers with more knowledge of his land and ownership of it than ever in history.

Add political power. The Nation's major minority may be here—now that the Negro minority is about to be divided between the two parties and the organized labor minority, lately put together, is splitting at the seams and center and (for trying to put integration and unionization into one package) on the southern quadrant. The South is more united and passionate than it has been since Appomattox. It has had a balance of power in Congress since 1946, come Democrats or Republicans.

As one good result of its otherwise deadly Democratic loyalty, it has through seniority the chairmanships of the major congressional committees. And it is in position to swing the national presidential election this year or, if not that, to establish itself as the major factor 4 years hence.

Is it a holdup that the South proposes? We don't see it like that. We think the promise of power is something to be employed for our vital Southern concerns, but even more, for a Constitution, for an anti-Socialist cause against too much Government too far from the governed, for return to the individual against social-mindedness gone mad, for the American right to be wrong, the American right not to be imposed on by a central government or a tyranny of 51 percent, for American vitalities that depend on preservation of America's traditions.

The finest Negroes in the world live in North Carolina. They got that way segregated in an enlightened State. One of them was the late C. C. Spaulding, who built a great Negro insurance business. It was my lot in other days to sit with him on a number of educational and interracial Southern committees, and I remember how he would always bring in his philosophy that what the two races needed most in the South was the economic and political power which was surely coming to the South.

I remember him last month when I talked at a luncheon in my Birmingham of the Hungry Club, an organization of leading Negro businessmen, ministers, and educators. The hunger is not for food, since they are as well-fed and heeled as any of us, but for that righteousness the Bible says shall be fed to those who hunger and thirst after it. We agreed at this meeting to talk only of what we had in common—and there was a sense of relief throughout that integration wasn't going to come up and put a pall of self-consciousness over old friends.

We found we had more to talk about than the walrus said, and we talked it to the tune of much laughing and understanding and mutual sensibility and good will. We talked of C. C. Spaulding and what it was going to mean to both races as the South came to power. We talked of education, of the need of all of us, white and colored, to qualify evermore for great days coming. We talked of law-abiding and God and the United States and the hope of peace on earth.

And we talked of how white people and colored people in the South like each other. We agreed that there was a certain condescension on the white man's part, but we agreed too, that this was because in most cases the colored man has been employed by the white, and we thought the liking could endure into coming days of Negro advance to economic equality.

Nat (King) Cole became an overnight hero in Alabama for refusing to play the NAACP game of hate and integrate. If he had favored his hurt back after the assault in Birmingham, if he had failed to return to the stage for the ovation awaiting him from 4,000 whites, if he had not gone on with his second performance for the colored people, if he had not spoken glowingly of Birmingham when he flew back to Chicago and of love for his native South, the NAACP might have blown the incident up as they did the sordid Till murder case in Mississippi.

But because he behaved as he did, a merciful reminder was given us, white and colored, of that strange but true affection we have had for each other through the generations—and of our hope to save it from what the Supreme Court has done.

Air Force Nurses Have New Chief

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mr. DORN of South Carolina. Mr. Speaker, the people of my district and particularly Oconee County are proud of Col. Frances Loy. She rose from humble circumstances to become the new head of our Air Force Nurse Corps. Colonel Loy has written a new chapter in the success story of American women. Her career of service should be an inspiration to us all. The following article from the Washington Evening Star is a just tribute to an amazing young lady with ambition and courage. I wish her well in this new opportunity:

[From the Washington Evening Star of July 5, 1956]

SERVICE SCENE—AIR FORCE NURSES HAVE NEW CHIEF

(By Ruth Dean)

A charming southerner whose 5 feet 9 inches handicapped her from becoming a flight nurse until after World War II is the new director of the Air Force Nurse Corps.

Even today, Col. Frances Lay recalls her futile effort to volunteer for nursing duty in the clouds as one of the strangest experiences of her life.

It was 1943. The war was on, and the 28-year-old nurse from Walhalla, S. C., commissioned 4 years in the Army Nurse Corps, wanted to go overseas. She was chief nurse at Randolph Airbase in Texas.

Her new-found love for flying plus the new flight nurse program which had begun a year before prompted her to volunteer for this type of overseas duty.

"Sorry, you're too tall. Our height limit is 5 feet 7 inches," was the disappointing answer she got. So she spent the rest of the war with the ground forces as chief nurse at an Army general hospital in England.

ALL SKILLS

It was to prove an invaluable experience however for the brown-eyed girl with the dimpled smile. Flight nursing requires all the skills of hospital nursing plus a graver responsibility.

A flight nurse must act often in the absence of a physician aboard the flight. Often she is dealing with emergency cases being flown to distant points, for more specialized medical care.

The patient's life is literally in her hands. So, the value of years spent in hospital nursing can't be counted too highly.

Colonel Lay's chance to realize her long-frustrated ambition finally came in 1948. After a succession of assignments at Army hospitals following her return from the European theater, she put in a request for duty at airbase hospitals. She returned to Randolph Field.

By this time, planes were bigger, the Air Force had become a separate service and physical requirements had changed. Nurses as tall as Colonel Lay—and even taller—were and are now admitted to flight nurse training.

Her acceptance as a student at the flight-nurse school at Randolph Field she calls "the pinnacle of my career." There she learned the specialized care of patients in the air, patients that can vary from blue babies to an Air Force soldier dangerously ill with a brain tumor.

"We have very few real emergencies in our business because our business is to avoid them," she says firmly.

After her intensive 9-week flight-nurse training, Colonel Lay put her study into practice for a year.

She would, perhaps, have liked to continue her flight duties, but the Air Force had other plans for her. They sent her back to school—this time to get a degree in nursing education at the University of Minnesota.

Then for the next 5 years she was chief nurse at the Air Force School of Medicine at Gunter Air Force Base, Ala., where she was responsible for the instruction given to all flight nurses and for the orientation program given to all newly commissioned nurses in the Air Force.

Washington was her next stop.

Six months ago she came here as deputy director to Col. Verena Zeller, the Air Force Nurse Corps' first director. When Colonel Zeller retired last week, she stepped up into the top position.

How does it feel to be in charge of 2,609 Air Force nurses, 836 of whom are flight nurses?

Naturally, Colonel Lay is happy and honored to have the job.

As for the future of Air Force nursing, Colonel Lay thinks flight nursing is one of the greatest developments in military nursing that has happened in our generation.

Prospects of a Brighter Future

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Scranton Times on Saturday, June 30, 1956, in which this newspaper comments on the Douglas-Flood area redevelopment legislation designed to aid economically distressed regions:

At long last, it may be that the expressions of sympathy which Scranton and other depressed communities have been receiving from official Washington for a number of years may be replaced by something a little more tangible.

The House Banking and Currency Committee has sent to the floor the bill cosponsored by Luzerne's Congressman DAN FLOOD, and Illinois' Senator PAUL DOUGLAS, which would set up a Federal fund from which loans and grants could be made to economically distressed areas for industrial development. The measure would authorize up to $250 million in loans and $50 million in outright grants.

Spokesmen for the Scranton Chamber of Commerce and our Life organization in supporting the bill made it plain to Congress that we are not seeking any handouts. Scranton is asking only for loans which could be used to finance the construction of industrial plants, these loans to be paid back from rentals or from the possible sale of the factories. Such a procedure would be only an extension of the Life program which, within its limitations, has been most successful to date.

The favorable committee report on the Flood-Douglas bill, of course, is no guaranty of its passage. There has been strong opposition to the principle of the legislation, notably from the United States Chamber of Commerce. Added to this is the fact that Congress is anxious to adjourn in mid-July, which creates the danger that the depressed area bill may be lost in the shuffle before it can get through the House and Senate. But we can hope, at least.

Legislation to Correct Unfair Automotive Industry Practices

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. MULTER. Mr. Speaker, the following is my testimony before the House Judiciary Committee in support of legislation to correct the unfair practices in the automotive industry:

STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER, DEMOCRAT, 13TH DISTRICT, NEW YORK, BEFORE THE HOUSE COMMITTEE ON THE JUDICIARY, JULY 2, 1956

Mr. Chairman and distinguished members of the committee, I appreciate the opportunity of appearing before your committee to present my views concerning proposed legislation to eliminate certain unfair practices in the automotive industry. I am aware of the long, untiring efforts of committees to protect the public interest and to stave off the serious consequences threatening our economy because of certain unfair marketing practices in the industry.

I know that this hearing has been scheduled to consider S. 3879 which was passed by the Senate and the chairman's bill, H. R. 11360. I trust you will not consider me presumptuous when I say to this committee that that bill hardly begins to touch the problem. It deals with only one of many unfair practices, and I believe it does not sufficiently attack even that one.

In this statement, with your permission, I will cover all of the problems, as I understand them, affecting the situation, and then give you my recommendations, for whatever they may be worth, for the guidance of the committee.

You will find that all of these matters have been fully documented and covered by supporting testimony in many congressional hearings, and in this Congress before the House and Senate Committees on Interstate and Foreign Commerce.

THE PUBLIC INTEREST

In commenting on some of the existing unfair practices in the automobile industry, I should like to specificate one underlying fact; namely, that in the automobile market both the consumer and the dealer have little choice in the selection of the manufacturer. As you well know, the year 1955 saw the disappearance of one more private automobile manufacturer—Kaiser-Willys. Today only five sources remain—General Motors, Ford, Chrysler, American Motors, and Studebaker-Packard. It is an anomalism that as the market has grown the number of companies in the market has lessened. The public was only amused upon reading in the press that the General Motors Corp., the biggest manufacturer in this country, which is at the same time the country's largest automobile manufacturer, in testifying before the Senate Antitrust and Monopoly Subcommittee in December 1955, said that it "is the servant of the dealer." It is public knowledge that dealers have been forced into serflike submission to the manufacturer. The dealer's plight is manifest from the figures, such as those submitted by the General Motors Corp. last December showing that the 1953 return on net worth for dealers averaged 14.40 percent, and was reduced in 1954 to 9.4 percent. Comparable figures show that the corporation earned 20 percent in 1953 after taxes and bonuses, and almost 24 percent in 1954. In 1955, it was over 28 percent.

MANUFACTURER-DEALER RELATIONS

Committees in this Congress have directed their attention to the subjects of territorial security for automobile dealers, bootlegging and so-called phantom-freight. There are also other unfair marketing practices in the industry that must be appraised in evaluating the position of the industry in our economy. With the committee's permission, I will comment on all of these practices.

A substantial part of the problems which beset the industry stem from the dealer agreement which is so drawn that manufacturers may grant or withdraw the franchise at will. I am in favor of the principle which would validate manufacturer-dealer contracts establishing exclusive representation by dealers for fixed periods of time. Heretofore, such contracts have been at the will of the manufacturer. In my opinion, manufacturers have wielded their whip of economic power too long, and if we are to avoid repetition of the picture of the thirties, and if we are to meet our obligation to the public, legislation must be enacted now to protect our economic structure.

As long as manufacturers want to have dealers under contract to handle only particular makes of cars, the manufacturers should be required to sell only to such dealers and to prohibit bootlegging. Manufacturing should be required to cancel the franchise of bootleggers. I have incorporated many of my views in H. R. 10310, which I introduced on March 29, 1956.

As a result of the recent congressional investigations, we have observed newspaper reports that the manufacturer's cancellation privilege will be superseded by a provision requiring the cancellation to be for cause. But will the manufacturer be compelled to define the term "cause"? There is no uniformity among the court decisions construing automobile franchise agreements.

Incidentally, some State legislatures are making strides in revoking the manufacturer's arbitrary cancellation privilege. In my own State of New York, Governor Harriman on April 20, 1956, signed a bill amending the New York general business law, for the purpose of prohibiting automobile manufacturers from arbitrarily revoking the franchises of dealers in New York State. Under the law effective October 1, 1956, auto manufacturers are required to register with the secretary of state and are prohibited from terminating a dealer contract except for cause. A maximum penalty of $1,000 fine is imposed for each violation. We should not be surprised to learn that automobile manufacturers opposed the legislation, claiming that "the public interest is not sufficiently affected." In his statement upon signing the bill, Governor Harriman announced it was his firm conviction that "it is very much in the interest of the people that small- and medium-sized business should be protected against unfair exercise of economic power."

In view of the peculiar nature of the automotive industry, coupled with the clear proof that previous congressional admonishments have been flouted, it is the duty of the Congress to enunciate a public policy that will protect the consumer interests in their relations with the economic giants who not only produce this article of necessity, but also control its distribution, as well as the price thereof.

ADVERTISING ABUSES

The dealers must pay for advertising literature they do not want and would not order. It is sent in to the dealer in such quantities as the manufacturer thinks he should distribute, and the dealer is billed and must pay for that literature even though he throws most of it into the wastebasket. The dealers must pay a fixed sum per car to the manufacturers toward the cost of advertising. The dealer's name and address is never part of that advertising, only the product is mentioned. This policy would cease if the responsibility for exaggerated and fraudulent advertising were laid at the door of the manufacturer and if the manufacturer were prohibited from requiring dealer constributions toward the cost of such advertising.

Only recently, as a result of testimony adduced at congressional hearings, the Federal Trade Commission filed charges against the General Motors Corp. for false and deceptive advertising. Independent manufacturers have reported that General Motors' use of the words "genuine Chevrolet" to describe parts used in making repairs is diverting business from the independent manufacturers and small repair shops. The parts manufacturers contend that the items, distributed and warranted by General Motors, actually are bought by General Motors from the independent manufacturers. The implication is that the "genuine Chevrolet" parts are superior to the same parts sold by competitors without such label.

DELIVERIES WITHOUT ORDERS

Manufacturers require dealers to file each month several reports showing sales and inventory volumes. The manufacturer bases his deliveries to the dealer upon these figures. Whether or not the dealer considers this quota salable is immaterial.

Moreover, the dealer has no control over the various built-in accessories that are billed as extras. For instance, the automobile is listed as equipped with vacuum windshield wipers, but is later shipped in with an electric wiper billed as an extra. Every car comes with a hole in the dashboard for a cigarette lighter, but the lighter is an extra.

It is the manufacturer, also, who determines the stock of parts and accessories that the dealer must purchase from the automobile manufacturer. The dealer could purchase these same parts and accessories directly from the parts manufacturer and much cheaper, too.

The only way to abolish this practice is to prohibit lump-sum bills and to require of the manufacturer and of the dealer a complete itemization of all charges. No amount should be collectible by either for extras unless ordered in writing by the buyer.

OLD CARS SOLD AS NEW

The need to eliminate the unfair practice on the part of some dealers in selling

as new automobiles those which have been towed or driven from the factory or used as demonstrators has long been recognized but completely ignored. Under legislation I have introduced, it would be a violation for any manufacturer or dealer to replace or disconnect the speedometer on an automobile or to change its reading in a manner to mislead the public as to the mileage, condition, or usage of the automobile.

The foregoing, as well as the other unfair automobile marketing practices commented upon throughout this statement, are dealt with in the omnibus bill, H. R. 10310, which I introduced on March 29, 1956, to provide for the enactment of a general motor vehicles law.

AUTOMOBILE FINANCING

Not to be overlooked in any compilation of unfair automobile marketing practices are the reports of substantial overcharges under the package finance deals. Dealers complain, too, they are forced to grant wild credit to consumers in order to satisfy quotas in manufacturer's race for sales.

Insofar as General Motors' installment sales are concerned, it should be noted that if the purchaser defaults, the manufacturer has recourse against the dealer. Contemplate, if you will, the situation of the small-business man—the average dealer with an investment of his life's savings in showroom, service station, autos, and parts. Should the market fall, upon whom would the loss rest? Upon the dealers themselves, because the manufacturers have so directed. If my memory serves me, the total amount of installment paper on all consumer items last year was $26 billion—of which $14 billion represented the automobile business. Thus far in 1956, auto installment loans extended in January and February totaled $2.5 billion—an increase of 14 percent over last year. Yet, on the other hand, production and sales are running about 26 percent below a year ago.

In April of this year three large finance companies announced increases in auto-loan costs which will be passed on to the dealers. Dealers, in turn, must either absorb the costs or pass the increase on to their consumers. The consequences are that the squeeze is continually put on the dealers. General Motors defies the country to compel it to accept any shrinkage in its predetermined profits. Incidentally, GMAC has not yet made any statement on its installment costs. It, of course, is the largest auto finance company. As a group, the finance companies account for 55 percent of the auto installment credit volume. The other 36 percent is handled by the banks which have also recently raised rates. Is it not fair to assume that General Motors will also make such an additional charge?

CHEATING OUR SOLDIERS

At this point I should like to touch on a matter that involves the now well-known adage: "What is good for General Motors is good for the country." You will see in a moment that we can now change that to "What is wrong for the insurance companies is not wrong for the automobile companies."

On September 8, 1955, I wrote to Secretary of Defense Wilson, calling his attention to a scheme by which armed-services personnel returning to this country are being duped and mulcted of thousands of dollars in connection with the sale to them of new automobiles. I indicated that the matter had been called to the attention of the automobile manufacturers who have failed to do anything to prevent these practices. I further stated that the Secretary of Defense need not make any determination of whether these practices are fraudulent or merely unethical, but urged him to direct all commanding officers to alert their men to these practices to afford them an opportunity to protect themselves accordingly. My letter of September 8, 1955, is exhibit A, which I submit herewith. I received an answer, dated September 23, 1955, a copy of which is submitted as exhibit B, in which the Department of Defense refused to take any action. I replied by letter of September 28, 1955, a copy of which I also submit and mark exhibit C, again indicating the need for departmental action. No answer has been received to my last letter.

Now let us see what happened when the Department's attention was called to similar fraudulent practices by insurance salesmen. No General Motors was involved. An investigation was instituted which confirmed the charges. A complete set of regulations was promulgated by the Department of Defense, including a directive to commanders of all bases, making them responsible for protection of the men against such frauds. Another reason for different treatment of the phony automobile salesmen is that the fraudulent business is so profitable that the automobile manufacturers have sent their own direct representatives overseas to grab this business.

MANUFACTURING WARRANTIES

What is the situation today? The consumer may need a new automobile, but he dreads the purchase. Breaking in the car means running back and forth to the dealer to correct inherent mechanical failures that are uncovered long after the guaranty period has expired. The attitude of the consumer is aptly defined in unsolicited letters I received, which were printed in the CONGRESSIONAL RECORD—one appearing in the January 31, 1956, issue (pp. A993–A995); another in the February 9, 1956, issue (p. A1331); and a third and fourth in the March 21, 1956, issue (pp. A2543 and A2548 respectively). The dealer, on the other hand, is called upon as a regular procedure to comply with, not his warranty, but a warranty the company requires him to make. What has been the dealer's redress? The answer the dealer receives from the manufacturer is to step up or maintain his sales volume—even if that means come-on advertising, bootlegging, price packing, and any other unfair-trade practice. Even outright fraud is countenanced by the manufacturer.

Many an inexplicable accident is caused by defective vehicles. The manufacturer, upon whom the blame should rest, passes the responsibility on to the dealers who cannot assume nor begin to fulfill the obligation. The automobile manufacturer today makes only a spot check of 1 out of every 10 or 20 automobiles that leave the assembly line. The company's warranties are plainly worthless, and the dealer upon whom the responsibility falls gives a minimum of service until the guaranty period expires; after which, he charges the consumer for repairs.

In testifying last December before a Senate committee a spokesman on behalf of 1 of the 6 manufacturers in the country stated: "The manufacturer assumes the greater risks and bears the ultimate responsibility to the customer." Should we not make certain, then, that this responsibility is firmly fixed? My bill, H. R. 10309, prohibits the interstate sale, transportation, or use of a new automobile unless accompanied by a certificate of fitness from the manufacturer or assembler, showing that the automobile has been inspected and found in good working order and, further, that it has been road-tested and found in good operating condition.

BOOTLEGGING

This topic needs very little amplification. Every Member of Congress is fully familiar with the practice which has grown up in this industry at the active instigation and with behind-the-scenes connivance of the automobile manufacturers. On the other hand, they require a dealer to handle only their new cars. Then they load him up with more cars than he can sell to the consuming public. Then they help him dispose of those cars to nonfranchised dealers. When a complaint is made to the manufacturer about this unfair practice, the manufacturer responds that he can do nothing about it because of the antitrust laws. When we seek to amend the antitrust laws to prohibit such practice the manufacturers come in and complain that it would be an unfair restriction upon their right of free enterprise.

MANUFACTURER REACTION TO CONGRESSIONAL HEARINGS

On the heels of the disclosure of so many unfair practices in the industry, we now see by the papers that the manufacturer pretends he is reforming. General Motors Corp. has predicted the beginning a new era, an era of good will, in relations with its dealers. The Ford Motor Co. announced dealer-management talks to show dealers how they will gain by joining the fight against bootlegging. In so doing Ford said this was the first time dealers have been called to discuss the bootlegging problem with top management. I say to you, gentlemen of the committee, that such overtures are too late.

The public confidence can only be restored by the affirmative action of this Congress. Let us recall that a similar false contrition permeated the atmosphere in 1938 after the Congress enacted House Joint Resolution 594, which directed the Federal Trade Commission to investigate the policies of motor vehicle manufacturers and dealers in their relation to the public interest. The Commission, 1 year later, made public its findings, which were not at all unlike the unfair practices that are now paraded before congressional committees. Unfortunately the Congress took no action at that time for the reason, among others, that the industry itself rejected any type of Federal legislation.

THE MANUFACTURERS' WAY OF ELIMINATING AN UNFAIR TRADE PRACTICE

The elimination of acknowledged unfair practices in the automobile industry cannot be left to the discretion of the industry itself. Let me illustrate. The phantom freight charge has long been prevalent in the automobile industry. A similar practice among steel producers, "Pittsburgh plus," was eliminated in the thirties. Under this practice, the manufacturer ships the automobiles to dealers from nearby assembly plants and requires the dealer to pay for the transportation in an amount equivalent to, or even greater than, the rail freight rates from the factory to the dealer's delivery points.

Let us examine the 1954 shipment record for motor vehicles as reported in the 35th edition of Automobile Facts and Figures, 1955. Of the 6,601,071 motor vehicles shipped, 80.5 percent or 5,314,842, left the factory by highway—on a big truck that hauls several other cars, or towed behind another new car. Shipment by boat accounted for 5.6 percent, or 370,044; while rail shipments accounted for only 13.9 percent. In other words, only 916,185 out of a total of 6,601,071 motor vehicles shipped went by rail. You have seen reports stating that the phantom freight charges have annually amounted to over $250 million. And what has the manufacturer to say? Ford has admitted that in 1954 it gained $50 to $60 million on its total distribution charges. General Motors testified before a Senate committee that its excess of collections over actual freight paid for last year would be about $152 million. We may rest assured those were conservative estimates. Do not forget that the excess profit-per unit in previous years was much greater, because it was not based on the lower freight rates announced at various times by the industry.

I urge that the public announcements now being flaunted in our faces by the manufacturers as to their mended ways is merely an attempt to becloud the issue.

As of February 29, 1956, Chrysler Corp., General Motors Corp., and the Ford Motor

Co. eliminated phantom freight charges. These three manufacturers at the same time increased the wholesale price of their cars to their dealers. This in the face of the Chrysler testimony that they paid out more for freight charges than they collected. The manufacturers contend they should be permitted to deal with the so-called phantom freight on an industrywide basis. Their testimony and their actions, in my opinion, indicate they cannot be trusted to solve these problems.

As long as the industry practice is to collect a separate charge from the public which is represented as the cost in making delivery of the automobile from the factory to the consumer, then the industry should not be permitted to collect any more than such actual cost. For this purpose I have introduced H. R. 7935, which would amend the Internal Revenue Code of 1954 to require every seller of property, who collects from the purchaser any amount as a charge for the transportation of such property, to furnish such purchaser a statement showing the amount of transportation charges, if any, taxable under section 4271 (a) of such code, and the amount of tax imposed.

I have heretofore referred to the report filed by the Federal Trade Commission in 1939, pursuant to its study of the automotive industry. It should be noted that, irrespective of whether or not legislative action was necessary, the Government controls of World War II, limiting production, obviated the need for positive action by the Congress at that time. Nevertheless, we find the same unfair practices prevalent in the industry today, and what is worse, on a larger scale. In these circumstances, our duty to the public is not discharged by a formal disclosure of their nature.

In conclusion I should like to make this observation. The manufacturers representing the automotive industry can best be described as giant octopuses whose tentacles of economic power extend over every phase of the industry, as well as over many unrelated products. On the other side of the picture are the 42,340 dealers—90 percent of whom are small-business men, the very backbone of our free-enterprise system. In most cases they are the civic and philanthropic leaders in their communities. In the past their position has been one of dignity among their fellow citizens. They are fast becoming the most despised members of their communities. There were 219 dealer bankruptcies in 1953, the highest number since 1938. Two hundred and forty-one dealer mortalities occurred in 1954. The April 30, 1956, issue of Automotive News gives some interesting figures on General Motors' dealer terminations. The figures are based on the first 10 months of 1955 as against 1954. In 1955 there were 178 nonrenewals against 150 for 1954; 214 involuntary terminations in 1955 against 192 for 1954; 1,908 voluntary terminations in 1955 as against 1,585 for 1954.

It is high time to put this House in order.

RECOMMENDATIONS

There are several legislative ways of remedying all of these very bad conditions in this industry. It can be done by enactment of a combination of the various bills which have been referred to the Interstate and Foreign Commerce Committe. It can also be done by this committee's reporting a bill which would write into the antitrust laws a fair code of practices which would cover all of these matters. There is little point in attempting to take them one at a time and treat each of them by a separate bill. The only way to clean up this industry is by doing the full job.

With all due respect to the Senate, its bill, S. 3879, will accomplish very little, if anything. I doubt whether any law can be enacted which will require anyone to renew a contract which has expired or is about to expire. To provide merely for compensatory damages in the event of cancellation or termination of a contract will accomplish nothing except to clog the court calendars with litigation.

What compensation can the court fix in the event of an unlawful or improper cancellation of a contract? The loss of future earnings is not compensation. If the dealer has a large investment in a service station which is connected to his showroom, what compensation is he to get when his contract is canceled? He still owns the service station. The same applies to his showroom. Is the court to say that a showroom for a Buick car is worth less than for some other car? Or that the automobile showroom cannot be sued for any equally valuable purpose other than as an automobile showroom?

Any law like this, to be effective, will have to carry with it a provision for double or trible damages and punitive damages, plus some arbitrarily fixed sum large enough to serve as a penalty which will deter the improper practice.

Surely this committee will agree that, as important as it is to prevent cancellations of franchises, it is even more important to prevent fraudulent advertising and bootlegging and phantom freight charges, and to require certificates of fitness and safety. These latter items are for the protection of the general public.

Certainly it is just as important in trying to protect the dealer, to also prohibit the manufacturers from requiring the dealers to buy and pay for automobiles and parts which they do not order, and to prohibit the requirement of the dealer to buy only the accessories carrying the name of the automobile manufacturer when in fact those accessories are manufactured by others than the automobile manufacturer.

Again, Mr. Chairman and members of the committee, permit me to thank you for the opportunity to attend here and express my views on these very important matters.

EXHIBIT A

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., September 8, 1955.

Hon. CHARLES E. WILSON,
Secretary of Defense, Department of Defense, Washington, D. C.

MY DEAR MR. SECRETARY: For some time Members of Congress have been receiving complaints about the tactics being used by various dealers in selling new automobiles to members of the Armed Forces returning from posts outside of the country.

It seems that some of these retailers have sent representatives abroad who through fraud and deceit induce these men who are about to return to the United States to sign contracts, and to pay deposits for the delivery of new automobiles to them at the port of their arrival in this country. As part of this scheme these retailers have made exclusive rental agreements for offices in the hotels in this country at which these men and their families are temporarily lodged upon their arrival here. The deceptive practices are continued at those places until the delivery of a new automobile is made and payment obtained.

No purpose can be served by setting forth in this letter the nature of the fraudulent representations that are made, nor is it necessary for the purpose of this letter to determine whether or not these practices are actually fraudulent or merely unethical business practices. The result of all of these practices is that these men are being duped and taken advantage of. They are paying more for these automobiles than if they bought them in their hometowns or, for that matter, if they bought them at the port of arrival. They are paying higher finance charges than they would pay if they took the opportunity of financing their automobiles in their hometowns or in the city in which they are discharged from the service, and they are being deprived of the inspection and service that ordinarily goes with a new car purchase when made in their hometown.

The automobile manufacturers, when apprised of these practices, have taken the position that these retailing practices are no concern of theirs.

I believe you will agree with me that in the absence of the manufacturers undertaking to prevent these practices, something must be done to help these men.

My suggestion is that you immediately issue a directive requiring commanding officers in all stations outside of this country to alert the men under their command to this situation, and to advise those men that it is inadvisable for them to make such purchases while abroad, or, for that matter, even at the place of arrival in this country, or the place of discharge from the service in this country, and that their best interests will be served by their making such purchases from dealers in their home communities. The hometown dealers, in almost every instance, can arrange for the delivery of a new automobile to them at their point of arrival or discharge in this country, which would then be available for them for transportation to their hometowns.

I hope you will agree with me that such a directive will serve a very useful purpose. As a matter of fact, the directive and the notice from the local commanding officer can be appropriately worded so that neither manufacturers nor retailers need be accused of any wrongdoing or impropriety and yet provide some measure of protection to the members of our Armed Forces.

With kindest personal regards, I am,

Sincerely yours,

ABRAHAM J. MULTER.

EXHIBIT B

ASSISTANT SECRETARY OF DEFENSE,
Washington, D. C., September 23, 1955.

Hon. ABRAHAM J. MULTER,
House of Representatives.

DEAR MR. MULTER: This is in reply to your letter of September 8 concerning certain practices of automobile dealers in selling to members of the Armed Forces returning from overseas posts.

You appreciate, I am sure, that no agency of the Department of Defense sponsors any plan of automobile sales such as you describe and the Department is therefore without jurisdiction to discontinue it. The selection of an automobile salesman or sales contract is a matter of individual choice.

Overseas representatives of United States automobile dealers are not amenable to military control. So long as they comply with the laws of the locality in which they do business they can offer their merchandise for sale to both civilian and military. Control of this group like their contemporaries at the port would appear to rest with the automobile dealers, their trade associations, and perhaps, the manufacturers.

I believe that the directive you suggest would be more restrictive than is appropriate for issuance by this Department and that it might affect the legitimate activities of firms and dealers who render real service to our personnel. I believe that the objective we seek, the use of caution and judgment by the servicemen in their purchases from unknown vendors, can best be accomplished by a continuation of the present normal counseling given by commanders to their troops. I am taking the liberty of sending a copy of your letter to the military departments.

Your interest in the welfare of our Armed Forces personnel is appreciated.

Sincerely yours,

CARTER L. BURGESS.

EXHIBIT C

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., September 28, 1955.

CARTER L. BURGESS,
Assistant Secretary of Defense,
Department of Defense,
Washington, D. C.

DEAR MR. BURGESS: Receipt is acknowledged with thanks of yours of September 23.

I fail to understand how the directive as suggested by me is in any manner restrictive. It does not require the Department or any commanding officer to take a position on the matter, nor in any manner to interfere with automobile dealers in this country or abroad. It has always been proper for the Defense Department to alert the members of the Armed Forces against dangers that they may encounter, whether physical, moral, or financial.

Alerting these men to these practices is in direct line with such procedure.

Sincerely yours,

ABRAHAM J. MULTER.

The CHAIRMAN. We have many questions which I know you, as an exceptionally able lawyer, can be of help to us in answering.

Mr. MULTER. I made notes on much of the Senator's testimony, and notes on some of the questions addressed to him, and I will comment upon them during the course of my remarks.

The question which your committee is considering now, Mr. Chairman, is not new to this Congress or any of its predecessors. It has been the subject of testimony on many occasions. Two committees of this Congress have taken considerable testimony on the overall subject. You will find in my prepared statement that I have subdivided the overall problem and given it various titles. And the strange thing about it all is that the titles are very much like the titles you will find in the report that I hold in my hand.

This entire volume is a report of 1,077 pages. This report was prepared by the Federal Trade Commission and submitted to the Congress on June 5, 1939, after the Congress, in 1938, had adopted House Joint Resolution 594, directing it to conduct a complete investigation of the problems involved in the automotive industry.

The Congress at that time had conducted quite lengthy hearings on this subject, before it adopted this resolution calling for this investigation.

Mr. Chairman, I understand that Congressman ALBERT's statement is very much briefer than mine; and if it meets with your permission, I have no objection to stepping aside.

Mr. ALBERT. I do not want to do this, if it will interfere with your testimony; but my statement is brief, and I would appreciate it if I could go on, Mr. Chairman, at this time.

The CHAIRMAN. Certainly.

Mr. ALBERT. Thank you, ABE; I appreciate that.

STATEMENT OF HON. ABRAHAM J. MULTER—RESUMED

Mr. MULTER. Mr. Chairman, when I started my testimony I was referring to the report of the Federal Trade Commission, which, after a very exhaustive study—it spent over a year in their investigations—it included in its report not only what it turned up during that year, but what it learned from the investigation of complaints that had been made even before the Congress had directed this all-inclusive study.

When you get to the conclusions in this very voluminous report, you find these headings or titles.

The situation as it existed at that time, the evils that were complained of at that time, are just the same as you will hear about during this hearing by this committee. They are the same as they heard on the Senate side in its committees' hearings and in the Interstate and Foreign Commerce Committee of this House this very year.

I read from the 1939 report.

The first title is: "Concentration in the Motor Vehicle Industry." Then there is "Competition in Production and Prices"; "Competition Among Motor Vehicle Dealers"; "Padding New and Used Car Prices"—that is what we today are calling packing prices—"Dealer Price-Fixing Activities"; "Unfair Methods of Motor Vehicle Manufacturers in Their Relations With Their Dealers"; "Manufacturers' Treatment of Dealers", "Abuses of Installment Financing"; "Itemized Invoice Needed for Consumer Protection"; "Deception in Charges for Transportation of Motor Vehicles"; "Sale of Driven Cars as New Cars."

The CHAIRMAN. Mr. MULTER, that report considered among other things the distribution, as I understand, of General Motors cars. Is that correct?

Mr. MULTER. It included that, but it covered the entire automotive industry.

You will find that almost every witness is going to refer to the same subject matter. He may use different words, as I did in my statement. My titles may sound a little different, but actually we cover the identical subject matter.

Now, one of the principal objections that is raised to this and all the other legislation introduced in this session of Congress is that you shouldn't pick on one industry and legislate against one industry. Well, then, we shouldn't have legislated on the security exchanges, there should be no Security Exchange Act today, there should be no regulation of the railroads, there should be no bank merger bills, because all of those laws—and there are dozens of others—are directed to specific industries, just as these bills are.

When I sat down to draft the legislation which I introduced in this session I thought that the thing to do, the approach, would be bills of general application to cover our entire economic situation where these problems or evils or wrongdoings would crop up. I thought we should have a law of general application that would cover them all.

Well, I say to you, that would be an almost impossible task. What you must do is address yourself to each industry as the testimony is adduced, showing what the situation is in that industry and how you can cure it.

The CHAIRMAN. I am very much impressed with that argument.

Mr. MULTER. Now, there were several questions raised this morning with reference to the bill that you are considering, which is a counterpart of S. 3879, which passed the Senate in slightly different form from the bill as introduced there. The two bills were identical when introduced, but it has come out of the Senate with some changes.

With all due deference to the Members of the Senate and to the author of the bill, I think they have put the cart before the horse. If you follow the same principle, you will be doing that, too. Every man has a right to go to court today, but the situation in this industry is such that when he arrives—when his proof is completed, his case is dismissed, because he has no actionable cause of action.

In other words, the fundamental situation is not changed by this bill as passed by the Senate and your own bill H. R. 11360 does not change it.

In order for a man to go to court and make a recovery in a civil suit, he first must have a legal right, not a moral right, a legal right; and then he must establish that that right has been violated or impaired or impeded and then, on top of that, that he has sustained damage.

Now, if you say, when he has proved the violation of a legal right, he shall recover punitive damages, you have given him a cause of action; but if you give him only compensatory damages, then you must inquire—what are the damages in cases of this kind?

Mind you, we are dealing now with contracts, the contract between the dealer and the manufacturer. No matter how unfairly it may have been arrived at, no matter how he may have been coerced into entering into it, on the dealer's part, as against the manufacturer, he still did not have to make the contract if he did not want to. He can get no damages because he, the dealer, accepted a bad contract.

If you are going to say that "We are going to let him recover damages because that contract is not renewed"—obviously from the report of the committee on the Senate side, they do not talk about a contract that has an option of renewal and is not renewed, but they say that if the contract has expired, or is about to expire and is not renewed, then he shall have a cause of action unless the manufacturer acts in good faith.

Look at the language: "The term 'good faith' shall mean the duty of the automobile manufacturer, its officers, employees, or agents to act in a fair, equitable, and nonarbitrary manner so as to guarantee the dealer freedom from coercion, intimidation, or threats of coercion or intimidation, and in order to preserve and protect all the equities of the automobile dealer which are inherent in the nature of the relationship between the automobile dealer and automobile manufacturer."

Now, that is the language in the House bill. I think that both bills had the same language, then, in section 3:

"An automobile dealer may bring suit against any automobile manufacturer," and so forth and:

"And shall recover twofold damages by him sustained and the cost of suit, including a reasonable attorney's fee, by reason of the failure of said automobile manufacturer to act in good faith in performing or complying with any of the terms or provisions of the franchise, or in terminating, canceling, or not renewing the franchise with said dealer."

Now, they added on to the Senate version: "*Provided*, That in any such suit the manufacturer shall not be barred from asserting in defense of any such action the failure of the dealer to act in good faith."

In other words, both sides must act in good faith, and it is fair to ask that both sides under a contract act in good faith—but the dealer's contract is about to expire and the manufacturer says, "I am not going to renew."

Well, when does he act not in good faith? When he says to the dealer, "You did not sell enough cars, I am going to put a dealer in here who is going to sell more cars"—is that bad faith?

Or suppose he says, "I think your service station is not being operated the way that we would like to have it done."

Each of them is going to bring in any number of dissatisfied customers. Their files will be full of complaints from customers who went in for service. And the dealer says, "Well, I have done the best I can for you, but you need a new motor in this car."

You are going to run up against an impossible situation in a bill of this kind unless the first thing you do is to enact a code of fair practice.

Mr. MCCULLOCH. If I may interrupt. If that is not done, are we not faced with a law which in effect requires the renewal of contracts or the reexecution of contracts in practically every instance; and wouldn't the same reasoning apply between landlord and tenant, where there was a lease of a storeroom, for instance, which calls for rental based upon the gross business done. Are we not

entering into a field in a manner that is wholly new in the field of our jurisprudence?

Mr. MULTER. I am not afraid of the newness of this or the novelty of the section, Mr. McCulloch; but you touched this morning and you have touched now upon a very important constitutional question: Can you make any man make a contract with any other man?

Now, you can lay down a code of fair practice and say, "In all your dealings you must do thus and so; there must be no bootlegging; there must be no delivery of items not ordered; you can charge only for that which is billed"—talking now about extras—"you can give the man a contract for a territory."

This is the first time that I know of where the people against whom the antitrust laws were aimed come in and say, "You cannot do these things because of the antitrust laws." They do not come in and say, "This is a good thing, let us do it, change the antitrust law, so that we can do it."

The CHAIRMAN. May I ask you this question? Suppose General Motors has a dealer contract with Mr. Smith and Mr. Smith is inefficient, there is no doubt about his being inefficient. Would General Motors have the right to cancel or refuse to renew Smith's contract as a dealer, under this bill?

Mr. MULTER. Well, I should say, even if there is doubt that the man is inefficient, and they come in and say that he is inefficient, "We will cancel out," the manufacturer could make that contention in good faith.

Well, surely you are not going to say to the manufacturer, "You must keep an inefficient dealer"?

The CHAIRMAN. But I want to be sure that this legislation is so drafted that the manufacturer cannot refuse to renew the contract for that reason.

Now, the point is, if all you need is good faith on one side——

Mr. MULTER. Well, I think the Senate version requires good faith on both sides.

The CHAIRMAN. The Senate's report says this, on page 3, line 15:

"*Provided*, That in any such suit the manufacturer shall not be barred from asserting in defense of any such action the failure of the dealer to act in good faith."

Now, that does not cover it.

Mr. MULTER. Yes.

The CHAIRMAN. Now, where is there language to permit the manufacturer to refuse a renewal of a contract under these circumstances?

We have in the report of the Senate the following, on page 5:

"The bill does not prohibit the manufacturer from terminating or refusing to renew the franchise of the dealer who is not providing the manufacturer with adequate representation."

Now, that is only a conclusion in the report.

Mr. MULTER. Yes. And when it got to the floor——

The CHAIRMAN. Perhaps somebody will point out to me something in the bill on which that can be grounded.

Mr. MULTER. When they got to the floor, the question was raised that the bill should provide just that, and they added the proviso that you find at the bottom of page 3 of the bill as passed the House.

The CHAIRMAN. As passed the House?

Mr. MULTER. As passed the Senate. You will find this proviso added:

"*Provided*, That in any such suit the manufacturer shall not be barred from asserting in defense of any such action the failure of the dealer to act in good faith."

The CHAIRMAN. That is not the point. The manufacturer simply says, "The dealer is inefficient."

Now, the question is, if the dealer is in good faith, although inefficient, would the manufacturer still have the right to dismiss him?

Mr. MULTER. The way the Senate bill was passed, I would say the manufacturer would have lost his right to cancel out—the manufacturer would have lost his right to cancel, under the Senate version of the bill, regardless of inefficiency, if the dealer is acting in good faith. If the dealer just happens to be a bad dealer and cannot do the job, but if he is acting in good faith and is doing the best he can, that would be a complete answer.

The CHAIRMAN. Then the manufacturer could not dismiss him?

Mr. MULTER. No. The manufacturer could not refuse to renew.

The CHAIRMAN. That would be barbarous, I would think. I think you would have to construe it this way, I will say to the gentleman from New York; if the manufacturer refuses to renew because the dealer is inefficient that does not show bad faith on the part of the manufacturer. And if the manufacturer is not acting in bad faith, I think he is within his rights in not renewing and the dealer could not successfully maintain the suit. Otherwise it would be a barbarous bill.

Mr. MULTER. I think the fault, if I may say, sir, with the drafting of this legislation is that you have provided a remedy, without having first stated what the things are that you want to remedy.

In other words, you have no declaration of policy of the things that you say are wrong in this industry which must be corrected.

The CHAIRMAN. Isn't there a preamble?

Mr. MULTER. No, sir; unless you call the title a preamble.

The CHAIRMAN. Yes. That is the preamble.

Mr. MULTER. You start with your title, which is almost in the nature of a preamble, and then you have your definitions, and after your definitions you then go into the provision that a lawsuit may be maintained.

The CHAIRMAN. Go ahead, Mr. Maletz.

Mr. MALETZ. Mr. MULTER, may I say this? As I understand it, under both the Senate and House bill, the question as to whether the manufacturer is acting in good faith or bad faith is a question of fact to be determined by the jury after receiving evidence of all the circumstances, for example, of the cancellation.

If a dealer has been canceled out because he has not provided adequate representation, presumably what the dealer would do would be to sue the manufacturer. The dealer would have the burden of proof, would he not, of establishing that the manufacturer had acted in bad faith?

But I would assume that under the circumstances, which you and the chairman have been discussing, the dealer would be unable to sustain that burden of proof; is that not correct?

Mr. MULTER. Let us assume that he does. Let us assume that he shows bad faith; he brings in the zone manager or the regional manager from the manufacturer's office, who says, "Yes; I didn't like the color of this fellow's tie the day I called on him, and that is why I canceled out"—obviously bad faith.

The CHAIRMAN. Yes. But if he——

Mr. MULTER. Then what happens? The man has a contract that is cancellable at will or runs for 30 days or for a year.

Mr. MALETZ. Well, it is so——

Mr. MULTER. He has no option to renew. And the day the contract runs out the manufacturer says, "I am not going to renew your contract."

Now, what are you going——

The CHAIRMAN. At that point the manufacturer says, "I am not renewing the contract because you are inefficient; you do not give me proper representation." And I assume that charge is true. Certainly the dealer has no claim, or should have no claim, against the manufacturer.

Mr. MULTER. Let us take it the other way——

The CHAIRMAN. Is that right? Do you agree with that?

Mr. MULTER. Let us agree that where the inefficient dealer—there is no question about his inefficiency—the manufacturer has the right to cancel out and does cancel out; there is no lawsuit or no right of recovery in a lawsuit.

The CHAIRMAN. Right.

Mr. MULTER. Let us go to the other case, the case you were trying to correct, the case where you were trying to help the dealer. The dealer has run a fine business. He has done well for himself and done well for the manufacturer. But the zone manager's brother needs a franchise, and this is a good place for him, and he goes in and says, "Look. You take my brother as a partner or we are going to cancel out."

The CHAIRMAN. That is bad faith.

Mr. MULTER. Bad faith of the worst kind. Now, where do you go from there?

The CHAIRMAN. Under the Senate bill, you get compensatory damages, having shown that bad faith; under the House bill, you get double damages.

Mr. MULTER. Where is the legal obligation that has been violated to give you your right of action? Just because the manufacturer has acted in bad faith, can you give the man a cause of action?

The CHAIRMAN. You mean that we should spell out in the legislation exactly what "damages" mean?

Mr. MULTER. You will have to first spell out a cause of action.

The CHAIRMAN. That is a cause of action if he does not renew the contract and shows bad faith. That is a cause of action.

Mr. MULTER. For how long must he renew the contract? One year? Ten years, or a lifetime?

The CHAIRMAN. It is not a question of renewal now; it is a question to be determined by the jury under the facts.

Mr. MULTER. I am afraid that any time this gets to any court, the court is going to say, "You have not established a cause of action. This legislation does not give this man a cause of action of such definiteness that we can enforce it."

The CHAIRMAN. Let me ask you this. Are you in favor of giving some remedy, and if so, what?

Mr. MULTER. Oh, yes.

The CHAIRMAN. How would you?

Mr. MULTER. I say you write into the law a code of fair practice, and you indicate there that these things, A, B, C, D, and E——

The CHAIRMAN. How could you do that? A code of fair practice in the law?

Mr. MULTER. I am giving a——

The CHAIRMAN. I would like to work it out with you, but I——

Mr. MULTER. I am giving you a broad definition of what I think you must do.

The CHAIRMAN. You have a bill yourself, have you not?

Mr. MULTER. Yes, H. R. 10310.

(H. R. 10310, referred to, is as follows:)

"H. R. 10310

"A bill to provide for the regulation of motor vehicles on the highways of the United States, and for other purposes.

"*Be it enacted, etc.*, That this act may be cited as the 'General Motor Vehicles Act of 1956'.

"DECLARATION OF POLICY

"SEC. 2. It is hereby declared to be the policy of Congress through the exercise in this act of its power to regulate commerce, in accordance with which policy all of the provisions of this act shall be interpreted, to promote safety in the operation of motor vehicles by the general public on the highways of the United States, and to regulate the trade practices between manufacturers of motor vehicles and their franchised dealers and the general public.

"DEFINITIONS

"SEC. 3. As used in this chapter—

"(a) 'Manufacturer' means any individual, partnership, corporation, association, business trust, or any other form of business enterprise, or any branch or agent thereof engaged in the business of manufacturing or assembling motor vehicles or of selling motor vehicles for resale, or servicing or financing motor vehicles intended for resale.

"(b) 'Dealer' means any individual, partnership, corporation, association, or any other form of business enterprise, or any branch or agent thereof, engaged in the business of purchasing motor vehicles for resale and of exchanging or servicing motor vehicles.

"(c) 'Motor vehicle' means any motor driven or propelled vehicle, except airplanes, road rollers, traction engines, power shovels, and other equipment used in construction work and not designed for or employed in general highway transportation, as well as farm and agricultural machinery, and vehicles designed for running on tracks or rails.

"(d) 'New motor vehicle' means a motor vehicle which has never been the subject of a sale with intent to pass an interest therein and has never been driven, pushed, towed, or propelled over a public highway.

"(e) 'Used motor vehicle' means a motor vehicle which has been sold, bargained, or exchanged, given away, or whose title has been transferred from the person who first acquired it from the manufacturer or dealer, and so used as to have become what is commonly known as second-hand, within the ordinary meaning thereof, or which has been driven, pushed, towed, or propelled over a public highway.

"(f) 'Franchise' means the right, privilege, or authorization accorded the dealer by the manufacturer, whether by contract, agreement, or otherwise, to purchase, sell, and service motor vehicles.

"(g) 'Commerce' means commerce among the several States or with foreign nations, or in any Territory of the United States or in the District of Columbia, or between any such Territory and another, or between any such Territory and any State or foreign nation, or between the District of Columbia and any State or Territory or foreign nation.

"UNLAWFUL PRACTICES

"SEC. 4. It shall be unlawful for anyone to sell, ship, transport, drive, push, tow, or propel any motor vehicle in commerce unless accompanied by a manufacturer's certificate of fitness which must state (i) that the motor vehicle and all the parts and accessories thereon have been inspected and found in good working order, safe and ready for operation on the public highways, and in complete accord with all specifications as set forth in all descriptive and advertising matter, and (ii) that the vehicle has been road-tested for 500 miles and found in good operating condition after having been road-tested for at least 100 miles at each of the speeds of 15, 30, 45, 60, and 75 miles per hour.

"SEC. 5. It shall be unlawful for any manufacturer or dealer to sell, ship, transport, drive, push, tow, or propel in commerce a motor vehicle with equipment, parts, or accessories different from or in addition to those specified in the current literature and advertisements of motor vehicles of the same make and model for which an additional or extra price or charge is made or sought to be collected for such equipment, parts, or accessories: *Provided*, That nothing herein shall prohibit the order or shipment of any motor vehicle equipped in accordance with the specifications set forth in a written order or written agreement of the parties, which separately itemizes each additional or extra item by full description and price.

"SEC. 6. (a) It shall be unlawful for any manufacturer to sell, ship, transport, drive, push, tow, or propel in commerce any motor vehicle without first having sealed the speedometer thereof so as to prevent tampering therewith or to prevent its operation.

"(b) It shall be unlawful for anyone to replace, disconnect, or prevent the normal and proper operation of the speedometer on any motor vehicle or change its reading in such a manner as to mislead or deceive a person as to the usage, mileage, condition, or other character of the motor vehicle.

"SEC. 7. It shall be unlawful to deliver a motor vehicle to a retail purchaser unless such delivery shall be accompanied by an itemized invoice of the cash sale price which shall separately set forth the amount attributable to each part, piece of equipment, and each accessory; Federal excise tax; State or local taxes; transportation; advertising; handling charges; service; motor-vehicle license; motor-vehicle title registration; and any other charge included in the price of the vehicle delivered: *And provided further*, That when sale of a motor vehicle is made other than on a cash-delivery basis the invoice shall also include the components of the charges added to the sale price by reason of the fact that the vehicle is delivered under a time sale or other agreement, separately stating the amount of each item charged in connection with the financing and the insurance, if any; and also indicating whether or not, and if so, how much of such charges are refundable if the balance is paid before maturity.

"SEC. 8. It shall be unlawful for any manufacturer or dealer to charge or collect as a charge for transportation of a motor vehicle or taxes thereon any amount in excess of the actual cost to such manufacturer or dealer of the freight or other transportation charges incurred or taxes payable by the manufacturer or dealer in making delivery of such motor vehicle.

"SEC. 9. It shall be unlawful for any manufacturer or dealer to advertise, or cause the advertisement of a motor vehicle in a manner so as to confuse or mislead, or to tend to confuse or mislead, a prospective purchaser as to the price or description of such motor vehicle that is intended to be or has been delivered at the dealer's place of business.

"SEC. 10. No manufacturer shall directly or indirectly require any dealer or group of dealers to advertise or pay for the advertisement of the manufacturer's product except by the usual signs at a dealer's place of business indicating he deals in the manufacturer's products.

"SEC. 11. It shall be unlawful for any manufacturer to threaten to terminate, to terminate or cancel, or to fail or refuse to renew the contract, agreement, or franchise of any dealer because of the dealer's unwillingness or refusal to purchase parts, accessories, equipment, or tools of any particular type, kind, or description from said manufacturer.

"PRICE DISCRIMINATION

"SEC. 12. It shall be unlawful for any manufacturer in any manner whatsoever, or by any device or method whatsoever, to discriminate pricewise between dealers by way of discounts, rebates, or other allowances to any dealer over and above, or any different from, any discounts, rebates, or other allowance available at the time of such transaction on equal terms to all other dealers. Volume discounts, allowances, or rebates are hereby expressly prohibited.

"MANUFACTURER-DEALER RELATIONS

"SEC. 13. (a) Every contract or agreement between a dealer and a manufacturer by which such dealer in motor vehicles operates as such under a franchise granted by such manufacturer may include provisions to provide for the termination or cancellation of the contract by mutual consent or upon breach of provisions specifically contained therein, and such contract shall be canceled only for one or more of the reasons stated therein.

"(b) Nothing contained in this act or in any other law shall render unlawful any contract or agreement between a manufacturer and a franchised dealer, in which such manufacturer agrees that such franchised dealer shall have the sole and exclusive right to sell in a specified geographical area and/or for a specific period of time a new or used motor vehicle produced or distributed by said manufacturer.

"(c) Nothing contained in this act or in any other law shall render unlawful any contract or agreement between a manufacturer and a franchised dealer in which such dealer agrees to sell only within a designated geographical area and to refrain from selling outside said area any new or used motor vehicle produced, assembled, or distributed by said manufacturer.

"(d) Nothing contained in this act or in any other law shall render unlawful any contract or agreement between a manufacturer and a franchised dealer in which such dealer agrees not to resell, either directly or indirectly, any current model motor vehicle made by such manufacturer, to any person, partnership, corporation, or other entity engaged in the business of selling new or used motor vehicles other than a person or entity operating under a franchise or authorized dealer agreement with such manufacturer.

"(e) Nothing contained in this act or in any other law shall make it unlawful for a manufacturer of motor vehicles to enforce any agreement authorized by subsection (d) by refusing to sell to, or canceling the franchise of, any dealer who knowingly engages in the sale of a motor vehicle of current model made by such manufacturer to any person, partnership, corporation, or other entity engaged in the business of selling new or used motor vehicles other than a person or entity operating under a franchise or authorized dealer agreement with such manufacturer.

"ENFORCEMENT

"SEC. 14. Any manufacturer or dealer shall be entitled to sue for and have injunctive relief, in any district court of the United States having jurisdiction over the parties, to enforce the terms of valid agreements or to enjoin violation thereof, or against threatened loss or damage by a violation of this act, when and under the same conditions and principles injunctive relief against threatened conduct that will cause loss or damage is granted by the courts, and upon the execution of proper bond against damages for an injunction improvidently granted: *Provided, however*, That the parties may agree to accept the decision of an arbitration body to be composed of three members—one of whom shall be selected by the manufacturer; one of whom shall be selected by the dealer; the third of whom shall be selected by the two appointees, provided the third person so named shall not be a manufacturer or dealer, or a stockholder, officer, or employee of, or person affiliated with, either a manufacturer or a dealer.

"SEC. 15. Anyone who shall be injured in his business or property by reason of anything prohibited or made unlawful by this act may sue therefor in any district court of the United States in the district in which the defendant resides or is found or has an agent, without respect to the amount in controversy, and shall recover twofold the damages by him sustained, and the cost of suit, plus a reasonable attorney's fee.

"PENALTIES

"SEC. 16. Any person violating any of the provisions of this act shall, upon conviction for each violation, be fined not more than $10,000, or imprisoned for not more than 1 year, or both.

"SEC. 17. Whenever a corporation shall violate any of the provisions of this act, such violation shall be deemed to be also that of the individual directors, officers, or

agents of such corporation who shall have authorized, ordered, or participated in doing any of the acts constituting, in whole or in part, such violation, and such violation shall be deemed a misdemeanor, and upon conviction therefor of any such director, officer, or agent, he shall be punished by a fine of not exceeding $5,000 or by imprisonment for not exceeding 1 year, or by both.

"SUITS BY UNITED STATES

"SEC. 18. The several district courts of the United States are invested with jurisdiction to prevent and restrain violations of this act; and it shall be the duty of the several district attorneys of the United States, in their respective districts, under the direction of the Attorney General, to institute appropriate proceedings to prevent and restrain such violations and for damages and penalties. Pending final determination of the matter, the court may issue such temporary restraining order or prohibition as shall be deemed just in the premises.

"SEC. 19. A final judgment or decree rendered in any criminal prosecution or in any suit or proceeding brought by or on behalf of the United States under this act to the effect that a defendant has violated said laws shall be prima facie evidence against such defendant in any suit or proceeding brought by any other party against such defendant under this act as to all matters respecting which said judgment or decree would be an estoppel as between the parties thereto.

"SEC. 20. Whenever any suit, proceeding, or criminal prosecution is instituted by the United States to prevent, restrain, or punish violations of this act, the running of the statute of limitations in respect of each and every private right of action arising under said act and based in whole or in part on any matter complained of in said suit or proceeding shall be suspended during the pendency thereof, and the time within which to bring such suit or proceeding shall be extended by the length of time elapsed between the institution and final determination, by appeal or otherwise, of such suit, proceeding, or criminal prosecution.

"TECHNICAL AMENDMENTS

"SEC. 21. (a) Part II of subchapter C of chapter 33 of the Internal Revenue Code of 1954 (relating to tax on amount paid for transportation of property) is hereby amended by adding at the end thereof the following section:

"'SEC. 4274. Statement of Transportation Charges.

"'(a) Requirement: Any person who, in connection with any sale of property, collects from the purchaser any amount as a charge for the transportation of such property shall, in any case in which any part of the amount attributable to such transportation is taxable under section 4271 (a), furnish such purchaser a statement showing—

"'(1) the amount attributable to such transportation upon which a tax is imposed by section 4271 (a), and

"'(2) the amount of such tax.

"'(b) Treble damages:

"'(1) Recovery by purchaser: Any person who, by reason of any misrepresentation in the statement required under subsection (a) of this section, is required to pay any amount as a charge for the transportation of property, including the tax imposed thereon, which exceeds the amount actually paid by the seller for such transportation, including such tax, may, within 2 years after the date of such payment, bring a civil action against the seller to recover three times the amount paid as such transportation charge, including such tax, in excess of that actually charged the seller. Whenever any person successfully maintains an action under the provisions of this paragraph, such person shall be entitled to recover, in addition to the amount provided in the first sentence of this paragraph, a reasonable attorney's fee, to be fixed by the court, which fee shall be taxed and collected as part of the costs in the case.

"'(2) Recovery by United States: In any case in which a person entitled to bring a civil action against a seller under the provisions of paragraph (1) of this subsection, shall fail to bring such action within the period of time prescribed therein, the Attorney General is authorized to bring a civil action against the seller in the name of the United States, within 2 years after the expiration of such prescribed period of time, to recover three times the amount paid as a charge for the transportation of the property purchased, including the tax thereon, which exceeds the amount actually paid by the seller for such transportation, including such tax, plus the sum of $500 as additional costs of the suit, the amount recovered to be paid into the Treasury of the United States.

"'(c) Cross-references:

"'(1) For penalty for false statement to purchasers relating to tax included in purchase price, see section 7211.

"'(2) For penalty for failure to furnish statement required by this section or for furnishing false statement, see section 7276.'

"(b) The table of sections for such part II is hereby amended by adding at the end thereof the following:

"'SEC. 4274. Statement of transportation charges.'

"SEC. 22. (a) Subchapter B of chapter 75 of the Internal Revenue Code of 1954 (relating to offenses in connection with certain taxes) is hereby amended by adding at the end thereof the following section:

"'SEC. 7276. Misrepresentations in connection with tax on amount paid for transportation of property.

"'Any person required under the provision of section 4274 to furnish a statement who willfully furnishes a false or fraudulent statement or who willfully fails to furnish a statement showing the information required under section 4274, shall, for each such offense, upon conviction thereof, be fined not more than $10,000, or imprisoned for not more than one year, or both."

"(b) The table of sections to such subchapter B is amended by adding at the end thereof the following:

"'SEC. 7276. Misrepresentations in connection with tax on amount paid for transportation of property.'

"SEPARABILITY OF PROVISIONS

"SEC. 23. If any provision of this act, or the application of such provision to any person or circumstance, shall be held invalid, the remainder of the act, and the application of such provision to persons or circumstances other than those to which it is held invalid, shall not be affected thereby.

"EFFECTIVE DATE

"SEC. 24. This act shall take effect 90 days after its enactment."

Mr. MULTER. First, you have a declaration of policy, and the declaration of policy—mind you, in my declaration of policy, I seek to protect the buying public as well as the dealer. And I think it is just as important, if not more important, to protect the man who buys and uses the car on the street as it is to protect the dealer. Today he does not get the protection that the manufacturer advertises it guarantees to him.

Now, after your declaration of policy you have a section on definitions. And then we come to unlawful practices. You specify what shall be unlawful.

The CHAIRMAN. What page is that?

Mr. MULTER. On page 3 of my bill, beginning with section 4.

Now, I don't pretend that you must take every one of these practices and designate them unlawful, nor do I pretend that it is all inclusive. The committee may add some to it. But I think that is the manner in which you must proceed.

The CHAIRMAN. Your bill regulates motor vehicles on the highways of the United States; doesn't it?

Mr. MULTER. That is only a small part of it. And then in section 5:

"It shall be unlawful for any manufacturer or dealer to sell, ship, transport, drive," and so forth, "with equipment, parts, or accessories different from or in addition to those specified."

Nothing shall prevent an order for extras, if the order is in writing.

Then you have section 6:

"It shall be unlawful for any manufacturer to sell, ship, transport," and so forth, "any motor vehicles without first having sealed the speedometer thereof so as to prevent tampering therewith or to prevent its operation."

That is to prevent this business of riding the car over the road from place of assembly to place of delivery to the consumer. In other words, he is actually getting a used car today delivered to him as a new car, because the speedometer is connected when it is ready for delivery to the buyer at the dealers shop.

Then I have a provision:

"It shall be unlawful to deliver a motor vehicle to a retail purchaser unless such delivery shall be accompanied by an itemized invoice of the cash sale price," and so forth, to prevent this business of phantom freight charges.

Then I have the provision:

"It shall be unlawful for any manufacturer or dealer to charge or collect as a charge for transportation," anything except what is actually charged therefor.

And then a provision:

"It shall be unlawful for any manufacturer or dealer to advertise, or cause the advertisement of a motor vehicle in a manner so as to confuse or mislead, or to tend to confuse or mislead, a prospective purchaser as to the price or description," and so forth.

And then this provision:

"No manufacturer shall directly or indirectly require any dealer or group of dealers to advertise or pay for the advertisement of the manufacturers' product."

Mr. MALETZ. May I ask you this question. Going over your bill rather hurriedly, you have sections 13 (b) and (c).

Mr. MULTER. That is right.

Mr. MALETZ. Section 13 (b) provides that "nothing contained in this act or in any other law shall render unlawful any contract or agreement between the manufacturer and a franchised dealer, in which such manufacturer agrees that such franchised dealer shall have the sole and exclusive right to sell in a specified geographical area."

And then subsection (c):

"Nothing contained in this act or in any other law shall render unlawful any contract or agreement between the manufacturer and a franchised dealer in which such dealer agrees to sell only within a designated geographical area, and to refrain from selling outside such area any new or used motor vehicle produced, assembled, or distributed by said manufacturer."

Now, wouldn't those provisions of the bill be contrary to the policy of the antitrust laws?

Mr. MULTER. I am aware of the fact that the Attorney General has rendered an opinion to that effect. I think his opinion is wrong. But right or wrong, if this Congress agrees that it is wrong for the law to so provide, then I think you must enact legislation to clearly provide, it is wrong.

Presently the manufacturer says to his dealer, who looks for an exclusive franchise

with limitation of area, "I can't do it, I will be violating the antitrust law," and refers to the opinion as the reason why he can't do it.

Let's leave that to a matter of contract between the parties. I know there is a division among the dealers as to whether that is good or bad.

The CHAIRMAN. As I understand it, you suggest that we follow the pattern of your proposed bill, which is, of course, a broad one, by inserting under the Senate or House bill some sort of standards or criteria which would guide the courts and dealers and manufacturers in the future.

That is your suggestion?

Mr. MULTER. That is my suggestion, sir.

Now, whether you will adopt all or some of these, whether you will adopt a provision prohibiting bootlegging or not, or price discrimination—and there is price discrimination in this industry today—their volume discounts are in direct violation of the Robinson-Patman Act.

The CHAIRMAN. Of course, we start out with the idea of protecting dealers from this monolithic, duopoly, that is, General Motors and Ford.

Now, if we keep that in mind, if we seek to protect the dealers against these corporations, hadn't we better keep our sight trained on that alone rather than going beyond that?

Mr. MULTER. I think, Mr. Chairman, with all due respect to that view, that you are missing the boat and you are not doing your full job if you do not also write into any law you write protection for the driving public.

You must go beyond just protecting the dealer, you must protect the buying public, too, and you can do it.

The CHAIRMAN. I don't want to argue with you about your bill, but I don't think you give the public protection when you give exclusive selling rights in certain areas. That is not protecting the public.

Mr. MULTER. As I said, there is a tremendous difference of opinion even among the dealers; you will find some dealers that say, "We should have this exclusive contract for a certain territory," and others that say no. The little fellow that can't sell his allotment in his area wants to rove all over the country selling it. And the other fellow that can sell in his area doesn't want the other man coming in.

You may never resolve that, but I say again, that should be a matter of contract between the dealer and the manufacturer.

The CHAIRMAN. I might say this: I have been studying the antitrust laws for many years, as a member of this committee and otherwise, and during the period when I have been on this committee I have always deemed that activity which you now seek to legalize is a violation of the antitrust law.

Mr. MULTER. That is right.

But in the light of our experience, in the light of what has gone on through these years, in the light of all the testimony adduced before the congressional committees—and you will hear much of it again during these sessions of the committee—I think it is time to review that.

You may not change your mind about it, but certainly you ought to give it very serious consideration as to whether or not the time hasn't arrived—at least, as to that part of it which applies to this industry, must be changed.

The CHAIRMAN. Let me ask you this:

Considering these bills with their limited range which are before us, where the State licensing statute, as for example, in Colorado, requires a court order in any case before a cancellation of a franchise of a dealer becomes effective, can you tell us what effect the passage of the bill before us would have on that statute?

Mr. MULTER. Has the statute been tested?

The CHAIRMAN. It is the law on the books. But the question is what effect that law we are attempting to pass will have on that situation.

Admiral Bell, you can answer that.

Mr. MULTER. I would say offhand that if a court order is necessary as a condition precedent to cancellation, any cancellation without it certainly would give rise to a very strong cause of action under this bill that you are considering, if it is enacted.

The CHAIRMAN. You asked a question whether the law has been tested. I understand Geneal Motors has proceeded to test it by a three-man court.

Mr. MULTER. You say they are testing it in the courts now?

The CHAIRMAN. I understand it is being tested now.

Let me ask you this other question——

Mr. MULTER. In other words, if that kind of a law is constitutional, then certainly this law that you are considering now would be constitutional, and you would be able to tell these manufacturers, once you issue a franchise, that is a franchise in perpetuity.

The CHAIRMAN. We use the term "automotive vehicles"—do you think that should include tractors and motorcycles and other such vehicles?

Mr. MULTER. Not unless there is proof adduced before your committee which would show that the same abuses apply in that phase of the industry. I don't know what the situation is with respect to farm machinery, I don't know what it is with reference to buses, motorcycles or bicycles.

The CHAIRMAN. Do you think the pending legislation, is adopted, would apply to existing contracts?

Mr. MULTER. You run into the question of retroactivity there. Certainly, this bill, unless you specifically provide that it shall be retroactive in effect—the very first rule of construction is that legislation is not retroactive in effect but prospective only, unless the language specifically and clearly indicates that it is retroactive.

The CHAIRMAN. If it does not apply to existing franchises, the bill would not have much applicability, would it? There are a lot of these franchises that are——

Mr. MULTER. Now, if you declare the public policy to be along this certain line, that public policy can be enforced as to existing contracts.

But, if you are going to make it retroactive and say that the public policy which we announced today will be thus and so, and that it will give a cause of action as to anything that was not contrary to that public policy heretofore, that is, that acts or conduct that occurred in the past with reference to an existing contract because of change of public policy or because of an enunciation of a new public policy, that would be retroactive in effect, and I believe your bill would be unconstitutional even if you specifically sought to make it so.

I believe that a bill which will be prospective in its outlook—as far as future conduct is concerned if it says, "Anything you do hereafter, after this, even under the existing contract"—that that would be good, provided that you do not go so far as actually to deprive the man of any property right under the contract. You could not deprive him of his rights. You could not, under the guise of public policy, take away from this man, his property; but if you say that hereafter, in interpreting these contracts, you must pursue this course of conduct because the public policy of the country requires you to and if the law makes it a violation to act contrary to such policy, after enactment of the statute—I think it would be enforceable.

The CHAIRMAN. Now, would you have a statute of limitaitons?

Mr. MULTER. I have not examined into that, but I am certain that the statutes of limitations that are on the statute books today would apply.

Now, they have different statutes in different States. For instance, in the State of New York, under the State law, the general statute of limitations in almost every instance is 6 years——

The CHAIRMAN. I know it varies from State to State.

Mr. MULTER. That is right.

The CHAIRMAN. From 1 year to 6 years generally.

Mr. MULTER. That is right.

The CHAIRMAN. If you do not put a statute of limitations in this act, then the statutes of the State would apply, and they would vary.

Mr. MULTER. Yes, they would vary from one place to another; which would not be good.

The CHAIRMAN. That is right.

Mr. MULTER. I think it should be uniform.

The CHAIRMAN. To have a uniformity which would provide for some period of time?

Mr. MULTER. Yes, and I think, having that in mind, that uniformity, at least to that extent, would be a very good provision of the bill. Your bill should have a statute of limitations written into it.

The CHAIRMAN. One further question; what is the status of your bill?

Mr. MULTER. I testified fn support of the bill on both the House side and the Senate side. The House subcommittee has not yet met in executive session on that or any other bills on which they have taken testimony. The hearings are closed but they have not yet acted or reported on the bills.

Now, I may point out one thing with reference to the remedy that you provide. You provide a remedy by court suit.

Suppose they write into these contracts an arbitration clause. Would you say that the man, nevertheless, can go to court or should go to court?

You see, in my bill, 10310, in setting up the enforcement provisions, I give them the right to go to court; and I also give them the right to have arbitration, if they so agree, the arbitration to be by a board of arbitrators of three, 1 appointed by the manufacturer, 1 by the dealer and the third not to be affiliated with the industry in any way.

The CHAIRMAN. Well, neither bill precludes arbitration; that would be voluntary.

Mr. MULTER. But if you don't put into the bill a provision as to what kind of arbitration, then your contract coming forth from the manufacturer could have a provision permitting him to name the arbitrator.

The CHAIRMAN. And if they are unable to agree, they can go to court.

Mr. MULTER. But you still have the situation—what kind of a contract the dealer is going to get. Today he must take the contract offered to him by the manufacturer. You do not need any of this legislation if the manufacturer is going to sit down and deal in good faith at arm's length, and fully and openly negotiate with the dealer—but they won't do it. They haven't done it. These bills H. R. 11360 and S. 7879 do not require it.

The CHAIRMAN. Admittedly. But as Senator O'MAHONEY this morning said, the motor companies have become so concerned that they are not likely to give reasonable cause——

Mr. MULTER. No, I do not go along with that. They were chastened immediately after this report came down in 1939 (exhibiting document); but for how long? And, now they are coming forward and telling us, "Leave this up to us, let us police the industry. We can do the job."

If this session closes without legislation, you can expect trouble again. The manufacturers will not reform for very long.

The CHAIRMAN. I may say that if the same party controls this House in the new session, the motor companies better watch out if they engage in coercive practices and their

representatives who are in this room, I hope will bring that message back to their principals.

Mr. MULTER. Now, let me pursue this one step forward, as far as the Senate bill is concerned.

I don't know whether you have in mind going along with the Senate version on compensatory damages, or staying with your version of double damages, and I do not want to put the committee in a position of giving an expression of opinion at this time.

The CHAIRMAN. I think at this point I may say that probably when I drew my bill I did not realize how punitive the damages were going to be—

Mr. MULTER. Let us consider that for a moment. I said that unless you provide for a penalty or for punitive damages there will be no recovery. After the plaintiff dealer has established his cause of action, and the court says, "Now, come forward and let us have your damages"—what are his damages?

The CHAIRMAN. It is very difficult to say, and I would not——

Mr. MULTER. Let me pursue it, Mr. Chairman.

The CHAIRMAN. You cannot anticipate all of those——

Mr. MULTER. Let me pursue it for a moment.

The CHAIRMAN. We are pioneering here.

Mr. MULTER. And that is why I want to pursue this with you for a few moments.

Assume I am representing the dealer and am trying my case before you as the judge, and I start to offer as part of my proof of my damages the evidence of profits, what they have been over the years that I have had this franchise, and I say, now, that I want to offer this proof so that you will have some idea of the profits I am going to lose in the years ahead and I want compensation for my loss of profits during each of the years that I would have had that franchise if it had not been canceled or if it had been renewed.

The CHAIRMAN. Well, that strikes me that that is the best proof, as to what the profits might be——

Mr. MULTER. Good——

The CHAIRMAN. How could you prove any loss—I would consider that kind of evidence relevant or material——

Mr. MULTER. But I do not think it comes within the definition of compensatory damages.

The CHAIRMAN. Why not? How can you prove compensatory——

Mr. MULTER. Compensatory damages are in my opinion, your actual losses, not prospective losses that might occur in any one of several events even if there had been no cancellations.

The CHAIRMAN. Do you feel that the word "damages" standing alone is better?

Mr. MULTER. Certainly I urge strongly that the word "compensatory" must be taken out, because the word "compensatory" will be limited to actual damage.

If he owns the building, the building has value, no matter how you are using it; if he has a lease, the leasehold has value, not matter how he is using it; and as far as his inventory is concerned, I think that every one of these franchise agreements requires the manufacturer to take back the inventory at cost, so he has lost nothing there, and——

The CHAIRMAN. I think your point is well taken. If you use the word "damages," you will have broader coverage than if you use "compensatory damages," is that right?

Mr. MULTER. Yes; with the probability—well, with the possibility of the court, nevertheless interpreting it to mean only actual damage.

The CHAIRMAN. That is all we want.

Mr. MULTER. What will he get there? If he makes out a cause of action, he will get attorneys' fees, and maybe 6 cents. Assuming that the court is going to take into account his prospective loss of profits, for how many years? You have arrived at the average earnings during the last 10 years or 5 years or whatever it may be of $100,000 a year—for how many years are you going to give him those lost profits?

The CHAIRMAN. Well, it is like a negligence case, the man gets his damages.

Mr. MULTER. That is right——

The CHAIRMAN. And the previous decisions will tell us what proof can be offered; and, as time goes on in a case of this sort, after passing this bill, it will be more or less standardized. But in the beginning the damages that the man alleges are very indefinite, depending upon many things——

Mr. MULTER. It certainly is; it depends on what he is doing, what he has earned, how he has——

The CHAIRMAN. That is what you are going to have here, I think——

Mr. MULTER. The stumbling block to recovery of substantial damages, which these bills do not remove, is the question if whether you can write into law a provision giving to a contract a term of years where none has been provided by the parties. These bills attempt to hurdle that obstacle by giving the court the right to speculate as to whether it will be 1 year, 2 years, or a lifetime. Each court will pull out of the air, whatever period it likes. The same court may apply different terms to each lawsuit. In a jurisprudence, which declares contracts expire at will, where the parties fail to agree on a specific term. You cannot permit that.

I am afraid that if you do not write into this bill the words "punitive damages," or provide for penalties, specific penalties, you are going to give this man a cause of action without a right of recovery of any money.

The CHAIRMAN. In other words, you think we should have penalties in the bill?

Mr. MULTER. Oh, yes.

The CHAIRMAN. In addition to damages?

Mr. MULTER. Yes, because otherwise he will walk out of court with the satisfaction of having been told by the court and jury: "You are right, but there is nothing that this man owes you."

The CHAIRMAN. That is something to consider, whether we should have sanctions, penalties, as a matter of law.

Mr. MULTER. You gentlemen undoubtedly will be told how the automobile dealers of the country are thriving and have done so well through the years.

In that connection, may I anticipate and give you this answer to that? In the June 1956 Dun's Review, there are statistics on failures by divisions of our industry. Incidentally, I think you will all agree that big industry and big companies have been not failing and are not failing; they are not going into bankruptcy. Some of them are liquidating and taking their capital gains, but they are not folding up because of adverse conditions or inability to earn profits.

In the automotive group of the retail trade in the 4 months of 1956, there were 232 bankruptcies as against 157 in the same period of 1955, and the total liabilities for the 4 months of 1956 were $9,900,000 against the same 4-month period of 1955 of $3,800,000.

You will hear from the representatives of the automobile dealers, and I think they will make out a pretty good case of their need for help.

I think, Mr. Chairman——

The CHAIRMAN. We certainly know that the dealer needs a lot of help now. I read with great interest last night an article in the current issue of Atlantic Monthly which called attention to the glut of cars that were rammed down the throats of the dealers by the three big manufacturers. One dealer now is offering a vacation to Bermuda if you buy one of his cars; another is offering a Geiger counter, and with that you can find uranium, and if you do not find the uranium when you get his car, he will give you 10 shares of uranium stock. I do not know what value it would have.

Another dealer provides that if you buy one of his Pontiac cars, you get a discount of $1 per pound of weight of the man and his wife.

I do not know how much weight that would be, but it would be a discount.

Another man offers, I think, 2 Chevrolet cars at $999, but there are only 2 in the shop; so you have to race there to get the 2. I do not know what kind of crowd went after those 2 cars.

But that article shows the desperate plight of the dealers. Of course, it also shows that in the period of 1953–54, which was called a lush period, that the dealers made a great deal of money and that prior thereto they also made considerable sums of money. And there is a repetition of the testimony of Mr. Curtice before one of the Senate committees that the squawks are mainly coming from those dealers who made these vast sums of money in those lush years who now are put to it to sell the cars that are being offered to them.

There is no doubt that the dealers are being hard pressed now to sell their cars.

The important things is that it is a very anomalous situation in our economy: Three huge companies can force and ram down the throats of dealers such a vast number of cars.

There was undoubtedly the prospect of a glut of cars in this country; yet the manufacturers had the power to do these things.

There is where the danger lies, that these companies should have that power to be able to accomplish that kind of evil. And it is an evil.

Mr. MULTER. You are going to be told, too, I am sure, that this year the manufacturers have not done so well. I think that the statistic is that they have done about 13 percent less in profits this year than last year. But bear in mind these figures: In 1953, General Motors earned 20 percent after taxes and bonuses on its capital investment; in 1954, 24 percent; in 1955, over 28 percent.

Now, the 13 percent less does not bring that down to 15 percent. It is 13 percent of the 28 percent worse this year so far than last year.

The CHAIRMAN. Am I correct in stating that last year, the calendar year 1955, General Motors had a gross profit of about $1 billion?

Mr. MULTER. That figure sounds right to me. I could get you the exact figure—I am sure I have it here somewhere—and submit it to you for the record. But that figure sounds right to me.

Incidentally, when the manufacturers are before you, I trust you will pursue them on this question of bootlegging. They will tell you about what a great job they are doing with their dealers today and how they protect them and are really rendering a fine public service in that connection.

I have in front of me, and I will leave it with you, a photograph of a Packard agency, and the sign in the window takes up one entire window right on the corner, a Packard agency, an authorized Packard dealer: "1956 Oldsmobiles, all models, big saving."

The CHAIRMAN. What was that?

Mr. MULTER. "1956 Oldsmobiles, all models, big saving."

Now, the point I am making is that this is typical of the so-called bootlegging that is going on throughout the country, not only the used car lot selling new cars, but even so-called authorized dealers carrying automobiles that are supposed to be handled only by so-called exclusive franchise dealers of other companies. The manufacturers do nothing to prevent this practice, because all they are interested in is the volume sales.

The CHAIRMAN. Is that all?

Mr. MULTER. There is one other point I would like to touch on very briefly. I have touched on it in my statement.

The CHAIRMAN. I hope you will not be too much longer.

Mr. MULTER. I will be less than 5 minutes.

The CHAIRMAN. We have not finished this morning's witnesses.

Mr. MULTER. A practice grew up among the dealers of sending men into military installations from which the boys were being sent home, and selling them cars there, making all sorts of misrepresentations to the men.

A similar situation occurred in the insurance industry, and the Defense Department found insurance salesmen were going into these places and selling the men insurance under false representations and outright fraud.

But when that matter was called to the attention of the Secretary of Defense, he immediately issued a directive and made every base commander responsible, required him to issue licenses to the insurance salesmen and made him responsible for the actions of these salesmen so as to be sure that the men and the service were not taken advantage of in the sale of insurance.

Now, when I learned of this practice in the automobile industry, I sent off a letter to the Secretary of Defense, Mr. Wilson, and called his attention to it. I did not ask him to do what he did in the insurance business; I did not ask him to make his commanding officers responsible. I merely asked him to issue a directive to his commanding officers requiring them to alert the men under their command to these fraudulent practices. And I said to him, "Don't predetermine the question. Don't make a finding of fraud or misrepresentation, but just tell these commanding officers that they must alert their men to be on guard against this thing."

And I got back from the gentleman, the Secretary of Defense, a letter saying that they could not do that; that would be restrictive of private enterprise.

In other words, what is good for General Motors is good for the country; what is bad conduct by the insurance companies, is not bad conduct by General Motors.

That situation was called to his attention as far back as September 1955.

My last letter to him on September 28, 1955, is still unanswered, except that the manufacturers have sent their direct sales representatives into those places to try to garner the business which the dealers were getting before.

That, Mr. Chairman, completes my statement unless there are some other questions.

The CHAIRMAN. The record will be left open for any changes or additions you want to make.

Mr. MULTER. Thank you, sir.

The CHAIRMAN. Thank you very much.

Father Flood Takes Leave

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader:

FATHER FLOOD TAKES LEAVE

Departure of the Reverend Leo F. Flood, CSC, director of King's College Foundation and former president of the institution, for North Dartmouth, Mass., to join a mission band, will be regretted by this community where he made hundreds of friends during the past 6 years.

A member of the Congregation of the Holy Cross for more than a quarter century, Father Flood leaves behind him in Wilkes-Barre an impressive record of achievement. It was during his administration that King's made its greatest strides, acquiring the former Lehigh Valley Coal Co. property for its main building and the Marion Apartments for a dormitory. The program also was accelerated, paving the way for accreditation.

Father Flood's warm personality was no small asset to King's and unquestionably contributed to his success and the advancement of the college.

His new assignment, after a tour of parochial and educational duty, returns him to a field where he spent 12 years, with Notre Dame University as headquarters. It is a role in which he should excel if his popularity in greater Wilkes-Barre is any criterion.

Foreign Aid

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1956

Mr. FORAND. Mr. Speaker, under leave already granted me I offer for printing in the RECORD a very thought-provoking editorial that appeared in the June issue of the Knights of Columbus' magazine Columbia.

The editorial follows:

THE NATIVES ARE RESTLESS

This journal is determinedly and properly noncommittal in purely political matters. We feel, however, that it is not out of order to suggest to the consideration of the various gentlemen, of various political persuasions, who will be offering their talents to the public service in this very political year, some facts which have been uncovered in a casual and undocumented exploration of grassroots sentiment. The grassroots we have surveyed are, in the main, neatly plotted along a 50-foot front with another small plot in the back of the ranchhouse for which the young occupant is in hock for an amount of money equaling somewhat more than the value of the whole shebang under any reasonably objective standards.

But they are young and they are the heads of young families and they are either back from the wars and the police action or they have done their drafted time in the Armed Forces and they have to live someplace, and peace, it's wonderful. But these young people and their poppas and mommas and aunts and uncles have taken to counting and they do not think it is so wonderful at all. And this is the basis of our friendly tip to the candidates of 1956: the natives are restless.

To put the reason for their restlessness in one word, it is money. Believe it or not, dear and respected candidates for this and that, the feeling grows among the citizens that their ever-solicitous Government is peeling them too close to the rind in the matter of taxes. This in itself should be valuable information for any candidate, but we'll diagram it a bit.

These citizens are muttering that they have been paying too long and too much for so-called services that they either do not want or do not need and for the support of projects that they do not, as a whole, approve or the need for which they do not understand or accept. They are mildly resentful of the multitudinous nickel nips that are taken off them by the means of the nuisance taxes but they have become quite solidily angered by the major gouge which is the income tax.

They are aware that this painful "bite" is plucked out of their pay envelopes before the flap is sealed for the simple reason that there is no other way of collecting it and the powers that be could not build jails enough to hold the delinquents, if the citizens ever were given the chance to become delinquent—which they would do with an enthusiasm that would edify even Monsieur Poujade, of France, whose followers are notably allergic to taxes. So the tax is "withheld," in the pious phrasing of the law, and the victim is expected not to miss what he never had. But, alas! he is not quite that stupid, and he not only misses it but is concerned about where it goes.

These citizens are not tax-dodgers by nature or inclination and they are aware that the necessary operations of government cost money and they are willing to pay for same—so long as they are necessary and there is some evidence of an effort to keep them to that limit. These citizens also have heard that the shooting war is over and they are wondering how long it will be before that fact is reflected in a reduction of the tax demands upon them. They know about the Communists and the "cold war" and they do not need any fatherly lectures on the need for keeping Uncle Sam's military muscles firm.

Nor are these citizens blindly opposed to foreign aid or to any kind of aid to anyone who is really in need of it. They are not cheap or miserly, but neither do they want to be the officially designated boobs of all creation. They are unconvinced of the usefulness of pitching apparently endless billions of their tax dollars—and in this game, chum, there are no other dollars—into a "gee whiz there's more where that came from" operation in various distant areas of the globe.

These restless natives, RFD 1, U. S. A., are of a mind to put at least a mild brake on the eleemosynary outgo, so to speak, and deal themselves in on a little domestic aid and relief, just for a change. They are especially cold to the currently publicized theory that their money will not be graciously received in foreign parts unless it is forwarded with no strings. Such strings as might have been attached heretofore must have been of the most delicate gossamer: none has been strong enough to pull a dollar back to its native land.

To get back to the main point, John Citizen, U. S. A., has had it more than plenty in the matter of being clipped, taxwise, for the support of eccentric operations at home and abroad. If anyone is going to siphon off his excess buying power (how's yours, pal?) he would like to hold his own siphon for a change and maybe lay up a buck for a rainy day. In fact, may it please the gentlemen who yearn to administer the affairs of the Republic, the citizens would like to have the use of a little more of the money they earn.

The Leadership I Believe In—Herbert Hoover

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a brief article by

former President Herbert Hoover, one of our elder statesmen. In this short article, Mr. Hoover expresses his deep religious faith and belief in the leadership of Jesus Christ. The article follows:

THE LEADERSHIP I BELIEVE IN

(By Herbert Hoover)

"There is a God governing the world."—Abraham Lincoln.

The present world struggle is much more than a contest in armaments or economics. It goes deeper than that and touches the souls of men.

Some people seem to forget that the primary dogma of Karl Marx's socialism was atheism and substitution of economic materialism for religious faith. Marxism denies the existence of God. It defiles ideals and denies spirit.

Prior to Marx, and since the very beginning of recorded time, every civilized race has believed in a Supreme Being. They have realized that the laws which control the orderly movement of our world are not economic materialism.

Religious faith is deeply imbedded in our Western civilization. The Sermon on the Mount established the transcendent concept of compassion and good will among men. From those principles have come our moral foundations, our obligations as our brothers' keepers, and our respect for the dignity of man.

I would not have you think that I believe our civilization is perfect, or that we do not have a multitude of problems if we would improve the life and invigorate the spirit of our peoples. But these problems can be solved only by free men.

I prefer to go forward under the leadership of Christ than backward under that of Karl Marx.

I believe that if we keep the faith, and maintain free minds, still new horizons and new frontiers will open to us, revealing daily new areas of adventure and enterprise, new vistas of beauty and belief.

U. S. S. R. Attitude Toward Pacific Settlement of International Disputes

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Richard F. Staar, Ph. D., professor of political science and departmental chairman, Harding College, Searcy, Ark., in which Mr. Staar presents further proof that the U. S. S. R. has never really desired peaceful settlement of international disputes except on its own terms:

SOVIET ATTITUDE TOWARD PACIFIC SETTLEMENT OF DISPUTES

Ever since the October revolution and the successful overthrow of the Kerensky government in Russia, the Communists in that country have characterized themselves as "champions of international peace." In support of this contention they have called upon the world to view the array of peace notes, appeals and declarations, records of conferences on interwar problems and disarmament, treaties and pacts of neutrality, and nonaggression which the Soviet Government has either supported or entered into over the years. On its face, this is an impressive record, indeed.

In order really to understand the attitude of the Soviet Union toward the pacific settlement of international disputes, one must first determine what the Russians actually mean when they talk about peace or war. The purpose of this paper, however, is merely to review the record of Soviet diplomacy, in order to determine the U. S. S. R.'s bona fide attitude toward the international settlement of disputes.

DIPLOMATIC NEGOTIATION

The Soviet Union has repeatedly stated and shown in practice a preference for bilateral talks rather than other means of settling disputes. This has been exemplified in many conciliation treaties. The Soviets have always claimed that their international agreements are more stable than those of any other state.

The fact of the matter is that the Russians have kept faithful to treaty obligations only when such a course was to their interest.[1] During the years that the U. S. S. R. was weak and afraid of being crushed it sought security through negotiation (1920–21), international conferences (1922–25), political agreements (1925–31), connection with the Frenct alliance system (1932), the League of Nations (1934–39), and Hitler (1939–41).

The situation following the Second World War was predicted 27 years ago by a Soviet international lawyer:

"The 'splendid isolation' in the traditional policy of the United Kingdom will be reproduced historically by the Soviet Republic, with the difference that not water will separate Russia from the European continent but borders of a different character * * * those of the great concept."[2]

Today, the frontiers of de facto control have extended to include most of the Balkans and half of Germany.

GOOD OFFICES AND MEDIATION

Both of these methods are essentially similar. There are only a few examples of acceptance by the Russians of mediation offers by other powers. The allied powers invited the Bolsheviks to Prinkipo in January 1919 for a conference that would conclude the civil war then raging in Russia. The Soviets immediately accepted by radiogram.[3]

This meeting failed to bring about peace. A second attempt was made in March 1919, when William Bullitt unofficially represented the United States on a trip to Moscow for the purpose of determining the possibility of acceptable terms to both the Soviets and their enemies. The former signed a draft treaty, thus showing their willingness to conclude peace with the anti-Bolshevik forces.[4] The agreement never went into effect.

A third example under this same category was the Soviet acceptance of a 1926 French mediation offer concerning a dispute with Switzerland. The trouble arose from the assassination of a Bolshevik diplomat. The Russians agreed to remove their boycott of Switzerland, providing that the latter meet certain conditions.

It would seem on the basis of the foregoing prima facie evidence that the Communists recognize the value of mediation by third parties. Such a superficial conclusion breaks down, however, when one examines the setting in which these incidents took place. The Bolsheviks were in extremely precarious conditions.

The first two illustrations happened during the civil war, when the Soviets were battling for their very existence on all fronts. The last example took place at a time, when the political situation was extremely dangerous due to the exhaustion and disorganization resulting from this same civil war. In view of the preceding, it would seem more justifiable—especially since the U. S. S. R. to date has never accepted any other offers of mediation—to assume that the positive Soviet attitude toward good offices and mediation was not manifested ex principio but rather because of necessity.

COMMISSIONS OF INQUIRY

This method of settling international disputes involves a definite procedure, established at the Hague Conferences of 1899 and 1907. The Soviets have never resorted to such fact-finding commissions. The reason for this negative attitude was explained by Maxim Litvinov in a 1922 speech.[5]

"Commander Hilton Young has asked whether it is impossible to find an impartial judge in the whole world. It must be established first that there exist not 1 but 2 worlds: the Soviet and the non-Soviet. * * * One party [to a dispute] will propose a Communist judge, like the chairman of the Third Internatoinal; the other party perhaps the head of the League of Nations. * * * Maybe only an angel could solve the Russian problem."

Even U. S. S. R. satellites have been candid in their criticism regarding international commissions of inquiry.[6] Neither the Soviet Union nor its Balkan satrapies (Yugoslavia, Albania, Bulgaria) permitted United Nations' commissions to enter territories under their control during the civil war in Greece. A similar refusal met the later attempt by U. N. representatives when they attempted to perform their legal duties in North Korea to bring about free elections.

ARBITRATION

The Russians prefer diplomatic action or even commissions of conciliation to this quasi-judicial process. They welcome arbitration only for commercial disputes on questions involving the conflict of laws, i. e., private international law.[7]

Again the reason for this attitude has been made quite clear by Soviet writers:

"The necessary minimum and basic premise for any arbitration is a community of mind on legal principles. Insofar as such a community is lacking, any attempt to secure an impartial authority for two parts of humanity that speak such different languages is a priori hopeless."[8]

In other words, there are no impartial states when a question involves differing economic systems according to the Communists. The idea of compulsory arbitration by third parties, therefore, has always been opposed by the U. S. S. R. The following exceptions only tend to substantiate this rule.

In a treaty signed by the Soviets with the proletarian Government of Finland on March 1, 1918, compulsory arbitration was one of the provisions. Both parties to the agreement were, however, workers' states. Also, the arbitrator was to be selected from the proletarian party of Sweden.

In December 1922, the Russians accepted the principle of international arbitration for political disputes with non-Socialist states, under the condition that a simultaneous agreement for disarmament be signed.[9] It was known a priori to the U. S. S. R. that the capitalist states would not accept the latter stipulation. In view of this, the whole proposal takes on the character of a propaganda maneuver, calculated to prove at no cost the peace-loving nature of the Socialist Fatherland.

The Soviets have demonstrated that they prefer to settle disputes by means of mixed commissions. Most of the treaties of conciliation, signed by the U. S. S. R. between the two World Wars, contain provisions for such commissions.[10]

Footnotes at end of speech.

Footnotes at end of speech.

All Russian treaties of this type are restricted by the provision that if agreement is not reached through conciliation, then no further obligation rests on the parties. The conciliation commissions are partiary and do not have a neutral chairman.

Soviet conventions for conciliation procedure usually contain a provision for submitting all disputes—regardless of nature—between the two parties, which cannot be settled through regular diplomatic channels within a reasonable length of time.[11] Some of these treaties contain explicit reservations. One is found in the convention with Poland, which precludes the applicability of conciliation to disputes concerning territorial questions.

Some Soviet treaties provide that precedence be given to special procedures established by previous agreements binding upon the parties. If such special procedures are provided for in these other agreements, the disputes falling under their provisions are not approached in accordance with the treaty for pacific settlement, but, instead, are handled in conformity with the provisions of the special agreement.[12]

Many of the treaties signed by the U. S. S. R. provide for the appointment of different commissioners for each session of the commission, despite the fact that the commissions established by these treaties meet periodically. They are, in a sense, more permanent than the so-called permanent commissions constituted by other treaties, which seldom if ever convene.

Each of the countries appoints two persons from among its own nationals. The sessions are presided over by one of the nationals of the party in whose territory the commission is sitting. Meetings are held alternately in the capitals of the two states. A session usually lasts 14 or 15 days and is held toward the middle of each year.

Under the system of annual sessions, no applications are necessary, except when one of the countries demands an extraordinary session. In that case, the party requesting the meeting must inform the other party of the "urgent circumstances" occasioning the request. With regard to ordinary meetings, each state shall "communicate to the other, through the diplomatic channel, the list of questions which it desired should be dealt with at that session" (identical in all treaties).

Often, experts appointed by the parties are allowed to be with the commission as advisers. The conciliation commission usually decides the procedure of its meetings. Any person is heard, whose evidence is deemed to be useful. The countries are obligated to furnish the commission with all data and assistance that is found to be necessary.

All members must be present for the proceedings. Most treaties require a unanimous decision. The commission submits a joint report on all disputes referred to it as well as a consolidated settlement proposal on the basis of interpretations that must be sound at law.[13] It usually recommends that its proposals be accepted by the two parties through diplomatic channels. The high contracting parties are bound to inform each other within 90 days as to whether they accept the proposals.

There have been some examples of mixed commissions established for a specific purpose. One was set up to map the Soviet-Afghanistan boundary by a convention between the two states.[14] The commission had three persons from each side and was empowered to decide the ownership of islands. Its report was subject to approval by the two high contracting parties. A similar mixed border commission was provided for the following year in an agreement between the Soviet Union and Finland.[15]

COMMERCIAL ARBITRATION

This topic relates to disputes arising from transactions between non-Communist individuals or corporations on the one hand and Soviet state trading corporations on the other. As such, it concerns only one state directly—the U. S. S. R.

The Foreign Trade Arbitration Commission in the All-Union Chamber of Commerce was established in Moscow by decree of June 17, 1932.[16] Soviet agencies transacting business in the United States, for example, always included a clause in their contracts with American corporations which provided that arbitration would take place only before this Soviet commission in Moscow. All decisions were final and binding.

A postwar trade agreement with Poland contains a similar provision. Article XI of this agreement, which was signed on February 2, 1946, by the Minister of Navigation and Foreign Trade of Poland and the Foreign Trade Board of the Soviet military administration in Germany, reads as follows: [17]

"All disputes arising out of the present contract or in connection with it shall be subjected to the pronouncements of an arbitration commission attached to the All-Soviet Chamber of Commerce in Moscow whose decision is final and obligatory for both parties."

The most famous case of commercial arbitration was perhaps that between the Lena Goldfields Co., Ltd., and the U. S. S. R. The type of arbitration agreed upon here was different from the foregoing illustrations. The Soviets bound themselves in a contract to have a three-man arbitral commission, consisting of a national from each side and a neutral umpire.[18] The U. S. S. R. eventually withdrew its commissioner, Dr. Chlenov, and never paid the 13 million pounds sterling which was later adjudicated as damages.

It would seem that experiences of this type have proven to the Russians that they cannot rely on any third party to see matters from their point of view. Therefore, the Communists now keep to their own Foreign Trade Arbitration Commission, where they are certain that the verdict will always be made in accordance with their wishes.

CONCLUSION

In general, it can be said that while the U. S. S. R. acknowledges the usefulness of international law, it reserves the privilege to deny the application of those provisions that it finds inconvenient. "This desire to retain freedom of choice springs from the Soviet conception of law as an instrument of the state and the state as an instrument of a dominant economic class." [19]

As Many Republicans as Democrats in Oregon Want the High Hells Canyon Dam

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mrs. GREEN of Oregon. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excerpt from a letter I received this week from Mr. Byron C. Brinton, editor of the Record-Courier, of Baker, Oreg. I am especially anxious to call the attention of this Congress to what Editor Brinton says in his letter and in the editorial from the June 28, 1956, issue of his paper, which I also insert here, because they express the concern of countless thousands in my State regarding the construction of a high dam at Hells Canyon. Excerpts from the letter follow:

I think the thing we are most incapable of doing is to impress upon leaders from all over the Nation that while Hells Canyon has stirred the imagination of granges and unions and necessarily of public power people and of Democrats, it is the grassroots enthusiasm of the people of Oregon and Idaho—as many Republicans as Democrats—who pray that the great project will be built that has inspired a most courageous fight against the most powerful economic forces ever thrown at American citizens anywhere and at any time.

Here adjacent to the site we feel the urge of a great Nation harnessing a great natural wealth for the long pull not only in achieving greater things for the American people but also greater security in a troubled world.

Those of us who have been so thorough as to prove beyond a doubt the superiority of the high dam are gratified, indeed, that the committees of the Congress have put this great engineering argument into words for the bodies of Congress to act upon. And therefore all that we can say is that we hope the Members of the Congress can become as immune to the confusing, selfish, partisan, and malicious controversy as we have become in our fight and will feel that same thrill in furthering the high dam that will serve the American people so well on the long pull.

The following is the editorial from the Record-Courier of Baker, Oreg.:

CONGRESS HAS THE AUTHORITY TO STOP LOW DAMS

Regardless of the unfortunate strategy of the private utility to rush construction of an adverse project in the reservoir area of the proposed high dam at Hells Canyon in this county, the issues have not changed and the Congress must not be coerced by precipitous action of an arrogant private monopoly attempting to influence the course of public legislation.

The allegation by the private utility in its lobby in the Congress and in the press that it is compelled under its alleged FPC license to rush its project at this time is not valid. Under the terms of article 28 (a) of the license the 36-months' construction period does not commence until the project is begun and the beginning according to both the license and section 13 of the act could be delayed by the company a full year at least and with almost certain agreement with FPC by 3 full years.

The allegation by the private utility that the public must reimburse it for millions of dollars worth of work cannot be proven by the company itself at this time and in any event cannot be considered as an element in the decision in Congress which ought to be based upon the resource issue and not upon the ability of the private utility to buy immunity from a Federal high dam by imprudent and arrogant haste.

Whether the company is making a reimbursable investment in the canyon or risking its investment hinges upon certain phases of law now at issue or which will or ought to be at issue both in Washington, D. C. court of appeals and in Oregon. It seems to us the legality of the FPC license now under court appeal, and the legality of a company building a dam without compliance with the solemn laws of the State of Oregon would have considerable bearing upon the matter of reimbursement. These issues must be adjudicated before any contention is made that would attempt to beat the public over the head with a thing which itself might be illegal in the case of Federal license or possibly criminal in case of breach of an Oregon statute.

A major premise of the company before the FPC and of the FPC itself was that Congress would not act on the high dam and therefore the FPC should license a low dam. This is a challenge to the constituted authority of the Congress and any use of it, with or without a financial club now being wielded because of premature low dam work either here in Baker or on the floor of the Congress, must be frowned upon and the Congress must act completely within its constitutional authority to restrict or control the authority of governmental Commissions in the name of the people.

We think it will be eminently clear to clear-thinking legislators what has been going on. They will act accordingly. And they no doubt will take a look at Oregon law (that clearly states the company must have an Oregon license), they will take note of the ruling by the Attorney General that they must have a license, will wonder what happened to the prosecution on the law, and they will hear the testimony that the company has been building a dam and that the State of Oregon can't stop 'em and hear the private utility side of the Congress shout that the Congress of the United States can't stop them.

Well, that in itself is quite an issue, indeed.

But we trust that clear-thinking Senators and Congressmen will see the real issue clearly. The precipitous haste of the power company in playing politics with other people's money and its arrogance against locally constituted authority can be settled in the courts. But the waste of resources can never be settled except now. Congress has the authority to order that a high dam be built and that the low dam nonsense be stopped. We are sure they will act on that authority.

Airline Pilots: They Never Look Out the Cockpit Window

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mr. ENGLE. Mr. Speaker, the tragic collision between the TWA and United Airline planes over the Grand Canyon has brought howls from some quarters about air congestion. The fact is that there was no air congestion over the Painted Desert when that accident occurred. It is one of the loneliest and most isolated areas in America. Those two airliners probably had 500 miles in any direction all to themselves, as well as 20,000 feet below them and as high as the airplanes would fly above them. Certain people in commercial and military aviation have been trying for years to chase the private business and pleasure pilot completely out of the air. Now they want to make this accident the basis for renewing their arguments that all airplanes should be equipped with such high-falutin', expensive, radio and radar navigation aids that everyone except the airlines and the military will have to stop flying. The private, business, and pleasure pilots fly more hours and more miles annually than all the commercial airlines.

The Aircraft Owners and Pilots Association, which is the most active and effective group speaking for the business and pleasure pilot, has long contended to the official agencies of our Government, first, that airline pilots simply do not look out the cockpit window; and, secondly, they do not have very much window to look out of even when they want to.

It is a common practice for airline pilots to bury their heads in the cockpit from the time they take off until the time they get ready to land. Proficiency in "flying on the gauges" is supposed to be a mark of the highest professional competence, and altogether too many airline pilots disdain to look out the window. As a consequence, we business and pleasure pilots fly around any major airport at the risk of our necks. If we do not get out of the way, we are apt to get run over, because we can be absolutely certain that the airline pilots will not be looking out of the cockpit. There have been repeated instances of the airliners literally running over the top of lighter and slower aircraft.

Furthermore, the AOPA for years has been insisting that the Government should require better visibility in commercial airlines. Did you ever look in the cockpit windows on a TWA Constellation? They do not look like windows—they look like gunnery slots. The fact is, that the pilot could not see very much if he took a notion to look out the window. These airplanes could be very easily built so that there would be a wide range of visibility for the men in the cockpit.

When congressional committees take up the matter of air safety, I hope they will keep some of these considerations in mind and not be stampeding into a super-duper system of radar-controlled flying on the basis of an accident that occurred as the result of the collision of two aircraft which were all by themselves at 21,000 feet over the Colorado Canyon, with hundreds of miles in every other direction to fly in.

Relevant to this matter, I attach a copy of a letter written by Max Karant, the vice president of the Aircraft Owners & Pilots Association, under date of June 2, 1956, to our colleague, Congressman MOLLOHAN, which contains an ex-

cellent discussion of the problem of air congestion:

JULY 2, 1956.

Hon. ROBERT H. MOLLOHAN,
Chairman, Legal and Monetary Affairs Subcommittee, Committee on Government Operations, House of Representatives, Washington, D. C.

DEAR CONGRESSMAN MOLLOHAN: I am impelled to write this letter concerning the collision between the TWA Super Constellation and the United DC–7 over the Grand Canyon, because of the press reports that were quickly attached to that accident. Within hours of the accident both the press and broadcasting industry had been supplied with material which, in effect, said that this accident was what everyone had been expecting for some time, that it was due to the congested air space, that the present air traffic control system's serious deficiencies were responsible, etc. In other words, it is apparent to me that someone quickly twisted the facts connected with this accident to an "I told you so" conclusion, as though to imply that this accident was caused by factors beyond the control of the people involved.

Because of this effort to use this terrible tragedy to suit the purposes of the professional airspace users who want the sky to themselves, I feel it necessary to comment on the facts as they are presently apparent. My comments are based, however, on the facts that have come to me through the published accounts of the accident, and the background information gathered by the press.

First, it should be readily apparent that this accident occurred in one of the most remote, desolate portions of the United States. It did not even occur on an airway; airways are the only portions of the airspace directly under the jurisdiction of air traffic control.

Both these airliners apparently were flying "off airways," a type of operation that has been in wide use for many years. In this particular case, these aircraft were being flown through an area equipped with virtually no radio-navigation aids on the course they were flying, making accurate navigaton impossible. Such radio aids—especially those needed for instrument operations—are concentrated on the airways. In this case, however, both pilots chose to make their flights off-airways, an often-used timesaving practice. But pilots electing to fly IFR (under instrument flight conditions) off airways elect to do so deliberately, knowing full well that they do not have the full protection of air traffic control when they do so. This type of instrument flight operation has been a source of debate and discussion for years, because of the known hazards.

This basic information is well known to all pilots, especially the professionals. The newspaper reports indicate that this was a factor in the collision between these two airliners. According to those reports, the TWA pilot asked ATC (air traffic control) for clearance to fly at 21,000 feet instead of the 19,000-foot altitude he was using. ATC knew of the United flight at 21,000 feet, and told the TWA captain he should not fly at that altitude because of the presence of the United DC–7 there. The TWA pilot, according to press reports, then asked for permission to fly 1,000 on top, and permission was granted.

If these reports are correct, the key to this accident appears to be that "1,000 on top" clearance. All pilots who fly on instruments are thoroughly familiar with the meaning of such a clearance, and the responsibility it places upon them. It means that the airplane so cleared can be climbed upward until it comes out of the top of the clouds into the clear. The regulations specify the 1,000-foot clearance so that other aircraft climbing on instruments up through the clouds will not blindly run into an airplane flying in the clear on top of the clouds, but so close to the clouds that it would be impossible for the other plane to avoid a collision.

However, once any pilot accepts such a clearance, he knows it then is his responsibility to look where he's going, because he's then flying in clear air, and this is VFR (flying under visual flight rules). Now, if this TWA captain did not for some reason manage to get in the clear on top of the clouds before he reached United's 21,000-foot level, he would be obligated—both by law and by ordinary commonsense—to avoid that altitude at all costs. Remember: It is reported that he had been advised not to fly at that altitude because of the proximity of the United DC–7.

What is so deplorable to me, however, is what appears to be deliberate distortion of these facts by some airline proponents, within hours of a terrible tragedy involving two of their own aircraft. They have indulged in quick résumés of the Harding report, particularly the portion that merely quotes the airlines themselves as claiming there are an average of four near-misses a day involving airline aircraft in the United States. They neglect to point out, however, that this still unsubstantiated claim originally dealt with the problem in very busy terminal areas. It was not intended to convey the impression that the off-airways airspace over the Grand Canyon—one of the country's most desolate areas—at 21,000 feet was a major problem.

Unfortunately, a considerable area of mystery will probably surround this accident forever. As I believe I testified before your committee, AOPA has some time ago strongly supported a proposal by the Civil Aeronautics Board to require all United States air transport aircraft to be equipped with automatic flight recorders. These recorders automatically and continuously record each plane's altitude, speed, heading, climb, and descent, and any stresses to which the plane's structure may be subjected. These recorders are fireproof, and designed to withstand shocks of up to 100 times the force of gravity.

The airlines' representatives in Washington opposed this proposal, contending such recorders would add nothing to the safety picture, but would involve them in a lot of unnecessary recordkeeping.

Had both these airliners been equipped with these recorders many of the most urgently needed facts relating to this tragedy would become known as soon as the recorders could be found.

Needless to say, we deeply regret this terrible accident. It is most unfortunate that this tragedy must so quickly become the cause of such unwarranted public controversy. It is particularly deplorable that some people would take such an opportunity to deliberately mislead and confuse the public with irrelevant discussions of the air traffic control system and other aspects of the airspace-use problem. I sincerely hope your subcommittee will take a careful look at all these facts.

Sincerely,

MAX KARANT,
Vice President, Aircraft Owners and Pilots Association.

Self-Employed Renew Pension Pleas in Canada

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Dalton Robertson which appeared in the Financial Post, of Toronto, Canada, on June 23, 1956:

SELF-EMPLOYED RENEW PENSION PLEAS—UNITED KINGDOM TAX CONCESSIONS INSPIRE NEW PRESSURE HERE

(By Dalton Robertson)

The recent decision of the United Kingdom Government to make tax concessions to help self-employed persons provide for retirement, has raised new hopes for similar action in Canada.

Until now, Ottawa has resisted pressure from this group—doctors, lawyers, accountants, grocers, druggists, etc.—who sought to have their contributions to pension schemes exempted from income tax. Salaried employees of companies which have an approved pension plan receive this special tax treatment already, but people who work for themselves have received no such concessions.

Strengthened by the United Kingdom precedent, however, various individuals and groups are arming themselves for another go at the Minister of Finance. The proposed exemptions in the United Kingdom have already been drawn to his attention.

THE CASE FOR

The self-employed businessman or professional man states his case this way: When it comes to making contributions to a retirement plan, we believe we should have the same taxation privileges as employees who work for a company where there's an approved pension plan. The employee's contributions are exempt from income tax. The employer, who usually makes a contribution, is also freed from taxation on his payment.

When the employed person retires and his pension starts to pay off, this income will be taxed. But at that point taxation is not likely to be as heavy as in the higher income period when he's making contributions. Thus the employed man not only gets tax exemptions which help him build toward a retirement income, but he is able to defer income tax until a time when his total income is likely to be smaller.

Contrast this with the man who is saving for his own retirement fund. He has to pay income tax on his savings through earning years when his tax rate is highest. And he has, the self-employed point out, no employer to double his savings.

GOVERNMENT REACTION

Several organizations—primarily those representing professional men—have been asking the Federal Government to consider changes in tax legislation for a good many years. Early in 1954, 12 interested groups spearheaded by the Canadian Bar Association, Canadian Medicial Association, and Ontario Chartered Accountants made a joint attack and presented a detailed brief to the minister of finance.

Douglas Abbott, then minister of finance, did not see his way clear to do anything about their requests. His successor, Walter Harris, has also been reluctant to tackle the problem.

Mr. Abbott summed up his stand saying: "The implications of such a move are extremely far reaching. It is difficult to know what volume of savings would be attracted by this monetary incentive, but I am inclined to think it would be extremely substantial. * * * I have not felt that I wanted to take the responsibility for such a far-reaching move at this time. * * * The difficulties still appall me."

TODAY'S CONDITIONS

That was 1954. Today, say the self-employed, conditions are different and have changed enough to let the Government alter its stand:

There's now a precedent. With the British concessions (which the United Kingdom Gov-

ernment calls "a measure of fiscal justice") the Canadian Government has less real reason to hedge longer on the issue; it can be done.

Concessions would complement the Government's monetary policy. Exemptions would encourage saving, which would be to the good if the Government is as seriously concerned about possible inflation as it makes out.

It's timely. The pressures of an election year might make 1957 the logical moment politically to introduce tax exemptions for the self-employed.

But chief stumbling block for the self-employed's cause is the fact that exemptions would cost the Government a substantial sum in lost tax revenues.

In their joint brief of 1954 the associations requesting changes declared—and still do—that their members receive inequitable and unreasonable treatment under the Income Tax Act because:

Preparing for a professional career calls for long training and a large capital outlay in no way recognized for tax purposes.

During the relatively short period of peak earning power, income-tax rates are so high as to make it exceedingly difficult to compensate for earlier expenses and lay aside for later retirement at the same time.

Professional people rarely build up a business organization with substantial capital reserves which will provide continuing income; rather earnings drop sharply with any lessening of the energy or capacities of the individual.

The Canadian Government has been reluctant to reshape its tax legislation to ease what the self-employed consider a discriminatory situation. One big reason, it would be difficult to make an adjustment for one group of taxpayers, yet maintain a tax incidence equitable to all. And, by no means a small consideration for the budget makers, it would involve a substantial loss of income for the Federal Treasury.

Self-employed are pointing to the recent British concessions. "If England, in spite of heavy financial commitments, has accorded tax relief to the self-employed, why can't Canada?" they ask.

UNITED KINGDOM PLAN

Full details of the United Kingdom plan are not yet available. But, in bringing down the British budget, Harold Macmillan, Chancellor of the Exchequer, stated:

"I propose to give effect, though in a simplified and modified way, to the recommendations of the second Millard Tucker committee on relief to the self-employed in respect of provision for retirement. This will grant relief from income tax and surtax within certain limits in respect of premiums paid to provide a deferred annuity on retirement.

"It will apply to professional men in practice, to individuals and partners in businesses which are not companies, to controlling directors of companies, and finally to employees who are not entitled to any benefit under schemes set up by their employers."

Stating that a condition of tax relief would be that benefits secured by premiums be payable as annuities and not as lump sums, Mr. Macmillan said that tax exemptions would be limited to pension contributions not exceeding £500 or 10 percent of earned income in any 1 year. Beneficiaries, he thought, would range from city accountant to village grocer.

Two related concessions were also announced. The Chancellor plans to relieve from income tax life insurance company annuity funds insofar as they represent invested premiums arising from deferred annuity business for the self-employed. A further exemption stated "purchased life annuities not connected with a pension scheme should not be taxed in full, the part representing a return of the purchase money should be exempt."

These steps will be a strong anti-inflationary force, the British Government believes. Substantial savings will accumulate, they think, as people take advantage of the exemptions possible in accumulating a retirement fund.

Biggest block to the introduction of tax concessions will be the possibly large loss of government revenues. Rough estimates place this at a minimum of $60 million to $70 million if the self-employed are accorded an exemption for pension plans of 10 percent of yearly earned income.

Since this is a fair sum for the Government to forego—especially when it still officially argues that there is nothing unfair about the present system—some groups of the self-employed predict that it will have to make the most of its concessions. With an election looming, they feel that this would be the opportune time for an announcement.

While tax concessions, if made, would in all likelihood apply to all self-employed, professional men feel most strongly about the necessity for them. It has been pointed out to the professional man that he could incorporate and thus gain certain tax advantages. But the professionals consider this would be detrimental to their professions, their clients, and to society itself.

Their reasoning: A professional service to be worthy must be a personal service. Therefore it cannot have created an artificial person in the form of a corporate being, between the giver of the service and the recipient.

There is another side to the view that tax concessions for the self-employed are a measure of fiscal justice. The employed person who contributes a tax-exempt portion of his earnings to a pension fund does not control that money and cannot obtain it for emergencies. Meanwhile, the self-saver can at least save any way he wants—stocks, bonds, mortgages, real estate—and be free to liquefy his assets, or use them as security for loans.

Against this, the self-employed are saving without the benefit of tax exemptions, employer contributions, or deferred income tax.

The Picture of Aging

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mrs. GREEN of Oregon. Mr. Speaker, one of the greatest challenges confronting American society today arises from the tremendous and continuing increase in the number of our older citizens. It is encouraging in the face of this challenge to see the growing responsible public concern with this subject. One evidence of this is a very thoughtful discussion in an editorial in the Portland Oregonian of June 25 of this year. Under unanimous consent I include this editorial in the RECORD:

GOLDEN YEARS NOT ALL GOLD

In the back of the young American worker's mind is the vague picture, perhaps a little more clearly defined by insurance companies' rosy advertisements, of his eventual retirement to the bliss of a 52-week vacation every year. No longer concerned with alarm clocks and time clocks, he'll be ready at age 65 or thereabouts to sit back and loaf for the rest of his life on the income from his pension, social security, and investments.

How does this picture really look, once one becomes an actual part of it? Recently the Twentieth Century Fund, an endowed foundation for research on economic and social problems, made a survey of the status of Americans over the age of 65. The survey, which shows how America's senior citizens live and what they live on, and how successful they have been in reaching their goal of a twilight life of fulfillment and dignity, is both enlightening and disturbing.

For most people over 65, the survey shows, retirement years are not the time of rest and contentment they are popularly supposed to be. Instead, poverty and unhappiness are the lot of a majority in this age group.

Evidently this prospect becomes more clear to people as they approach retirement age, for a study of the reasons for retirement showed only 9 percent quitting work voluntarily at age 65 for more leisure time. A majority, 56 percent, quit because their employers' age policies gave them no choice. Twenty-six percent retired because of illness or accident, and 9 percent for miscellaneous reasons.

Obviously the chief reason for discontent among senior citizens is financial worry. Only 15 percent of Americans over age 65 have incomes of more than $2,000 a year; 38 percent receive less than $1,000, and 36 percent have no income at all. Of the fortunate few with incomes over $5,000, retirement is being enjoyed by 73 percent. Half of those receiving between $1,000 and $2,000 like their lives of leisure. But of oldsters with incomes of less than $1,000, only 38 percent are finding life to be fun.

Of the approximately 12 million senior Americans, 2,700,000 are gainfully employed. Another 1,400,000 would like to work, but are barred under present employment customs. Some 90,000 are physically and mentally at par, but can't find jobs. Five million elderly Americans are living out the remainder of their lives doing menial household tasks; a great many, it may be assumed, the unhappy and not particularly welcome guests of younger relatives.

The existence of this large, unhappy minority in America's social structure shows plainly the need for a revamping of our traditional ideas about employment and retirement. Somehow the job system must be revised so that elderly people can find useful, gainful things to do when they cannot afford to, or don't want to, loaf. A good place to start would be at the State level. The next Oregon Legislature ought to take a sharp look at existing unemployment compensation and accident insurance statutes which make it economically impractical for employers to add elderly and handicapped persons to their payrolls.

Congress Can Protect Itself

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mr. FORRESTER. Mr. Speaker, the Valley Times, San Fernando Valley, Calif., Thursday, June 28, 1956, issue carries on page 12 thereof an editorial by Hon. George Todt, entitled "Congress Can Protect Itself."

Mr. Todt has no patience whatever with the group who contends that it is improper to criticize the Supreme Court. He feels that this group actually does not know history. He directs the attention of that group to the immortal words of Thomas Jefferson, to wit:

In questions of legislative power, let no more be heard of confidence in the Supreme Court, but bind it down from mischief by the chains of the Constitution.

The editorial is so splendidly written and so completely American that everyone should have the privilege of reading it. It is a privilege on my part to afford that opportunity. The editorial reads as follows:

GEORGE TODT'S OPINION

CONGRESS CAN PROTECT ITSELF

"Four things belong to a judge: to hear courteously, to answer wisely, to consider soberly, and to decide impartially"—Socrates.

The angry murmur coming out of Capital Hill in the direction of the judicial branch these days almost paraphrases itself in Jefferson's immortal words to read anew: "In question of legislative power, let no more be heard of confidence in the Supreme Court, but bind it down from mischief by the chains of the Constitution." And Congress is talking about doing just that. However, talk and action are often poles apart.

Congress appears to believe that the judiciary has been taking too many liberties in the interpretation of the law—so much so that the law, as Congress intended it to be, seems to be no longer recognizable even to those who made it. Consequently, the legislators may consider writing some stiff statutes to protect themselves in their own legislative field. But it still remains to be seen whether the lawmakers can concoct measures so ironclad that their intent may not be ameliorated by further "judicial interpretation." This has the makings of a splendid game of chess for the future between these two heretofore "equal and coordinate branches of the Government." Who will win out in the end?

Since all of the wounded outcries are coming from Congress in this instance, and none are emanating from the bailiwick of the Supreme Court, the appearances would tend to indicate that the aggression or encroachment—if any it may be called—is definitely emanating from the judiciary against the legislative.

Actually, it is an unhealthy sign whenever we are able to note a tendency of any of the three coordinate branches to encroach upon either or both of the others. The Founding Fathers set it up the way they did in order to decentralize governmental power—so that too much of this corruptive force of political power could not come to be lodged in the hands of any one man, or body of oligarchs. They did this for our own good, not because they were incapable of conceiving a "streamlined, centralized, collective pattern" on European lines.

But 5,000 years of recorded history taught our wise men at Philadelphia that "power corrupts," as they so succinctly put it, and they purposely divided the governing power of our American state into the present three equal and coordinate branches—with checks and balances to insure that none would be overrun in the future by either, or both, of the other two partners in government. Today there are many shallow thinkers who prate that our Constitution is not "modern" enough to suit our needs, and they cry for "change" to streamline our needs. Boiled down, this invariably spells reactionary authoritarianism, totalitarianism, and tyranny.

The people of America desire to retain confidence in our Supreme Court and see it retain its traditionally strong, healthy role in the shaping of the national destiny in the future. But this does not mean that we want it to encroach upon the rights of an equal and coordinate branch of the Government, such as the legislative.

Congress is well within its rights to investigate such a condition, if it exists, and to remedy the situation with appropriate legislation so well worded and ironclad that it cannot leave any room for doubts or judicial misinterpretation of intent. Congress has the power to defend itself from judicial forays into its territory whenever it wishes; perhaps it is the party at fault in not producing appropriate legislation earlier which would have properly fenced the Supreme Court within its own allocated area. It is time for Congress to act and thereby commence to close the gaping wound caused by the rift created from allowing this controversial matter to get out of hand. It calls for healing.

Communications Favoring a School Construction Law

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1956

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include the following communications on the Kelley school construction bill, which was before the Congress during the past several days:

ALABAMA STATE SUPERINTENDENT OF EDUCATION URGES PASSAGE OF SCHOOL CONSTRUCTION BILL

STATE OF ALABAMA,
DEPARTMENT OF EDUCATION,
Montgomery, Ala., June 22, 1956.

Hon. CARL ELLIOTT,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN ELLIOTT: Your efforts to provide Federal funds for the sorely needed additional school-building facilities in Alabama are highly appreciated. The friends of education in this State urge that the Kelley bill, H. R. 7535, without cripping segregation amendments, be passed.

It is inconceivable that the Congress of the United States of America will appropriate billions of dollars to rehabilitate foreign nations and fail to appropriate adequate funds to house the schoolchildren of America. Alabama makes at least the average financial effort of the Nation in supporting public education based on financial ability to finance education and yet the school-building survey, financed partly by appropriations from Congress, shows that Alabama needs over $300 million more school-building facilities to house the schoolchildren of this State. • • • The school-building deficit becomes greater year by year because of the increasing enrollment in public schools and colleges.

Your efforts to get Congress to pass the school-building appropriation will be highly appreciated.

Sincerely yours,

A. R. MEADOWS,
State Superintendent of Education.

ALABAMA EDUCATION ASSOCIATION URGES PASSAGE OF SCHOOL CONSTRUCTION BILL

MONTGOMERY, ALA., *June 25, 1956.*

Hon. CARL ELLIOTT,
Washington, D. C.:

Your active support to legislation effecting education has been gratifying. Your particular support for H. R. 7535 (Kelley bill) at the present time is of utmost importance. We encourage you to vote for the Kelley bill and against the Power antisegregation amendment.

ALABAMA EDUCATION ASSOCIATION,
WILLIAM N. EDDINS,
Director, Public Relations.

ALABAMA CONGRESS OF PARENTS AND TEACHERS APPROVES KELLEY BILL

MONTGOMERY, ALA., *June 23, 1956.*

Hon. CARL ELLIOTT,
House of Representatives,
Washington, D. C.:

Kelley bill, H. R. 7535, will come to a vote between June 23–29. Urge you to actively support this bill and work toward its final passage. Alabama would receive approximately $10 million per year for 4 years to build much needed school buildings.

Mrs. JAMES HOLLADAY,
Chairman, Committee on Legislation, Alabama Congress of Parents and Teachers.

BOARD OF DIRECTORS APPROVES KELLEY BILL

WASHINGTON, D. C., *July 4, 1956.*

Hon. CARL ELLIOTT,
Washington, D. C.:

It is our sincere belief that record vote should be taken on Powell amendment and on final passage of school construction bill. Will appreciate your being on House floor to help accomplish both these important votes.

William G. Carr, executive secretary, National Education Association; John Lester Buford, president, NEA, board of directors, NEA, comprising J. W. Letson, Alabama; Donald Lawvere, Alaska; C. A. Carson, Arizona; A. L. Whitten, Arkansas; Hazel Blanchard, John Palmer, Mary Jo Tregilas, California; Anna Maud Garnett, Colorado; Mrs. Elma Leblond, Connecticut; Grace C. Moore, Delaware; Helen E. Samuel, District of Columbia; Thomas D. Bailey, Florida; M. D. Collins, Georgia; James R. McDonough, Hawaii; Elmer Crowley, Idaho; Helen Ryan, Illinois; Paul Grigsby, Illinois; Audrey Shauer, Indiana; Verl Crow, Iowa; F. L. Schlagle, Kansas; Mrs. Willie C. Ray, Kentucky; George H. Deer, Louisiana; Clinton F. Thurloy, Maine; Harry R. Poole, Maryland; Albert M. Johnson, Massachusetts; Ruth Winter, Michigan; Laura M. Farnam, Minnesota; H. V. Cooper, Mississippi; Louese Phillips, Missouri; Oliver W. Peterson, Montana; Chester O. Marshall, Nebraska; Albert G. Seeliger, Nevada; Mabel M. McKelvey, New Hampshire; Lena M. Porreca, New Jersey; William B. O'Donnell, New Mexico; James A. Cullen, New York; Earl C. Funderburk, North Carolina; W. G. Byers, North Carolina; Mary Fowler, North Dakota; H. C. Roberson, Margaret Boyd, Ohio; Garland Godfrey, Oklahoma; Margaret Perry, Oregon; Harvey E. Gayman, Mrs. Audrey Graham, G. Baker Thompson, Pennsylvania; Jose Rivera, Puerto Rico; Marie R. Howard, Rhode Island; Gladys Robinson, South Carolina; Joy Hamrin, South Dakota; Andrew D. Holt, Frank E. Bass, Tennessee; Myrtle M. Hembree, Dana Williams, Texas; Clifton Cook, Utah; Gertrude E. Sinclair, Vermont; Mary Delong, Virginia; Helen E. Holcomb, Washington; Mrs. Nan Temple Davis, West Virginia; S. R. Slade, Wisconsin; Velma Linford, Wyoming; Cornelia Adair, Richmond, Va.; Florence Hale, Connecticut; Frederick Hunter, Oregon; Uel Lamkin, Missouri; Mrs. Josephine Preston, Washington; Agnes Samuelson, Iowa; Henry Smith, Indiana; George Strayer, New Jersey; Willis Sutton, Georgia; Charl O. Williams, District of Columbia.

ALABAMA DELEGATION OF SCHOOLTEACHERS ATTENDING NEA CONVENTION IN PORTLAND APPROVES KELLEY SCHOOL-CONSTRUCTION BILL

PORTLAND, OREG., *July 4, 1956.*

CARL ELLIOTT,
House of Representatives,
Washington, D. C.:

Eighty-one members Alabama delegation of teachers attending NEA convention in Port-

land commend you for continuing support of H. R. 7535 and urges you to help secure final passage without Powell amendment. List of names of delegates follow by letter.

FRANK GROVE,
Executive Secretary, Alabama Education Association.

PRESIDENT, AEA DIVISION OF CLASSROOM TEACHERS, APPROVES KELLEY BILL

PORTLAND, OREG., *July 5, 1956.*

Congressman CARL ELLIOTT,
Washington, D. C.:

Twenty-four thousand Alabama teachers urge your every assistance in securing further consideration of Kelley bill.

RUTH W. CARLISLE,
President, AEA Division, Classroom Teachers.

AFL–CIO Endorses High Hells Canyon Dam

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thrusday, July 5, 1956

Mrs. GREEN of Oregon. Mr. Speaker, under leave to extend my remarks, I include a letter I received this morning from the American Federation of Labor and Congress of Industrial Organizations. We in the Northwest are deeply gratified to know that organized labor has demonstrated great understanding of the importance of maximum development of the Nation's rivers for the greatest benefit to the largest number of our people by endorsing the construction of a high dam at Hells Canyon.

The letter follows:

AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS,
Washington, D. C., July 3, 1956.

Hon. EDITH GREEN,
Washington, D. C.

DEAR CONGRESSWOMAN: The American Federation of Labor and Congress of Industrial Organizations endorses pending legislation reported by the House Interior Committee, to authorize a high dam at Hells Canyon on the Snake River, and urges you to support this legislation.

Organized labor is persuaded that the demand for increased energy for industry, agriculture, and the home requires the use of all possible sources of energy to their maximum if we are to meet the demand of the immediate future. Today we know the demand for industry amounts to 7.7 kilowatt-hours per man-hour of work. Sound predictions of the demand in the future show a minimum need by 1970 of 14 kilowatt-hours per man-hour of work. It is for this reason that the AFL–CIO in their merger convention held last December in New York City, specifically endorsed construction of the high dam at Hells Canyon on the Snake River.

The proposed high dam which would be authorized by the pending bill would provide large blocks of low-cost power. The lower dams proposed by the Idaho Power Co. would produce less electricity at higher cost to the company and electric consumers. Abundant, low-cost electric energy is an essential ingredient of the industrial development which brings jobs for labor, health to the economy, and prosperity to our Nation and its people.

The high dam at Hells Canyon would add a total of 1,124,000 kilowatts of prime power, compared with a total of only 680,000 kilowatts for the smaller dams. The cost per kilowatt-hour of power from the proposed power-company dams would be more than twice as much as power from high Hells Canyon Dam.

The high Federal dam would provide nearly four times as much water storage for flood control (3,880,000 acre-feet of useful storage as opposed to only 1 million acre-feet for the power-company project). The high dam would provide greater benefits in navigation, conservation, and recreation. It could make possible irrigation of large areas.

The high Hells Canyon Dam is an essential part of the comprehensive plan for the development of the Columbia River, one of our Nation's great natural resources. If we permit a private power company to destroy this basinwide plan with partial, piece-meal dams, we shall be turning our back on the lessons of the history of exploitation of our natural resources.

At stake in the Hells Canyon controversy is the future of our water resource development programs. Our rivers belong to our people, and organized labor is proud to join with others in calling for maximum development of the Nation's rivers for the greatest benefit to the largest number of our people. Therefore, we support legislation to authorize a Federal high dam at Hells Canyon, and we call upon the Congress to enact this important measure.

Sincerely yours,

W. C. HUSHING,
Codirector, Legislative Department.
ROBERT OLIVER,
Codirector, Legislative Department.

Marquette University's Birthday Presents

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I want to enclose an article which appeared in the Davenport, Iowa, Catholic Messenger of May 31, 1956, written by Mr. Donald McDonald and entitled "One University's Birthday Presents."

Mr. McDonald very aptly calls attention to the fact that Marquette University—

decided a year ago to celebrate its 75th birthday not by looking back at its past performance and not by soliciting praise for its present accomplishments. Instead, the university embarked upon an ambitious and what must have been certainly an expensive project designed to make a substantial addition to the total content of truth in the American political society.

This was a most praiseworthy and constructive undertaking which benefited our entire Nation, and which produced a series of national conferences and other symposiums on vital topics of current and future interest. In this manner, Marquette University substantiated its anniversary-year theme: "The Pursuit of Truth To Make Men Free."

I want to take this opportunity to commend Mr. McDonald's article, and Marquette University's birthday presents to our society, to the earnest consideration of the membership of this body.

ONE UNIVERSITY'S BIRTHDAY PRESENTS
(By Donald McDonald)

Three of the most refreshing and vitalizing developments in Catholic education in this country in the past few decades have occurred within the past year. I refer to (1) the establishment of the Sister-Formation Conference organized to improve, nourish, and sustain the intellectual, spiritual, and professional competence of our sisters; (2) the published critical survey of American Catholic intellectual life by Father John Tracy Ellis, a survey whose reverberations are still being felt in educational circles; and (3) the series of five national conferences on some of the most important issues of the day sponsored by Marquette University during its 75th anniversary year now drawing to a close.

It is the latter which I should like to discuss here. Perhaps I should preface my remarks with the acknowledgment that Marquette is my alma mater. This fact may increase the warmth of my enthusiasm for what the school has done this past year. But it does not affect the basic reason for either my enthusiasm or the gratitude which all American Catholics should reveal.

There is, I suppose, a variety of ways in which a university can signalize its jubilee. It can publish histories about its past achievements. It can hire speakers to eulogize itself. It can sponsor fetes and festivals and parties of every description. It can bring in carts of $2 bills and new silver dollars, put them in the hands of students and impress upon the local business community the commercial impact of the university in its midst.

Somehow, none of these methods seem to quite fit the real function of a university, the noble and honorable responsibility of teaching and spreading truth.

Marquette University decided a year ago to "celebrate" its 75th birthday not by looking back at its past performance and not by soliciting praise for its present accomplishments. Instead, the university embarked upon an ambitious and what must have been certainly an expensive project designed to make a substantial addition to the total content of truth in the American political society.

The university has sponsored a series of five 3-day national conferences to support and substantiate its anniversary-year theme: "The pursuit of truth to make men free." The titles of some of these conferences are themselves indicative of the seriousness with which the university takes its obligations to be in fact, as well as in word, "a center of learning":

"From Disorder to World Order"; "Interprofessional Cooperation for the Improvement of Our Health and Welfare"; "Problems of Communication in a Pluralistic Society"; "The Role of the Independent School in American Democracy."

In addition, the school has sponsored a number of other symposia and exhibits dealing with such political and cultural matters as the use of the Fifth Amendment today; contemporary art and music; and assessment of both the tactics and ideology of Communism, mainly from the viewpoint of "experts," refugee-intellectuals from behind the Iron Curtain.

Now, contentwise, these major academic conferences alone would be enough to earn the acclaim and respect of American citizens. At each conference 8 to 10 speakers delivered formal papers on as many aspects of the central theme under consideration. In addition, the university invited from 35 to 40 "discussants" to each of the conferences, paid their traveling and living expenses for the duration of the conference, and asked the discussants for nothing but their critical interest and critical, round-table discussion of the papers read at the meeting.

This is indeed refreshing and intellectually exhilarating. But beyond the immediate

effect of bringing together scholars for 3 days of penetrating discussion of fundamental issues of the day, there will, I think, be a long-term, enduring effect which is bound to produce an added honor and respect for both Marquette and the Church in general.

For the lecturers and discussants invited to Marquette during this past year have included Catholics and non-Catholics alike. If the university accomplished nothing more in its 75th anniversary year than to prove that Catholic and non-Catholic scholars have much to learn from each other, that the barrier between them is too frequently unnecessary and too often based on questionable ground, that the Catholic university is not an academic ghetto protected by the moat of fear and contempt, I say if Marquette did nothing but this it did a great deal.

To the campus at Marquette came great and illustrious scholars from our Catholic colleges and universities: Notre Dame, Georgetown, Catholic University of America, St. Louis University, Loyola of Chicago.

But to the campus also came professors (nationally recognized authorities in their fields) from such schools as Duke, Cornell, Northwestern, Illinois, Minnesota, Indiana, Wisconsin, University of Chicago, Ohio State, Pennsylvania, Johns Hopkins, New York University, Yale, and Harvard.

Early in May, at the university's final conference (on the role of the independent school in the United States), those attending witnessed what must seem scandalous in some Catholic circles: A panel discussion on the partnership of independent and public schools in this country between Msgr. Frederick Hochwalt, director of the education department, National Catholic Welfare Conference; Dr. William G. Carr, executive secretary of the National Education Association; and Dr. Arthur S. Adams, president of the American Council on Education.

All of this is not to suggest that the professors, educators, editors, physicians, lawyers, judges, and Government officials who came to Marquette suppressed their differences and disagreements in a 3-day aura of insipid fellowship. It is only to suggest that (1) the area of agreement on controversial issues is much larger than we suspect or than some of the more violent and inflammatory editors in the Catholic press are willing to admit; and (2) that it is possible for people to disagree without becoming disagreeable and to argue without becoming uncharitable.

It is indeed somewhat surprising, and gratifying, to note the happy and healthy consequences which flow inevitably from a single-minded pursuit of truth. Mutual respect and mutual admiration between Catholics and non-Catholics, despite some basic philosophical differences—these are indeed precious values in an age when suspicion, hatred, and distrust seem to fluorish like a rank undergrowth. It is good to record that a Catholic university led the way this year in enhancing those values.

Mr. Quinn Rides Again

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mr. REECE of Tennessee. Mr. Speaker, on June 16, 1955, I reviewed the writings of Mr. T. K. Quinn, who has frequently appeared before congressional committees dealing with the problem of monopoly and concentration of economic power—see CONGRESSIONAL RECORD, volume 101, part 7, page 8852.

My only concern with Mr. Quinn's economic theories stemmed from the fact that he has been a frequent witness before congressional committees, where he described himself as a former big business executive. He was supposedly giving the committees of the Congress an inside look behind the scenes. Accordingly, I wanted my colleagues to be in a position to properly evaluate his testimony. Whenever anyone presents proposals for changes in public policy he must expect that they will be revjewed against his previous stated positions. I hold no personal animosity toward Mr. Quinn. My only concern is to protect our economy from unsound proposals.

I stated that Mr. Quinn's present dislike of large corporations arose from the failure of the Monitor Corp., which he formed after World War II. In reviewing his book, entitled "Giant Business: Threat to Democracy—the Autobiography of an Insider," I said:

This book for the first time reveals the basis for his present animosity toward big business. Immediately following the war, Mr. Quinn formed the Monitor Corp. to merchandise and distribute a diversified line of household appliances. The firms from whom he expected to purchase these appliances were unable to obtain sufficient steel, and it was necessary for the Monitor Corp. to be completely reorganized as a result of the failure of its suppliers to deliver appliances to it. I find that it was only after this occurred that Mr. Quinn remembered that he left General Electric 8 years before because of the reasons set forth in "I Quit Monster Business."

Mr. Speaker, the Monitor Corp., headed by Mr. Quinn, was not organized to be a small business. In an advertisement which appeared in the Saturday Evening Post of November 17, 1945, the Monitor Corp. described itself as "Sixty men and—the boy in the 7-league boots." "They selected not just one plant to build a whole line, but 24 plants each particularly suited to make one appliance.—They enlisted not just 1 but 24 research staffs, comprising a total of 148 engineers." The advertisement also stressed that the 24 plants employed 32,000 workers.

Fortune magazine in its issue of October 1945 described the formation of the Monitor Corp. as follows:

Next month a double-page 4-color splash in the Saturday Evening Post will signalize the launching of a new type of enterprise into the home-appliance field—a distributors' cooperative marketing a line of appliances produced to their order by 30 anonymous manufacturers. Whatever the venture's fate, it will add another lively episode to the history of its volatile organizer, Theodore Kinget Quinn, man of enthusiams, onetime youngest vice president of General Electric, erstwhile director-general of WPB's labor-management production drive (p. 279).

Last December Quinn announced the formation of Monitor Equipment Corp., to be served by Quinn as president and to be owned in equal parts by 60 home-appliance distributors. The company will sell, under the brand name Monitor, a new high-quality line of appliances complete from refrigerators to steam irons, from toasters to television sets, supplied under contract by a number of medium-sized manufacturers. The 60 participants whose combined territories blanket the United States include many for whom the word Monitor has pleasant associations: former General Electric distributors Rex Cole, of New York; L. H. Bennett, of San Francisco; L. H. Driscoll, of Charlotte; Beckett Electric, of Dallas. Quinn confidently predicts a sales volume of more than $100 million. His own hold on the project is insured through 51 percent stock ownership of T. K. Quinn Co., management consultants, to whom Monitor will pay one-half of 1 percent of the distributors' purchases for 20 years (p. 280).

Certainly Mr. Quinn expected to be operating a big business. According to Fortune, the T. K. Quinn Co.,, of which 51 percent was owned by Mr. Quinn, was to receive one-half of 1 percent of the distributors' purchases for 20 years. If a sales volume of $100 million had been achieved, Mr. Quinn's annual personal income, according to the Fortune article, would have been $255,000. The failure of the Monitor Corp. and the loss of this anticipated income, I still maintain, is responsible for Mr. Quinn's repeated attacks on not only big business, but our entire social structure.

In the Fortune story on the formation of the Monitor Corp., the article also said of Mr. Quinn:

Quinn, the economist, assails existing antitrust legislation as "mental windmills of outmoded competition" thoughtlessly designed to "prevent our economy from evolving naturally," and defends the "self-regulation" of industry as most important to the public interest. He talks a great deal about teamwork, fair dealing, and goodwill, and he is convinced all men must avoid hasty conclusions (p. 280).

Mr. Quinn's present insistence that the antitrust laws must be rewritten to curb big business obviously represents a complete change from the position he took when he wrote "Liberty, Employment, and No More Wars."

Mr. Speaker, Mr. Quinn has just written a new book entitled "Giant Corporations—Challenge to Freedom" published by the Exposition Press. Mr. Edward Uhlan, the president of the Exposition Press, Inc., in the publisher's foreword to Mr. Quinn's latest book said:

A publisher can judge books; he cannot stand in judgment of issues. But as Mr. Quinn's publisher and editorial adviser, I have become involved and find myself identified with the cause that he espouses. T. K. Quinn, an unusual combination of scholar and practical businessman who has observed and participated officially in the workings of both very large and small operations from the inside, is recognized as America's most knowledgeable critic of giant business and is an outstanding champion of the independents. Like any ardent critic who writes from a deep faith in the American way, he has become a controversial figure because of his forthrightness, penetrating analyses, and especially his definite proposals to create greater free enterprise for the many as distinguished from the few.

Later attacks have centered around Congressman CARROLL REECE, former chairman of the Republican National Committee, who undertook to show that Mr. Quinn had tried to profit personally from wartime associations. This charge was based on old allegations of Congressman Jerry Voorhis of California, who later reexamined the evidence, declared frankly the information was false, withdrew the accusations, and publicly commended Mr. Quinn and his work. Mr. Reece's

subsequent vague charge that Mr. Quinn has been "inconsistent"—that statements in a book written many years ago contradict his present position—were answered both in later committee testimony and in a direct reply printed in the CONGRESSIONAL RECORD—though opponents still quote only the original charges (pp. 7–8).

Mr. Speaker, I have reviewed the direct reply by Mr. Quinn to my detailed documented review of his writings which appeared in the CONGRESSIONAL RECORD of July 28, 1955. Mr. Quinn supplies no information in his statement to refute any of the quotations which I used from his first book Liberty, Employment, and No More Wars." He supplied 4 quotations, 3 paragraphs from 1 chapter, and the fourth from another, which in no way refute the many quotations I inserted which were taken from numerous chapters in his several books.

Mr. Speaker, specifically Mr. Quinn in his book Liberty, Employment, and No More Wars said:

Monopoly was seen to be an evil and as an antidote the antitrust laws were passed to enshrine the old competitive order and fix it on the future, regardless of growth, progress, or evolution. Then natural law proceeded to make cynical jokes of our man-made antitrust laws. Within the past 40 years there has been a veritable slaughter of small-independent business men. Corporations and combinations of them have grown by leaps and bounds, until the independent is the exception and the huge organization is the rule. Officially we have not yet recognized the immutability of the natural law. Instead, we continue to fight it, superficially and hopelessly, of course; but the fight is kept up at tremendous and useless, legal expense. I hasten to say that it is not all wasted. Some combinations and artificial price-boosting agreements and practices are clearly antisocial, as mere forms of commercial larceny. But the overall trend toward big business within limits which have not yet been set, and a constantly higher and further division of labor means lower factory costs and is inevitable in the progress of civilization. The fact that we have badly handled the accompanying social developments does not change, one whit, the inevitable trend (pp. 85–86).

When we speak of the United States, its resources, abilities and accomplishments, then Ford, General Electric, General Motors, A. T. & T., U. S. Steel, Dupont, et cetera, are sources of American pride and strength as much as our great battleships, the George Washington and Golden Gate Bridges, the Smithsonian Institution, or the Merritt Parkway. They are a part of this great country. Where would we be in this war without them?

Our "Sherman Antitrust Act" and the "Clayton law" were belated attempts to enforce the old competition. Both Federal laws were based upon the assumption that competition was still the beneficent force that it was in the early days of industrial development. Their authors saw competition vanishing before cooperation and consolidation and attempted by legal enactment to resurrect and revitalize it. They sought to break up trusts and combinations by law, as if legal enactments could change natural, economic laws. By prosecution and persecution industries may indeed be destroyed, the whole Nation may be plunged into disaster, but the old rugged individualism and unrestricted competition cannot be restored in this new age (pp. 83–84).

These statements are so completely at variance with the theme of his new book that once again I shall set the record straight.

In Liberty, Employment, and No More Wars Mr. Quinn stated the trend toward big business was inevitable—that it could not be changed by legislative action. In Giant Corporations Mr. Quinn takes a diametrically opposite position. He says:

To the confirmed evolutionist, elephantine organization is an inevitable, unavoidable development incident to the machine age. Karl Marx considered it a collectivism that would captivate mankind. And to the extent that we have accepted his doctrine, he has appeared to be a prophet. The advocates of mergers, combinations and superorganizations, not their opponents, are following in the philosophic footsteps of the father of communism. We see in the development of mass forces a gravity impact that is sacrificing individuality in favor of material welfare and an illusory security. Noble-spirited thinkers and writers like Thoreau and Emerson and the liberal-minded of our time uphold the human and spiritual values of the individual against super organization. They would have us take hold of organization and mechanization and make the white elephants subordinate to, rather than masters of, spiritual man. They would say with Samuel Johnson, "Sir, I know my will is free." The practical question, then, is whether or not we choose to accept the doctrine of inevitability and with it the continuing reign of constantly bigger and bigger elephants or, on the other hand, to force them under the control of the people, where they belong (pp. 191–192).

Mr. Quinn denies that he is a Socialist, but yet repeatedly suggests socialist solutions to industrial problems. In Giant Corporations he says:

The expression "creeping socialism" can be used in such a way so often that we come to assume without the slightest warrant that there is something wrong or dangerous in it. It can be used by backward, selfish men to stop health insurance or the public building of roads or schools. The truth becomes lost in the propaganda campaign. I am not a socialist, but if I am forced to choose between government by a few, private, giant businesses, economic rulers with selfish, often shortsighted motives, on the one hand, and democratic socialism on the other, I shall unhesitatingly choose the latter, under which at least I have an effective vote (pp. 98–99).

Mr. Quinn proposes that the Government should enter into any business field in order to promote inventions. He says:

The cost of securing a patent, the long time required, the need to secure financing and to build an organization to produce and market the product and the cost of defending the patent against able lawyers, most of whom represent the big companies, is quite beyond the ability and means of the individual inventor.

Still, as we have seen, he is the one most likely to have original, basic ideas. We have come now to the point where the Government itself must establish means of encouraging the independent inventor. A Federal agency could undertake the responsibility, as agent of the inventor, to ascertain the value of the invention and then to see that remunerative licenses are issued to avoid monopoly and at the same time to compensate the inventor fairly. When necessary, in unusual circumstances the agency could be empowered to launch the product itself. Its power to do so would make the exercise of the power unnecessary in 99 percent of the cases, perhaps all of them. In answer to those who may raise the cry of socialism against this suggestion we should ask: What else can be done? Must we stand by and witness the further suffocation of American creative ability (pp. 178–179)?

Mr. Speaker, certainly if we establish a Federal agency to ascertain the value of inventions and then engage in the production of new products as Mr. Quinn proposes, we will have embarked upon socialism with a vengeance.

The above quotation is not the only instance in his new book Giant Corporations—Challenge to Freedom, in which Mr. Quinn proposes the Government enter into competition with private business. He believes that the Government has a responsibility to promote full employment. He says:

Government insistence on full employment is about the strongest force we have to prevent monopolies from holding prices up to the point at which production may be dangerously restricted and the machinery of business slowed down, although we suffer now more from over- than from underproduction. Let the Government stand by ready to go into business, any and every business, that may be necessary to maintain full employment, or at least to provide somehow the indispensable purchasing power. Shorter work hours will follow if they become practical and the retirement and pensioning of the senior citizens sooner is indicated in the interests of a wholesome economy. The only danger then would come from inflation, because the Government would have to borrow for the purpose and the debt, credit, and money supply could get out of hand (p. 122).

This too, is socialism and nothing else. Mr. Quinn's statement that the credit and money supply could get out of hand is the understatement of the year.

Mr. Quinn objects to programs to keep subversives from working in defense plants. He said:

There are many instances now of private corporations performing work on Government contracts for war material. Tens of billions of dollars are necessarily going into guns and tanks and planes. Where the work is of a secret nature, a new and strange personnel situation is created. Private corporations are assuming the authority to determine whether or not employees are loyal to the country. When an employee is discharged for disloyalty or because he pleads the fifth amendment, the employer assumes a political role that may deprive the employee of his livelihood and of his civil rights in direct violation of the Constitution of the United States. It is wrong and it is illegal, but it is being done. Only by a public court trial may an American citizen be found legally guilty of disloyalty to the country. He is within his constitutional rights if he pleads the fifth amendment or any other law of the land, despite any inferences or assumptions that may be drawn. Any lesser treatment is a feudalistic type of inquisition, however popular it may be momentarily. The corporation is not necessarily at fault. The point is that our society has so developed that the system itself assumes feudalistic characteristics and the individual tends to become inconsequential. His rights are lost in huge organizations in which numbers rather than individuals count (p. 105).

Mr. Speaker, keeping subversives and spies out of defense plants does not violate the constitutional rights of anyone. Throughout the operation of our security program no individual has been convicted of disloyalty by a private em-

ployer as Mr. Quinn suggests. Most unions, employers, and fair-minded citizens agree that the national security demands the exclusion of any security risk from a sensitive defense plant.

Mr. Quinn believes that the antitrust laws have not been properly enforced under the present administration. He says:

It is scarcely coincidental that under the present 1952–56 administration there have been a minimum of vigorous prosecutions under the antitrust laws (p. 122).

Many students of the antitrust laws, who have no reason to praise the record of the present administration, disagree with Mr. Quinn. Judge Stanley Barnes, who is retiring as the Assistant Attorney General in charge of the Antitrust Division of the Department of Justice, has aggressively enforced the antitrust laws. Our colleague, the distinguished gentleman from New York, Mr. CELLER, who is the chairman of the House Judiciary Committee, said:

I have been in Washington many years and have followed the activities of the Antitrust Division of the Department of Justice most assiduously. I know of no one who has given so much of his effort and so effectively to the work of that Department as Judge Barnes.

Our colleague, the distinguished gentleman from Texas, Mr. PATMAN, who is chairman of the House Small Business Committee, said:

I have been impressed with the type of effort he has put forth * * * and I hope that he is successful in what he is trying to do.

In the other body, the distinguished senior Senator from Illinois, PAUL H. DOUGLAS, said:

I have a very real respect for him, and I think he is one of the best officials in the present administration.

Our former colleague, the distinguished junior Senator from Alabama, JOHN SPARKMAN, who is chairman of the Senate Small Business Committee, said to him:

I think you and your Division are doing a very fine job.

Thurman Arnold, the Assistant Attorney General in charge of the Antitrust Division during the New Deal years, said:

I have watched some of the cases he has brought, and I have been very much impressed with his integrity and his vigor in antitrust enforcement.

Mr. Speaker, I believe that the statements by Members of Congress and Thurman Arnold are more representative of the effectiveness of the prosecution of the antitrust laws under this administration than the opinions of Mr. Quinn.

Mr. Quinn believes that the whole world is out of step and only the liberals are right. This insight into his approach to the complex problems of our industrial society is afforded by his comments on the objectivity of the press. He is opposed to one-sided presentations of any subject. He believes that "the other side" and the truth may be found in the left-wing press. He said:

We should look with suspicion upon every one-sided presentation of any subject. For "the other side" and the truth about vital public questions, I have found invaluable over a period of many years such publications as the Progressive, the New Leader, the New Republic, the Nation, and the Reporter. Significantly, these publications carry a minimum amount of advertising. Their editorial policies are not for sale to anyone, but this freedom is purchased at a price which may make it financially difficult for them to continue (pp. 132–133).

I believe it will help my colleagues to evaluate Mr. Quinn's proposals if they know that "the truth" is what the editors of the New Leader, the New Republic, the Nation, and the Reporter say it is.

Mr. Quinn is fighting to turn the clock back to a simpler society without any impersonal complex organizations. I am sympathetic with his desire to achieve better communication between management and workers and between the various levels of management, itself. However, the problems of communication are just as serious in a $50 million business as they are in a billion dollar business. Fortunately, great progress has been made in integrating management and the worker into a harmonious whole in our large corporations. Mr. Quinn, himself, in Liberty, Employment, and No More Wars said:

Our large corporations have worked out better than Government, practical ways and means of getting men to work together in a common cause. Indeed, they have done such a good job of it that human adjustments, an equilibrium of desires and loyalties beyond anything attained by Government have been achieved by private industry (p. 83).

Mr. Speaker, let me contrast this statement with the following which is taken from his new book, Giant Corporations—Challenge to Freedom:

The pressure is on each one to stay where he is, however hopeless his prospects, and to dry up, if necessary, as somebody's man—the corporations,' the Government's, or the Army's. This is what modern giant organization is doing to the individual—making of him a supine dependent whose outlet, like the serf's, too easily becomes self-indulgence. Human nature learns to accept or tolerate failure that each one can charge to himself, but failure chargeable to others who may not even be identifiable can never be accepted by men of spirit (p. 106).

If we are to operate with the only kind of economy which will produce the weapons to maintain our military strength against the Communists, we must maintain large organizations including organized groups within the Government and within the Army, to which Mr. Quinn also seems to take exception. His aversion toward organizations is so great that he says:

Any comparison between the way we do things in this country and the way they are done in Russia may be quite unpopular just now. But the plain truth is that there is little, if any, difference organizationally between Russian economic totalitarianism and economic totalitarianism of General Motors or the United States Steel Corporation (p. 97).

General Motors and the United States Steel Co. undoubtedly have their faults, but the difference between them and Russian economic totalitarianism is so great that very few would venture such a comparison. American corporations must deal with independent unions. They are in competition with other firms in the same industry and with other industries for the consumer's favor, and the Government, through the antitrust laws, prevents them from enjoying a monopoly. The management of any American corporation must act as a trustee for the interests of the stockholders, the consumer, and the employees. Any of these groups are free to bring pressure to bear upon the management and each of them has access to the Government. In Russia, the steel trust and the automobile trust are the government. Mr. Quinn's comparison shows how far he has been carried away by his emotional antipathy toward big business since 1945.

Mr. Quinn attacks the system of industrial development which has made this country great in which the manufacturer of a complex industrial product, the prime contractor, uses countless subcontractors to manufacture parts within their capabilities. He says:

Now, it happens that the reputation for quality, performance, and service of almost all completed products is made up of many parts, elements, and contributing services. A producer of piston rings, for example, for an automobile manufacturer loses his identity in the completed end product. Although he contributes proportionately to the final product, he never shares in its reputation. He may devote years of creative work to the production of the best piston rings imaginable and still remain always in the precarious position of being wholly at the mercy of the will or whim of the end product assembler—who, in the case of defense products for the Government, is called the prime contractor. The parts or subcontracting manufacturer does not participate as a part owner of the reputation of the completed product to which he contributes. The plus value which he helped to create is lost to him. Because he has no known identity, he is liable to be forced out of business or taken over at any time by the buyer of his parts product. As the number of potential buyers decrease (it is down to six in the automobile industry) the chances for any parts producer to sell to others diminishes. Moreover, the requirements of giant manufacturers—that is, assemblers of completed products—are so great in volume that the small-parts manufacturer tends to concentrate on the business of one primary company. Increasingly, therefore, he is at the mercy of his one big customer. The result is that the big buyer, not the small supplier, dictates the price and the specifications. They can be so difficult or impossible to meet that the little fellow is driven out of business or forced to merge or sell out to his big buyer at a sacrifice price. Under such conditions, without governmental regulations, the tendency is for the big fellow to get bigger and the little fellow smaller, if he lives at all. The fault in the arrangement is that the big fellow is always in the dominant position and he is permitted legally to grab the plus values, which belong, in proportion, as much to the suppliers as to him (pp. 155–156).

In the first place, the prime contractor must be responsible for maintaining exacting production standards, to which Mr. Quinn objects, as it is his responsibility to see that the parts supplied by the several subcontractors assemble into a satisfactory end product. The facts completely belie Mr. Quinn's thesis that the producer of components is at the mercy of the prime contractor. He specifically cited the manufacture of automobile piston rings. It so happens that most of the piston rings used on Ameri-

can cars are manufactured by one of the smaller companies, the Perfect Circle Co., with total assets of less than $20 million. This company, small thought it be, through aggressive engineering and high quality of product, has maintained its integrity and independence. There is still ample opportunity for the subcontractor who can deliver the goods and do a satisfactory job.

Mr. Quinn proposes a graduated corporate income tax in order to encourage the distintegration of large companies. He says:

If an average of 52 percent on corporate profits is required for revenue, there is no good reason of policy why corporation tax rates should not be graduated. They could be as low as 10 percent on $10,000 of gross profit and as high as 75 percent when gross profits exceed a billion dollars. The 75 percent rate would of course bring a storm of protest from a score or so of giant corporations, because it would result in a decentralization move, which is exactly what we want. The Frigidaire Division of General Motors, for example, could easily become a separate corporation, as it should be, since there is no relation between automobiles and electrical home appliances. The separation would be accomplished by the incorporation of Frigidaire and the separation of the book value of the investment in this division. Shares in the new company would then be distributed to present shareholders of General Motors in proportion to the book value of their holdings. In this same way the trucking business, coach business, diesel-engine business, etc., could easily be decentralized without damage to anyone, except those who wish to hold intact the predominant market and capital power of monster General Motors, regardless of the effect on the country. United States Steel could thus be decentralized into dozens of separate companies and the opposition of the Attorney General to the proposed Bethlehem-Youngstown and other steel mergers would begin to make sense. In this same way other giant corporations could be separated into several companies without fragmentizing them or damaging any property right (pp. 170–171).

The difficulty with this proposal is that a profit of $1 million in some lines might represent monopoly profits, and in others, where the capital investment per worker is higher, might represent a totally inadequate return.

Mr. Quinn categorically states that there is no relation between automobiles and electrical home appliances. Therefore, any company which happens to make both should have these functions divorced. It is true the two products are not made on the same assembly line, but both manufacturing operations draw on the same fund of scientific and engineering knowledge. Mr Quinn says:

General Motors is much too big and powerful. The fact that its management personnel are attractive men, socially minded, according to their lights, is beside the point. The corporation should certainly be restricted to the automobile industry and then further decentralized if we are to maintain a healthy economy and check our totalitarian trend (p. 182).

Mr. Quinn's efforts to restrict firms to a single industry would make it impossible for companies to operate the vast new technical centers which hold such promise for our future economic development. What is more important, they are a necessity in the race for military supremacy with the Soviets.

Since the war American industry has invested billions in new research facilities. According to Mr. Quinn, these are probably unnecessary. He says:

Mr. Slichter's confidence in the creative ability of the giant corporations appears unlimited. I wonder how he would explain the fact that in the electrical-appliance business, to which he refers, not a single product now in use—refrigerators, lamps, washing machines, vacuum cleaners, fans, irons, broilers, ranges, shavers, mixers, etc.—36 in all, was ever created or invented by any of the giant corporations in that field—General Motors, General Electric, or Westinghouse. What has Mr. Slichter to say about this? Mr. H. Stafford Hatfield in his excellent book The Inventor and His World states, "It is frequently said * * * that advance in the future will come exclusively from the magnificently equipped research laboratories of the great trusts and corporations. There is no evidence of this except the ipse dixit of the corporations themselves." Mr. Hatfield lists the following inventions which have not come from great research laboratories but from the independent work of individuals—monotype, casehardening of steel, photogravure, moving pictures, the dial telephone, the diesel engine, carborundum, the telegraph and telephone, electric train control, the submarine, the safety razor, the airplane, bakelite, the gyrocompass. "The very latest example of the victory of individualism in invention," he adds, "is television, worked out by a young Scotsman with the slenderest resources in a cellar in Soho" (pp. 68–69).

I do not doubt that it is possible to design washing machines, vacuum cleaners, fans, and irons without technical centers. However, the fundamental knowledge necessary to produce guided missiles, nuclear weapons, and the electronic equipment for our aircraft warning systems can only be produced with the assistance of the best research facilities industry can secure. To be sure, the individual scientist will always be the key to each new development, but he no longer can operate in isolation. The engineering work behind the development of the H-bomb by DuPont required a series of more than 2 million blueprints. A new jet interceptor now being designed requires more than 370 engineers working on the drawings for just that 1 plane. In 1940 a typical fighter plane required only 17,000 engineering man-hours. Today a modern fighter requires 1,400,000 engineering man-hours. The planes that will be flying in 1960 will require more than 2 million engineering man-hours to design. The computations necessary to design modern aircraft require electronic computers which can make literally thousands of computations in a second. The rental cost on these machines, I am told, is $40,000 a month. These are the reasons why technical centers are necessary.

Recently a great new technical center was dedicated by the General Motors Corp. in Detroit. The research activities of this corporation have already had an impact far beyond the motor vehicle. It developed the first successful mechanical heart which will save the lives of many patients where heart surgery is necessary. It produced the new centrifilmer for purifying vaccines such as the Salk vaccine. If we followed Mr. Quinn's premise that this organization should confine its efforts to automobiles, these humanitarian projects would not have been undertaken.

President Eisenhower participated in the dedication of this great research center. He said:

It is truly an honor to participate with you today in this dedication of this new and great research center of America. It is a new adventure for frontiersmen. The history of America is a history of frontiers, and each frontier has been a challenge to Americans to dare more, to do more, to go forward faster and on a broader front.

We had geographical frontiers; always lying out there in the West and the Appalachians, challenging every person that was an inhabitant of those first Thirteen Colonies. And so we had Lewis and Clark, and Pike, and all the rest opening up that great country. Even today some of those frontiers still remain. And we have great and gallant Americans exploring the Antarctic and the Arctic. Always a frontier—the challenge—and the response.

We had our economic frontiers. We started as a Nation of small farms and little shops when the fur trade was in its infancy. And we learned about the gold in California; we learned about the great expanse of the West where we could raise cattle and produce our food. Frontiersmen went into them. We built roads and railroads to open up all those lands. Inventors came along and we had great machines to meet our needs. And so we had the great economic revolution of the 19th and 20th centuries that has so changed our lives.

We were a Nation of political frontiersmen. The reason that today we so admire Franklin and Washington and Patrick Henry—Jefferson, Lincoln, is because they dared to think new thoughts about the way that men should govern themselves—the institutions and the procedures they should set up—and devised a scheme that has stood the test of time and has met our need for progress, with men enjoying equal justice, rights, and the great opportunities.

So it might be said that the frontiersman is symbolic of the United States. General Motors was founded by frontiersmen, people who were not satisfied with what we had and were determined to make it possible for men to travel faster and better and in greater comfort. Among those frontiersmen, two of your greatest were, of course, Alfred Sloan, Jr., and Mr. Kettering. Their accomplishments were so great in the technological field that today their names are household words in our country. Even though they have at least partially laid aside their work in that regard, they are still frontiersmen, showing us all how duties and citizenship can better be performed, how men can better discharge their duties in this country as citizens.

Here with me today is another frontiersman. I have just had lunch with him—the President of the great country of Indonesia. America is honored that President Sukarno has come to visit us. He wants to see, among other things, this great research center you are establishing, and he is going to visit you on May 28.

This particular center is a place for leadership in furthering new attacks on the technological frontier. Beyond that frontier lie better and fuller employment, opportunities for people to demonstrate yet again the value of a system based on the dignity of the human being, and on their free opportunities in life. Beyond it lie people, better capable of working with others and so that they may share what they learn with our friends in the world.

We hope that we will be fortunate enough to be able to give President Sukarno something that he may carry to his people. We would be very proud indeed if he should find something here worthwhile carrying back.

So in this technological center, we have this development of new machines responding in their efficiency to the constantly inquiring mind of the technician, that they in turn will produce yet broader freedoms and richer dignity for human beings, more rewarding lives, for all America and we hope through all the world.

Mr. Speaker, on previous occasions I have expressed my concern with the misuse in United Nations debates of statements made for political purposes within the United States. The Communist bloc in the United Nations assiduously read every attack upon our Government and our business institutions. The May 26, 1956, issue of the Nation carried an article by Mr. Quinn entitled "Sovereign State of GM, World's Biggest Corporation." He attempts to identify General Motors with the Eisenhower administration. He says, "The corporation has had three of its representatives in President Eisenhower's Cabinet." I presume that the three Cabinet members to whom Mr. Quinn refers are Secretary of Defense Wilson, the Postmaster General, Arthur Summerfield, and the former Secretary of the Interior, Douglas McKay. In order to set the record straight, it should be pointed out that Secretary McKay and Postmaster General Summerfield never worked for General Motors, but were automobile dealers. The theme of Mr. Quinn's article Sovereign State of GM was that the corporation and its dealers were at odds with one another. If that is so, it is difficult to see how the presence of two General Motors dealers in the Cabinet could be of advantage to General Motors. Mr. Quinn can't have it both ways.

My particular concern with the article in the Nation is the following statement: "GM constitutes a privately-owned economic world state empowered to make agreements with foreign governments and interests which the political state that chartered it could not legally make." Mr. Speaker, this statement will be thrown back at us in the debates within the United Nations to embarrass us. If we are to expand foreign investment and to lift the burdens of foreign aid from the backs of the American taxpayer, we must encourage foreign investment by American business. The Congress has ample power to deal with any American corporation which may make any agreement with a foreign government contrary to national policy. It is true that when the Federal Government was formed the States relinquished their authority to conduct foreign relations. Private corporations are not conducting the foreign relations of the States which chartered them nor of the Federal Government. They are engaging in worldwide commercial transactions which must be carried on by private corporation unless we wish to see the Federal Government engage in State trading. Again, Mr. Speaker, such a course would be socialism to which I am unalterably opposed.

Mr. Speaker, the Congress has a responsibility to secure the benefits of big business for all of our citizens without condoning abuses of economic power which may restrict the opportunity of anyone. We must constantly review all of the laws to make sure that we retain the good and reject the bad. This cannot be done with a meat ax which would destroy the technological base of our modern society. Whatever is evil must be exorcized with a scalpel. The task before the Congress requires the knowledge and skill of the surgeon, not the approach of a butcher.

Failures of the Nasser Regime

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1956

Mr. MULTER. Mr. Speaker, the following article, which appeared in the May 3, 1956, issue of the Reporter makes interesting reading:

EGYPT: POTEMKIN VILLAGE ON THE NILE

(By Hal Lehrman)

When Col. Gamal Abdel Nasser and his colleagues seized power in July 1952, Egypt's vital statistics read in large part like the Ten Plagues: 96.5 percent of its land was uninhabitable desert; the population density was 1,600 persons per square mile; a single cultivated acre had to feed and maintain 3.6 human beings; the national per capita income was $100 annually; the illiteracy rate was more than 82 percent; the average life expectancy at birth was 30 years. Foreign observers were acutely aware of these conditions. Nasser did not have to perform prodigies of efficiency to acquire a reputation abroad. He needed only to confront Egypt's vast misery, firmly announce his intention to make it vanish, and then begin chipping away. This he has done—and the reputation has followed.

Perhaps the most attractive aspects of the Nasser regime, in the eyes of foreign beholders, are its honesty, youth, and energy. Under King Farouk the royal administration, high and low, functioned according to the classic Oriental system of baksheesh. Politics was a perpetual competition among old-line parties and the old men who headed them. Intrigue and maneuver left little energy for problems of national welfare. The junta has undeniably swept this apathy and corruption away, along with the political parties in which they festered. Youth now stands at the controls: Most Cabinet Ministers are under 40.

Non-Egyptian witnesses have appreciated the contrast between Nasser vitality and Farouk torpidity. Perhaps influenced by a desire to see a healthy, stable, productive Egypt, western reporters have tended to minimize mistakes and aberrations or even not notice them—and magnify the achievements.

The result has been a sterotyped image, widely imprinted. Critical readers this side of the map may feel a recurrent irritation over the military junta's behavior in foreign policy. But on internal policy there is nearly universal acceptance of the notion that the junta is progressive and reformist, a paragon of efficiency and sound intentions.

ROBOTS ON DISPLAY

Every newly arrived foreign correspondent in Cairo is strenuously invited to visit Liberation Province, a stretch of reclaimed wasteland off the road to Alexandria, about 55 miles northeast of the capital. Fellahin who once were landless serfs of Nile feudalism have been settled there as independent farmers in spick-and-span new villages. The area is officially described as a pilot project—the beginning of a large-scale program.

It is administered by an autonomous board directly responsible to the cabinet. Each village has been endowed with a multipurpose cooperative managed by functionaries representing the central regional directorate. The cooperatives are staffed with Government technicians, financed with Government funds, and equipped with Government-supplied machinery which is operated by hired crews from outside. Every fellah is inscribed as a member of the local cooperative and assigned a 5-acre interest. But all the land of the village is considered a single farm, its occupants "one family and one hand."

The visitor finds some 600 families established in conditions that are clearly superior to their former destitution. Agents of a central governing board are busy looking after the inhabitants' every need. The happy peasants wear neat government-issue clothing. The wives are even being lectured on birth control, and husbands are discouraged from arbitrarily divorcing wornout wives and acquiring fresh ones—an attack on the prime Egyptian curse of overpopulation.

But closer inspection reveals a pervasive authoritarian tone. Small families are obligatory. According to some of the local farmers we talked with, parents are told, informally but firmly, that more than three offspring will mean expulsion. The free clothes are uniforms—one color for males, another for females. The cooperatives do more than help the new proprietor; they very nearly make him superfluous. They do everything for him, from providing seed and fertilizer and cultivating the soil to harvesting and marketing his crop.

The new enterprise is unable even to meet expenses of current operations as long as it must provide income for idle farmers. (The management now hopes, by introducing tomato canneries, sugar-beet refining plants, and other small industries, to squeeze extra income out of the crops.) At short range, Liberation Province ceases to be a pilot project, since its multiplication, in its present form at least, would be ruinous to the national economy. It becomes instead, a Potemkin village.

AGRARIAN REFORM

Land reform is another triumph claimed for the junta. Government brochures give the impression that a nationwide agrarian revolution is underway. All royal estates have been confiscated and, one is assured every square inch of ground owned by other landholders in excess of some 200 acres each has been expropriated for distribution to the land-starved masses. To prove it, the visitor is conducted to a village where a former large estate is now segmented into many little pieces. He duly notes that the new smallholders have groceries on their shelves, unpatched clothes on their backs, perhaps even a radio in the house or a bicycle at the door. Certainly nothing like that existed in Farouk's day. But how typical or widespread is this progress?

The highest estimate, by the most optimistic government spokesmen, of the amount of land ultimately to be distributed under the agrarian reform is 600,000 acres. But even this figure is only about 10 percent of all the cultivated land in Egypt.

Furthermore, only 250,000 acres had been parceled out by the end of 1955 after 3 years of fanfare. It is going to take the junta another year just to finish requisitioning the estates, to say nothing of their redivision.

Land reform in backward countries is a notoriously slow proces. So it may seem unfair to condemn Nasser for not having settled everything in 3 years. But should he be applauded for dragging his feet when

nothing prevents him from lifting them, and when he boasts that his new reforms are already fundamental? At best, Egypt simply does not have enough arable land for its people. But agrarian experts point out that a limit of 100 acres on the size of estates might have made a genuine difference to Egypt's peasantry, and would have been just as practical politically as the innocuous 200-acre limit at which the junta halted. Left with 200 Nile acres—among the most fertile in the world—each of the pashes against whom the regime has raled so virtuously remains very comfortably a pasha. Besides, even the 200-acre limit is largely a hoax. If the pasha has sons, the law enables him to hold on to 300 acres. He has been allowed to sell off his excess acreage privately before requisition—sometimes becoming a concealed owned by sale to his own impoverished tenants. It is even possible to obtain massive exemptions from the legal limit by promising to begin large industrial-crop or reclamation projects.

Furthermore, the demand for labor on shrunken estates has gone down faster than the supply of laborers who have not received land and who therefore still need to hire themselves out. Farmhands complained to this writer that the pasha in their vicinity had been able to cut wages as much as 50 percent because of the increased competition for jobs.

The big winner in the agrarian reform is the state itself. Every new owner works off his obligation by making 30 annual payments to the High Committee for Land Reform, which supervises the program. This rent adds up to twice the initial market value of his property. Part of the money goes to the expropriated owner as compensation. The remainder is held by the Committee. The official explanation is that these funds are required to meet "administrative expenses." One would expect them to stay at a steady low level because of constant and prompt disbursement. Instead, the Committee's account in the National Bank of Egypt has been steadily climbing.

A final, and at long range perhaps the most serious flaw, is the regime's failure to use the agrarian reform as an opportunity to attempt at least a beginning in the training of a self-reliant peasantry. More than 160 cooperatives are already functioning; a total of 400 is projected. These can be justified as an essential aid to ignorant, impoverished people who would be helpless if they had to make their way from the start without assistance. But when these people are left permanently dependent on imported government crews and machines, they are likely to be as helpless as ever if the aid should cease. Like his robot counterpart in reclaimed Liberation Province, the so-called independent farmer on redistributed land gets little chance to display initiative or even to learn.

STEEL AND SHIFTING SANDS

Another major exhibit for foreign approval is a giant steel mill now under construction near Helwan below Cairo. By the middle of 1957, according to official claims, this plant will be producing 220,000 tons annually, which would replace two-thirds of the steel now imported. The officials do not mention that this domestic steel will cost Egypt three times as much as foreign steel.

Farouk can claim the dubious credit for the idea of putting Egypt into the steel business. Back in 1937 it was decided that since iron ore existed at Aswin in the south, a steel mill should be built there. Designs for an Aswan plant piled up—until after several years it occurred to the planners that Aswan was an expensively remote point to which to bring fuel. Accordingly, the site was moved much farther north to Helwan. Iron ore from Aswan and coke brought in from abroad would be delivered to Helwan by Nile barge. But building was delayed for a few years more while still a third site was debated: Kosseir, with important deposits of iron and an advantageous location on the Red Sea, permitting large reduction of freight charges (which make up five-eighths of the cost of coke to Egypt). Meanwhile, German-delivered machinery had been rusting on the sands for a decade.

When the junta came to power it resolutely reverted to the Helwan location. There is no guaranty that the mill—construction costs of which have been increasing inexorably—will really be completed this time. But if it is, it will operate with ore mined in uneconomically thin layers, at an expensive depth, extravagantly far away from the place where it is to be processed, and with coke hauled from abroad at crippling freight rates. The Nasser government, however, will have in its helmet the bright feather of industrializing the country.

PIE IN THE SKY

What about the dynamism that makes the junta so impressive?

To attack illiteracy, disease, and general backwardness, the régime has launched a combined service unit program which is to erect a school, clinic, workshop, and community hall under 1 roof in 800 villages. But the few units constructed to date are extravagantly lavish. It has been estimated that three-fourths of the limited funds thus squandered might have been better employed in the training of technicians, of whom Egypt has a chronic shortage.

Like other countries with a narrowly based agricultural economy, the new Egypt sees a panacea in industrialization. But planning for it tends to be irrational. An imposing hydroelectric plant at the low Aswan Dam, one of the major completed projects of this planning, is already beginning to look like a white elephant. To begin with, more than $2 million was lost when construction was begun at one site and then abandoned. Now the machinery has been installed—but some 700 miles of transmission lines must be strung northward from Aswan before the power will be available to population centers now without electricity (or income to pay for it) and to industrial clients. But, apart from a new fertilizer plant at Helwan, the industry the new power supply must serve in order to be economically justifiable does not exist—and neither does the capital with which to begin creating this industry.

An important potential source of investment in the industrialization Nasser passionately desires is private capital, domestic and foreign. Yet his regime paralyzes such prospective investors by a contrary policy of red-hot nationalism and finger-in-the-pie economic controls.

Business establishments are being compelled to discharge most (non-Moslem) local employees because they lack Egyptian nationality. Because the ranks of Egyptian elite workers and professionals are thin, employers must fill vacancies with second- and third-raters. Further, the Government has powers to confiscate properties without appeal. It issues decrees which oblige companies to retire directors at 60, insist that their replacements have regime approval, and make the presence of a state agent mandatory at board meetings.

Part of the motivation behind the land reform was a desire to maneuver the agrarian rich into becoming industrial investors, but they are holding onto any expropriation money they get, or else they are putting it into nonproductive real estate, because there is no rent ceiling on new structures. Hence the rash of building in Cairo which gives a spurious impression of prosperity.

In its zeal for experiment, the regime has tended to undervalue experience. It has snubbed experienced men and given their posts to overambitious youngsters. "The economic incoherence is frightening," said one foreign expert who was well disposed toward the regime. The Nasser reforms, with honorable but rare exceptions, constitute a jumble of uncompleted plans, in a maze of disconnected agencies and ministries, supported by commitments far beyond capacity to pay.

THE HIGH ASWAN DAM

Some of these plans may possibly be scrapped after conclusion of the impending agreement on western financial aid to the high Aswan Dam.

For political rather than economic reasons, the United States, Britain, and the International Bank for Reconstruction and Development are prepared to help Nasser with his major development project: a high Aswan Dam. Negotiations were particularly sticky because the bank had gravely scrutinized Egypt's welter of economic programs and policies and proposed certain rectifications and controls against which dictatorial and nationalist vanities had bridled. Nasser may have sufficient funds for his share of the $1.3-billion project, but only if many other schemes for which he has already been applauded by uncritical onlookers—good or bad, on paper or half implemented—are abandoned.

The Aswan project itself exposes characteristic foibles of the junta. The regime has habitually asserted that the dam's storage of unused Nile waters would reclaim 2 million acres; when pressed, Egyptian officials admitted that maybe only 1.3 million acres would actually be new soil—the other 700,000 would simply be made more fertile. Now, however, officials are commencing exuberantly to jumble both sets of figures and come up with 2.7 million acres. For a long time Cairo disdained to consult Khartoum, although the dam as planned would involve the Sudan's vital interest in the Nile and even create a vast lake flooding more than 100 miles of Sudanese Nile territory and obliterating the Sudanese town of Wadi Halfa.

Finally, the dam is envisaged by Nasser as his monument, the basis of his claim to the gratitude of Egyptian posterity. The junta has hailed the project as the cure-all for Egypt's electrification, industrialization, and land-hunger problems. Yet there are no visible funds or even sensible plans for the factories and other massive economic developments that the dam's hydroelectric facilities are presumably to power. (These facilities are over and above those already noted at the low Aswan). Nor is there the slightest reason to believe that, even with the high dam completed in 18 years and irrigating a third as much land as Egypt cultivates today, it will be anything like a cure-all. The added acreage will barely keep pace with the added population, which swells at an annual rate of more than 3 percent.

PHILOSOPHY

The views of Nasser's chief lieutenants clearly reflects the authoritarian character of the regime. "What this country needs is drive," Interior Minister Zakaria Mokhialdin, commander of the police and director of counterespionage, told me. "Human qualifications," he went on, "are more important than knowledge or experience. Sincerity and hard work are the best teachers." But what if the sincere hard worker goes wrong? Who controls him? "I suppose you mean we ought to have a parliament," he replied. "We had one under Farouk, and nothing got done. Well, we'll have a parliament again. Not that we need one. The people are satisfied with us. If they weren't it would be reported to me. But we want the people to participate more. There will therefore be a parliament soon. Its form doesn't matter. It will meet, discuss, and advise—somehow. But no opposition. Not to the basic principles of our revolution."

Much of the same philosophy was expounded to me by Lt. Col. Anwar al Sadat, who is both Minister of State and leader of

the Islamic Congress. Recalling that he had once successfully arranged the assassination of a royal Egyptian pro-British Cabinet Minister, Sadat assured me that political murder was now no longer patriotic, because "Egypt today is at last ruled by Egyptians." But could his opponents criticize him? I inquired. "Certainly not," he retorted. "This is a revolution. We will permit no attacks upon it. Egyptians are a simple people. Four out of 5 are illiterate. They would be easy victims for any demagog."

AND A CONSTITUTION

With such a mentality shaping it, the constitution Nasser finally granted Egypt this January has inspired no grateful odes to liberty. It is the junta's second effort. The first drafting commission included distinguishing jurists and others representing a wide range of opinion beyond the military. They produced an exemplary document. It created a parliament composed of genuine representatives. It firmly gave the franchise to women literate enough to fill out a voter's application. It bestowed on women with a university degree the right to sit in parliament. In its opening paragraph it abolished military rule. The junta straightway rejected the work of its own commission and clamped a censorship on discussion of the draft—including the fact that it had been rejected. The assignment of writing a constitution was taken up this time by the revolution command council itself.

The substitute version, now unveiled, clouds its intentions toward votes for women in the following triumph of verbiage. "The state secures for the female citizens means for reconciling their family duties with their public responsibilities."

According to current reports, male voting will be compulsory but female optional—which is tantamount to no votes for women at all in millions of rural households where they have little more than chattel status. Article 191, snatching back whatever freedom the previous 190 articles may have inadvertently released, stipulates that preconstitution laws and mechanisms established by the junta in restraint of freedom "cannot be annulled or their validity questioned." A law is still to be written that will inform the Egyptian people who are to be elected to the national assembly, by whom and how. But it is certain that, with all other parties barred, Nasser's rubberstamp Liberation Rally—renamed National Union and empowered to nominate all candidates—will continue to have a great deal to do with running the government.

DEGREES OF DESPOTISM

Is Nasser popular? In neighboring states, yes. To them, Nasser at the moment seems the brightest light in Islam since Mohammed—because he has defied the West, in the Czech arms coup and other matters, and gotten away with it.

But inside Egypt his glory is diluted by the reality of day-to-day life. In the anonymous darkness of even the humblest Cairo movie house, Nasser's handsome face evokes only silence, and sometimes a derisive whistle. Anyone who applauds gets punched by unidentifiable fists, or as least is invited menacingly to shut up.

By Western standards, Farouk's rule was intolerable, with an abundance of terror and internment camps. But the monarchy's police apparatus angled mainly for big fish. Obscure subjects could grumble out loud with reasonable impunity. Even General Naguib, whose administration was hardly a model of freedom, at least stood for a "liberty" soon to come.

Still diseased, still illiterate, and incapable as yet of full self-government, the Egyptian people at large will accept rule by a clique, but only up to an uncertain limit. There has to be enough elasticity in the tyranny for a seditious speech now and then, even a refreshing street riot. Failing that, the man on top of the obelisk may be feared but not admired. So it is with Nasser. His police are too efficient.

Is Nasser, nevertheless, firmly seated? Superficially, he seems to have cut off any chance of revolt. While his cabinet contains only a minority of 8 officers (as against 10 civilians), the military members meet apart with him, usually at night and under heavy guard, at a former Farouk lodge on Gezira Island, as the all-supreme Revolution Command Council.

Nasser's two closest colleagues, Colonel Mokhialdin and Maj. Gen. Abdel Hakim Amer, respectively manage police and army for him. A Free Officers Corps of 350 picked men holds the key positions in every branch of government. Some 40 of these officers report directly to Nasser.

The street, normally a threat to any Egyptian regime, is for the moment intimidated. Most leaders of the once dangerous Moslem Brotherhood have been executed, jailed, or exiled, and several thousand rank-and-file fanatics are still behind bars. Traditional parties like the Wafd and Saadist are illegal and disbanded. The Communists, never strong or particularly well led in Egypt, are more rigorously suppressed than ever. Finally, the two remaining classic sources of popular unrest—students and proletariat—seem to have been expertly frustrated. One of Nasser's majors is Minister of Education. A lieutenant colonel controls labor as Minister of Social Affairs. Today the universities are politically sterile; the trade unions, built up deliberately by the regime as strongarm squads, constitute an auxiliary militia that can be mobilized on an instant's notice to "demonstrate" in favor of Nasser's republic.

THE POTENTIAL DANGERS

But beneath this well-managed surface serenity, Nasser cannot relax too confidently even in his own junta household. During his first 3 years in power he purged 4 overambitious colleagues one at a time, streamlining the junta down to its present 8. Since then he has had to send 1 of the remaining 8 off on an extensive "tour" abroad to reduce his size in the public eye (Wing Commander Gamal Salem, the Deputy Premier), fire half the top staff of "radical" writers on another's newspaper (Al Goumhouriya, edited by Colonel Sadat), and read the riot act to a third for meddling in politics instead of building parks and boulevards (Wing Commander Abdel Latif Baghdadi, Minister of Municipal and Rural Affairs).

After challenge from intriguing rivals in the junta itself, the next biggest threat to Nasser lurks in the military establishment. His free officers represent only a small fraction of the entire officer caste, on which they spy and by which they are feared and sullenly hated. There is a new crop of junior officers who shared neither in the revolution nor in its spoils and therefore yearn ominously for more freedom. Even among the older field officers who helped make the revolution, some have been brutally shoved aside.

A sinister nucleus of Moslem brotherhood leadership still functions from Damascus. As for the students, the regime may boast it has captured their loyalty—but not so much, evidently, that Colonel Mokhialdin dares remove the heavily armed police who patrol every school entrance and admit nobody unable to prove he is a student or professor. "It's only to keep out persons who haven't paid tuition fees," the Interior Minister first tried to persuade me; later he conceded there still might be agitators on the prowl.

Add to the list of potential subversives an increasing breed of neoliberals unaffiliated either with the old discredited political parties or with the new holders of power. There is a significant reservoir of educated outs who despise the muscle-bound ins and are waiting quietly for the day of true liberation.

No organization is visible within or among these various centers of potential sedition. Nobody risks complaining above a murmur except in intimate private interview. For the moment, at least, Nasser is on the crest of the wave churned up by his arms deal with the Soviet bloc.

But an energetic conspirator would not have far to search for partners in a future revolt—if only he knew how to avoid soliciting government spies as accomplices. One strategic error by Nasser, one substantial defeat abroad for his prestige, and candidates for the succession will not be lacking.

Our Gold Supply Is Growing Short

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1956

Mr. ENGLE. Mr. Speaker, recently I placed in the RECORD some information in regard to the foreign claims against our gold reserves. Technically all foreign claims in dollars can be converted into gold and at present the outstanding dollar claims are equal to about half our gold supply. An article in the Washington Post shows that there has been an actual earmarking of almost $7 billion, which is approximately 32 percent of our gold stocks. The steady increase of the earmarking indicates a lack of confidence in the American dollar. Furthermore, we should be doing something about building up the gold stocks. A copy of the article is attached for the information of the Members:

GOLD STOCKS SET ASIDE REACH RECORD VOLUME

With gold earmarked by our Federal Reserve banks for foreign accounts reaching a record volume of $6,968,000,000 on March 31, or approximately 32 percent of our $21,716,000,000 of gold stock, it becomes increasingly important that the reserve authorities enlighten Congress and the public on matters of ownership, trends, origin, and causes of this heavy earmarking, said Walter E. Spahr, executive vice president of the Economists' National Committee on Monetary Policy.

The heavy earmarking of gold, 1953–56, is hardly a compliment to our nongold dollar, Spahr said. The heaviest earmarking of gold before suspension of redemption in 1933, was $463,931,000 in October 1931. The volume earmarked then amounted to approximately 11 percent of our $4,160,000,000 of gold stock, not counting that in circulation.

Gold earmarked for foreign account is in addition to our gold stock, he explained. Therefore, had the foreign owners of this large volume of earmarked gold preferred dollars to gold on March 31, 1956, they could have increased our gold stock to $28,684,000,000.

To obtain a picture of a trend in the earmarking of gold it is necessary to go to every Federal Reserve Bulletin for the period involved and to compile a table, Spahr stated.

He said increases in the volume arise from conversion into gold of dollars held by foreign central banks and governments—that is, by drawing down our gold stock—or from exports of gold by them to our Reserve banks for earmark rather than for exchange for dollars.

Since the beginning of 1953 there has been a persistent increase in the volume of gold

placed under earmark. Spahr reported. In 1952, the monthly average was $4,923,067,000. In 1953, the average rose to $6,118,492,000. In every month, except four, from January 1954, to April 1956, inclusive, there was an increase in the amount of gold placed under earmark for foreign account. The peak, during this period was the $6,968,000,000 on March 31, 1956.

The following table provides data on our earmarking of gold for foreign account for the period 1922 to April 30, 1956.

Gold held under earmark by Federal Reserve banks for foreign account

[Data compiled from the monthly Federal Reserve Bulletins]

YEARLY AVERAGES OF MONTHLY DATA, 1922–53

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

Appendix

The American Stockman and the American Way

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. ADAIR. Mr. Speaker, Mr. Earl L. Butz, Assistant Secretary of Agriculture, recently delivered another scholarly and factual address dealing with problems of agriculture. This was given before the South Dakota Stock Growers Association, Deadwood, S. Dak., on June 7, 1956, and, under leave to extend my remarks, I include it herewith:

THE AMERICAN STOCKMAN AND THE AMERICAN WAY

The American stockman is a real stronghold of individual freedom in the American economic system. He is a laborer, a manager, and a capitalist, all rolled up into a single package. He is a private enterpriser in the best sense of the word. He is an independent businessman in the best tradition. He is a stanch supporter of the American way.

We have come through years when the American free-enterprise system has been under general attack. Important and powerful groups of people in this country have questioned the fundamental premises upon which our competitive economy is built.

Neither the American stockman nor his organizations are included in the groups attacking our free-enterprise system. The ranch family—both husband and wife—is articulate with respect both to our economic system and our form of government. They are conversant with the basic foundations of our system. They understand it. They believe in it thoroughly. They are truly advocates of the American way.

What is the American way? Obviously, different people view it differently. No one can describe it adequately in a paragraph. Let me list a few attributes of it which are pertinent to this discussion.

The American way holds the individual to be superior to the State, and not the State above the individual. It believes the citizen should support his Government, and not the Government its citizen. It encourages a maximum of economic freedom for individual producers, consistent with the common good. It places major dependence upon relatively free markets and free economic institutions. It holds that ever increasing and efficient production of goods and services by all our people is the best guaranty of a high living standard for everyone. It is based upon the premise that the end of production is consumption—not purposeless storage or senseless waste. It does not hold that a Government warehouse is really an effective market for food and fiber. It stresses that the individual citizen should always be the senior partner, and Government the junior partner.

There are many well-meaning citizens among us who have strayed far from this concept of the American way. Growing numbers of our people would turn increasingly to Government for security guaranties of one kind or another, and junk the economic system which has made us great.

SOME PEOPLE WANT CONTROLLED MEAT PRICES

There are too many people in America today who do not really believe in the free-enterprise system, but who look increasingly to Washington for price supports, price regulations, price ceilings, and the like. Some of the people and organizations who a few months ago were pressing for price floors under live cattle and hogs are the very ones who 5 years ago in the Korean war were crying loudest for price ceilings on beef and pork in the retail counters of America. These people don't want higher livestock prices as much as they want controlled meat prices. They would move away from price as a regulator of our economic system. They would substitute for it Government regulation and rationing.

Freedom of choice is one of the basic pillars upon which the American economic system is founded. We often refer to ours as the competitive or the private enterprise system.

This implies freedom to enter into a given field of endeavor or to stay out, freedom to expand production or to contract it, freedom to adopt innovations in production and marketing or fredom to continue in the old pattern, freedom to seek new markets and new methods of distribution or freedom to plug along with the same old customers, freedom to grow with a dynamic industry, or freedom to choose ones course as he sees fit.

This kind of economic system has its opportunities and its rewards, but it is also demanding of those who would succeed above mediocrity.

Consider for a moment how far we have deported from the traditional concepts of freedom in American agriculture. The Federal Government is well along the way to becoming the senior partner with American farmers. The Commodity Credit Corporation today owns a hoard of food and fiber unparalleled in the history of the world. The bins and warehouses of the CCC provide a residual but seemingly unsatiable market for a wide variety of food and fiber no one else seems to want very badly. Ability of the CCC to buy, and still keep on buying, is so extensive that it staggers the imagination. When its storage quarters become filled, still more space is provided. When it begins to run out of money, either its notes are conceled or its borrowing authority is extended.

As we sit here today the Government either owns or has under loan approximately 1.1 billion bushels of wheat, 1.1 billion bushels of corn, 13.2 million bales of cotton, 300 million pounds of cheese, 325 million bushels of other feed grains. And yet the United States Government neither eats food nor wears fiber. The Government really has very little use for the stuff.

SURPLUSES DEPRESS FARM INCOME

It has been reliably estimated that were it not for the presence of excessive Government-owned surpluses, farm prices would be from 10 to 15 percent above present levels, and farm income last year would have been some $2 billion higher. This would have meant a 20-percent increase in net farm income.

As a Nation, we have gotten ourselves into the current almost unbelievable food and fiber situation primarily because many of our people believed, or at least hoped, an act of Congress could brush aside fundamental demand and supply relationships. We set out to legislate price at artificial levels, without effective measures to maintain consumption rates or to curb production increases. We shackled price as an economic throttle and provided no substitute regulation, other than Government controls. In most cases, these proved to be too lenient and too late.

The American livestock industry, against this gackground of ill-conceived economic activity on the part of Government, is to be congratulated for keeping its feet on the ground. There have been sporadic requests, it is true, for Government to establish price floors under live cattle and hogs. However, we have resisted pressure to place direct price supports on livestock. Such a program would create more problems than it would solve. Your national association and the various State and other cattlemen's organizations throughout the country have flatly refused to have any part of a program of controls and regimentation such as some of the professional politicians have advocated. If any additional evidence were needed, this action has proved again that our cattle industry has lost none of the independence which has made it great.

CATTLEMEN REJECT "PIE IN THE SKY"

Your decision to pursue sound economic programs is the more significant when you realize that the cattle industry has been going through a period of serious adjustment. We have more cattle in the Nation than at any time in our history, and the unusual supply has brought greatly increased marketings and lower prices. On top of this, the widespread drought throughout the southwestern cattle country in recent years has further aggravated the problem. But your cattlemen and their leaders have constantly refused to be pushed off sound economic foundations by any "pie in the sky" panaceas advanced by vote-hungry politicians.

We have continued to believe that the people who actually raise cattle know their own problems better than anyone else. We have constantly sought the advice of your own leaders. And we have refused to be distracted or frightened by the anguished cries of those who are more interested in November's votes than in November's cattle prices.

We are firmly convinced that the problems of the cattle industry will not be solved by drugstore cowboys who, if they happen to see a branding iron might mistake it for a television antenna. We will have stronger cattle prices and higher cattle incomes in the years ahead if we take the freedom road rather than the one which leads to control and regimentation.

I wish I could say to you today with complete assurance that our major cattle problems are all behind us. The relative stability of cow numbers and some firming of prices during the past several months is reassuring. The difficult problem in the marketing of heavyweight well-finished cattle during the past winter is now clearing up. However, prices of stockers and feeders are still a little below a year ago, and the cattle slaughter rate remains high.

The cattle situation first became serious in 1953 because of a combination of increased cattle numbers and a severe drought over wide areas which forced increased marketings

and lower prices. At that time the Department undertook a large beef purchase program to help bolster the cattle market. We purchased about 250 million pounds of beef at a cost of more than $90 million.

During 1954 and much of 1955, the cattle market was more stabilized and may now again be returning to more stability. By good fortune, the large increase in cattle and beef production has coincided with high employment and record incomes of consumers. More dollars have been available to be spent for meat than ever before.

RECORD CATTLE SLAUGHTER LAST YEAR

Cattle and calf slaughter last year turned out even larger than in 1954. Slaughter last year was the largest on record, amounting to nearly 40 million head of cattle and calves. Just 5 years ago, cattle and calf slaughter was only about 26 million head. This represents more than a 50 percent increase in the past 5 years.

Last year's record beef output provided the highest rate of consumption per person: 81 pounds in 56 years of record. Even this large supply did not depress prices very much until the latter part of the year. At that time many feeders delayed marketing their cattle in expectation of the usual seasonal advance in price. A large overproduction of long-fed overweight cattle resulted. As the market for heavyweight beef is relatively limited, the large supply affected the market not only for heavyweight cattle, but also for other grades and weights as well. The situation continued until this spring, when the supply of very heavy cattle began to ease.

The Department has been working closely with all segments of the cattle and beef industry in an intensive promotional effort to stimulate consumer demand for beef. The Department is cooperating with various trade groups, such as retailers and restaurants, and with newspapers, magazines, radio stations, and TV outlets in focusing consumer attention on the plentiful supplies of beef. Retail and other trade groups have greatly intensified their merchandising activities in order to increase consumer buying of beef.

The Department has purchased more than 12 million pounds of beef for nationwide distribution to the school-lunch program. This quantity is in addition to the large volume of beef purchased locally by the participating schools.

We are also trying to stimulate exports of beef. Beef is now being bought under an agreement to sell 40 million pounds, worth $10 million, to Israel for Israeli currency. Also, during recent months a total of 20 million pounds of beef has been moving from the United States to Spain under an agreement worked out between the 2 Governments.

Let's look now at the prospects ahead in the cattle business.

CATTLE CYCLE NEAR ITS CREST

A record 97.5 million cattle and calves were on farms and ranches January 1, 1956. This was an increase of more than three-quarters of a million head from a year earlier. All the gain was in young slaughter stock. Total cow numbers were unchanged from last year, and heifer numbers were down a little. This was the seventh consecutive yearly increase in cattle numbers. The low point in the present cattle cycle was at the beginning of 1949. In the past 7 years cattle numbers have increased about 27 percent. Much of this increase occurred during 1950–52; numbers have gone up more slowly during the past 3 years.

Most of this increase in the cattle inventory during the upward phase of the present cycle has been in beef cattle, and most of it in breeding stock. During the past 7 years, beef cow numbers have risen more than 60 percent.

We are not able to foresee accurately when the peak of the present cattle cycle will be reached. The cycle has now extended the same length of time as the previous cycle. It is quite possible that this will prove to be the peak of the cycle, and that numbers may decline for the next few years. However, it is also possible that, with the present large numbers of breeding stock and the tendency in the past few months to hold back cows and heifers from slaughter, the downward phase of the cycle may be delayed. Also, the reduction, when it does begin, may not be as great as in previous cycles. Nor should it be, because of our growing population and our higher levels of demand for beef.

Influencing the outlook for the immediate future is the sizable inventory of young stock on hand, and the unsatisfactory profits in cattle feeding last winter which have retarded demand for replacement feeder stocks. On January 1, 1956, about 1.2 million more steers and one-third million more beef calves were on farms than the previous January. More than half the increased number of steers has already moved to slaughter. However, the remainder will contribute to slaughter the rest of the year. Following low returns from feeding last winter, cattle feeders have reduced their placements on feed the last few months below those of last year. Prices for feeder cattle are about to begin their usual seasonal decline. Until confidence of feeders is restored, prices of feeder cattle may remain less than last year. On the other hand, since the backlog of fed cattle is being worked off, prospects are bright for a price upswing for fed cattle this summer. If this occurs, it will ultimately strengthen prices of feeder calves and steers.

For the longer future the cattle industry today is in a fundamentally strong position despite its apparent difficulties. There are good prospects ahead for your industry. During the last 7 years our population has increased very substantially, and we can expect the rise to continue. We can expect an increase of about 25 million persons in the next decade. This would add to our present total population of around 166 million persons, almost as many more people as are now living in the western half of the United States, less Texas.

WE ARE EATING BEEF AT A RECORD RATE

Another favorable factor is the upward trend in meat consumption. Indications are that consumption of beef in 1956 will set another new record at 82 pounds per person. This compares with an average of only about 54 pounds per person during 1935–39. This sharp increase in beef consumption provides a sound basis for continued growth of the industry.

One of the things that hurt the cattle industry most last year was the sharp increase in pork production at the same time that you were marketing a record quantity of beef. This was the first time in a long while that supply cycles of beef and pork crested together, and it was an important factor in causing lower proces for both cattle and hogs. However, hog producers reduced farrowings this spring, probably by as much as 5 to 7 percent below a year ago. It is likely that they will also reduce fall farrowings. Prices of hogs have recovered almost $7 per 100 pounds from their lows of last December. Their present higher level is partly seasonal. However, after midsummer the supply of hogs for slaughter will be less than a year before and prices may be expected to retain a much firmer base than last fall.

Prices for lambs also have recovered significantly. They were reduced last winter under the pressure of large supplies of pork and beef. Present highs for lambs also are partly seasonal, reflecting the end of the fed lamb season and the beginning of the spring lamb supply. Nevertheless prices during their seasonal downtrend this summer may compare favorably with those of last year.

Although some adjustment is needed in the cattle inventory, it obviously must be combined with efforts to maintain a continuing strong demand for beef by our growing population.

The American cattle industry must continue to grow with our growing population and with our increasing preference for more protein in the diet. It cannot grow adequately if it should succumb to the temptation to substitute a Government market for the commercial market it now enjoys. It could never have grown to its present size if cattlemen had accepted Government price supports and controls.

Few, if any, agricultural commodity groups have ever expanded after accepting the favor of Government price supports and the necessary production and marketing controls which follow. On the contrary, the production of many price-supported commodities has shrunk in recent years. When the benevolent hand of Government is called upon to control prices and direct the flow of goods opportunity to produce and market is usually rationed among producers.

Production and marketing controls in some form are the inevitable Siamese twins of price supports. Producers are limited to a percentage of some historic base of what they have produced in the past. Government production and marketing controls are essentially backward looking—not forward looking. Under these circumstances, producers with above average managerial capacity and ambitions are severely limited in what they can do. They suffer; consumers suffer; all America suffers.

WHERE WILL YOUR PRICE BE SET?

The American stockman wants to get his price in the marketplace if he can. He wants to sell his products in the marketplace in Chicago or New York City or Los Angeles through the channels of a free price system, rather than having a Government agency standing between consumer and producer saying, "This is the price. We set it in Washington."

The current struggle centers on the important question of whether farmers will get their price in the marketplace, or whether they will get part of their price in the marketplace and the rest through the tax collector.

Many agricultural leaders have become firmly convinced that there is no magic about payments from the Treasury. You simply send the money to Washington in the first place so you can get some back from Washington later. They have become convinced further that you cannot send a dollar to Washington and get a dollar back. You get back 60 cents and a lot of blanks to fill out.

They have also become convinced that with this system of subsidies there must inevitably come a system of control which transfers from the individual farmer to a central planning agency many of the managerial decisions that traditionally have been made on the individual farm and ranches of America.

The farmers of America, both individually and collectively, must continue to be salesmen for the American way. They must acquaint themselves with the issues in agricultural policy. If they genuinely believe in the freedoms they profess, they must understand the basic premises upon which those freedoms rest.

We must strive to preserve a proper relationship between agriculture and Government. You must always keep the individual farmer the senior partner and Government the junior partner. It would be easy to preserve that relationship. You must be ever vigilant that our great agricultural industry assumes the responsibilities put upon it

by our private enterprise system. Otherwise Government will become the senior partner.

You must preserve an atmosphere in which freedom of choice remains one of the basic pillars of our economic system. Under such a system individual producers and individual processors can grow and prosper as far as their ambition and their ability will take them. The right to succeed will be open to everyone.

In our free society, the right to succeed carries with it the right to fail. If, through legislative action of one kind or another, we remove the right to fail, we ultimately remove the right to succeed beyond mediocrity. Men of vision and ambition do not want that. They know their future is most secure in an environment which guarantees freedom to choose, freedom to experiment, freedom to become more efficient, freedom to seek and develop new markets, freedom to dream, and freedom to enjoy economic rewards if their dream is successful.

We pledge the personnel and the resources of the Department of Agriculture to work alongside you in our common march toward these goals.

Good Advice for Mr. Dulles

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include an editorial from the July 5 issue of the Harrisburg (Pa.) Patriot, relative to the oratorical gyrations of Secretary Dulles. To the sentiments expressd by the Patriot, I can offer an enthusiastic amen. The editorial follows:

SECRETARY DULLES SHOULD LEAVE FREE-WHEELING ORATORY TO OTHERS

It won't be long now before Republican orators across the land will be lauding John Foster Dulles as "one of the greatest Secretaries of State in our country's history." Some of the partisan extremists will go even further than that and call him the greatest.

On the other side of the oratorical coin, Democratic campaign speakers will be chalking him up as "one of the worst Secretaries of State in our country's history." And the extreme partisans among them will go all the way and label him the worst.

This has become the presidential campaign year fate of our Secretaries of State in recent years. There were times 4 years ago when one was almost led to wonder how the United States ever had managed to survive in this dangerous world if former Secretary Acheson was even half of what some of the more violent political orators charged him with being.

Just what niche both Mr. Dulles and his predecessor, Mr. Acheson, will occupy in the rollcall of our Secretaries of State remains to be seen. The roll of world events, and their part in them, still is going on, and only future historians will be able to appraise their reputations with any reasonable degree of accuracy.

Americans, for their part, can take all of this political oratory with a grain of salt. They well might advise the politicians and the candidates at every opportunity that if there is restraint no place else in the campaign, our country's foreign policy and the men who administer it should not be dragged helter-skelter through the rough and tumble of the political arena.

Mr. Dulles, for his part, can make a contribution toward the nurturing of this restraint.

Mr. Dulles, it seems to us, could stand far more restraint in his own oratory and in all of his public statements and congressional testimony. The Secretary of State is given far too much to over-claiming and over-emphasizing. Just last week, he gave lock, stock, and barrel credit to "the unity and combined strength of the free world" for bringing the Communist world into its present state of confused transition. Certainly, this unity and strength was a major factor, but it cannot be the sole big reason for the apparent turmoil among world Communists. There is a historic vacuum when a dictator dies, and the leadership of a despotism goes up for grabs. A government by despots has no provision for an orderly succession of leadership.

Other recent oratory by the Secretary said the menace of communism is on the decline, and while we all hope and pray that is true, Mr. Dulles pictured it far too much in terms of all black and all white. It recalls his testimony before a congressional committee just a year ago next week that the Soviet economy was "on the point of collapsing."

The Secretary, too, in recent months, has larded his pronouncements far too much with dramatic, soap-selling phrases.

To criticize Mr. Dulles for what we consider to be his oratorical failings is not to discount one whit his devotion to the cause of freedom, his talents, and the physical beating he unselfishly is taking as he carries on the conduct of American foreign policy in combat with the Communists.

Several weeks back, on May 26, in a speech defending his record of keeping Congress and the people informed, Mr. Dulles furnished his own "boxscore"—130 meetings with congressional committees and groups of Congressmen, 70 press conferences, 54 major foreign policy speeches. Since that time, his "boxscore" has been considerably built up.

Certainly, Mr. Dulles should speak out from time to time on his stewardship. But, where a Secretary of State is concerned, there is also such a thing as talking too much.

It is our belief that if Mr. Dulles would speak softer and far less often he could better conduct the quiet and earnest pursuit of diplomacy which is, after all, a Secretary of State's major responsibility. He would be well-advised to leave the bulk of the international propagandizing and the side flings at political oratory to others.

A Letter to My Constituents

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. THOMPSON of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to my constituents:

HOUSE OF REPRESENTATIVES,
Washington, D. C., July 23, 1956.

MY DEAR FRIEND: I am taking this means of asking you for your vote and support in my reelection. During the past 4 years I have worked for you in Congress on a full-time basis. I have found the experience gained in my 18 years' service in State government prior to coming to Congress of much help in my duties here. I have worked closely with our Louisiana delegation in Washington and sincerely believe that the last 4 years have been years of accomplishment.

Our district has received millions of dollars for flood control, soil conservation, watershed programs, and development of our rivers and harbors. Many new industries have come into our district because of our vast resources and friendly treatment by our people, and more industry will come. This means more and more jobs for our young men and women who will be able to remain at home instead of being forced to go to other places for employment.

I am happy to have had a part in development of a permanent Air Force base in our district. Lake Charles Air Force Base brings more money into the district than all of the industry in Lake Charles combined. This helps to raise the economy of our people. Also, Fort Polk has been reopened and made a permanent installation, and this has greatly helped the economy in the district. Increased acreage allotments have been accomplished for our farmers, as well as assistance in disposing of their surplus products.

Southwest Louisiana is one of the great areas of the United States. In the years ahead we will see developments that will astound the Nation. Sometimes it is difficult for our people to receive the attention from our Federal Government that is due them. I have spent my full time protecting your interests, and I assure you I shall continue to do so. We must continue to fight against those in Government who would rob us of our rights and privileges as a sovereign State.

There are many things to be done. Soon, under my recently enacted bill, the Government will begin a 5-year program to eradicate the water hyacinth from our streams. I have programs planned for disposal of surplus cotton and rice and other programs which will benefit all the people of our district.

As long as I am your Congressman your problems will be mine and you may be assured that my services will be available to you at all times. With our combined efforts, the Seventh District will flourish and its people will prosper.

I will never forget your help and your vote for me on election day, July 31.

Sincerely, your Congressman,
T. A. THOMPSON,
Member of Congress.

Another Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. BEAMER. Mr. Speaker, the strong and natural impulse and determination of freedom demanded by people is well expressed in certain court cases in Indiana and in other parts of the United States at the present time.

As one illustration, under unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an editorial from the July 1 issue of The Indiana Farmers Guide:

ANOTHER INDEPENDENCE DAY

Elsewhere in this issue you will find articles describing various provisions of the Agricultural Act of 1956, including the new soil bank, and announcing the wheat referendum to be held July 20. American farmers have come to expect such regulations, and many of their fellow citizens residing in cities and towns across the Nation are con-

vinced that the situation is inevitable and virtually irrevocable.

But as we pause to observe the July 4 anniversary of our magnificent, fighting Declaration of Independence, we note that a small group of patriotic farmers who believe in the old-fashioned American virtues of hard work, property rights, and personal independence have taken a bold stand against Government interference with their farm operations. Organized about 2 years ago, the Independent Farmers of Indiana, Inc., is composed of self-reliant farm owners and operators who are completely opposed to all Government farm programs, particularly the Agricultural Adjustment Act of 1938, as amended, which means virtually all of the present crop control programs.

Our attention was called specifically to this organization by a visit from the president, Ethan Stangland, of near Albion, and one of the directors, Willard Youse, of Hoagland. This is the same Ethan Stangland who is engaged in a courageous fight in the Federal courts to do what he pleases with the wheat on his farm. Other defendants in the actions filed in May 1955 by the United States Government under existing farm laws are Max Munk, of Kendallville, and J. Walter Bowyer, of Peru. They were charged with raising more wheat than the ASC said should be raised on their farms and with failing to sell the excess wheat to the Government—not for selling the wheat without a marketing card, or transporting it off the farm, but for an act which did not go beyond the boundaries of their farms. The defendents have never applied for nor accepted any ASC payments or controls on their farms.

Even the two different Federal judges involved in these cases do not agree in their initial rulings. The defendants denied the charges and asked for a trial by jury. The United States district attorney filed a motion for summary judgment. Last January 13, Judge Luther M. Swygert in United States district court at Fort Wayne found for the Government in the Stangland and Munk case. On March 28, however, Judge W. Lynn Parkinson in United States district court at South Bend found against the Government in Bowyer's case. The summary judgment in the Stangland-Munk case denied the defendants a trial by jury, which is a fundamental right guaranteed in the Bill of Rights. They have filed an appeal to the Seventh United States Circuit Court of Appeals in Chicago. If the Government appeals the Bowyer case, the 3 cases will have 1 hearing.

Many other farmers have already come to the aid of these three embattled farmers, who are challenging the constitutionality of the Farm Crop Control Act which allegedly deprives them of basic rights. The fight is being carried out through the Indiana wheatgrowers defense fund of which Robert Trimmer, R. R. 2, Albion, is treasurer, and the Churubusco State Bank is depository.

The purposes of the Independent Farmers of Indiana go beyond those of any other farm organization. Here are their eight points: (1) To promote the general welfare of the farmers of the United States; (2) to insist that the Constitution of the United States be adhered to by the officials of our Government; (3) to oppose all subsidies in any form; (4) to oppose the regimentation of American agriculture; (5) to work to secure the American market for the American farmer by adequate tariff protection; (6) to work to prevent and for the repeal of any and all legislation that is contrary to the American way of life; (7) to demand that the Government balance the national budget; (8) to oppose the involvement of the United States in any entangling foreign alliances.

Undoubtedly, there are many people who will say that this organization is reactionary, behind the times, doesn't face facts, etc. But with the wheat issue as a rallying cry, we cannot help but recall those immortal words emblazoned on a monument at Concord: "Where once embattled farmer stood and fired the shot heard 'round the world." Maybe the American farmer's freedom is meeting one of its final tests 180 years later. It could be that we are selling a birthright for a mess of potage.

Memorial Day Address by Hon. George A. Dondero, of Michigan

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks I include the text of a speech made by our colleague, the Honorable GEORGE A. DONDERO, at the annual Memorial Day ceremonies at Gettysburg National Cemetery:

MEMORIAL DAY AT GETTYSBURG 1956

This is Memorial Day. It is a day of memories.

Americans everywhere around the world gather reverently as we do here at Gettysburg today, to honor the Nation's dead. Their dust remains an inspiration to their countrymen.

Because of their sacrifice, on the Capitol Building at Washington—kissed by the sun of day and watched by the stars at night—waves the unconquered flag of your land and mine.

The struggle for freedom never ends. It was purchased with blood. It must be preserved by devotion. So Memorial Day is a day of honor, a day of remembrance, a day of reckoning, a day of accounting and above all a day of high resolve. We resolve anew today "that these dead shall not have died in vain" and with the help of God, who has never foresaken this favored land, we shall maintain our high resolve through future generations.

If the time should ever come when we no longer remember what brave men and women, living and dead, have done for us, in that day our Republic will no longer deserve preservation.

No one can stand on the battlefield of Gettysburg, on this spot, on this day and in this hour of history without a deep sense of humility. Here was fought one of the greatest and most significant battles of all time. Here were spoken from a page and a half of ordinary ruled paper the lines of an address that has never been surpassed on American soil. To me it has always seemed a near miracle that a man with President Lincoln's limited education, whose invitation to come here to make "a few appropriate remarks" was an afterthought, and whose educational opportunities were so meager, could produce such a gem of English literature as the Gettysburg Address. Many years ago I asked Robert Lincoln, the President's son, the extent of his father's education, and he replied: "Father did not have anything to start with and hardly went to school at all." Lincoln's lines not only gave mankind the essence of the meaning of the struggle then being waged but also serve in this hour and for all ages as a prayer of deliverance for all people.

Abraham Lincoln the man, Gettysburg the place, and the soldier dead were the occasion for the ceremony on November 19, 1863. These combined to create for the free world an eternal light in man's unending struggle for the happiness God intended him to possess. Here at Gettysburg representative government ceased to be an experiment of 4 score and 7 years. The battle and the speech gave it the stature of perpetuity. Today, 4 score and 13 years later, Lincoln's question, "whether this Nation or any nation conceived in liberty can long endure," has again been tested in the crucible of war and answered affirmatively at least for our day.

The circumstances dedicating this burial ground take on a shining luster and a sublime grandeur from the complete absence in the spirit of Lincoln's Address of any note of hostility. It is weighted with the tragedy of the event and the whole war. It broods over the hero dead as though on both sides they had fought for the clarification of a great deal and perished to realize it.

Great utterances have been delivered in many places down through the centuries. This one had the singular gift of expressing the basic meaning of the United States, in the noblest language, at a moment of deep national bereavement, by an American President forever stamped as typical, and whose entire life work is summed up in these compactly beautiful sentences of that short oration. Never in the history of literature was so much said, so wisely, in so few words.

We know now that the address was not written on the back of an envelope, nor was it the inspiration of the moment. We know it represented the deepest soul searching of a profound and thoughtful President putting into 3 minutes of the spoken word what he had been thinking about for many years. The longer he lived the greater was his faith in the freedom of man and the stronger his conviction that it must be preserved.

What we have in the Gettysburg Address is deep thinking expressed in simple language. Its infinite compassion, its dedication and its hope that "this Nation under God shall not perish from the earth" place it with the most sublime literature of the Hebrew prophets.

Whatever part of this Republic might be destroyed in a physical sense, its spiritual foundations, with these words, remain imperishable.

The real headline or top attraction of the Gettysburg dedication 93 years ago was not Abraham Lincoln at all, but perhaps the greatest of the great orators of that day. He was a former Member of Congress, former president of Harvard College, former Minister to Great Britain, former Secretary of State, former Governor of Massachusetts, and former United States Senator—the matchless Edward Everett. Yet the purest and most perfect prose was spoken not by the most educated American of his time who had attended temples of learning on two continents but by a most uncommon commoner from Illinois whose hands knew the feel of an axe handle and who hardly went to school at all. Yet the few "appropriate remarks" he was invited to deliver here stand forever as the symbol of our American philosophy of government.

There is still another circumstance equally challenging that holds us here today in this reverent hour of recollection and memorial.

"The world," said Lincoln with the humility of the lonely and the great, "will little note nor long remember what we say here, but it can never forget what they did here." Now 93 years after we find the Gettysburg Address as well as "what they did here" as much the living tradition of our country as the Declaration of Independence and the Constitution of the United States. Indeed I venture to suggest that we have to turn to the Bible and to our books of prayer to find words better remembered, more frequently quoted or vested with such moving spiritual force.

It was because of what was done here and precisely because of what was said here that we gather today to add our homage to the generations that before ours paid their tribute as will the generations that are to come after. Where we now stand is holy ground, a shrine as durable as man's love of freedom and as precious as his willingness to sacrifice life to maintain it.

We are rightly humble before the presence that watches over these sacred acres, and we should take as much as we can of inspiration from these surroundings for the tasks destiny has thrust upon us in an age where again freedom and slavery face each other in a world divided.

It may be that another American will in the decades to come add to the luster Abraham Lincoln gave to the American dream. It may be that another American taking his fire from the eternal light brought forth here will help mankind of a future day march to its hour of victory over the enemies of liberty. Perhaps we had less than 2 short years ago an approach to the Lincoln tenets of faith in the words of President Eisenhower, who stated on July 7, 1954, "I will not be a party to any treaty that makes anybody a slave."

Freedom has its life in the hearts, the actions and in the spirit of men. This we know as we meet today in commemoration and communion; a weapon touched by the finger of God was forged here by Abraham Lincoln, a weapon of the soul and of the heart that cannot be vanquished by any force so long as man lives.

We have been obliged to forge some dreadful weapons to preserve our heritage. But no weapon we have forged is as enduring, no weapon is as strong, no weapon so grips our inmost conscience as that weapon of the mind that Lincoln tossed to man, like a torch, on the field of Gettysburg in 1863.

Hail the Young Men of Layton

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. DAWSON of Utah. Mr. Speaker, a signal honor has been conferred upon the Layton Junior Chamber of Commerce. I am particularly proud of the young men of my hometown for having won first place in towns of 10,000 and under in the United States for last year's program of accomplishments. These young men have not only brought honor and distinction to Layton and Davis County, but the State of Utah as well. Knowing many of them as I do, I can only commend the National Jaycees for making this most worthy award.

For the information of my colleagues I am inserting an editorial from the Deseret News and Telegram extolling my fellow townsmen:

HAIL THE YOUNG MEN OF LAYTON

The town of Layton, Davis County, and the whole State of Utah can take a lot of pride in the honors won by the young men of the Layton Junior Chamber of Commerce. And a lot of comfort in knowing that many of these same young men will be directing our affairs in the coming years.

The Layton Jaycees not only won first place among towns of their own size, 10,000 and under, for last year's program and accomplishments, they won first place in the open competition for Jaycee chapters of every size and from every part of the Nation. That is a tremendous accomplishment, with some 2,300 livewire Jaycee chapters competing for the honor.

The Deseret News and Telegram joins the rest of the State in saluting the Layton Jaycees—and in confidently looking to them for forward-thinking leadership in the years to come.

Motion Pictures in World War II

EXTENSION OF REMARKS
OF
HON. JOSEPH F. HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 28, 1956

Mr. HOLT. Mr. Speaker, recently at Fort Myer an impressive tribute was paid to the motion picture industry of America, the studios in California and 6,000 actors and actresses who gave their services to the United States armed services during World War II.

On that occasion Maj. Gen. Donald P. Booth, Deputy Chief of Staff, presented to Eric Johnston, president of the Motion Picture Association of America, a citation, in which it was stated that the motion-picture industry contributed without cost, some 4,700 complete films which were distributed in combat and isolated areas and 6,000 motion-picture artists made more than 55,000 appearances at military posts at home and abroad. The citation also paid tribute to the unarmed motion-picture cameramen who photographed battle actions and to the industry for making films of service backgrounds.

Two helicopters brought the famous 3d Regiment drill team for the ceremony, which included a parade of the veteran troops at Fort Myer and an exhibition of the latest communication apparatus of the Signals Corps.

As a Marine Corps veteran of World War II, I know personally of the stimulating effect the movies and artists had in building and sustaining the morale of our fighting men in the Army, Navy, and Marine Corps.

As representative of the district in California where most of the studios are located, I know personally that the citation was fitting when it said "the motion-picture industry has always supported the Armed Forces of the American people."

The citation follows:

MILITARY DISTRICT OF WASHINGTON.
CITATION

The Military District of Washington extends its sincere thanks and heartfelt appreciation to a most generous and willing ally of our Armed Forces, the Motion Picture Association of America, representative of the producers and distributors of the motion picture industry.

We in the Army vividly recall the numberless exploits and services performed by unarmed photographers whose versatile lenses pursued us into the trenches, over the barricades, and onto hostile beaches. Thus, many pages have been added to our Nation's history which otherwise might have forever remained untold.

We are thankful that posterity will be able to view our efforts on the battlefield where we fought so hard to preserve the ideals which we cherish. We hope that such vivid portrayals will serve as an inspiration to all to continue forever our fight for freedom and world peace. In the field of service entertainment, the generosity of the American motion picture industry is unsurpassed. During World War II, the industry contributed, without cost, some 4,700 complete 16-millimeter programs to men in combat and isolated areas. During the same period, approximately 6,000 motion-picture artists made over 55,000 appearances at military posts at home and abroad. The industry, in producing motion pictures with service backgrounds, has contributed greatly to enhancing the prestige of the Army and creating a better public understanding of its aims.

The United States Army feels that the motion picture industry has always supported the Armed Forces of the American people, and the Military Distirct of Washington is proud to pay tribute to the Motion Picture Association of America, an organization whose efforts have contributed so significantly in support of the interests and ideals of the United States Army.

JOHN G. VAN HOUTEN,
Major General, United States Army, Commanding.
JUNE 10, 1956

Hells Canyon: National Asset or Private Windfall?

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mrs. GREEN of Oregon. Mr. Speaker, one of the most important issues facing this Congress — and the voters — is whether we will have the comprehensive development of the water resources vital to the economy and welfare of the people of the Northwest and of the Nation, or whether these resources will be given away by the administration to an absentee-owned corporation to half develop the area for quick profit. Many of the people of my State of Oregon are up in arms against the Republicans' betrayal of their interests—as witness the resolution of the Baker County Commercial Club unanimously adopted on July 3. Under unanimous consent, I include the club's letter and resolution in the RECORD.

I also include the article concerning the power issue written by the eminent news commentator, Mr. Thomas L. Stokes, which appeared in the Washington Evening Star Thursday, July 5.

BAKER COUNTY COMMERCIAL CLUB,
Baker, Oreg., July 3, 1956.

Hon. EDITH GREEN,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE GREEN: The Baker County Commercial Club urges your support to the Hells Canyon legislation now pending before Congress.

The enclosed resolution states our position on this most important matter. Our membership, polled by secret ballot, has expressed almost unanimous support of the high dam.

Your favorable consideration will receive not only the thanks of the great majority of people here, but also the thanks of many generations of Americans yet to come.

Very sincerely yours,

BARD JOHNSON,
President.

BAKER COUNTY COMMERCIAL CLUB,
Baker, Oreg., July 3, 1956.

RESOLUTION FAVORING HIGH DAM AT HELLS CANYON

Whereas Baker County Commercial Club is the most representative and one of the largest groups of business, professional, agricultural, and mining people in this area; and

Whereas the commercial club is one of the original financial sponsors of National Hells Canyon Association and one of the grassroots groups carrying on the fight for the high dam and full development of Snake River; and

Whereas this is the home county of the Snake River development, be it high or low dam, and this area of Oregon is a major part of the Snake River Basin and our streams are the most immediate tributaries upstream from the dam sites; and

Whereas the effort of selfish interests to maintain monopoly control of the power resource east of the Blue Mountains has shamefully and maliciously injected controversy into the schedule of programed comprehensive Federal projects, particularly at Hells Canyon despite its merit; and

Whereas in all significant elections in Baker County and in Oregon since 1948 the people have overwhelmingly voted the high dam preference; and

Whereas the future economic well-being of this section is contingent upon the adequate utilization of its greatest resources—water and land and minerals—and the high dam most fully assures full use of the water, proper reservation for its future consumptive use upon our land and low-cost energy for the processing of our mineral wealth; and

Whereas the Federal Power Commission examiner, after long hearings, determined the high dam to be the more nearly ideal development, better in coordinated power production by close to 500,000 kilowatts, cheaper in kilowatt-hour cost by 2.65 mills compared to 6.69 mills for low dams, superior in flood-control storage by 2½ million acre-feet, and immeasurably better in recreation and other values; and

Whereas private development has declared itself superior to the sacred laws of Oregon governing water, built a bridge crossing a navigable stream prior to obtaining a Federal permit, failed to consult county authorities relative to road floodage, failed to complete negotiations with the State for highway floodage, failed to include major access highway facilities into Hells Canyon as a part of its development, and failed to wait legal clearance of its Federal license; and

Whereas minor preliminary construction by the power company at the Brownlee low dam site shows no promise of economic advantage to this region, stoppage of low dam work through high dam authorization would actually stimulate rather than restrict business investment here: Now, therefore, be it

Resolved, That the Baker County Commercial Club does most respectfully petition the Congress to authorize the high dam at Hells Canyon and by copies of this resolution does respectfully urge the able members of the Oregon delegation sponsoring this worthy legislation to convey this message from the people of eastern Oregon to the Congress.

BARD JOHNSON,
President.

[From the Washington Evening Star of July 5, 1956]

DEMOCRATS AND THE POWER ISSUE—FEDERAL VERSUS PRIVATE DEVELOPMENT OF RIVERS SEEN AS CAMPAIGN ARGUMENT

(By Thomas L. Stokes)

Once again the Democrat Party in Congress has decided to seize upon and project further the vision first glimpsed by a Republican President half a century ago—Theodore Roosevelt—and transferred into reality on several fronts by two of its own Presidents, Franklin D. Roosevelt and Harry S. Truman.

This is the public development of our great river systems for reclamation, navigation and production of hydroelectric power which has been stifled by the Eisenhower administration. Instead, the present administration has devised something it calls the partnership policy which in most cases would mean that waterpower sites still not utilized would be handed over to private power companies to exploit for fancy profits through high rates charged the consumers for electricity.

In no other area has the Eisenhower administration surrendered so supinely to big business and finance, with which the vast monopoly is interwined. Luckily for consumers, this attempted handout has been dramatized by an inconsistency that even a schoolboy can understand. This is the way the administration readily lends the financial support of our Government, either directly or through the International Bank, to build great dams in India, Egypt, Israel, Latin America, and other parts of the world while it forbids any such for our own people.

Luckily also, there is Congress and there is the Democratic Party that controls it and is looking for issues in this election year. It has found its opportunity in two areas of greatest undeveloped potential, one in the Northwest, one in the Northeast, and the leadership has pushed bills for each forward in the last few weeks.

One is the Pfost-Morse bill for Hells Canyon, which has been approved in the last several days by the Interior Committees of both House and Senate and now is on the calendar in both branches for final action. This measure would authorize Federal construction of a high dam across the Snake River along the Oregon-Idaho border at Hells Canyon as recommended by the Army engineers. It was their verdict that this was the best way to utilize all the potentials of the Snake River for flood control, recreation, and production of hydroelectric power, and the only way to carry out the overall plan for integrated development of the Columbia River system at which they have been working for 30 years.

By passing this bill, Congress would annul the administration scheme, originally pushed by former Secretary of Interior Douglas McKay, and rubber-stamped by the Federal Power Commission, that called for private development through three low dams by the Idaho Power Co., a Maine corporation, absentee owned. This would fail to utilize all the potential at Hells Canyon and would also cost consumers, including industry, much higher rates than under public development. Already the Idaho Power Co. has started preliminary work on one of the low dams, and the Hells Canyon Association, composed of consumers, farmer and labor organizations, is trying to stop construction by a suit in the Federal courts here in Washington.

The other project, that in the Northeast, is the $440 million redevelopment of the Niagara River to produce 1.5 million kilowatts of power. This is not a Federal enterprise but would be developed by the New York Power Authority, a State agency, under terms of the Buckley-Lehman bill which passed the Senate in middle May and was recently reported favorably to the House by its Public Works Committee.

As to the Niagara project, President Eisenhower always has taken the position that it was up to New York to decide how it should be developed. An alternative before Congress was a bill authorizing developing by five private companies which once passed the House, but now is supplanted by the State development measure.

Public development through the New York State Power Authority is envisaged by the sponsors as a means of providing low-cost electricity over a wide area, including Pennsylvania and much of Ohio, as well as New York. At the present time, rates in New York are much higher than those across the border in Canada. In 1952, for example, in Toronto, the average home used 367 kilowatt hours a month at a cost of $3.81, while in Rochester 100 kilowatts cost $4.36. Or compare Windsor, Canada, 200 miles from Niagara Falls, where average home use was 286 kilowatt hours a month at a cost of $3.65, with New York City, where the average home paid $4.44 for only 100 kilowatt hours. So the comparison goes across the border wherever you choose to pick your samples. New York rates have been increased still further since 1952.

Both the Niagara and Hell's Canyon developments are sound, self-liquidating enterprises. The savings by the economic operation possible in each would mean much to the consumer's budget in this era of high-living costs. There seems no reason why a great country such as ours could not do as much for its people in reducing electric utility costs as does Canada, where public development of its water resources is so long established that it is taken for granted as the only sensible way.

Wilson and the Red Air Threat

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of July 6, 1956:

WILSON AND THE RED AIR THREAT—SECRETARY VIEWED AS BELIEVING SOVIET'S ECONOMIC SETUP MITIGATES DANGER

(By Constantine Brown)

There is an honest difference of opinion over the lag of the American Air Force in comparison with the U. S. S. R.'s. Uniformed service leaders and their supporters in Congress are genuinely alarmed by the progress the Russians have made. Gen. Nathan Twining, Air Force Chief of Staff, is said to have been more impressed than he has announced publicly by the quality and quantity of Soviet aircraft. On the other hand, Defense Secretary Wilson does not believe in the Reds' capabilities to wage a successful war.

The difference between the civilians and the military in the Pentagon spring from the fact that the men in uniform look at the situation strictly from an operational point of view, while Mr. Wilson—who is advised

also by economists—looks at the overall economic angle. He is convinced that the Soviets under present conditions could hurt us only slightly should they decide to strike. Their economy transportation, industrial capability for producing war materials to sustain a war of any length and the morale of the peoples of the U. S. S. R. tend to nullify the obvious progress in their air and naval building programs.

These advisers of the Secretary of Defense point to World War II. Before the Japanese hit us at Pearl Harbor they had a definite superiority in naval power and military manpower. The Japanese military machine in 1941 and the subsequent year was considered among the finest in the world. They had more planes (particularly their Zeros), more capital ships and more submarines than we had. They had a ground force far superior to ours which marched from victory to victory all over southeast Asia. At the outbreak of the war they possessed at least one 50,000-ton battleship which our Navy considered then as the queen of the seas.

There was nothing wrong, say these advisers of Secretary Wilson, either with Japanese patriotism and their willingness to die for their country, or their technical know-how and industrial establishments, which were among the best in the world. Yet Japan went down in defeat—not at the time she actually surrendered but at least 18 months before. The reason was the economic conditions in that country, which, despite its technological advances and temporary supremacy of the seas, could not bear the brunt of war for long.

It could be said, the economists admit, that the situation is not altogether comparable between the great land mass which forms the U. S. S. R. and the small Japanese islands into which were then compressed some 70 million people. Russia is not dependent on seaborne traffic to feed herself and her war factories. And she does have vast quantities of natural resources on her own soil.

But at the same time Russia does not have the same cohesive population Japan had. There is almost the same lack of food and consumers' goods in the Soviet Union, and particularly among her subjugated satellites on whose loyalty she must count in event of war, as there was during the days before she achieved her present perfection in nuclear weapons and long-range bombers.

The Japanese people were almost 100 percent behind their war lords in World War II and were fanatically prepared to die for their country and emperor. Not so in the Soviet Union, particularly since the downgrading of Stalin, who had become during his dictatorship almost as much of a sacred cow as the Emperor of Japan was to his people.

Now as in the past, the Russian Empire is composed of people of many races, religions, and languages. These peoples are kept together in a tenuous coalition mostly through fear of the central authority in the Kremlin. A satisfied stomach and an occasional pair of shoes would do much to keep the loyalty of these people in times of hardship.

Had it not been for the immediate intervention of America and Britain with food and war materials when Hitler's legions got Stalin's divisions on the run in 1941, there is little doubt that the Soviet regime would have collapsed and the U. S. S. R. might have become pulverized into a number of states under the impact of the Nazi blows. The national spirit in the U. S. S. R. awoke when the peasants and workers were called to defend their own land, and then it succeeded only because the United States and the British Empire rushed not only weapons but also food and clothing for the defenders of the Russian soil. Communism is imperialistic, but the Russian peoples are not.

These economic considerations explain the lack of enthusiasm on the part of the Secretary of Defense to spend more than he considers absolutely necessary to match the Soviet military machine plane-for-plane and ship-for-ship.

Ike Needs Whom?

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

Mr. QUIGLEY. Mr. Speaker, the cry is already going up, and it shall reach a crescendo by November, from our brethren across the aisle that "Ike need me" in the Congress.

Sometimes, as we watch the rollcall votes, we wonder just whom Ike really needs. A particular case in point was the vote on the mutual security bill, which Mr. Eisenhower has referred to as the keystone of his whole foreign policy.

An interesting commentary and analysis has been made by Roscoe Drummond, in an article published in the Harrisburg (Pa.) Patriot for July 4. It might be noted that the Patriot has been a strong supporter of Mr. Eisenhower. The article follows:

DEMOCRATS GO TO BAT ON FOREIGN AID—LOOK WHO SAVED THE PRESIDENT

(By Roscoe Drummond)

Principally because of its own faltering in leadership, the Eisenhower administration is fortunate that it is getting through Congress as good and as sizable a mutual aid bill bill as its now in process of being passed.

In large part the credit belongs to the patriotic good sense of Senators LYNDON JOHNSON and WALTER F. GEORGE—who did more for the President's cause than any Republican—and to the votes of Democratic Members.

Emasculating cuts in foreign aid funds were avoided, although the fight will come all over again when the appropriations are finally made.

The proposal to end peremptorily all aid to Yugoslavia was defeated.

Other crippling amendments affecting East-West trade and aid to India were lost.

In all these moves adverse to the President, in an almost evenly divided Senate, there were always more Democrats than Republicans supporting the White House and more Republicans than Democrats opposing what Mr. Eisenhower was asking.

There were several critical test votes which showed the President's indebtedness to the Democratic leadership and to Democratic support.

On the amendment precipitately to cut off aid to Tito—an amendment sponsored by Senator STYLES BRIDGES, of New Hampshire, and supported by Minority Leader WILLIAM F. KNOWLAND, of California, the two senior Senate Republicans—President Eisenhower's views were opposed by 23 Republicans and 15 Democrats and were backed by 29 Democrats and 23 Republicans.

The White House position was that assistance to Yugoslavia ought not to be hastily foreclosed until developing events and reevaluation show whether Tito is going to be an uncritical ally of the Kremlin. The bill required the President to explain his reasons to Congress for whatever decision he made. No wonder Senator JOSEPH O'MAHONEY, Democrat, Wyoming, strongly supporting Mr. Eisenhower's position, turned to Senator BRIDGES, who was seeking to take all discretion from the White House, and remarked: "Don't you trust the man you want to run for President?"

Further, most of the pressure and most of the votes behind the ultimately unsuccessful efforts to cut in half the amount of aid to India and to make United States aid to all countries conditional upon their following exactly the same policies in East-West trade as we do, came principally from the President's own party.

I think it has to be recognized that from the President down, the administration is in part to blame for the near defeat it has just escaped. The administration seemed to be listless and inadequate in expounding to the country the continuing need for an effective mutual-aid program to counter new Soviet tactics and woefully tardy in bringing the leaders of Congress to an across-the-table bipartisan conference at the White House. These came long after there were ample danger signals on the Hill that the bill was in peril. When one Democratic leader asked at the opening of the conference, "Why are we meeting only now?" there was no good answer.

Further it must be frankly stated that one reason why the White House is now asking an unusually high foreign aid figure is that it has been using gimmicks to bring about a fat budget surplus is this election year. And one way this has been done has been by cutting foreign aid commitments to the extent that the pipelines have been unwisely depleted. The bill may still suffer from this short-sighted action.

It always seemed to me a mistake that as President Eisenhower and the other officials of the administration, with the exception of Harold Stassen, were so chary of giving clear credit to the Marshall plan for the tremendous dividends it paid the United States in security and savings and in European solidarity.

Although Mr. Eisenhower has briefly spoken contrariwise at one or two press conferences, he let the fallacy that foreign aid is a "giveaway" program become widely accepted during the past 3 years without vigorously countering it. This is why his own mutual aid program came within an inch of going down the drain in Congress during the past few weeks.

There is no justification for any give-away of the American taxpayers' money. If economic and military aid to nations struggling to maintain their own independence does not serve our own security, it should not be voted at all.

The Marshall plan devoted $12 billion to saving western Europe from economic disintegration. It was a prudent investment. If western Europe had come under the domination of the Kremlin in 1948—and it was near to it—nothing we could have done would have compensated for the loss. Instead of spending $12 billion in 4 years to avert it, we would be spending at least $12 billion more every year to defend against the consequences.

Worship and Work—History of St. John's

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. MARSHALL. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Commonweal of June 29, 1956, paying tribute to the monks of

St. John's Abbey at Collegeville, Minn., on their centennial observance.

It also recommends a history of the first 100 years, Worship and Work, written by Father Colman Barry, a monk of St. John's.

The editorial follows:

WORSHIP AND WORK

In the days of its youth in the Dark Ages, the venerable Order of St. Benedict helped keep alight the flickering fires of Western civilization. The Roman Empire had collapsed and chaos reigned. The monasteries of Europe carefully preserved and laboriously copied out the priceless texts of our cultural and religious heritage. At the same time they showed their contemporaries how to clear and till the land in order to build up a material base for an ordered human existence.

During the 19th century the Benedictines experienced a remarkable revival and expansion which persist to this day. In Europe and America they have been confronting a society whose essential unity was broken into fragments by the 16th century Protestant revolt and which was yet further weakened by the industrial revolution's creation of a rootless, urban proletariat. To fulfill their appointed task in the spirit of their common rule under these conditions has presented the world's various autonomous Benedictine communities with a new challenge.

This could hardly be better exemplified than by the first hundred years, just completed, of St. John's Abbey of Collegeville, Minn. Its tasks have varied and expanded at each stage. The founding Bavarian Benedictines had first to establish the monastic life of prayer in common in the Minnesota wilderness (as they likewise did concurrently at Latrobe, Pa. and Atchison, Kans.). The extent to which they ministered to the needs of the American frontier from the outset is attested by the few years required for them to receive an independent status from Rome. The degree to which these hardy monks were able to transmit the full life of the church, as they had experienced it in Europe, to the primitive American frontier was truly remarkable. It comprises some of the most colorful pages of Colman J. Barry's extremely able historical account of the first hundred years of St. John's (Worship and Work, St. John's Abbey and University, Collegeville, Minn., $5).

As is brought out in this impressive new volume, it was the conjunction of Abbot Alcuin Deutsch, who served as head of the community from 1921 to 1950, and Father Virgil Michel, who died in 1938 at the age of 47, that brought St. John's to the forefront in the annals of American Catholic life. Abbot Alcuin was the chief instigator of a liturgical revival which was to radiate beyond the abbey's walls to all corners of the United States. Father Virgil was imbued with similar convictions as to the necessity for a widespread return to liturgical worship, that primary and indispensable source of the true Christian spirit (St. Pius X). He founded Orate Fratres, a monthly review which became Worship at the time of its 25th anniversary, and the Popular Liturgical Library ,which is still producing inexpensive booklets of liturgical teachings and actual texts.

But Virgil Michel was also preeminent for his vision of the connection between universal participation in the full prayer life of the church and the urgently needed solution of the social question. He believed it literally providential that Leo XIII and St. Pius X were virtually contemporaries. He insisted that Christian social action and the nonindividualistic liturgical movement should stimulate each other, that the mystical body supplies the true basis for Christian solidarity.

Accomplishments such as these reflect the dynamism and zeal of a religious community whose first concern is the official prayer life of the church. For St. John's Abbey in its first century has, among other things, built up one of the most respected universities in the Middle West, ministered to the spiritual needs of several generations for miles around, set up a continuing series of constructive social action and rural life institutes for adults and at the same time sent forth its men again and again to establish a dozen or more new autonomous monasteries and priories along a vast arc which extends from Mexico and Puerto Rico to Tokyo, Japan. We are happy to join in paying tribute.

Letter to My Constitutents

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. MORRISON. Mr. Speaker, under leave to extend my remarks in the RECORD I include a letter which I am sending to my constituents:

HOUSE OF REPRESENTATIVES,
Washington, D. C., July 1956.

MY DEAR FRIEND: I am writing this letter to ask for your vote and support in my reelection. Election day, as you know, is July 31 and your support will be deeply appreciated by me. I will also be deeply grateful if you can contact your friends, neighbors, and relatives and urge their support of my candidacy for reelection.

It has been my privilege and honor to be your Congressman for the past 14 years or 7 consecutive terms. I am extremely appreciative of the confidence that you have placed in me and also of the fact that you have elected me by a larger vote each time that I have come for reelection. With your generous support in the past, you were responsible for me being unopposed for the past two terms.

I have certainly tried in every way to justify your confidence by trying to assist each and every person who called on me regardless of their walk in life or political alinement. No problem has been too small nor none too large to receive my urgent attention. I think you will agree with me that I have tried to be one of the best Congressman that ever served the sixth district.

I do not want to appear boastful as to my efforts but I do feel that by writing you this letter that it will enable me to let you know how extremely grateful I am to serve as your Congressman.

Your Congress has faced a multitude of difficult issues and problems during the past years. I have consistently voted for all measures that would aid the farmers, the old folks, the businessmen, the laboring man and the veterans and for the various bills that improve our security and standards of living.

I pledge to do everything within my power to continue to help you to remedy the troubles that beset you at this time and to improve your working and living conditions. You may therefore, rest assured that I shall continue to put forth my best efforts in your behalf.

I trust that my legislative experiences for the past 14 years and my record as your Congressman in these 14 years will warrant your continued consideration for your vote for my reelection July 31.

With kindest personal regards and best wishes, I am

Sincerely yours,

JIMMY MORRISON,
James H. Morrison,
Member of Congress.

P. S.—As I have said in the past, I want you to feel that at any time I can ever serve you in my capacity as Congressman, please do not hesitate to call on me. I am enclosing my remarks from a speech I made on the floor of Congress and hope that it will be of interest to you.

Best regards.

J. H. M.

Galloway Calhoun

EXTENSION OF REMARKS
OF
HON. BRADY GENTRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. GENTRY. Mr. Speaker, the Honorable Galloway Calhoun, past grand master of Masons of the State of Texas, past imperial potentate of the Shrine of North America, president and chairman of the board of trustees of the Shriners Hospitals for Crippled Children, was elected by the board of directors of Indiana Technical College, Fort Wayne, Ind., to receive an honorary degree of doctor of humanities which was to have been conferred upon him in person at the commencement exercises on May 20, 1956, when the eminent scientist, Charles F. Kettering, was the speaker.

Because of ill health Dr. Calhoun could not attend the exercises. His friend of long standing, Dr. George E. Stringfellow of West Orange, N. J., long time business associate of the late Thomas Alva Edison, member of the imperial divan of the Shrine and a member of the board of directors of Indiana Technical College, received the citation in behalf of Dr. Calhoun. Dr. Stringfellow was authorized by the board of directors of Indiana Technical College to present the citation to Dr. Calhoun at the annual meeting of the Texas All State Shrine Association in Houston, Tex., on May 26, 1956, on the assumption that Dr. Calhoun would be able to be present. Dr. Calhoun, however, had not sufficiently recovered his health to attend this very successful affair and the Governor of the State of Texas, the Honorable Allan Shivers, received the citation from Dr. Stringfellow for Dr. Calhoun.

In presenting the citation, Dr. Stringfellow read the following message from Dr. Archie T. Keene, president of Indiana Technical College:

Mr. Calhoun, because you realize that to be effective, any efforts in behalf of humanity must be rooted in unflinching personal integrity; because you know that prosecution of the evil-doer should be undertaken only by the pure of heart and that the strength for such efforts comes from rectitude and simplicity; because you realize that the sick and the weak give to the strong and the able an opportunity to develop gentleness, humility, and gratitude; and because your own concern and love for the physically unfortunate have grown to the place where you are willing to sacrifice your own vitality and talents for their welfare—which is the ultimate in unselfishness—Indiana Technical College, upon the approval of its board of directors, is honored to pay tribute to you and through the authority in it vested by the State of Indiana confers upon you the degree, doctor of humanities (honoris causa), with all of the

rights, titles, privileges, and obligations appertaining thereto.

ARCHIE T. KEENE,
President.

In receiving the citation for Dr. Calhoun, Governor Shivers said:

Thank you, George Stringfellow, President Kendall Baker, of the Texas Shrine Convention, imperial sirs of the Imperial Council of the Shrine for North America, distinguished guests, ladies and nobles of the Mystic Shrine.

It is a proud moment for me that I have been selected to receive this honorary degree of doctor of humanities from Indiana Technical College, on behalf of our great and good friend, Galloway Calhoun, who cannot be with us this evening because of illness.

We can say to all of you that we truly love Galloway Calhoun, and in his behalf we express our gratitude for this recognition. No citizen of Texas has been more interested in his fellow man than has Galloway Calhoun. He has contributed generously of his time and talents, as well as his economic resources, to make this Nation secure in its freedoms, more able to cope with its ever increasing problems, and to create a better feeling among all people. I know I can express his deep regrets because of his inability to be with us here tonight. His contribution to the great humanitarian work of the Shrine for North America has been invaluable.

His legion of friends are saying a prayer for his speedy recovery, and in his behalf I am privileged to say thanks many times over to you, and to the members of the board of Indiana Technical College and all its faculty, for this additional honor which has come his way.

Mr. Speaker, the people of all walks of life in my congressional district and the State of Texas feel that they themselves are honored through this award to a great American citizen by one of our country's outstanding educational institutions. We who know Galloway Calhoun intimately realize full well that it is a worthy and most deserved tribute to one who, throughout his life, has given his utmost in service to humanity.

NAACP Injures Negro Race

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks I include an editorial from the Orlando Morning Sentinel which is most timely:

NAACP INJURES NEGRO RACE

The unfortunate situation in our State capitol at Tallahassee shows how racial relations can deteriorate when attempts are made too suddenly to alter the customs of generations.

Because two Negro students demanded the right to sit in the white section of a local bus, as the Supreme Court had indicated they had every right to do, a boycott was instigated when they were put off the bus.

There are many things that are not right in this world and everyone should try to improve bad conditions wherever they exist. But fools rush in where angels fear to tread. And too many times rabid reformers only succeed in making matters worse.

The boycott of the bus company in Tallahassee was managed so well that Saturday night it went out of business. Now the city's 14,000 Negroes are without transportation facilities.

Even worse, considerable animosity has been aroused among the white people against those who participated in the boycott and Negroes are complaining of police intimidation. There are threats of extending the boycott to other lines of business.

In condemning the action of the National Association for the Advancement of Colored People, Governor Collins said, "If it is interested in advancing the welfare of our Negro citizens, it should concern itself with other conditions of far more importance than where people sit on buses."

There are so many things which need to be done for the benefit of the Negro race before integration becomes possible. The NAACP could make a real contribution to Negro welfare if it devoted its energies to improving his health and sanitation, his sense of moral values, his attitude toward work, and responsibility to family and community.

In seeking these goals the Negroes would have the cooperation of their white friends everywhere throughout the South. They could have better schools, better housing, better health facilities, and better economic opportunities on a segregated basis.

Once they have achieved equality, there would be less opposition to integration.

H. R. 11375 Will Boost Milk Consumption

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, since the passage of my bill, H. R. 11375, by the House, I have received some additional information on how my bill will increase the consumption of milk under the special school milk program.

Before I present this information, I wish to point out that under the present authority many agencies and institutions are not eligible to receive school milk unless the children are underprivileged and are on a public-welfare or charitable basis. We do not apply this discrimination to the milk received by elementary and secondary schools; therefore, I believe that the law should be amended to remove this discrimination from child-care centers, nursery schools, settlement houses, and other youth programs of a nonprofit nature such as summer camps, and so forth.

I have been informed that comparatively few child-care organizations in all of our States are eligible to receive milk under the present authority. For example, small-population States, such as Vermont, Utah, Wyoming, and Nevada, report that less than six organizations are eligible to receive milk under the present authority.

In the southeast States of North Carolina, Kentucky, Georgia, and Alabama the number of child-care agencies, organizations, programs that are eligible is estimated to be from 15 to 30.

Michigan estimates that only about 50 organizations—serving about 2,500 children—are eligible now to receive school milk. Minnesota estimates that it has only 25 organizations—serving 2,000 children—eligible under present authority.

Wisconsin, which has demonstrated considerable interest in the extension of the mink program to organizations other than schools, recently made a survey to determine the number of programs eligible under the present law. The results of the Wisconsin survey show that only 31 child-care institutions serving 4,600 children are presently eligible.

On the other hand, under my bill—H. R. 11375—it is estimated that 279 organizations or programs, serving approximately 85,000 children, will be eligible for school milk.

The present legislation excludes many organizations serving a very substantial number of children. These include the Boy Scouts, Girl Scouts, Camp Fire Girls, 4–H Clubs, WMCA, church groups, and summer camps operated by city recreation departments or park commissioners.

For example, 270 camps in Massachusetts now receive surplus foods; however, only 20 to 25 of these camps can qualify for the milk program under present authority. In the greater Boston area summer recreation programs serve some 50,000 children daily. While certain units in this Greater Boston program may qualify, the State agency does not wish to participate in the program except on a communitywide basis.

The same reaction is reported from Philadelphia where extensive recreation programs are operated for children from late spring through early fall.

Under H. R. 11375 all of these programs, agencies, organizations, and institutions would be eligible to participate in the special school-milk program.

I certainly must emphasize the fact that children are very active during the summer months. This is one time when they should have all the milk they can use for nutritional purposes. The broader authority for extension of the school-milk program under H. R. 11375 will certainly increase the consumption of milk, and it will provide children with nutritional food at a time when they need it the most.

A True World Peace Congress

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. HYDE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include an article, featured in the summer issue of the Washington magazine, World Affairs, written by my friend, Dr. Joseph F. Thorning, professor of international relations in the University of Santo Domingo and a Maryland educator, author, and lecturer. This article is entitled

"A World Peace Congress: Christians in Action." It is clear that the spiritual resources of our Judaeo-Christian civilization are equal to the problems which confront us in the age of thermonuclear energy.

The article follows:

A WORLD PEACE CONGRESS: CHRISTIANS IN ACTION

(By Joseph F. Thorning, professor of international relations, the University of Santo Domingo)

The peace movement is not a monopoly of the Soviets. This was demonstrated on a world scale, when delegates from every free nation and representatives of many countries behind the Iron Curtain met for 10 days (February 26–March 8) in the Dominican Republic. The keynote of this gathering was the motto of the American Peace Society: "Peace is the tranquillity of order." Without bombast or bellicosity, without nationalistic overtones or the futile posturings of self-styled "pacifists," spokesmen (ladies and gentlemen) from Asia, Africa, Australia, Europe, Canada, Hispanic America, and the United States presented, by word and deed, an affirmative program for human brotherhood based upon undiluted Christian doctrine.

It was significant that the principal orators in this international gathering were not ecclesiastics but youthful, dedicated lay leaders. Outstanding in this category was Prof. Enrico Medi of the University of Rome. The gentleman, fresh from his experience at the Geneva International Conference on the peaceful uses of nuclear energy, described, with a wealth of mathematic formulæ, the lightninglike advances which scientists were making toward creating a superabundance of economic goods. It was Dr. Medi's contention that mankind was much closer to the solution of the ultimate problems in the domain of thermonuclear energy than would be suspected by the uninitiate. "The human race," this specialist insisted, "is moving forward in the antechamber of Paradise. Global food supplies, comfortable homes on every continent, suitable raiment for every climate, and transport for all, rivaling that epitomized in the fable of the magic carpet, await discovery just beyond the final, paper-thin barriers to new worlds of scientific truth. What reason is there to engage in fratricidal slaughter when we have traversed nine-tenths of the journey, through deserts and over mountains, to the Promised Land? The folly of war, the crime of wholesale incineration, can serve as the only roadblocks on the highway to happiness."

The world dimensions of this dream did not keep the delegates from a careful consideration of the problems that afflict humanity on a more modest scale. The Family, Its Nature, Qualities, and Purposes was the subject of an excellent address by Prof. Félix Obieta of Madrid, Spain. Youth Education for Farm Work was a theme developed by Prof. Fernand Boulard, of Paris, France, while the advantages and limitations of agricultural and fishing cooperatives for production and marketing were described, in intimate detail by Prof. Michael McKinnon, of St. Francis Xavier University, Antigonish, Nova Scotia. The shipment and sale in Boston of two crates of lobsters, it was pointed out, formed the starting point of a whole system of regional education for farmers and fishermen, with a consequent 100 percent increase in the standard of living for these workers and their families. A brief history of social security laws constituted an integral part of this discussion. It was the role of Dr. Pedro Troncoso Sánchez, in a masterly dissertation, to sum up the economic and sócial features of progress in the Dominican Republic under the general heading "The Commonweal, Chief Purpose of the State."

In the midst of the serious toil of the International Congress on Christian Culture for the Peace of the World, it was refreshing to have flashes of brilliant wit and humor spread by three notable representatives of the British Commonwealth (Messrs. Douglas Woodruff, Bruce Marshall, and Dr. M. McNarney). Mr. Bruce Marshall, the novelist, delighted his listeners by pointing out that religious, peace-minded people did not have to be dull. He recommended that imagination and sound feeling should inform, enchant, and enlighten the attitudes of Christian apostles of peace. "Why should God's crusaders for brotherly affection," he asked, "be content to denounce reality rather than to deal with it? What is to be gained by constantly becoming embroiled in rear-guard actions? Peace is a Christian ideal; peace is an interesting, happy experience; peace is fruitful and fructifying. Too many religionists, like militarists, tend to despair of human nature. Since man possesses his soul, made in the image and likeness of God, he holds within himself and in the divine spirit of his neighbors a fountain of eternal hope. Human betterment comes about by love of virtue, not merely by the detestation of sin. Therefore, the Christian man of letters pictures life as God made it, not as the preachers sometimes depict it, sulfurous with fire and smoke. Whereas the agnostic despairs of his own destiny and is dismal in his interpretation of life's suffering and setbacks, the Christian paladin of peaceful living is at home in history and in the world as it is. Since Satan is the real deity of the unbeliever, why should not the faithful Christians move forward with letters, arts, sociology, and science?"

A similar note was sounded by M. J. Paul Chartier, editor in chief of the celebrated Radio-Cinéma, illustrated magazine of France. Deploring the tendency to wax melancholy about the salaciousness and superficiality of many Hollywood-Paris-Rome productions, this gifted journalist declared that the public could demand and get the best in motion-picture art. In his view, good entertainment, exemplified in pictures such as Pygmalion and Julius Caesar, were also good box office. "Religion," he stated, "is a better treasure trove for silver screen than classic drama, the latter a cultural source that, repeatedly, has been tapped with golden results. Christians must become entrepreneurs and promoters. The masterminds and the merchandisers must not be necessarily drawn from the ranks of the pagans or infidels. Motion-picture stars, male and female, can be keyed to the cause of Christian humanism. Many of them hunger and thirst after justice. But neither the artists nor the technicians nor the producers can be courted with tommyguns. They can be won to the peace movement and to the Christian apostolate by intelligent admiration for what they create in the magic-lantern world of the true, the good, and the beautiful."

Peace Among the Nations was the topic confided to a youthful member of the Italian Parliament, the Honorable Giuseppe Vedovato. "Law and politics," he elucidated, "must be predicated upon the fact that the human race is the human family. Although the members of the same family may disagree or quarrel, they are organically united. Consequently, until they establish their family relationships upon juridical principles they are living outside the plan of nature's God." Touching upon the cultural aspects of family living on a world scale, Dr. Vedovato, who is one of the Vice Presidents of UNESCO, indicated that, although agnosticism had been a feature of this organization's initial phases under the influence of Mr. Julian Huxley, this was no longer as prominent a factor as it had been. Consequently, he urged that God-minded people do their best to enter the activities of UNESCO with the conviction that culture could not be divorced from religion. "Since the human family can be united only by love," Deputy Vedovato concluded, "Soviet collectivism, which promotes militant atheism, can never offer any motivation superior to expediency, if, indeed, it does not spread envy and hatred."

Switzerland, which has such an excellent reputation as a "little League of Nations," was represented in the conference by M. Robert Bénoit-Cherix, professor of religious literature in the University of Fribourg. He emphasized the responsibility of the individual citizen to come to the assistance, spiritual and temporal, of his neighbors. "World peace," he declared, "does not transcend the need of a citizen's body and soul for personal charity; no organization can take the place of a friend who is willing to persevere in the role of a Good Samaritan."

This view coincided with that of the principal delegate of China, Dr. Paul K. T. Sih. "It may be stated sadly," he suggested, "that we are living in a cold peace, for the flames of charity are lacking. * * * If you seek peace apart from God, you will have wars and wars. Without God there is no ultimate frame of reference for human beings or for any other creatures. A righteous peace program must pit faith against terror; truth against falsehood; and love against hate."

The spokesman for Asia at the final session of the World Congress was Dr. Kotaro Tanaka, chief justice of the supreme court of Japan. Both chief justice and Mrs. Tanaka, it may be remarked, are fervent Christians and both took an outstandingly brilliant part in the gathering. What they reported about the importance of the Far East was thoroughly interesting. But most impressive was their personnal example of conscientious devotion to duty at all sessions, their painstaking record of the comments by each speaker, their industry in transcribing their notes from Japanese to English, German, Spanish, and French, their obvious sense of solidarity, in the light of Christian love, for their fellowmen. No couple from any country won deeper respect from all who saw them or had occasion to exchange opinions with them.

It was hardly astonishing, therefore, that the final declaration of the International Congress began with these principles:

"All men are essentially equal, whatever may be their race or the class to which they pertain, or the stage of civilization which they have reached. All have an identical origin in God, by creation; all have the same nature, a body and an immortal soul; all have been redeemed by Christ; all can be reborn to the life of Grace; all are called to the perfect possession of God in Christ."

Eastern Kentucky State College Extended International Recognition

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 7, 1956

Mr. WATTS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to insert an article appearing in the April 6 issue of the Christian Science Monitor which I believe will be of extreme interest to the membership of the House.

It relates to the outstanding achievement of a small teachers' college located in my congressional district in Kentucky. This accomplishment is most extraordinary because it dwells in a

field ordinarily unique and removed from the normal endeavors of the average teachers' college.

Long has Eastern Kentucky State been recognized as one of the foremost and progressive institutions of its kind in the country. This commendation concerning its success in promoting a system of study and dissemination of information on matters relating to world mindedness is well merited and reflects the untiring efforts of the management and faculty of this institution to advance the standing of Eastern in the fields of education.

The director of the center of international relations, Mr. Glenn A. McLain, is a very dear friend of mine, and I know personally of his work and endeavors to insure the continued and broadening success of this undertaking. To him and to the faculty of Eastern Kentucky State I extend my sincere congratulations. They have well earned this recognition.

The article follows:

THEY SEE WIDE HORIZONS IN THE BLUEGRASS STATE

(By Glenn A. McLain, director, Center of International Relations, Eastern Kentucky State College)

RICHMOND, KY.—Teachers colleges are seldom famous for giving their students an outstanding knowledge of world affairs; and perhaps this, in particular, is not expected from a teachers college located in the heart of the Middle West and drawing largely from the region directly around it. Yet for over 28 years the study of world affairs has been a notable part of the teaching program of Eastern Kentucky State College. This school has, indeed, achieved an international reputation for its emphasis on world-mindedness.

Leadership rests with a World Affairs Club. Founded back in 1927 under the guidance of Dr. L. G. Kennamer, head of Eastern's department of geography and geology, it has been consistently active through the years. Under its sponsorship, discussions, film programs, and world-famous speakers have brought the world to Richmond's doorstep, and in turn sent out hundreds of graduates having an unusual grasp of the importance of a knowledge of world affairs in facing the problems of their own State and communities.

ESPECIALLY SELECTED

In May 1954 the Foreign Policy Association of New York selected Eastern as one of 40 institutions and organizations in which to establish a center of international relations. Eastern also became one of 19 educational groups in America sponsored by the United States Department of State to distribute United States foreign policy materials, and 1 of 22 colleges in the Nation which is working with the United Nations as a depository for U. N. materials. The groundwork already done by the World Affairs Club had opened the way.

For many years the club had kept a large collection of materials on Kentucky and on world problems. This was greatly increased, and is now used as resource material by schools, colleges, and community organizations throughout the State.

Part of this collection includes a clipping file from newspapers. This file, which covers 1,000 subjects in the field of international relations, is based largely upon articles printed in the Christian Science Monitor during the past 10 years. Many former Eastern students, now teachers and professional leaders, have been trained to us this simple inexpensive way to build a topic file on any of a variety of subjects.

SOME OF ACTIVITIES

That the program at Eastern is considered unique in its field in the entire Nation, is due to a large extent to the members of the World Affairs Club. These students have been generous in volunteer work and have shown outstanding leadership in developing speakers' events.

From May 10, 1954, until October 10, 1955, for example, a total of 872 teachers at all levels of instruction have been included in the mailing list of the Center of International Relations. During the academic year 1954–55, 316 personal requests for materials on everything from conservation in Kentucky to United States policy in the Far East were filled by the World Affairs Club staff of the center.

A great many of these students spent their weekends, time between classes, and afternoons, in the center typing up packages, making posters, unwrapping mail and answering or processing the over 100 letters and 200 packages which weekly flowed into the center. Over 1,300 organizations in the field of world affairs have the center on their mailing lists and many times during the past year truckloads of mail have been sent to the center for distribution throughout Kentucky.

WASHINGTON RESOURCES

Washington resources have been developed for the club and center by the public services division of the State Department, and many Washington legislators have placed Eastern on the mailing lists of every congressional committee and subcommittee in the Congress. World Affairs Club members handling these valuable materials have developed skills in handling Government and many other types of resources which few college students know how to use, either in teaching or in other professional fields.

Last year, 11 speakers of international importance came to the Eastern campus as the guests of the club. The list was headed by the Australian Ambassador, Sir Percy Spender, who made a radio broadcast with the president of the club, Patti Ann Poyma, and local townspeople. After a banquet attended by over 200 Richmond citizens and students of Eastern, the Ambassador was entertained informally by the students in the dormitory. This kind of off the cuff activity with the students has been of major importance to the club throughout the years at Eastern. Many speakers from Austria, Germany, Finland, Israel, and other countries have gone into the classrooms and let down their hair for the benefit of the students.

As the club rounds out yet another year of its pioneer work at Eastern, a new development is already under way. Last autumn what is said to be the first international relations center in America at the high-school level was established in Harlan, Ky. The World Affairs Club and the Center of International Relations at Eastern expect to go on and establish many other such centers during the next 3 years.

Northwest to the Orient

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. REUSS. Mr. Speaker, the following editorial from the Milwaukee Sentinel of April 18, 1956, should be pondered by all who are interested in the current Civil Aeronautics Board inquiry into certification for flying the northwest route to the Orient:

DIRECT LINK

The right of Northwest Airlines to fly the northern Pacific route to the Orient without disabling competition is again coming up for review before the Civil Aeronautics Board next month.

This is another chapted in a long-standing effort by Pan American World Airways to gain access to the shorter northern route in addition to the longer but more lucrative southern route via Hawaii for which it already holds a certificate.

Northwest has resisted this effort on the grounds that competition would reduce its revenues to the point where it would again require Government subsidy—a condition from which it has been free since 1954.

The matter is of concern to businesses and individuals throughout Wisconsin because of the advantage they enjoy in Northwest's direct link between our State and the Orient.

We wish to suggest that they be alert on this situation, and prepare themselves to register their positions when the case comes on for public hearing before the CAB in May.

Statement by Charles H. Callison

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, it has been my great pleasure, since coming to Congress to become personally acquainted with Charles H. Callison, conservation director of the National Wildlife Federation. I would like to call my colleague's attention to a statement Mr. Callison made before the House Agriculture Committee recently in support of legislation to provide for the development of the recreational and wildlife resources of our national forests.

STATEMENT BY CHARLES H. CALLISON, CONSERVATION DIRECTOR, ON H. R. 1823 AND SIMILAR BILLS

The National Wildlife Federation is made up of some 3 million conservation-minded citizens through its member organizations in the States, Alaska, and the District of Columbia. These people and their families represent a substantial segment of the 40 million sportsmen and sportswomen who hunt and fish in this country. They also are among the principal recreational users who made 46 million visits to our national forests last year.

It is a privilege to appear before this important subcommittee of the Congress to express enthusiastic endorsement by the federation of legislation that will provide for development of the recreational and wildlife resources of the national forests. Medical authorities tell us that outdoor activities are a safety valve through which the people can relieve themselves of the tensions and anxieties that beset our society. One of the most popular and frequently recommended antidotes is a trip to the out of doors to fish or hunt, hike or camp, picnic, or enjoy other of the many relaxing pastimes that are to be experienced within the 180 million acres of the national forests. If I may insert a personal reference, 3 years ago I was having some stomach trouble. It was about this time of year, and I was racing around like mad trying to keep up with the multifold activities of Congress. My principal job is to produce

a legislative reporting service which goes to the member organizations of the National Wildlife Federation, to the State wildlife agencies, and to other conservation groups and leaders throughout the country. I went to see a physician about the persistent rock in my stomach, and he told me I was on the verge of developing an ulcer. He prescribed a diet and some pills, but his principal advice to me was, "Take some time off and go fishing."

The national forests belong to the people and are open to their use. There is no more important resource than the human resource. We cannot place a price on human health and happiness. Neither can we justify or excuse the continued failure to provide the funds needed to develop and utilize the recreational resources of the national forests.

We are not going to keep these millions of recreation seekers out of the national forests. We cannot afford to let the attrition of their very numbers despoil and endanger the forests and the wildlife resources within them. We cannot in good conscience fail to provide the necessary sanitary facilities to protect the health of these millions. Five and one-half million dollars per year as proposed in the bills under consideration—or even twice that amount—would be cheap insurance indeed.

Public recreation has become a third major use of the national forests, ranking in importance along with timber production and watershed protection. It is not difficult to show that, from the standpoint of the public welfare, recreation is the most important product or use of certain national forests that lie within easy access of smog-ridden, tension-laden metropolitan areas. The Inyo National Forest of California and the Allegheny National Forest of Pennsylvania, are examples.

The social and economic importance of the national forests for hunting, fishing, camping, hiking, and other forms of outdoor recreation is a fact created and recognized by the American people. It is a fact not yet recognized by the Federal Government that determines policy and appropriations for those forests.

While the curve of recreational use has been zooming toward the 46 million visit mark, appropriations for servicing and maintaining the recreational facilities—the campgrounds, the picnic areas, the roads and parking areas, and the sanitary facilities—have not kept pace. There have been some small increases in recent years. The appropriation act already approved for fiscal year 1957 carries $3,097,250 for sanitation and care of public campgrounds. This isn't even enough for operation and maintenance of the present run-down and inadequate facilities. It is less than 7 cents per recreational visit. It provides no money for needed capital improvements. In 1952, when the total of recreational visits was running around 35 million per year, the Forest Service estimated $7,169,000 was needed at once to put existing recreational areas in good condition. The Service estimated another $17,135,000 was needed to expand the capacity of existing recreation areas and to construct new areas and facilities to take care of the public overload. A total capital investment needed—in 1952—of over $24 million. I don't know what their current estimates are, but I trust they will be given to the subcommittee.

The condition of recreational facilities on national forests has deteriorated until the public health and safety—and the resources themselves—are seriously endangered. The fire hazard has increased. At places like the Big Pines recreation area in the Angeles National Forest of California, the Barton Flats area in the San Bernardino National Forest, the Powder River area in the Roosevelt National Forest, conditions so slumlike and unsanitary have developed during peak seasons in recent years as to disgrace the Government of the United States.

Wildlife managers point to the fact that some 3,220,000 big game animals—one-third of the national total—live in these publicly owned forests. This number includes 2,820,000 deer, 246,000 elk, 82,000 black bear, 690 grizzly bear, 14,000 mountain goats, 9,660 bighorn sheep, 10,000 moose, 27,000 antelope, and 17,000 peccary.

In addition to providing range for more than 90 percent of all the elk in the country, the wildlife-rich national forests support a large part of the bighorn sheep and nearly all of the mountain goat and grizzly bears to be found outside of the national parks.

Hunters harvested some 473,000 big game animals from the national forests during the 1954 hunting seasons. This total includes some 312,000 mule deer and 85,000 whitetail deer. In addition, 8 out of every 10 of the 41,000 elk taken in the United States come from these forest areas.

Yet, on the basis of current appropriations for wildlife work on these lands—a pittance of $365,000 for the next fiscal year—we would be making an annual investment of less than a dollar per head for each deer or elk taken home by a hunter if the whole sum were expended on big game. Such an allocation, of course, would leave nothing for the important small-game resources or for maintaining the vast sport fisheries in 81,000 miles of streams and 2¼ million acres of lakes and reservoirs within the National Forests. These comparisons serve to illustrate that our present rate of investment in these public game ranges and fishing waters is ridiculously shortsighted.

This kind of neglect of a great natural resource is theopposite conservation. It is sheer waste.

What could the Forest Service do with additional funds for wildlife habitat improvements? Here are some things urgently needed:

Proper location and construction of timber roads and skid trails to eliminate or minimize siltation of streams.

Reservation of sufficient natural openings and brush areas to meet game browse and feeding needs. Fencing of key food and nesting areas.

Planting or reservation of natural groups of conifers for wildlife shelters, and planting or release of fruit-bearing trees and other species that are valuable for wildlife food.

Planning for use of timber-harvesting roads so they may also serve sportmen's needs and secure adequate harvest of big game in areas where there are problems oversupplies of big game.

Management of streamside and lakeshore borders to preserve cover conditions for aquatic animals, such as waterfowl, beaver, and fish.

Seeding of skidways, roadsides, and landings on timber-sale areas where wildlife forage plants will grow and where such seeding will not be inimical to timber-production objectives.

Creation of water holes and construction of watering devices in areas where water shortages tend to limit wildlife populations.

Building of fishing lakes.

(We are submitting for the record, if the subcommittee will permit, a longer listing of direct wildlife habitat improvement measures needed in the national forests.)

Today, except for the small amounts spent on cooperative planning and administration of habitat improvement projects that are paid for by State agencies and other cooperators, the Forest Service has no money to invest in this important phase of the wildlife program. That there is great need is demonstrated by the fact that the State game and fish departments themselves spent nearly one-half million dollars on the national forests last year. With the funds that would be provided by the bills under consideration here, the Forest Service could enter into cooperative projects that would offer real inducements to the States for even greater investments. After all, this is Federal land we are dealing with. The States are limited in the amounts they can spend on national forest lands, but they can justify spending more if Uncle Sam will carry his share of the load. The allocation of $2½ million per year for the wildlife part of the program would be a modest amount.

National forest receipts accrue from timber sales, cottage and resort-site leases, grazing, and other special-use permits. Total of receipts in fiscal year 1955 was about $82 million. The $5½ million ceiling proposed in most of the bills before the subcommittee would be considerably less than 10 percent. The estimate of receipts for fiscal year 1956 and for succeeding years exceeds $100 million.

We would favor increasing the annual authorization or ceiling to $7½ million, as recommended in bills recently introduced in the Senate. Actually, $7½ million is more realistic than $5½ million in view of the increasing costs and booming recreational needs. The returns in benefits to the public health and welfare, in better hunting and fishing, and in protection of the timber, soil, water, and wildlife resources, would be tremendous.

We have heard and studied the technical and academic objections to the earmarking of national forest receipts for the purposes specified in this legislation. The public isn't going to take much stock in such arguments in view of the present earmarking provisions which set aside 35 percent of the money received from the national forests for county roads and schools, and another 10 percent for roads and trails within the national forests. We suggest that the earmarking objections have been raised by those who are reluctant to allow recreational uses to come into their own as a part of the multiple-use pattern of national-forest management.

In closing I would like to say that the National Wildlife Federation has long felt that this is one of the most important conservation problems needing action by the Congress. This legislation has been endorsed and advocated by every one of the State wildlife federations and sportsmen's leagues that belong to our national organization. We urge your favorable and speedy action. It is going to be difficult to explain to the many millions of interested citizens that it is too late now to pass this bill because of the crowded calendar. We shall observe, as we have in the past, that there will be new bills reported from committee and passed by both Houses in the final week of the session.

Thank you for the opportunity and privilege of presenting our views.

DIRECT WILDLIFE HABITAT-IMPROVEMENT MEASURES NEEDED IN THE NATIONAL FORESTS

1. Stream and lake improvement to create more favorable conditions for fish life:

(a) Streambank stabilization.

(b) Providing shade by planting along streams.

(c) Small check dams and deflectors to improve shelter and pool conditions.

(d) Providing gravel in lakes.

(e) Provide cover in lakes by sinking brush piles.

(f) Removal of undesirable vegetation from ponds.

(g) Pond fertilization.

(h) Raising of water levels in lakes to prevent winter lows.

2. Building of flow maintenance dams.

3. Diverting water to unstable natural lakes.

4. Building of fishing lakes.

5. Building of ponds and marsh areas for waterfowl.

6. Building of water places, such as ponds, sping development, "guzzlers," in arid sections to provide drinking water for wildlife.

7. Making food and cover plantings:

(a) Groups of conifers in extensive stands of hardwoods.

(b) Legumes and grasses in forest and other openings.

(c) Browse on big game winter ranges.

(d) Willows for streambank stabilization and shade.

(e) Oriental chestnut and other trees for most production.

8. Cultivation and fertilization of food plots.

9. Opening up dense brush fields to provide access by game and also variety of forage plants.

Dr. Leonard A. Scheele—An Outstanding Public Official

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 7, 1956

Mr. HESELTON. Mr. Speaker, this country has suffered a great loss in the recent resignation of its Surgeon General, Dr. Leonard A. Scheele. But I am confident that many more people than he realizes recognize the magnificent contribution he has made during his terms of office. I am certain that they are grateful to him for what he has done so effectively for years in their behalf. And I know that, although they regret his decision to leave his great office, they appreciate fully his reasons for doing so and join with Members of this House, who know him well and admire him greatly, in wishing him the fullest measure of richly deserved happiness and continued service to his fellow citizens in his new work.

I am glad to place in the RECORD two fine editorials.

The first is from the July 1 Holyoke (Mass.) Transcript-Telegram:

EVERYBODY'S DR. SCHEELE

There has never been a Surgeon General of the United States Public Health Service, whose name has been so well known throughout the United States as Dr. Leonard A. Scheele. Every home in the Nation knows something about him. It was his job under the law to set up the administration of the Salk vaccine against polio. All those thousands of children in Holyoke who have had polio vaccine can say that Dr. Scheele was their top doctor.

The polio vaccine issue was the first major problem to come before the new Department of Health, Education, and Welfare. To have cast those three tremendously important phases of our public life in one basket was not the best thing for public service or the public life. There should be a department for education alone as the changing standards of our changing life will prove.

In the polio case when some of the drug concerns to which making the vaccine was entrusted tried to set their job too speedily, and let some live germs go through, the blame was laid at the doors of the new department that was trying to give every child in the Nation the protection against polio.

Secretary Hobby turned the situation over to Dr. Scheele, the Surgeon General who had been in Public Health Service for 23 years. Dr. Scheele held his own, intolerable though the burden seemed. Secretary Hobby resigned. It was not her fault, neither was it Dr. Scheele's fault. But he assumed the responsibility. Now the Salk vaccine and its administration has reached every child in the land whose parents will accept it. The excellence of our public health organization has been proven.

There has come a chance to Dr. Scheele to go into a pharmaceutical job that will give him a large salary. He will have more money for the education of his children. That is his explanation. We can have an idea that he can toss his head up and say, "I got caught in a terrible situation for which I was in no way personally responsible. Under my oath of office I did have a responsibility. I have cleared that up."

The Salk vaccine administration has been extended to the childhood and the young mothers of America. The AMA is rising up to say that vaccination against polio should be in the hands of private doctors except in welfare cases. "I do not have to give battle to that idea. I have a right to accept a more lucrative and less disturbing field." And Dr. Scheele has a right to say just that. But he won't.

The second is from the July 1st New York Times:

DR. SCHEELE RESIGNS

The Surgeon General of the United States Public Health Service is not usually a conspicuous figure in the news. He works, day in and day out, at the head of an immensely important and vastly complicated service. His work is a combination of the scientific and the administrative, and he must be good in both fields. He usually tries to keep it from being spectacular or controversial.

Dr. Leonard A. Scheele, who has just resigned the post after the best part of a young lifetime in service, had to be an exception. He was in the position of authority when one of medicine's dramatic mileposts was reached, the perfection of a vaccine against polio. When some trouble arose about testing he was obliged to act and did so. His name, in public memory, will always be connected with these incidents and episodes.

This should not make us forget, however, that he has long been a diligent and faithful public servant who has helped all of us with his skill and intelligence. We regret that he feels obliged now to turn to a private career. It would be ungenerous to wish him less than the greatest success, which he deserves.

Readjustment of Postal Rates

SPEECH

OF

HON. KENNETH J. GRAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11380) to readjust postal rates and to establish a congressional policy for the determination of postal rates, and for other purposes.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois [Mr. GRAY].

Mr. GRAY. Mr. Chairman, I want to use the brief time allotted to me to talk about something that has not been talked about here today. I want to talk about the service that the American people are receiving from the Post Office Department. There has been one Member after the other come to this microphone and speak out in behalf of Mr. Summerfield and the Post Office Department. But, how many have come and talked about the three basic segments of our American economy, namely, the small-businessman, the workingman, and the farmer? I am bitterly opposed to this bill because those three classes of people in my district are against it. One reason is because of the service they are receiving. When I came to the Congress in January 1955, one of the first letters on my desk was from the Post Office Department. It says:

DEAR CONGRESSMAN GRAY: Investigation has disclosed that the fourth-class post office in Sora, Ill., may probably be discontinued at an annual saving of $1,700, or $17,000 over a 10-year period.

Very frequently thereafter, I received one of these letters telling me of a post office closure. There have been numerous fourth-class post offices closed in my congressional district, forcing many inconveniences upon the people including receiving their mail a day late. That is one of the reasons they are against this postal rate increase. They do not mind paying for something that they are getting, but they are not getting much.

I wish my friend, the distinguished gentleman from Tennessee, the chairman of the committee, was here because he talked about the extensive hearings that were held on this bill. Sure, they were held. I know because the committee room is just down the hall from my office. Yes; but how many days were spent talking about the service that the American people are getting from the Post Office Department? I have not read the hearings, but I dare say that there was not 1 day spent to see why we are getting less service at higher costs.

Each time the Post Office Department closes a post office, ignoring the service curtailed, they brag about how much saving is being effected, but I would like to know where all this money is going that is being saved? In my district since I took office less than 2 years ago, the alleged savings would amount to several thousand dollars. In the name of economy they are closing post offices not only in my district but throughout the country. This should amount to several hundred thousand dollars in savings. Service certainly is not being considered in this economy drive. I was particularly interested to listen to the remarks of the gentleman from Indiana [Mr. HALLECK] when he said:

You vote the postal employees a pay raise but don't want to raise the revenues with which to take care of the increased cost.

It is my opinion that more than enough has been saved in the closing of post offices to more than take care of the small raise voted the employees.

In each instance of a post-office closure, the residents residing in the community affected petitioned the Post Office Department to keep the facility open. I have always believed that this is a government of, for and by the people; however, in the case of the Post Office Department, the demands of the people are ignored. In addition to the post-office closures, I have had absolutely no

success whatsoever in getting rural mail routes extended. I have had numerous petitions by farmers in my district requesting service. I realize that there is a necessary departmental requirement of three families per mile of extension, however, the Department uses no commonsense in interpreting the regulation. One particular case recently where 5 families were without mail service because of a 1-mile extension and the Department said they could not comply with the request to extend mail service to these five families because it would require a two-tenths-of-a-mile extension farther than the established regulation. As a result, the five families in question are still without mail service. How do you think they feel about this proposed rate increase? How do you think the thousands of families who were once able to go to their local post office and buy stamps and send packages and receive their mail as soon as it was brought in who are now forced to drive many miles where a post office is located in order to get service immediately feel? In many instances their mail is a day late because the rural carrier leaves the post office early in the morning and subsequent deliveries to the main post office are not delivered until the following day. How do you think these thousands of people who are affected by this rate increase feel? I can tell you how they feel. They feel that they are not getting adequate service at the present rates, much less being shouldered with an extra tax that is not justified.

Mr. Chairman, I have several weekly and daily newspapers in my district. Due to economic conditions of southern Illinois, we have lost considerable population. This has forced a hardship on these newspapers. This unfair tax will will be a burden very hard to bear. I have talked personally with many of them and they too feel the post-office service is grossly inadequate. One publisher in my district informed me that in order to get his newspapers in the mail the day they are printed, he is forced to drive to the Post Office Department with the papers himself in order to meet outgoing mails. Mr. Chairman, do you think with that kind of service we are justified in imposing an extra tax on those people.

The post-office employees are doing a good job under the conditions in which they are forced to work by the complicated and lengthy regulations handed down by the bureaucrats in the Post Office Department. Mr. Chairman, I cannot in good conscience vote for this rate increase. My people do not mind paying a greater tax if they are getting adequate service, but mail service in southern Illinois in general is wholly inadequate. Instead of improving the service under Postmaster General Summerfield, we have received nothing but sad news concerning closures, failure to extend rural routes and curtailment of incoming, and outgoing mail to most of the larger towns, including my hometown of West Frankfort, Ill. If the Post Office Department's foresight isn't any better than its hindsight concerning the service they are rendering, I cannot see any possibility of a justification for an extra tax burden upon the workingman, the small-business man and the farmer from my congressional district who is already paying far more to the Post Office Department than he is receiving in service.

I urge my colleagues to vote against this unfair and unwarranted rate increase, at least until such time as service has been adequately restored.

Tito Is Up to Mischief Again—He Would Organize a Third Force Between East and West

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, American subservience to the Communist dictator Tito is ridiculous. In the next few days we shall have for consideration again the question as to whether or not we should continue to supply Tito with military materiel. In view of this dictator's conduct in the past 30 days when he has pledged allegience with the rest of the Communist world, we find him now engaged in a new venture, namely, the establishment of a so-called third force which would constitute a defensive area between the Communist and the free world of the West.

Tito is ambitious. Tito is a Communist. He shares with the Red dictators the hope of world conquest and the imposition of Marxism upon all people everywhere.

Mr. Speaker, an Associated Press dispatch from Frankfurt, Germany, yesterday stated that Tito has launched this ambitious campaign and has already discussed with other nations the preliminary moves. He will use as the fulcrum for his program neutralist nations in Asia and Middle East leaders who are playing cozy with the dictators in the Kremlin.

I am inserting at this point a portion of the Associated Press dispatch from Frankfurt dated July 6:

According to Tito's own statements, a third force would work on two basic principles:

1. It would be neutral in the sense it would be part of no bloc and would take orders from no one, but it would arm itself to protect its independence.

2. It would practice peaceful active coexistence with both ends of the Moscow-Washintgon pole and attempt to mediate the East-West differences that started the cold war.

In what is considered a campaign kickoff, Tito has invited the chiefs of state or two prominent neutralist countries—India and Egypt—to a series of conferences at his Adriatic island retreat of Brioni in mid-July.

There has been no announcement of an agenda, but it has been predicted the talks will wind up with a statement spelling out the meaning of "active coexistence" and an invitation to all nations to adopt this philosophy. The informants said Tito's argument is that all ideologies must be submerged in a greater goal of world peace.

Tito is understood to be counting on firm support from both India's Prime Minister Nehru and Egypt's President Gamal Abdel Nasser.

Tito likes the phrase "coexistence without neutrality," and western diplomats believe Nassar probably will buy this and that Nehru might accept it if neutrality is defined carefully.

Among other major declarations which western quarters anticipate from Brioni is one calling on the United States to agree to seating Communist China in the United Nations.

Some sources also except Tito, Nehru, and Nasser to call for attaching Nationalist China's Formosa Bastion to the Red mainland and the removal of Chiang Kai-shek from power.

With Nasser present, it is considered certain the Brioni Conference also will deal with deal with conflicts in north Africa and the Mediterranean: those involving Israel, Cyprus, and Algeria.

Tito plans to follow the Brioni Conference with talks with Greek leaders on the island of Corfu late this month.

These talks are expected to concentrate on the Balkan alliance between Turkey, Greece, and Yugoslavia.

With Greece and Turkey at loggerheads over the disputed island of Cyprus, Tito will again find himself a third force in a position to make his influence felt.

Poliomyelitis Vaccination

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. HESELTON. Mr. Speaker, recent developments as to the increased production of the Salk vaccine has been most encouraging. And the results of vaccinations seem to be equally encouraging.

I hope very much that Secretary Folsom will be justified fully in his apparent opinion that no other legislation by Congress is required beyond the extension of authority already granted to June 30, 1957.

However, I think it is advisable to take this opportunity to make the record clear at a time when everyone anticipates an adjournment of Congress soon.

I quote the following paragraph from the report of the Committee on Interstate and Foreign Commerce on January 30, 1956:

The highest incidence of paralytic poliomyelitis for the United States as a whole occurs in the age groups below 20 and in pregnant women. These are the groups which are eligible to receive vaccinations with funds authorized in the act. Your committee is recommending no change in this limitation at the present time. Your committee has received information, however, which indicates that in some States the incidence of paralytic poliomyelitis and the severity of the cases is as great or greater in some age groups above 20 years. Your committee trusts that the Surgeon General and others responsible will review from time to time the voluntary national priority sys-

tem now in effect in relation to experiences in the various States to determine whether the priority groups should be modified to include individuals in selected age groups above 20 years, and advise the Congress of any corresponding changes in this legislation which might be desirable.

The following is a release from the Department of Health, Education, and Welfare of July 2, 1956:

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
Washington, D. C., July 2, 1956.

Release of a total of 17,172,396 cubic centimeters of poliomyelitis vaccine during June, almost twice as much as ever before released in a single month, was announced today by the Public Health Service.

Of this amount, 6,192,891 cubic centimeters were released last Friday, June 29. Altogether 79,058,460 cubic centimeters have been released to date.

Commenting on the record production in June, Marion B. Folsom, Secretary of Health, Education, and Welfare, said:

"I am very pleased with the rapid increase in vaccine production in recent months, and with what this means in increased protection for children against polio.

"I am advised that there are 53 million persons in the top priority group of children under 15 and expectant mothers. Enough vaccine has now been released to provide two injections for three-fourths of this group.

"The period of acute shortage of vaccine now appears to be over in many parts of the Nation. In areas where demand still exceeds supply, we may look forward to an easing of the shortage soon if production continues at the present rate.

"I urge parents, physicians, and health officials to cooperate in making maximum use of the increasing supply of vaccine as it becomes available. We should all remember that vaccination in July may prevent polio in August or September, the months when the danger is greatest."

The record production in June increased the total released during the past 3 months to 35,249,256 cubic centimeters. This compares with slightly less than 14 million cubic centimeters released during the previous 3 months of January, February, and March, and less than 30 million cubic centimeters released during the 9 months of 1955 after the program started in April 1955.

Dr. Leonard A. Scheele, Surgeon General of the Public Health Service, recommended that States extend their priority groups for the vaccine to include all children under 20 as soon as the supply of vaccine in the State warrants such action.

"In States where demand for vaccine for the 0 to 15 age group continues high, it is important to satisfy that demand before broadening the priority group," he said. "However, in States where there is a lag in demand for this group, every effort should be made to obtain maximum use of the vaccine before the peak of the polio season by extending priorities."

Dr. Scheele pointed out that this procedure was recommended by the National Advisory Committee on Poliomyelitis Vaccine last April. The committee at that time recommended that States concentrate their polio programs on children under 15 and expectant mothers until maximum coverage of this group has been achieved. The Public Health Service, in accepting the committee's recommendation, said that the States should immediately broaden their priority group when this goal was reached. There are about 53 million persons in the priority group of 0 to 15 and pregnant women, and about 65 million persons would be included as the age limit is extended to 20.

Of the 6,192,891 cubic centimeters of vaccine released June 29, the Public Health Service reported that Eli Lilly & Co. had produced 4,143,501 cubic centimeters and 2,049,390 cubic centimeters were produced by the Pitman-Moore Co. Except for 882 cubic centimeters which are licensed for export, all of this supply goes to States and Territories for distribution through public agencies and commercial channels to private physicians.

The Public Health Service also reported that it is reallocating 744,192 cubic centimeters which had not been used by the States to which they were originally assigned. The areas and the amounts they turned back are: Alabama, 147,402 cubic centimeters; Arkansas, 33,300 cubic centimeters; American Samoa, 306 cubic centimeters; Canal Zone, 1,026 cubic centimeters; Idaho, 5,805 cubic centimeters; Mississippi, 33,138 cubic centimeters; Missouri, 146,844 cubic centimeters; North Carolina, 149,940 cubic centimeters; Puerto Rico, 135,945 cubic centimeters; Tennessee, 41,913 cubic centimeters; Texas, 44,892 cubic centimeters; and the Virgin Islands, 3,681 cubic centimeters.

Altogether, States and Territories have now been allotted 64,747,305 cubic centimeters; the National Foundation for Infantile Paralysis has received 13,732,134 cubic centimeters; 16,281 cubic centimeters have been licensed for export; and 562,740 cubic centimeters went into commercial channels before controls were established.

The attached table shows how much of the new and reallocated supply released June 29 will go to each State and Territory.

Distribution No. 33: Number of cubic centimeters (doses) of poliomyelitis vaccine available by States

	Number of cubic centimeters
Alabama	149,409
Arizona	45,639
Arkansas	88,155
California	479,637
Colorado	59,238
Connecticut	79,281
Delaware	14,364
District of Columbia	30,447
Florida	136,710
Georgia	171,324
Idaho	28,989
Illinois	345,492
Indiana	173,052
Iowa	108,756
Kansas	81,369
Kentucky	134,766

Distribution No. 33: Number of cubic centimeters (doses) of poliomyelitis vaccine available by States—Continued

	Number of cubic centimeters
Alaska	6,588
Hawaii	22,473
Puerto Rico	141,426
Virgin Islands	1,314
Canal Zone	1,800
Guam	2,358
American Samoa	1,521
Department of Defense	174,591
Total	6,936,201

I call particular attention to the sound recommendation by Dr. Schule that States extend their priority groups for the vaccine to include all children under 20 as soon as the supply of vaccine in the State warrants such action. I hope that the Department will use every effort immediately to assist the States and local communities in working out a satisfactory program and that it will not content itself with simply issuing bulletins and releases. I believed last January that its simple request for a blanket extension of time left a great deal to be desired. During the 4 months since then events have led me to believe that the Department should have requested by now an opportunity to report to Congress and advise the legislative committees as to what, if anything, should be done further by Congress before its adjournment. There is still time for that but it is running out fast. I hope the Department will take such action soon as may be satisfactory to itself, to the Congress, and to the American people in the weeks between adjournment and next January.

I include the additional views I submitted on H. R. 8704:

ADDITIONAL VIEWS ON H. R. 8704

I did not vote to report this bill favorably.

I am convinced that Public Law 377 of this Congress, the Poliomyelitis Vaccination Act of 1955, should be extended beyond the terminal date, February 15, 1956. But I am not convinced now that it should be extended to July 1, 1957, without more consideration of certain facts. Since I have no doubt that it will be extended to that date, I believe I should state briefly the matters I think should be considered further by the Department, this committee, and Congress prior to July 1, 1957. I know that this committee has every intention of continuing its interest in the administration of the program and I understand that reference will be made to that in the report.

This committee and Congress wisely set the present terminal date at February 15, 1956, so that this new and vitally important program would be reviewed early in this session. The Secretary of Health, Education, and Welfare recognized this in his letter transmitting the draft of this bill stating that it was the congressional intention "to provide an opportunity for reviewing program developments early in the second session of the Congress before completely implementing the Federal grant provisions of the act."

The Department reported its estimate that there would be sufficient vaccine available by December 31, 1956, to provide for 3 injections for each of the 65 million children under age 20 and expectant mothers, but added that this was based upon 100-percent demand which it conceded was unlikely. It based its request for the extension to July 1, 1957, on the recommended 7-month interval between second and third injections.

It seems to me that this committee should have been given evidence of any departmental plans as to adjustments which should be made as soon as production of the vaccine permits, to make additional vaccinations in the older age groups possible.

Undoubtedly such adjustments will be made and I hope they will prove satisfactory to all concerned. However, without intending any reflection upon anyone, it seems to me that this committee should not be asked to approve a blanket extension of such duration in the absence of the most complete information available as to possibilities during that period.

This committee recommended, and this Congress accepted the recommendation, of an upper age limit of 19 years, with the addition of "any expectant mother," in the definitions under the act (sec. 10 (b) (1), and see also sec. 4). I believe that recommendation was sound. But I cannot accept the argument that it should necessarily be continued to June 30, 1957. It constitutes an important limitation and I hope it will be considered fully long before that date.

Last year this committee had before it the clear and sound warning that it would not discharge its full responsibilities by confining its thinking to the admittedly vital problem of prevention among those under 21 years of age.

At its hearings (pt. 2, pp. 134, 136, 137) Dr. Albert B. Sabin, of the Children's Hospital Research Foundation, Cincinnati, Ohio, testified in part as follows:

"It is important to stress that this is no longer a disease we should call infantile paralysis, because the disease occurs with great frequency in young adults and, furthermore, is much more severe in those in later life than in earlier years * * *. I submit, gentlemen, that these in the third decade (age 21 to 30) are just as much in need of preventive measures as are all the others * * *. To summarize this, then, the problem in the United States is to prevent paralysis in young adults in whom it is most severe, as well as in children in whom it is more frequent."

Last year, and mostly subsequent to the passage of this law, Massachusetts suffered its worst epidemic of poliomyelitis. At the suggestion and with the financial assistance of the National Foundation of Infantile Paralysis a special study was made.

It appears that of 3,819 cases, there were 675 in the age groups between 10 and 20. However, there were 574 in the age groups from 20 to 30, 232 in the age group from 30 to 35, and 104 in the age group from 35 to 40.

It is my recollection that a great many of the cases among the young adult groups were most severe.

Any instance of this disease is tragic. All who have contributed toward its prevention are richly entitled to the gratitude of this Nation.

But the responsibilities of this Congress toward insuring the best possible program are great. I do not believe they will be discharged completely by a simple extension of the date. For emphasis, I repeat my appreciation of and agreement with the contents of what I understand will be in the committee report on this point.

JOHN W. HESELTON,
Member of Congress.

Readjustment of Postal Rates

SPEECH
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 6, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11380) to readjust postal rates and to establish a congressional policy for the determination of postal rates, and for other purposes.

Mr. LAIRD. Mr. Chairman, the question which faces each Member of Congress today is whether the users of our Post Office Department should pay part of our $500 million post office deficit or whether the income taxpayer should be required to finance all of this deficit. At the present time 60 percent of our postal deficit is paid by individual income taxpayers and 40 percent of our postal deficit is made up from corporation income taxes. The hearings before the Post Office and Civil Service Committee show that 75 percent of the mail carried by the Post Office Department is mailed by large users of the mails.

The legislation we are considering today will not place the Post Office Department on a self-financing basis, but will go a long way in reducing the current deficit in this Department.

I have always opposed deficit financing wherever it exists. It seems only fair to me that the users of the mails should help eliminate part of our present postal deficit. Under existing postal rates, the individual taxpayer is charged with 60 percent of this postal deficit. If this bill passes, less than 30 percent of the postal deficit will be charged directly against the individual.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Anderson, Douglas, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Laird, Scott, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Lehman, Kennedy, McNamara, ———, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Wofford, ———, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

Farmers Union Discusses Farm Problems

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, July 9, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert in the RECORD a copy of a special fourth of July broadcast made over 12 Wisconsin stations by Mr. Bob Moses, of the Wisconsin Farmers Union.

Mr. Moses discusses some of the pertinent economic facts staring Midwest farmers in the face at this time. I commend the address to my colleagues. The full text of the broadcast follows:

SPECIAL FOURTH OF JULY FARMERS UNION BROADCAST

The United Nations Food and Agriculture Organization recently reported that farmers throughout the world are getting less money for their crops, but that the hungry still have to pay more for food than they can afford. The 1956 report of the FAO added that the decline in farmers' purchasing power poses a great threat to general economic stability.

Here in the United States farm prices have been bolstered in recent months, according to figures of the United States Department of Agriculture. However, it would be a cruel and misleading blow to our agricultural community to believe that we have seen the end of the farm recession. A great share of the upsurge in farm prices is of a strictly seasonal nature. Farm prices generally rise in the spring months, but this year's increase has included a restoration in livestock prices, which had taken a terrific tumble in 1955.

You don't have to remind a Midwest hog farmer what happened to his market last fall and winter. Hog prices shrank as much as 50 percent in a short 3-month period late last year. When the bottom falls out of a wagon, you either get in a new bottom or don't run your wagon. In the hog slump of last year, the bottom had fallen clear out and hog farmers were losing money on sending hogs to market. It is to the credit of the hog producers that they decided to repair the damage and stay in agriculture.

In the processor-dominated economy which is American agriculture, the American farmer can merely hope that the seasonal upsurge in farm prices this year will continue, and that eventually he will gain back some of the 25-percent drop in farm income he has experienced since 1952. If farm income depended upon hope or promises, the farmer could feel a sense of security. But since the farmer cannot name his price, nor can he strike for higher wages, he is at the complete mercy of a processor-dominated economy.

A good example of how the farmer is the forgotten man in America's economy is shown in the great profits amassed by the large meat-packing companies in the last 6 months. It would be well to keep in mind that during this 6-month period, the price of hogs fell to about 10 cents a pound, well below the farmer's cost of production. In the dark days of 10-cent hogs, economists figure that hogs were averaging slightly over 50 percent of parity.

The large meat-packing firms figure their business years from October to October. For the 6-month period of the current fiscal year, ending April 28, not a single packing company failed to report sizably increased profits. Yet in these same 6 months, hog farmers were taking hogs to market at 10 cents, 11 cents, and 12 cents a pound. Only since the April 28 6-month reports of the packers have hog prices reached the 15- and 16-cent-a-pound level.

Here is the record for 6 of the largest packing companies in the country, including the 4 largest. Earnings of Swift & Co., the giant in the industry, were $11 million for the first 6 months of this year, an earning 2½ times as high as for the comparable period a year earlier. The second largest packer, Armour & Co., more than tripled its net earnings during the first 6 months of this year to around $10½ million.

These 2 packing companies, Swift's and Armour's, are by far the 2 leading firms in the industry. Between the 2 of them in the last 6 months they sold over $2 billion worth of meat and received for these selling services about $22 million in net profits. These two companies were buying this meat from farmers, hog farmers and beef ranchers alike, whose income was being depressed. While the prices received by these livestock producers reached near disaster levels, the income of the $2 billion packing companies were increasing from 2½ to 3 times the earning level for a comparable 6-month period a year earlier.

What about some of the other firms, you say? No, Swift and Armour were not alone in building up packer profits at the expense of our farmers. The No. 3 firm in the industry, Wilson & Co., released its 6-month earnings recently and found that their earnings during the months of 10- and 12-cent hogs had increased by more than 5 times over the same period the year before. The 6-month income this year reached $4.8 million compared to close to $900,000 for last year.

Then there's the Cudahy Packing Co. which learned recently that its earnings were larger in the last 6 months than they have been for any full year since 1947. The record: Net income of almost $3½ million, compared with over 1 million the year before. Other firms reporting sizable packer profits in the last 6 months were the Hormel Co. of Austin, Minn., and the Rath Packing Co. of Waterloo, Iowa.

Incidentally, the Rath Co. is one of the smaller packers but from October 1955 to April 1956 its net income, or profits, increased by 8 times over the 6-month earning figure for a year earlier. Yet the sales for this company were just about the same during the last 6 months.

The folks in cities and towns must be asking themselves how such a situation can exist whereby one segment—the farmers—are given as much as 50 percent less for their products while, on the other hand, another segment—the packers—roll up as much as 3, 5 or even 8 times the profits they ordinarily receive. The housewives, the city workers and the people with small businesses must begin to wonder if all of this is fair to our farmers. It must be particularly perplexing to the folks on Main Street when they read that the cost of living is now headed to an all-time high.

The unequalled cost of living, which is just around the corner, is announced by the Commissioner of Labor Statistics in the United States Labor Department. Last week, housewives were told that there wouldn't be any relief from the climb in retail food prices until fall, when the harvest comes in and many of the fruits and vegetables now dominating the cost of living index will go out of season. But if the cost of food is now affecting the cost of living index, housewives cannot blame the farmer. Actually, food prices are now just 4.8 percent lower than they were in August of 1952, the all-time peak for food prices. However, in the same span of time that consumer food prices have dropped by only 5 percent, the prices paid to farmers have fallen off sharply by about 30 percent.

Comparing a 5-percent drop in consumer food prices to a 30-percent drop in prices paid to farmers, the city housewife has just cause to ask: "Why didn't my food prices come down more in line with the low-farm prices, or if that wasn't possible, why couldn't the farmer have gotten a little more for his products?" Neither the farmer nor consumer have profited in recent years from low-farm prices. In a recent monthly publication, the First National City Bank, one of the world's largest banks, gives the answer. The large food processing companies in the United States increased their profits by about 10 percent during 1955, a year which saw farm income drop off by another 10 percent.

If the folks in the cities and towns have come to understand that falling farm prices do not necessarily bring about comparably lower food prices, then they must also realize that those large food processing industries have been reaping huge profits at the expense of the farmer and consumer. The packers are not alone. The large dairy processors are off to another record year in increased processor profits, a year which may exceed the banner year of 1954, Ezra Benson's year of lower dairy supports and cheese windfall scandals. In that year, the big dairy processors cleaned up at the expense of the dairy farmers to the tune of 35 percent more profits than the year earlier.

There is one large industry which is not as fortunate as the food processors. Yes, there is one large group of manufacturers which are feeling the pinch of continued lower farm income. That is the farm equipment industry. To some extent the recent troubles of the automobile manufacturers can be attributed to the farm price slump, but there are other factors involved in the auto production cutbacks and factory layoffs.

Let us consider briefly what has been happening in the farm equipment industries in the past few months. Of the large companies manufacturing farm equipment, only the largest company reported that its net income during the last 6 months had gone far below the corresponding 1955 figure. Even International Harvester found itself in serious trouble, with net profits up only one million dollars for the 6-month figure but with 2,400 workers laid off during the month of June, and International president, John McCaffrey, predicted that sales for the 12-month full-year period would be below the previous full-year period.

Some of the other farm implement firms have had rougher going. For example, the John Deere Co. saw its net income fall off by 45 percent in the last 6 months, ending April 30. Sales to farmers were down by 21 percent. Minneapolis-Moline lost a million and a half dollars in the 6-month period, and their sales were down as well.

A well-known Canadian firm, Massey-Harris, announced last month that it is slowing output of farm machinery in the United States and Canada because an expected spring pickup of sales in the United States had not materialized. (The Canadian government announced last week that net income in Canada during 1955 increased 22 percent, at the same time that American farm income was dropping 10 percent.) Here in Wisconsin, the J. I. Case Company of Racine is having tough times, as their income loss during the first 6 months amounted to almost $4.8 million. This equals a sales dropoff of 18½ percent from the previous year. Case Co. president, John T. Brown, felt that the best thing that could happen to his company would be a "particularly good harvest." The Case Co. has closed one of its plants in Racine and is anticipating another factory shutdown of its Burlington, Iowa, plant.

As Detroit is to the auto industry, the Quad-City area in Illinois and Iowa is to the farm-equipment industry. In the industrial area along the Mississippi River which includes Moline, East Moline, and Rock Island, Ill., and Davenport, Iowa, there are 12 farm implement factories. By mid-May, employment in these Quad-City plants was down to 13,700 from the 21,300 employed 3 years ago. This means about one-third of the normal work force is out of work because of the farm price slump and subsequent lack of farm implement buying.

As if the farm rescession hadn't hit the farm equipment industry hard enough, there is indication that it will be hit even harder before the year is over. The Wall Street Journal last week told how "the soil bank is sending shivers through the already-shaken farm-machine industry." The business publication was referring to the acreage-diverting measure of the Eisenhower administration which is now in effect for American agriculture.

An unnamed official of one large firm told the Wall Street Journal reporters that "I just don't see how all that land can be taken out of production without hurting this business to some degree." The paper then quoted "an economist with one of Chicago's big banks" in this way: "There will be some offsetting factors, of course, but I believe the acreage withdrawals will tend to restrict the over-all demand for equipment more than if the soil bank weren't there."

What does all this prove to the folks in towns and cities who know little of farm life? It simply means that if agriculture is left to drift for itself, unprotected, and in the main unorganized and unrepresented by a farm organization, it can practically bankrupt itself, while filling the coffers of one industrial group, the food processors, and at the same time bringing misery to another industrial group, the farm equipment industry. The consumer, like the farmer, benefits not at all from such a system.

On the other hand, if the farmers, as the producers of the food and fiber, had the dominant say-so in what they received for their commodities, then everyone would be happy. This, basically, is the program of the Farmers Union.

Until the program of the Farmers Union is completely put into practice; until the farmers, through their marketing and supply cooperatives, can take a greater part in what prices shall be received; then the substance of the U. N.'s Food and Agriculture Organization report will continue to hold true.

Using the United States as a basis, the FAO report says in brief that farmers are getting less for their crops; consumers have to pay more for food than what they can afford; and the loss in farmers' purchasing power poses a "great threat to general economic stability."

Readjustment of Postal Rates

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11380) to readjust postal rates and to establish a congressional policy for the determination of postal rates, and for other purposes.

Mrs. ST. GEORGE. Mr. Chairman, first, may I say that I have served on the Post Office and Civil Service Committee for 10 years. I have also served under the able chairmanship of the gentleman from Kansas [Mr. REES] and the gentleman from Tennessee [Mr. MURRAY].

I can assure the Congress that every bill this committee has brought to the floor of the House has certainly received the most careful, the most lengthy, and most impartial consideration; of that there can be no possible doubt.

I would like to address myself especially to first-class mail, because I think a great many things have been said about first-class mail that need to be cleared up, to say the least.

First of all, it is contended that first-class mail pays its way, and therefore the rate should not be raised in any way. I am reliably assured that first-class mail does not pay its way; that even after we pass this bill and raise the rate to 4 cents an ounce, it will still cost about three-tenths of a cent per piece. But laying that to one side, let us ask ourselves what is the history of the Post Office and of first-class mail? Let us go right back to the beginning.

Benjamin Franklin, who was the father of our postal system, stated unequivocally that postage rates are not in the nature of a tax, but rather are fees paid for service.

How do we pay for our first-class mail now? What do the first-class users of mail have to do? They have to pay for this deficit.

We have done a lot of talking about the little fellow and certainly we should be careful of his rights. I would like to assure you, however, that no little fellow came before this committee to protest against the raise in the first-class rate. Why? Because, although it may be the fashion to talk down to the little fellow, he is quite aware of where his money goes. This is where his money goes and where his money will go. Here are the exact figures, which I have taken considerable trouble to get and they are correct. If the postal rate bill is passed, it will cost the average American family, of whom there are 40 million, an additional $1.76 per annum. If it is not passed, the deficit will continue to be supported by tax money. In other words, to tell these people that because their rate is raised they are not paying anything is a lot of demagogery, and we know it. They will pay. What will they pay? They will pay $7 per year. That is, the exact difference between $1.76 and $7 per year.

When we say that first-class mail should not be taxed as heavily, we should take into consideration certain matters. First, may I tell you that, if you do not raise the first-class rate, you might as well leave here now and not bother with the bill at all, because it is not worth the trouble to pass.

First-class mail in the year 1932 cost 1.7 cents per piece to carry. Nevertheless, without any great trouble the rate in that year was raised to 3 cents. I believe we were assured that that would be temporary. It was so temporary that in 1947, by unanimous consent, it was made a permanent rate, which it has been up to the present time. So there was no question then of making it pay its way. It was paying a good 2-cent surplus for all those years to help carry the Department.

Now we are only asking for the 1-cent raise, which is almost a necessity if you are going to raise your third class, and I think there is little argument but what that should be 3 cents. In other words, when first-class mail was first raised in the year 1932—and it has never been raised since—it paid 30 percent over its allocated cost. We are doing nothing like that today.

To go back to the individual, to this little fellow whose thoughts and aspirations we are always careful of except when it comes to voting his money away, and, after all, we should be careful of him. Most of us are little fellows, and we know what that means. He as an average would prefer, believe it or not, to pay 5 cents. Up to the north of us in Canada where they are more advanced in many things, they have a 5-cent first-class postal rate, and it has worked no hardship at all.

Mr. FULTON. Mr. Chairman, will the gentlewoman yield?

Mrs. ST. GEORGE. I yield to the gentleman from Pennsylvania.

Mr. FULTON. May I congratulate the gentlewoman on her excellent and logical statement.

Mrs. ST. GEORGE. I thank the gentleman. Even at 5 cents, you will be sending a first-class letter farther for a lower rate than anywhere in the world today. That is a statement that cannot be challenged. At 3 cents you are just giving it away.

Mr. KEATING. Mr. Chairman, will the gentlewoman yield?

Mrs. ST. GEORGE. I yield to the gentleman from New York.

Mr. KEATING. I think the gentlewoman has expressed the most convincing argument for an increase in the first-class rate of any I have heard. In other words, it would actually cost every family or the average family about $5.25 to defeat this bill, the amount they would have to pay in addition?

Mrs. ST. GEORGE. That is exactly correct, and I thank the gentleman for his contribution.

Verdict: Commendable Homicide

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 9, 1956

Mr. CRAMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Tampa Morning Tribune of July 7, 1956:

VERDICT: COMMENDABLE HOMICIDE

Democrats and Republicans are angrily blaming each other for the death of the Federal school aid bill.

Well, as one coroner, we blame nobody for this killing on the confused floor of the House. In our opinion it was a clear case of justifiable homicide—not merely justifiable but commendable.

For this was a bad bill.

Some deemed it bad because, in the showdown, it brandished an antisegregation amendment. Others denounced it because it would have divvied up the proposed construction money on a basis of population rather than existing need for classroom.

But these should have been secondary considerations.

The bill was fundamentally bad because it handed over to the Federal Government partial responsibility for the support of our public schools, which are and ought to remain the obligation of community and State.

For that reason alone it deserved to die.

If blame is to be assessed, it should fall upon those Congressmen who regularly sing hymns to States' rights and bewail the march of centralized government—yet would have voted for Federal school aid without blinking an eye if the form of the bill had suited them.

This, we submit, is plain hypocrisy.

How can local and State governments claim the right to run their own affairs if they willingly pass their responsibilities to Washington? How can they complain that the Federal Government is preempting tax sources if they constantly call upon Washington for money which they ought to raise themselves?

It should be obvious to the thickest wit that we can't expect to have it both ways. If we beg bread at the Federal door we're going to have to chop wood at the Federal command.

And where does "Federal aid" come from, anyway? Sooner or later it comes out of our own pockets—plus administrative costs and probably plus interest on money Washington borrowed to "give" to us. For the Federal Government, please remember, is $272.7 billion in debt.

There's less excuse for the school handout than for most Federal aid programs. For one thing, schools are not interstate like main highways; they're local. For another thing, there can't be a valid claim of a nationwide "emergency" in school housing. With the exception of a few special situations around new Government plants or military bases, States and communities have known for a long time what their school needs would be. If they haven't taken steps to provide the classrooms, they can blame no one but themselves.

Florida, because of its tremendous growth, has a harder problem than most States in keeping facilities up with enrollment. Yet by joint local and State effort it has managed pretty well. It can continue to provide adequate—if not ideal—schools as long as its citizens will pay the bill. If they aren't willing to pay, then they don't deserve any outside help.

There's not a single one of the 48 States that lacks the resources to give its children a decent education. Statistics show that for 1953–54 no State spent more than 4 percent of its total income for schools and most spent less than 3 percent.

Federal school aid apparently is dead for the session. Instead of weeping for the lost $1600 million, true friends of the schools will get busy raising the money in their own States—where it would have come from, anyway.

Control Follows the Purse

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 9, 1956

Mr. CRAMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Petersburg Independent of July 5, 1956:

CONTROL FOLLOWS THE PURSE

Acceptance by the House of Representatives on a voice vote of the Powell amendment to the Federal school bill exposes the utter hyrocrisy of the militant integrationists who would force the end of school segregation in the South overnight.

The rider, sponsored by Representative ADAM POWELL, the Negro Congressman from New York, would deny Federal aid for school construction to those States that have not complied with the edict of the United States Supreme Court on ending school segregation.

Admittedly until the last decade the South has been shamefully delinquent in failing to provide schools for its Negro citizens equal to those of the whites. During the last decade, however, great strides have been made in overcoming this delinquency. In every Southern State more funds have been spent proportionately on Negro than white schools.

Much of the Federal aid that Congress now proposed to grant the States for school construction, would, in the Southern States, have gone to build new Negro schools.

The integrationists demand the end of segregation in Southern schools purportedly because they believe this will result in better educational opportunities for Negro children.

But in sponsoring and supporting the Powell amendment they cut the ground from beneath this argument.

In effect they are saying: "We want our Negro children to have better educational opportunities. The way we do this is to deny the South Federal funds with which to build Negro schools."

The maneuver, of course, is intended to coerce and intimidate the South into integrating its schools immediately. It holds forth a billion and a half in funds collected from the States and says, "Here is a wad of money. End segregation and you can have it. Otherwise you get none."

But at the same time the integrationists expose the falsity of the great tears they constantly shed in behalf of the southern Negro.

While they cry out in mock pain over the unequal or lack of educational opportunities for Negroes in the South, they are, at the same time, perfectly willing to sacrifice any opportunities that might be made available in an effort to force the South to follow their dictates.

This rule or ruin attitude is typical of the fanaticism that marked the course of the abolitionists in the era leading up to the Civil War. For them there is no compromise, no moderation, no middle road. Either the South falls in line or suffers the consequences.

Since it was first proposed that the Federal Government appropriate huge sums to aid the educational effort of the States, many educators as well as State officials and parents have rightly feared that Federal aid inevitably would result in Federal control of the public schools. Supporters of the measure have brushed aside these fears as groundless. There has been a great deal said and written about how Congress would provide Federal aid with no strings attached.

But even before the measure comes to a final vote in the House a rider is approved which immediately attaches strings to the funds and sets out to dictate the operation of the public schools.

This should be fair warning of what is to come if the Federal Government is permitted to get its foot in the door of our public schools.

If House Members are foolish enough to give final approval to the measure, we hope wiser heads will prevail in the Senate and kill it.

We have never been convinced of the need for Federal aid. We believe the States are fully capable of meeting the needs of their schools if the effort is made. Indeed, if they cannot or will not assume this basic responsibility, then the States may as well forego any thought of sovereignty, local self-government and responsibility and assume the status of conforming puppets of big centralized government.

Federal School-Aid Bill Deserved To Be Defeated

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 9, 1956

Mr. CRAMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the followihg editorial from the Tampa Times of July 7, 1956:

FEDERAL SCHOOL-AID BILL DESERVED TO BE DEFEATED

The House of Representatives has killed the Federal school-aid bill primarily because of the antisegregation amendment nailed to it, but although the segregation issue may get the blame, there are many other compelling reasons against Federal aid that the bill properly should be killed.

In the first place it has never been accurately shown that schools are facing an emergency which demands Federal assistance. As Raymond Moley wrote in the Times yesterday, the whole argument of educators for financial help from the National Treasury is based on a hodgepodge of statistics which prove exactly nothing.

The United States is enjoying a period of unprecedented prosperity, shared by all of the States. There has been no indication that any of the 48 States are so poor that they cannot provide adequate schools for their children, if they so choose.

Education is, and always has been, primarily a local problem. This is as it should be. The individual communities of the Nation should accept and guard the responsibility of educating their own youngsters according to local preference and tradition. The moment education becomes federalized and dominated by one set of standards prescribed by a Washington bureaucracy, individuality will be destroyed and the way will

be paved for one giant program of brainwashing.

The children of the Nation are not children of the state by any means. They have an identity with their families and local communities which must be preserved. Federal aid to schools is a step in the direction of Federal domination of the educational system and a trend toward separating the child from his personal heritage and molding him into the image desired by the State.

In addition, Federal aid to schools has its economic disadvantages. It means that the taxpayers of such States as Florida, where school standards are relatively high, will be called upon to pay for the education of children in such States as Mississippi, where standards are low. The dollars which go for Federal aid will be fewer because they must pass through the bureaucratic machinery in Washington where inefficiency diminishes their purchasing power.

In numerous instances it has been shown that higher educational standards mean better living standards in the community. Better educated pupils return their developed skills to improving their environment. For obvious practical purposes the individual States and communities should see to it that teaching standards are high. This should be a matter of local pride; it cannot be stimulated by dollars from Washington.

The United States has no low-income States. There is not a single State which does not have the potential resources to provide good schools. If these States now possessing low educational standards will not improve their own lot, it is not fair to ask the rest of the Nation to carry the reponsibility which local citizens refuse to accept.

The professional educator argues that it is the child which suffers. But the parents of that child have a right to leave the States with low standards and see that their youngster has better educational opportunities. In many cases, this is happening. The States with poor school systems are losing population to those States with better schools. Educational considerations are not the only factors in this migration, but they play a big role.

The House defeat of the Federal aid bill does not mean that it is dead permanently. Its proponents will try to breathe life into the issue again, but efforts to shift this responsibility to the Federal Government must be stoutly resisted.

Brownell's Political Corn

EXTENSION OF REMARKS

OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 9, 1956

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD an editorial from the Pittsburgh Press, under date of July 7, entitled "Brownell's Political Corn."

I feel that the enclosed editorial expresses the opinion of many people. Attorney General Brownell's last-minute investigation of General Motors as a monopoly is only designed to get a few votes between now and November, and then to forget the suit the day after election.

The same deceit has been used throughout by this big-business administration. When a paper like the Pittsburgh Press which has supported the administration comes out and calls it political corn it demonstrates that even some Republican supporters are getting sick and tired of the fakery that is now being practiced.

The editorial follows:

BROWNELL'S POLITICAL CORN

If Secretary Ezra Benson were to go on a General Motors-sponsored TV program to announce that the Agriculture Department had decided to blacklist Corn Products Co.—

It is doubtful that honest old Ezra would do such a thing, but if he did—

Well, it would be no worse than Attorney General Herbert Brownell's performance Wednesday night, when he went on a Corn Products-sponsored TV program to announce that the Justice Department would file an antitrust suit against General Motors.

It might be good politics, because this is an election year and some farm spokesmen have been accusing Ezra of loving the food processors more than he loves the farmers. But, repeating, it's doubtful that Ezra would play politics that way.

And, of course, there is no way of knowing how long Mr. Brownell carried that official news item around in his hot little hand before he stepped up to the TV camera to perform a governmental act under the auspices of a sponsor with a name appropriate to the performance.

But it is known that Mr. Brownell attained his present position by his skill in politics, that General Motors has been a large and growing corporation through the 3½ years Mr. Brownell has been Attorney General, that Democrats have been accusing the Eisenhower administration of favoring big business, and that Mr. Brownell didn't announce his suit against the symbol of big business until well along in an election year.

The traditional way for the Justice Department to break the news of an antitrust action is to file the complaint, making it a matter of court record, and give out a press release or hold a press conference available equally to all mediums of public information explaining the reasons for the suit.

But Mr. Brownell chose an unorthodox way of making his announcement, arousing controversy that might possibly draw more attention to the idea that the Republicans, in this election year, are hell bent for protecting the little fellows against the big fellow.

For his performance, Mr. Brownell received a leather-bound 20-volume encyclopedia and newspaper reporters participating in the Corn Products press conference received a cash honorarium for 30 minutes of acting the role they are paid all week to do for their own newspapers.

However you grind it, it's corn.

Veterans' Benefits

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 9, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I would like to put into the RECORD a letter I received recently from Mr. Everett Guse, Veterans' Service Officer for Trempealeau County, one of the 11 counties in the ninth congressional district.

I believe Mr. Guse has made a fine presentation of the case for veterans' benefits and against the recommendations of the Bradley Commission. I am in full accord with Mr. Guse's views and I am glad to call this letter to the attention of my colleagues. The letter follows:

VETERAN'S SERVICE OFFICER,
Trempealeau County, Whitehall, Wis.

Hon. Congressman LESTER JOHNSON,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN JOHNSON: We have been doing some thinking on the recent so-called Bradley report, Hoover report, and veterans' benefits in general.

We sincerely hope that this so-called Bradley report has caused you to become somewhat concerned over the future benefits of those who sacrificed for our freedoms. The future benefits of our veterans should be of grave concern to every true American. I wish to call to your attention some of the facts as I see them from day to day while assisting the doughboy and the GI.

If all red-blooded Americans would stop to reflect just a few moments on the very first statement of the Bradley report, I am sure that the balance of the report would be considered insignificant. The statement I refer to is "Military service in time of war or peace should be treated as discharging an obligation of citizenship and not of itself as a basis for future Government benefits."

I think Mr. Bradley and his Commission are forgetting the soldier, the sailor, the marine, etc., who fought to preserve our democratic Government so that it is still possible for us to extend to these veterans their just and deserving benefits.

I am sure Mr. Bradley and his Commission have forgotten that the man and the woman who put on the uniform of his country and went forth to face the hazards and uncertainties of war did more than the average citizen. The man actually engaged in war did more than the man engaged in the shipyard and factory; the man who dug the trenches and foxholes and fought therefrom did more than the man who dug the ore or compounded the high explosives; the man who flew our fighters and bombers did more than the man on the ranch or the man who maintained the railroad; the man who fought the sea battles and the man who established the beachheads did more than the man who built the training stations or issued the ration stamps.

Mr. Bradley doesn't, but I am sure you realize the man who served his country in combat did more and is deserving of more than those who didn't. The man in the Air Force during World War II, no doubt, many a time wished he was back home on good solid ground instead of flirting with death. Doesn't that veteran deserve more than his classmate who was deferred during the entire war to help a beekeeper produce honey? A very good friend of mine quit his job and accepted employment on a farm in order to avoid the World War II draft. Should he be entitled to the same benefits as those who went forth to battle? I am sure there are thousands of similar cases.

One can aptly say that no man can put on the uniform of his country during war but what it takes something from him. He has given even though he may not be on a hospital bed or visibly crippled.

A veteran receiving nonservice connected pension would perhaps be on some welfare or relief roll if he was not receiving his veterans' pension. He is proud that he served his country and receives his pension with pride. This should be a significant fact.

We trust you are cognizant of the needs of the veteran. Recognizing this need, we beg you and expect you to exercise the influence of your position to safeguard the veterans' benefits and diligently strive for greater veterans' benefits; more hospital beds; more

medical care; a greater veterans' service to the veteran, his widow and children. These and other veterans' benefits are the things a grateful Nation owes those who fought to preserve its freedom.

Let's always bear in mind that there was a big difference between firing on the field of battle and keeping the home fires burning.

Very truly yours,

EVERETT GUSE,
Veterans' Service Officer,
Trempealeau County, Wis.

Northwest to the Orient

EXTENSION OF REMARKS
OF
HON. HAL HOLMES
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 9, 1956

Mr. HOLMES. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD two editorials from the Yakima Daily Republic on a subject of importance to the State of Washington.

[From the Yakima Daily Republic of April 21, 1956]

THE TIME HAS COME

It has been a little more than a year since President Eisenhower directed that Northwest Orient Airlines operate its North Pacific-Orient route under a temporary permit for 7 years. The Civil Aeronautics Board had recommended permanent certification, but the President said he wanted the line to prove it could operate without Federal subsidy before granting permanent certification. He wanted the carrier to "demonstrate its ability to operate without subsidies within a reasonable period of time."

We note that Northwest will put on its sixth oriental flight per week April 29. Northwest has been operating without need for a subsidy ever since the President signed the order, in fact from a month before the order was signed. This proves the airline's short route to the Orient has arrived, economically speaking; that Northwest has successfully sold the advantages of the Pacific Northwest gateway in travel to and from the Far East.

For these reasons we believe the time has come for the President to certify the route permanently. Temporary authority is a handicap to a carrier. It is harder to plan for the future when that future may not be permanent. Among all the American-flag international carriers only Northwest's application was made to hinge on subsidy-free operation. All others have permanent routes, but only TWA and NWA do not require subsidy. That's an added reason for permanent certification.

[From the Yakima Daily Republic of May 22, 1956]

SUPPORT FOR NORTHWEST

We commend the Yakima Chamber of Commerce for its support of Northwest Airlines' application for immediate permanent certification of its Great Circle route to the Orient. The examiner for the Civil Aeronautics Board is about to make his report on the prehearing conference in this case and the Board soon will be passing a recommendation on to President Eisenhower, so the chamber's support is well timed.

The airline is operating on a 7-year temporary certification, ordered by the President to give the company time to show it could operate without a subsidy. It has been operating without subsidy since January 1, 1955, and we believe it has proved its point.

It is not only to the advantage of the airline to have a permanent certificate, it is to the advantage of the Pacific Northwest to have our own gateway to the Far East recognized as a permanent route. We have the shortest route to the Orient and long have advertised our region as the gateway to Alaska and the Orient. It is up to our region to guard its position.

The Civil Aeronautics Board once before recommended a permanent certification and likely will do so again. We trust the President will accept 17 months' operation without a Federal subsidy as the proof he requires.

Labor Fears Government Development of Niagara

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 9, 1956

Mr. AUCHINCLOSS. Mr. Speaker, under permission to extend my remarks I am very pleased to include a full page advertisment which appeared in the New York Times on Sunday, July 8, which was paid for by the New York State Association of Electrical Workers-AFL, protesting against the enactment of the so-called Niagara public power bill, H. R. 11477, recently reported out by the Committee on Public Works of the House by a small margin.

As a member of the Public Works Committee of the House for several years, I regret the action taken on this important legislation without the serious study which it merits. Many members of the Public Works Committee have never had the opportunity to learn about this proposal through the medium of hearings and although a record has been written on this subject and the proposal for Government operation has been definitely rejected by the House of Representatives, this new proposal has not had careful study by the Committee on Public Works of the House. The provisions in this legislation are contrary to the economic foundations of our country, based on which we have gone forward to be the greatest and strongest nation in the world. It is no wonder to me that members of the labor unions who are patriotic citizens are greatly concerned.

The advertisement follows:

LABOR FEARS GOVERNMENT DEVELOPMENT OF NIAGARA

To the honorable Members of the United States House of Representatives:

The Free Trade Union movement and the free-enterprise system together have made our country the greatest Nation in all the world. It is most essential that we keep it that way.

Based upon this fundamental principle the New York State Association of Electrical Workers whose 80,000 members work in all branches of industry, and the International Brotherhood of Electrical Workers (550,000 members) throughout the United States, are opposed to governmental development of Niagara power.

This message is written to you because in Washington today there is a bill pending before your honorable body which seriously threatens free trade and the American system of free enterprise, and we are against it.

The so-called Niagara public power bill (H. R. 11477), introduced in the Senate by Senator HERBERT H. LEHMAN, of New York, and in the House of Representatives by Congressman CHARLES A. BUCKLEY, proposes that Government displace regulated business enterprise in the development of additional water from the Niagara River for electric power to be distributed on a priority basis to preference groups (municipal distribution systems and rural cooperatives) representing only 5 percent of the power customers of New York State. This establishes a privileged class of citizens and is wholly un-American.

We are opposed to this discriminatory bill because it violates the principles of free enterprise and fair play because there is no valid reason for Government to compete with its citizens in the electric business, or any other business, and because the bill marks a long step toward further nationalization of American basic industry.

We like free trade; we like the free enterprise system that has made America great and the life of the American labor man the envy of the world. Our American system of getting things done makes sense—we want to retain it.

In opposing this legislation, we ask you to bear in mind that:

1. The Niagara Power Development does not involve any governmental function such as navigation, irrigation, reclamation, flood control; it involves only the generation of power.

2. The electric utility companies of the State of New York are ready, willing, and able to proceed immediately to develop the power in the Niagara River—all that's required is congressional approval.

3. If government is authorized to develop water for electric power purposes because water is a natural resource, other natural resources, such as gas, oil, lumber, and minerals, will eventually be taken over by government. We do not like the direction in which this public power bill is headed.

4. Business-managed electric utilities pay their full way in taxes; government power projects do not. Taxes evaded in the great development like the Niagara ($23 million annually in additional taxes if utility companies do the job) will have to be made up later by all taxpayers.

5. Under business-managed operation customers are fully protected in the rates charged them for their electric services by a duly-authorized, efficient State-regulating agency—the New York State Public Service Commission. There is no regulation of political operation.

6. Past experience shows that fair and lasting labor agreements with government agencies are almost impossible; organized labor has, and is, reaching excellent agreements today with business-managed electric utilities. We want to continue this way.

7. We agree with President Eisenhower that this issue should be decided in accordance with the wishes of the local people concerned. In the project area, working men, farmers, industry, representatives of local governments, and every category of electrical user and taxpayer overwhelmingly reject the public power bill. (Note below.) It is supported substantially by public-power extremists who are only remotely concerned but who insist on imposing their philosophies upon the people directly concerned.

8. Hundreds of thousands of International Brotherhood of Electrical Workers members earn their livelihood and support their families as employees of the free enterprise system in the light and power industry. And hundreds of thousands of other citizens re-

ceive an income from their investments in the power companies. Truly this is one of the basic industries in the country. On its record it deserves to be protected.

9. As members of organized labor we do not propose to have our welfare directed or determined by any bureaucratic official of the Government, whether it be municipal, State, or national, no matter how good the intention may seem to be. Government ownership would tend to make the American worker a servant to his government, whereas his government should be a servant to him.

10. The development of the Niagara River power project by the power companies of the State of New York, received the endorsement of the New York State Federation of Labor representing 1,300,000 members.

On July 9, 1953, your honorable body, by a decisive bipartisan vote of 262 to 120, passed the bill, introduced by Congressman WILLIAM E. MILLER, of New York, and Congressman GEORGE A. DONDERO, of Michigan, for the development of the Niagara River by the five major New York State business-managed electric utilities. We believe it was a sound position then; we believe it is a sound position now.

We sincerely hope that you sustain that decision by voting "No" on the so-called Niagara public power bill.

The Miller-Dondero bill guarantees equality to all in the sale of power under rates regulated by the New York Public Service Commission. The development will pay its full way in taxes and preserve the American way of free enterprise; the free trade union movement and the free enterprise system, marching together, have made this country the greatest nation on earth; let's make sure we keep it so.

Your consideration of this most important matter will be deeply appreciated.

Jefferson said: "That government governs best which governs least." It is as true today as it was yesterday.

Respectfully submitted.

NEW YORK STATE ASSOCIATION OF ELECTRICAL WORKERS–AFL,
WILLIAM BUTLER, *President*.
JOHN R. WEIGELT, *Secretary-Treasurer*.

NOTE.—The results of surveys by Congressmen OSTERTAG, MILLER, and PILLION, of New York, among the voters in their territory and by the American Agriculturist show that 75 to 90 percent of the voters who replied were in favor of free enterprise. Hundreds of independent organizations such as farm bureaus, the New York State Grange, the New York State Association of Town Boards, labor unions, the Supervisors' Association of the State of New York, women's clubs, etc., have all endorsed free enterprise.

The Cyprus Situation

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 9, 1956

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release by Mr. Refik Koraltan, Speaker of the Turkish Grand National Assembly, being a message to the world parliaments. This press release deals with the Cyprus situation.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FROM THE PRESIDENT OF TURKISH GRAND NATIONAL ASSEMBLY TO WORLD PARLIAMENTS

Following is the text of a message sent by Mr. Refik Koraltan, Speaker of the Turkish Grand National Assembly, to the World Parliaments:

"Mr. Rodopoulos, Speaker of Greek National Assembly, is understood to have sent on June 6, on behalf of that Assembly, a message to all world parliaments. In this message Mr. Rodopoulos claims that Turks of Cyprus—which he qualifies as gangs and a negligeable minority—are killing, wounding, and plundering Greek population of that island. He protests these acts and requests assistance.

"This message, in which it is attempted to distort completely the realities for the purpose of, on the one hand, throwing the responsibility for crimes perpetrated in Cyprus on the innocent Turkish population, and on the other, of drawing the sympathy of world public opinion to the cause of annexation of Cyprus by Greeks, has created deep indignation throughout Turkey.

"The Turkish Grand National Assembly, of which I have the honor of being the speaker, has during its session of June 13 decided with unanimity to charge me to express the indignation felt in Turkey, and to assert the truth to all parliaments to which the Speaker of the Greek Assembly has sent his above-mentioned message.

"In consequence, on behalf of the Turkish Grand National Assembly, I hasten to submit to your attention and to that of the Parliament of your country, the following.

"The Turkish community of Cyprus is not an insignificant minority as alleged by Mr. Rodopoulos. They represent in the midst of a total population of 500,000 for the whole island, a mass of 120,000 people as against around 370,000 people of the Greek-speaking community.

"For a year a secret organization called EOKA, has been performing acts of systematic terrorism. This organization is composed of a certain number of people of the Greek-speaking community and of officers, specialists in terrorism and volunteers who have secretly come from Greece.

"The members of the EOKA have not only illegally kept the arms which they possessed, in defiance of the orders from the local authorities inviting the population of the island to surrender them, but have also secretly received arms from Greece or secured them through funds also received from Greece.

"This group has recently started to murder police constables working under orders of local authorities and to execute organized incursions on a large scale into villages which are partly inhabited by Turks, in order to perpetrate bloody and shocking acts of aggression against them and to destroy their property. All these facts are corraborated by factual evidence and documents.

"As for the Turks of Cyprus, not only have they turned in their arms to the local authorities by complying with the order, but they have, unlike EOKA, never received outside arms aid.

"They are, therefore, deprived even of the material means for perpetrating terrorism of which they are accused in the message of Mr. Rodopoulos. Furthermore, those Turks who are qualified in the message of Mr. Rodopoulos as gangs, have distinguished themselves with their compliance with the laws and regulations and with their preference of defending their just cause through legitimate means despite the fact that they are opposed to enosis with all their hearts.

"It is an indubitable truth that the acts to which they have resorted for expressing their disgust in the face of the atrocities committed by the terrorists and for exercising their legitimate right of self-defense cannot be compared in any way, neither in nature not in intensity, to all that the terrorists have.

"Intensive propaganda is being made to deform the realities not only on the subject of what is happening in Cyprus, but also on the subject of the whole of the so-called Cyprus question with the sole purpose of bringing about the unjust and unfounded annexation of the island to Greece.

"From this point of view equally, there exist a great number of official documents depicting the true picture of the affair and exposing the ulterior motives that are pursued, and explaining the thesis and attitude, based on justice and equity, of Turkey which has a vital interest on the island. Even a résumé of the essential points of these documents will unduly prolong the present message. I will, therefore, confine myself on behalf of the Grand National Assembly, to beg Your Excellency as well as the Parliament of your country:

"1. Not to lose sight of the fact that any ill-advised and unjust change in the status of Cyprus will create a vital injury not only for Turkey, but for the peace and security of the free world.

"2. Not to heed subversive and provocative propaganda.

"3. To bear in mind the truth that the so-called question of Cyprus is not a simple question of the application of the principle of self-determination, but the outcome of a certain number of unlawful political calculations the realization of which must never be permitted for political, historical, strategical, and a variety of other reasons.

"4. In view of the preceding observations, to remember that if Your Excellency or the Parliament of your country should, by taking into consideration only documents and claims emanating from a single source, and by being influenced by subversive and distorting propaganda, take any action, even with the best of intentions this might occasion immense damage the extent of which cannot be foreseen, to the cause of justice and equity and to the triumph of the truth.

"Please accept, Your Excellency, the assurances of my highest consideration.

"REFIK KORALTAN,
"Speaker of the Turkish Grand National Assembly."

The Hood River Valley

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, July 9, 1956

Mr. NEUBERGER. Mr. President, one of the most picturesque portions of the Pacific Northwest is the beautiful Hood River Valley, extending from the glacial slopes of the 11,245-foot Mount Hood to the shores of the Columbia River. This is one of the great orchard areas of the entire world. It also is the scene of such cultural enterprises as the annual Hood River music festival, featuring a talented emigree from Finland, Dr. Boris Sirpo.

The achievements and geography of the Hood River region have been graphically described in an article written by J. L. (Jack) Travis, staff correspondent of the Oregonian, of Hood River, Oreg., and published in the Oregonian Sunday magazine of July 1, 1956. For the infor-

mation of other Members of the Senate, I ask unanimous consent that the splendid article by Mr. Travis, from the Oregonian, be printed in full in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REMEMBER THE HOOD RIVER VALLEY

(By Jack Travis)

Beautiful, productive, self-ontained Hood River Valley has in the last few years been brought much closer to Portland and the Willamette Valley. The new water-grade highway along the Columbia River and the opening of a road through almost forgotten Lolo Pass, from Hood River over the northwest shoulder of Mount Hood to Zigzag, now make it easier than ever to spend an afternoon or a day viewing the valley's natural beauties, fishing for steelhead and trout in Hood River and its tributaries, admiring spring blossoms or taking part in the seemingly endless activity of the harvest in the fall.

"An hour to see—a lifetime to remember," says the chamber of commerce. This section of Oregon has been semi-isolated by the natural boundaries of Mount Hood to the south, the Columbia River to the north, and forest-covered wilderness hills and mountains to the east and west.

As the crow flies, it is only 19 miles from the remotest year-round resident, on the slopes of Mount Hood on the south, to the Columbia River on the north. At its widest point at the Columbia River, Hood River Valley measures only 9 miles.

Within the valley live around 12,000 people. The city of Hood River is the only incorporated community in the valley. Cascade Locks, 20 miles down the Columbia from the valley, is the only other incorporated town in Hood River County.

Other communities in the valley include Parkdale, the city nearest the mountain; Odell in the center of the valley; Dee, the home of the Oregon Lumber Co., now purchased and operated by the Edward Hines Lumber Co., of Chicago, and Mount Hood, a small community in the upper valley near Parkdale.

Between these communities lie acres and acres of some of the finest apple, pear, and cherry orchards in the world. Interspersed are neat, trim, luxuriant strawberry fields. The growing and processing of these fruits is Hood River Valley's largest industry.

The heavily forested hills and mountains on three sides of the valley make possible the logging, lumbering, wood products, and hardboard industries that run agriculture a close second.

The valley was first settled in 1852 by a Dr. Farnsworth and a man named Laughlin. Families of hardy pioneer stock started clearing and planting the valley almost immediately. The first commercial orchard began producing about 1876.

In 1900, the Hood River Commercial Club and real-estate men started a campaign to advertise the valley. Between 1902 and 1914, many easterners and midwesterners, drawn by stories of promising orchards, excellent climate, and wonderful scenery, migrated to the valley.

During this time, a university club with well-appointed clubrooms was established in Hood River. At Parkdale, graduates of Princeton University formed an informal Princeton Club. It was from newcomers of this stripe that the valley has received its prominence in cultural matters.

A number of families of Finnish and Japanese ancestry arrived in the valley at about the same time. From the Finnish strain came Hood River's reputation for appreciation of good music. Years later another Finn of international musical reputation, Boris Sirpo, brought the Hood River Music Association into being and firmly placed the valley into the spotlight. Sirpo's work is now being carried on under the direction of the brilliant Clayton Hare through the music association.

It was the Japanese who showed through hard work and long hours what could be done in the growing of the valley's world-famous fruits.

Today children and grandchildren of these early developers of the valley are active in the political, business, and social life of the community.

A number of the early growers of the valley banded together shortly after the turn of the century to form a growers' cooperative. Today the Hood River Apple Growers' Association handles a large percentage of the apples, pears, cherries, strawberries, and peaches grown in the valley. Grower-owned, its various plants and equipment for sorting, grading, packing, storing, canning, and juicing represent a present-day valuation of from $9 million to $10 million.

Hood River County has a unique distinction of being the first and only county in the United States to place its county land under the management of the United States Forest Service. A 10-year agreement was entered into in 1945, and so successful were the results that a new agreement was signed in 1955 for the next 99 years.

Friendly Hood River Valley looks to the future for greater industrial development, confident always that nature has assured its residents one of the finest places in the world to live.

Pooling of Health Insurance Companies

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 9, 1956

Mr. PRIEST. Mr. Speaker, I have introduced a bill to encourage the extension and improvement of voluntary health prepayment plans or policies. The introduction of this bill was requested by the Secretary of Health, Education, and Welfare, the Honorable Marion B. Folsom, in a letter addressed to the Speaker dated June 29, 1956. This letter, which explains the bill, follows:

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
June 29, 1956.

Hon. SAM RAYBURN,
Speaker of the House of Representatives.

DEAR MR. SPEAKER: I am enclosing for your consideration a draft bill which would permit private insuring organizations—either small insurance companies or voluntary associations—to enter into voluntary agreements for the purpose of helping to extend and improve health prepayment plans or policies. The President pointed out in his special health message to the Congress of January 26 that this type of legislation was under consideration by the administration.

The draft bill would authorize the Secretary of Health, Education, and Welfare, after consultation with the Federal Trade Commission and with the approval of the Attorney General, to approve voluntary agreements between private insuring organizations for pooling or coordinating their resources and efforts in developing plans or policies designed to meet current needs for adequate health prepayment protection. The bill would require that data and technical materials developed as the result of operations and activities carried out under an approved agreement be made publicly available. The bill would also provide that reinsurance made available pursuant to the agreement could be purchased by insurance organizations who are not parties to the agreement. Approval of any voluntary agreement would be withdrawn if there is substantial failure of the organizations to comply with any provisions required in the agreement, or if it is determined that continuation of such agreement will no longer further the objectives of the bill or would otherwise be contrary to the public interest. The bill also provides for consultation by the Secretary with representatives of State insurance supervisory agencies in order to obtain their advice and recommendations in the development of standards for approving voluntary agreements, and on other needs arising in the administration of the program.

The provisions of the bill are applicable only to voluntary associations like the Blue Cross and Blue Shield, and (since the larger insurance companies are generally in a position to undertake experimentation and developmental activity on their own) to insurance companies doing less than 1 percent of the total commercial health insurance business in the United States. Actions pursuant to approved voluntary agreements which affect interstate commerce would be exempted from Federal and State antitrust laws and the Federal Trade Commission Act.

This proposal would make possible accelerated efforts to develop improved voluntary health insurance. Considerable progress has been made in the past few years in broadening voluntary health insurance coverage so that an estimated 105 million American people now have some prepayment protection against the costs of hospitalization, about 90 million have surgical expense insurance, and approximately 50 million have prepayment coverage against the costs of other physicians' services primarily in connection with hospitalized illness. However, there are four areas referred to in the draft bill where additional progress is needed:

1. Major medical expense insurance: Even though major medical expense insurance—now protecting more than 5 million people in this country—is the fastest growing type of prepayment coverage, there is need for more widespread use of this form of insurance.

2. Coverage for the aged: There is also need to develop better coverage for retired and other older persons for whom there is increased likelihood of expensive illness.

3. Coverage in rural areas: Persons who live on farms and in other rural areas, or who work in small plants or are self-employed, generally are not well protected against the costs of hospitalization and medical care, and better methods of reaching such persons need to be developed.

4. Coverage of substandard risks: More prepayment protection is needed for persons who have chronic conditions such as heart disease or cancer or other disabilities—the so-called substandard risks.

We believe that encouragement should be given to insuring organizations to develop improved plans to help meet these and other needs. The program set forth in the appended draft bill would be a useful further step toward this goal.

The very large insurance companies are generally in a position to undertake on their own the developmental activity and experimentation which is essential to the furtherance of more effective voluntary health insurance. We anticipate that these organizations will proceed, as many of them are, with individual efforts toward the development of new and improved forms of coverage.

At the same time, under the provisions of the appended draft bill, joint developmental action and experimentation by smaller in-

surance companies or by voluntary associations would be possible.

Finally, we believe that the offering of Federal reinsurance in accordance with the President's recommendation to the Congress last year would also help extend and improve voluntary health insurance. The provisions which would carry out the recommendation made by the President last year are contained in title I of H. R. 3458 and H. R. 3720. You will recall that an earlier version of these provisions was considered by the House of Representatives during the 83d Congress and recommitted for further consideration. The President's recommendation to the 84th Congress contained provisions designed to meet certain of the objections to the earlier version of the bill, and also focused on specific areas of unmet need in health insurance.

Although private reinsurance is available from several sources, we believe that a systematic offering of such reinsurance by the Government on a limited basis with the specific objective of encouraging new and improved forms of protection would result in wider use of such reinsurance as an aid in introducing new types of prepayment plans. We also believe that the knowledge acquired, the information exchanged, and the experience resulting under a Federal reinsurance program would serve as a further stimulus and aid in the whole development of voluntary health insurance.

We therefore recommend that the Congress give consideration to the reinsurance proposal as well as to the appended draft bill. We believe that the two proposals, as a supplement to the effort of individual insurance organizations, would help to achieve improvement in voluntary health insurance in this country.

We shall appreciate it if you refer the draft bill to the appropriate committee for consideration.

The Bureau of the Budget advises that enactment of this proposed legislation would be in accord with the program of the President.

Sincerely yours,

M. B. FOLSOM,
Secretary.

Vice President Nixon Performs Another Outstanding Service

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. HOSMER. Mr. Speaker, Vice President NIXON's current visit to the Far East is paying substantial dividends to the American people, just as have his previous activities both at home and abroad. On Saturday the Los Angeles Examiner editorially commented on his speech in Manila as follows:

NIXON SAYS IT

In timing and substance the Manila speech of Vice President NIXON on the occasion of Independence Day in both this country and the Philippine Republic was magnificent.

Mr. NIXON established by skillful contrast the difference between America's policy of friendship, equality, and independence toward Asian nations and the brutish tyranny of the new Soviet colonialism that has already colonized into slavery such areas as North Korea and North Viet Nam. Previously he had buttressed the American position by making recognition of Philippine sovereignty over United States airbases there unmistakably clear.

On the subject of neutral nations the Vice President's words were equally reasoned and strong.

He could understand, he said, how some nations on the fringe of Soviet conquest could decide to refrain from military alliance, although he pointed out the historic danger of such a course. But there can be no sympathy, he went on, with that form of neutralism that professes to see no moral distinction between Communist tyranny and freedom, between godless oppression and God-fearing affirmation of the dignity of man.

We think the Vice President has done this country an outstanding service.

The Bradley Report

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks, I set forth the action of the New Jersey Disabled American Veterans, Department of New Jersey at their 36th annual convention held in Wildwood, N. J., June 21 to June 24. May I say I agree with them in their objection to the vicious Bradley report:

DISABLED AMERICAN VETERANS, DEPARTMENT OF NEW JERSEY, CONVENTION RESOLUTION

Whereas the present administration of the Federal Government has ordered a study of veterans programs and benefits, by a commission headed by Gen. Omar Bradley, which commission produced a series of pronouncements and recommendations, known as the Bradley report; and

Whereas a study of said Bradley report discloses that its recommendations are designed to drastically curtail veterans' benefits, including the total elimination of all benefits for millions of veterans; and

Whereas these recommendations, if implemented, would have a disastrous effect on veterans, particularly disabled veterans, their families and dependents, because the Bradley report seeks to reverse the 150-year-old American tradition and policy, in the words of Abraham Lincoln, to "care for him who shall have borne the battle, and for his widow and for his orphan," and seeks to demolish and wreck the system of veterans' benefits built up so laboriously over the years: Now, therefore, be it

Resolved, by the delegates of the New Jersey Department, Disabled American Veterans, in convention assembled, That this department highly resolve and go on record, as being unalterably opposed to the said Bradley report in its entirety, as being a deadly and direct threat to the welfare of this organization, its members and their families and dependents, and to all veterans, and as being a bald, deliberate, cynical breach of faith with the American veteran; and be it further

Resolved, That this department, its officers, member chapters and membership, do all in their power to oppose its implementation, in any way, legislative or administrative, and that copies of this resolution be forwarded to appropriate officials of the Federal and State governments, the United States Congress, the New Jersey Legislature, and to the national convention, Disabled American Veterans, 1956, in San Antonio, Tex., for adoption and support.

Address by Stasys Lozoraitis at Festival of Lithuanian Art and Music

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, July 9, 1956

Mr. DIRKSEN. Mr. President, on June 16, 1956, the National Lithuanian Society of America presented the festival of Lithuanian Art and Music here in Washington, D. C. This presentation graphically showed the true culture of the Lithuanian people through the many years of their great history. The festival was climaxed by a dinner at which the Honorable Stasys Lozoraitis, Chief of the Lithuanian Diplomatic Service gave the principal address and it is that address which I would like to bring to the attention of the Senate and the people of the United States by having the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY STASYS LOZORAITIS, CHIEF OF THE LITHUANIAN DIPLOMATIC SERVICE, AT THE FESTIVAL OF LITHUANIAN ART AND MUSIC, HOTEL STATLER, WASHINGTON, D. C., JUNE 16, 1956

I consider it a great privilege to be able to speak, in the capacity of Chief of the Lithuanian diplomatic service, at this distinguished gathering which climaxes the Festival of Lithuanian Art and Music and which is lent special significance by the generous presence of so many representatives of the Government and people of the United States of America and other nations.

In the folk art and music presented at this festival is heard the voice of Lithuania, and beating of her heart; in them her soul is mirrored. This Lithuanian soul, despite tragic hardships under Soviet occupation, remains free and thirsts after but one thing: To throw off Soviet-Communist slavery and to return to her rightful place among the democratic, Christian nations of the West to which the Lithuanian nation belongs by right of her history, faith, and culture.

This is the ultimate and unshakable will of the Lithuanian people. Our nation has not accepted and will never accept the so-called incorporation into the Soviet Union. In fact, this incorporation was an act of brutal aggression, the result of force, as contrary to international law and morality as it was to the will and interests of Lithuania. This premeditated international crime was carefully planned by the Soviet Government. In August and September of 1939, the Soviet Government reached an agreement with Hitler, forming a plot which opened the gates to the Second World War. One of the most important elements of this plot was the destruction of the independence of the Baltic States and their forced incorporation into the Soviet Union. The Soviet Government enacted this criminal plan in two stages: Military and quasi-elective. In October 1939, by the threat of force, the Soviet Government imposed on Lithuania the so-called Mutual Assistance Pact in accordance with which it was able to introduce Soviet garrisons into Lithuanian territory, promising, however, to respect Lithuania's sovereignty and independence. But in June 1940, taking advantage of the fact that the democracies of western Europe

had succumbed to Hitler, the Soviet Government presented the three Baltic States—Lithuania, Latvia, and Estonia—with a totally unfounded ultimatum. This action was followed up by an attack on the Baltic States and their occupation by the overwhelming Red army. In Lithuania, at sword's point the Soviets indulged in electoral manipulations by which means the occupying force organized a so-called parliament composed of Communists, and authorized it to vote for the annulment of Lithuanian independence and the incorporation of Lithuania into the Soviet Union. This was the beginning of terrorist persecutions, mass deportations, and the annihilation of the most basic human rights in Lithuania, by which the Soviet Government has inflicted and continues to inflict the most grievous wounds. Only 2 days ago we marked the 15th anniversary of the beginning of one of the greatest crimes in the hisory of Europe—the deportation of thousands of Lithuanians, Latvians, and Estonians to certain death in the slave camps of Siberia.

Lithuania's painful experience in dealings with the Soviet Union is and remains a manifest example of how the Soviet Union interprets international coexistence. In the same way, soon after the establishment of the Soviet regime, in Russia, in the days of Lenin, the Soviet Government carried on a whole series of aggressive acts toward its western neighbors of which Lithuania was one. However, a decisive defense closed the path of Soviet expansion to the west and forced the Soviet Government to change its tactics, replacing open aggression with a coexistence policy. This new Soviet tactic manifested itself in the abundant peace, nonaggression, and other security treaties which the Soviet Union concluded with its western neighbors. I surely would not be exaggerating by saying that in no other part of the world was there devised such a broad system of guaranties against every possible form of aggression as there was between the Soviet Union and her neighbors. To any person of good faith this system would certainly have seemed an inviolable barrier. Such guaranties existed also between Lithuania and the Soviet Union. Notwithstanding all these things, the Soviet Union seized the first opportunity—in 1939–40—to put an end to peaceful coexistence and to violate solemn treaties into which it had freely entered.

It is for this reason that Lithuanians, having had such tragic experience with the Soviets, now follow attentively and with misgiving the new tactic which the Soviets unveiled since Stalin's death. This tactic has two aspects.

First, it would seem that the Soviet Government is experiencing troubles within the regions which they occupy and rule, and must contend with the fact that the Soviet population and the populations of the nations enslaved by the Soviet Union abhor the political regime. For this reason, the Soviet Government wishes, in certain internal affairs, to give the impression that the regime is now less rigid. Therefore, I think it worthwhile to remember that this lessening of tension fails to affect any basic question. The Communist Party remains the supreme, deciding factor, totally beyond appeal. The dissolution of basic human rights remains in effect. In this way the Soviet regime remains what it was, as contrary to human nature as it is dangerous to world civilization.

As to the second aspect, that of foreign policy, the opposition of the west, under the leadership of the United States, to Soviet expansion, forced the Soviet Government to devise a new policy and to proclaim the watchword of peaceful coexistence. The purpose of this tactic is to lull the alertness of the west, to bring it to political and moral disarment and to the recognition, or at least to the forgetting, of the results of those international crimes of which the Soviet Union is guilty in attacking and occupying a whole series of nations, among them Luthuania. This tactic seeks to demoralize international relations and to make expansion possible where military means would be impractical—by means of subversion. It seems to me that, although the new Kremlin leaders are second-string men, their new strategy is as dangerous as was the old one. In this way the struggle of the Soviet Union, and indeed of bolshevism, to subjugate the entire world—the struggle begun by Lenin and carried on by Stalin—is now being implemented by Stalin's successors. In this struggle, the civilized world has a silent ally. This ally is the group of millions belonging to the nations enslaved by the Soviet Union. These peoples, among them the Lithuanian Nation, continue a moral resistance to the Soviet Government, and, I believe, by so doing they hinder the plans of Soviet imperialism. In this struggle the west has also a powerful weapon. Opinions are sometimes voiced that in this fight against communism a new ideal is needed. I do not think that this is the case. There are two ancient but always valid ideals: faith in God, and the devotion of peoples and nations to the principle of freedom. The intensified proclamation and implementation of these two ideals is that powerful weapon which I just mentioned. Its use in conjunction with peaceful coercion of the Soviet Union must bring the elimination of the danger which the Soviet Union constitutes to civilization. An indispensable condition in the elimination of this danger is the restoration of freedom to the Soviet-enslaved nations which look with hope to the west for deliverance.

Ladies and gentlemen, the Soviet will never give up their proclaimed plans. It is only when they can no longer practice them that they put them aside until the times again become propitious. May the Western World not forget its plans for freedom and justice; may it carry them forward methodically and without compromise.

From that fatal day when the Soviet Union attacked and occupied Lithuania, the understanding attitude of the American Government and people in regard to the case of Lithuanian freedom, has been a source of comfort and of hope to the Lithuanian Nation. Our people will never forget that from the very beginning America condemned the illegal occupation of Lithuania and refuses to recognize it. Our Nation remembers with gratitude, remembers the repeated statements of high-placed American officials recognizing Lithuania's right to the restoration of her freedom. And the fact that this festival, this manifestation of the soul and culture of Lithuania, could only take place in the United States—in their Capital—will be welcomed by all Lithuanians and they will derive from it special significance.

I am certain that I express the feeling of all Lithuanians, at home and abroad, when I thank the United States for their sympathy toward Lithuania. Furthermore, I am also convinced that I speak for all my countrymen in extending best wishes to President Dwight D. Eisenhower for his speedy recovery.

Ladies and gentlemen, may I consider your presence here as a sign of your sympathy for Lithuania? I will long remember this evening and I will always be grateful to the National Lithuanian Society of America for inviting me. I feel sure that this society has done much to help the Lithuanian cause and Lithuanian-American relations by the zealous organization of this festival.

Ladies and gentlemen, during the lifetime of one generation the United States of America twice was forced to take up arms and fight for the ideals of freedom, law, and justice. In this cause hundreds of thousands of American youths gave their lives but the Soviet Union blighted the ripening of the fruits of their sacrifice. I believe that those ideals, always alive in this huge Nation, will totally triumph through peaceful means, and that this will bring, to my country as well, the restoration of freedom and independence.

The Civil Rights Bill

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, July 9, 1956

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the weekly newsletter of my distinguished successor in the Seventh Congressional District of Virginia, Representative BURR P. HARRISON, in which he discussed the so-called civil-rights bill now under consideration by the House. Representative HARRISON'S analysis of that bill is lucid and accurate, and I fully endorse the position he has taken in opposition to it.

There being no objection, the newsletter was ordered to be printed in the RECORD, as follows:

YOUR CONGRESSMAN REPORTS

(By Representative BURR P. HARRISON)

During the sessions of Congress, I receive many well-informed letters from citizens of the Seventh Congressional District concerning pending legislation. It has been amazing to me, therefore, that I have not been getting mail about the so-called Civil Rights Act of 1956, which the House of Representatives is getting ready to pass.

Even a casual reading of this bill, sponsored by the President, reveals it as one of the most drastic measures ever to receive consideration by Congress.

It would set up a Federal Commission with a staff of snoopers who could roam the length and breadth of the United States, armed with subpenas, looking for civil-rights incidents. One fo the objectives of this Commission would be to advance the idea of complete racial integration in private business.

Any State or local official, any businessman; in fact, any citizen, could be hauled before this Commission, under threat of a prison term for contempt, and required to answer the allegations of any troublemaker that he had been subjected to unwarranted economic pressures, whatever they are, because of color, race, religion, or national origin.

It does not take much imagination to predict where the agents of this Commission would do most of their snooping. Under its authority to investigate legal developments, any Southern judge, sheriff, or police chief could expect to receive a subpena if the Commission thought the official had not handled a civil-rights case in accordance with its ideas of what civil rights are, and how they should be protected.

The chairman of the House Judiciary Committee admitted last week that the bill would permit charges to be brought in a Federal court against any member of a State legislature who voted for an interposition resolution on the school-integration issue. This raises the question as to whether Southern Members of Congress who signed the anti-integration manifesto likewise could expect to find themselves indicted and brought to trial.

But these are among the milder provisions of the Civil Rights Act of 1956.

The measure would authorize the Federal Government, through the Attorney General, to take any civil rights case into a Federal court, even though it might be active in a State court at the time. And believe it or not, the person claiming he was being discriminated against would be assigned a Government lawyer, free of charge, to handle his case.

Now, you might say:

"Why talk about such a bill? Congress never would vote such a thing."

It will vote such a thing, if given a chance, and the House of Representatives is likely to get its chance soon. Consider these facts:

1. The prestige of President Eisenhower is behind this bill. In a message to the convention of the National Association for the Advancement of Colored People, he stated the bill, "will materially assist the Government in discharging its responsibility to safeguard the constitutional rights of every citizen." 2. Despite the respect in which Representative HOWARD W. SMITH, of Virginia, is held as chairman of the House Committee on Rules, northern Democrats and all the Republicans ganged up on him and cleared this bill for floor debate by a vote of 8 to 3. 3. Mr. Eisenhower's floor leaders in the House are clamoring for a vote on the bill, and the northern Democratic leaders are promising it.

Parliamentary delays can be used against the measure, but the House limits debate. The bill will pass by a heavy majority whenever it comes to a vote. Sponsors are confident they have the votes in the Senate too; so the only recourse of the minority fighting against this extreme legislation is the unlimited debate permitted in that body.

It is difficult for citizens of Virginia to realize the great numerical strength of the proponents of such legislation as this in the Congress. When President Truman's Fair Employment Practices Commission bill was up in Congress—and it was a cream puff in comparison with the current measure—I offered an amendment to provide that a minister of the Gospel could not be sent to jail for refusing to employ an atheist in his church—a situation which was possible under the bill. The amendment was adopted tentatively but then voted down.

Formerly, some of this extremist racial legislation could be blocked by a coalition of southern Democrats and Republicans. Now, under the urging of the President, the Republicans have formed a coalition with northern Democrats against us.

That is why the House is heading for a vote on a bill which includes such unbelievable language as to provide legal service at taxpayers' expense to get a Federal court injunction against persons the complainer thinks have engaged "or are about to engage" in infringement of a claimed "civil right."

Under such a law, a casual frown at the wrong time and place might send you to Federal prison.

Persecution of Jews

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, July 9, 1956

Mr. DIRKSEN. Mr. President, recently the Syrian Ambassador to the United States delivered an address at a forum conducted by Illinois Normal University and in the course of his address statements were made which evoked very considerable feeling, some of which found editorial expression. There appeared in the Chicago Daily News on Friday, June 29, an editorial to this effect, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VICIOUS FALSEHOOD

For a sample of the kind of reasoning that blocks a peace between Israel and the Arab nations we give you the remarks of Farid Zeinddine, Syrian Ambassador to the United States. Speaking at a Normal University forum, this diplomatic envoy asserted:

"The American Jew is not an American emtionally or even ultimately. A Zionist cannot have real allegiance to the country in which he lives."

The effrontery of this attempt to pass on the qualifications of American citizens is matched only by the bitter prejudice that it reveals. It is interesting to note that a substantial number of American Jews are opposed to Zionism, giving as one reason that it would invite this false allegation. But it is equally a falsehood when applied to the great numbers of Jews who support Israel.

It was undoubtedly Hitler's massacres that give the greatest impetus to the dream of a homeland safe from persecution. American Jews view this effort with the same earnest, sympathetic and helpful attitude that Americans of Irish descent gave to the cause of Erin's freedom and that Greco-Americans give to the cause of their countrymen on Cyprus.

To say that this makes them any less good Americans is vicious nonsense. It is totally out of place in the language of an accredited diplomat from another country.

Ignoring the Children

EXTENSION OF REMARKS
OF
HON. EARLE C. CLEMENTS
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Monday, July 9, 1956

Mr. CLEMENTS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial entitled "Ignoring the Children," which appeared in the July 7, 1956, issue of the Washington Post and Times Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IGNORING THE CHILDREN

The death of the school-construction bill in the House of Representatives on Thursday was nothing less than a national disaster. The measure was put to death by a combination of prejudice and politicking in an atmosphere of confusion and finagling discreditable to Democrats and Republicans alike, and to the House itself as a lawmaking body. As a result, increasing numbers of American children next year and the year after will be in unsafe and overcrowded schools; for some there will be no classroom space at all. A decade from now the country will feel the direct effects of this folly; the scientists and technologists and engineers needed for national security in the future will lack the requisite training; the educated citizenry indispensable to the wise direction of a self-governing society will be inadequately prepared. The neglect of such needs amounts to legislative irresponsibility.

Both parties must share the blame for unconscionable jockeying for political advantage over the formula for allocation of Federal funds in aid of education. Had they focused on the overriding need to provide money for school buildings, they would have been able to reach agreement on a difference which was certainly secondary in importance. Asked yesterday if the administration would want the measure that went down to defeat, White House News Secretary Hagerty said simply, "We are interested in schoolrooms." That interest should have been controlling. But the Democrats refused to consider the administration proposal that would have distributed funds in part according to need, while the Republicans stubbornly refused to support the Kelley bill which apportioned the money strictly on a basis of school-age population.

Responsibility for adoption of the Powell amendment must be borne in very large measure by the Republicans. The rollcall in this crucial question found 148 Republicans and 77 Democrats for it, 146 Democrats and 46 Republicans opposed. But when the bill itself, with the Powell rider tacked on to it, came up for a vote, only 75 Republicans supported it. It is difficult to interpret this as anything but cynical politicking. Having squeezed what benefit they could out of voting for a rider that doomed the bill to death, most Republicans joined callously in burying it. The President has indicated that he will continue to press for passage of Federal aid to education. But no one now seriously hopes that the measure can be revived.

It takes a long time to plan schools and build them. Perhaps next year Congress will recognize its responsibility and provide the financial assistance without which the country's public-school systems cannot meet their obligations. But children need schooling while they are children; they cannot wait. Many who are now of school age will suffer an irreparable injury from the shabby conduct of the House of Representatives on Thursday. They have been denied a part of their American birthright.

Are You a Vote Slacker?

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 9, 1956

Mr. MUNDT. Mr. President, this is election year, and office seekers are soliciting votes from among the people of this country. However, I think that it will be safe to predict that many an office seeker will feel disappointment, after the polls close, that so few voters have exercised their voting franchise.

In the July 8 issue of Family Weekly, the magazine section appearing in the Daily Plainsman, Huron, S. Dak., there appears a thoughtful article, "Are You A Vote Slacker?", written by Joseph N. Bell. This article analyzes reasons why people fail to go to the polls. It reports the basic reasons why citizens do not grasp the importance of voting. I believe that it is of great value and should not only be of interest to those who will seek office this year, but should stir the interest of people of this country, especially those who have not realized the

importance of exercising a voice in the selection of candidates for office.

I ask that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARE YOU A VOTE SLACKER?

(By Joseph N. Bell)

The earnest young man was a brand-new American. He had won his citizenship a few months before and had just participated in his first election—anywhere. His eyes glowed as he discussed this great blessing of voting.

"It felt good to vote," he said, and shivered a little as he recalled the experience. "Where I come from nobody votes. Here I looked forward to its as a real opportunity, and I was proud when I cast my ballot. Voting is my way of doing something for the privilege of being an American.

"What kind of a country would this be if people didn't vote? A man has to take an interest in his country and his community."

This young man was answering questions put to him by interviewers of a Chicago organization called Science Research Associates. Their mission was to determine for the political science department of the University of Chicago why only half the citizens over 21 voted in the last Chicago mayoralty election.

This new American citizen, with his clear-cut sense of duty, would have been distressed to hear some of the answers:

"I don't have time to vote because I work nights and sleep during the daytime."

"Elections don't accomplish anything. Law-enforcement bodies don't become more efficient. Things are always just as before."

"I'm just not interested in voting like some people."

"I've never voted because I don't want to pay poll tax."

"I've wanted to vote, but I just never took much interest in elections. Besides, I can't take the time from my business."

"I intended to start a TV repair store and thought declaring my politics would hurt me in the future."

These are Americans speaking—young and old, rich and poor, laborers and white-collar workers, men and women. They have one thing in common: They don't vote. And, sadly enough their numbers are discouragingly large. Traditionally, only a little more than half the registered voters in the United States vote in presidential elections; for Senators and Representatives, the percentage drops sharply, especially in a nonpresidential year; and in local elections, the number of eligible voters who never get to the polls is scandalous.

Why do so many ignore this basic prerogative of democratic government?

Strangely enough, the research team found that the answer to this question lay in another question: "Why do people vote?"

Most nonvoters could give no compelling reason for not voting. The long-nurtured assumption that a person will vote unless something happens to prevent him was not confirmed by the survey. Nor did the type of election, the personalities involved, the intensity of the campaign, or the weather have great significance.

By and large, voting emerged as a general habit—a way of life. And in the process, it underscored a vital and sometimes little-emphasized function of the American family: to impress the voting way of life on its children—by example.

Of those interviewed who voted, more than half mentioned their family in connection with early election experiences; they remembered voting participation by the members of their family; recalled their parents' belief in or loyalty to a candidate or a party.

This background of family interest in practical democracy—more than any other single factor—contributed to active voting participation in adulthood.

Says Prof. Jerome G. Kerwin of the political science department of the University of Chicago, under whose direction the survey was made: "The importance of the family in political education and participation is reemphasized by this survey."

What else did the researchers find out about voting versus nonvoting Americans? Two other main points emerged.

One-fourth of the voters said they had no reason for their choices. Typical of this group was a woman who commented: "I just didn't feel capable of judging the candidates. There were so many I hadn't heard of before. I was all mixed up."

Yet, never before have there been so many means of communication between candidates and voters. Three-fourths of those surveyed who voted said they saw a candidate on television, 16 percent saw a candidate in person, and 65 percent were visited by an organization worker.

Thus the overwhelming majority of voters cast their ballots on the basis of reasonably enlightened convictions as to the personalities, issues, or parties involved.

But young people fell down decidedly on the voting job. The median age of nonvoters was 33 (for the voters, it was 47), and researchers found a great deal of political apathy among young people of voting age.

The composite of the nonvoter was: Young; inclined to be restless and mobile, seldom putting down roots in a community (more than half hadn't lived at their present address for 2 years); and a tenant rather than a homeowner (less than 10 percent owned homes). He also had very little history of political background at home to impress him with the importance of voting.

Professor Kerwin concludes gravely, "Far too many young people are nonvoters. A democracy should not have to wait for advancing age for adults to start going to the polls."

How can the average American be active in politics, short of running for office? There are many ways, but the place to start is at home. Your first job in discharging the duty of every American is to make sure you and your family are registered and eligible to vote, and know the candidates and issues well enough to vote intelligently.

Then, if you feel the urge to work further for candidates of your choice, there are a number of other doors open to you. The most effective way for you to be politically active is through an organization—and there is usually one to fit your own ideas. To find out, you can contact party headquarters in your city; get in touch with your ward or township committeeman or precinct captain; or affiliate yourself with one of the special groups sponsored by both major parties as well as independent political organizations—groups like the Young Republicans, Young Democrats, Independent Voters, and the League of Women Voters.

In answering survey questions, few people denied the value of voting. Almost everyone thought it was a good thing—even those who didn't vote. The greatest enemy was apathy. Thus, in this election year, you might profitably ask yourself these questions:

1. Do I vote in all elections? Not just the glamorous presidential elections, but for school boards and bond issues in my own community; for city, county, and State officials; for special problems brought before the electorate?

2. Do I vote intelligently, by acquainting myself with the issues and candidates before casting my ballot?

3. Am I setting a good example in practical democracy for my children, my friends, my neighbors, and my business associates by championing the cause of intelligent voting?

4. Am I working actively to improve whatever defects may exist in our democratic system—rather than standing off and criticizing?

5. Am I honestly discharging my basic obligation as an American citizen—to contribute, at the very least, an enlightened ballot to the operation of the greatest democracy in the world?

Tribute to Walter S. Robertson

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, July 9, 1956

Mr. SMITH of New Jersey. Mr. President, I have had called to my attention an editorial in the St. Louis Dispatch of Sunday, May 20, 1956, which pays a well-deserved tribute to Walter S. Robertson, Assistant Secretary of State, who recently made an outstanding address at Staunton, Va., in celebration of the centennial of the birth of Woodrow Wilson.

Secretary Robertson is one of our outstanding, stalwart champions of President Eisenhower's foreign policy, especially our foreign policy in the Far East, which is Secretary Robertson's responsibility. The editorial to which I refer is entitled "Partisanship Set Aside," and makes an important contribution to the whole subject of our foreign policy at the present time.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PARTISANSHIP SET ASIDE

Walter S. Robertson is one of the most responsible officials in the Eisenhower administration. As Assistant Secretary of State for Far Eastern Affairs he shoulders the responsibility for United States policy with respect to the perplexing problems of the Orient. His specific assignments have taken him to the Geneva Conference of 1954 and to the Manila Pact Conference at Bangkok last year.

Because Assistant Secretary Robertson is this trusted official of the Eisenhower administration special importance attaches to an address he delivered at Staunton, Va., the birthplace of Woodrow Wilson. The occasion was a notable gathering, including Ambassadors or their representatives from 35 countries, in connection with the centennial year of the birth of the World War I President.

Mr. Robertson's review of the Wilson career was in striking contrast to the slurs frequently thrown at that great President by Republican partisan speakers. There was no low blow at Woodrow Wilson as the first of three Democratic Presidents to get the country into war. There was no attempt to dismiss him as a visionary, an impractical idealist, an egghead.

On the contrary, Mr. Robertson made a point of saying that when war came in

Europe in 1914, Wilson was primarily concerned to keep our Nation out of it. He told how Wilson as a boy of 8 had seen at first-hand in Georgia the horror that follows in the wake of war.

Because Wilson's devotion to peace was genuine and compelling the Democratic President struggled through 3 years of the war in Europe to find a common ground on which the belligerents could meet. Of this Mr. Robertson said:

"Wilson's statesmanship stands out as mature and inspired. He could not have tried harder than he did to bring about peace without victory, but no man could have held back the tide of events that was to follow—the sacrifice of more hundreds and thousands of lives, the achievement of power by the Communists in Russia, the internal collapse of Germany and the eventual rise of nazism, bringing on Europe another and near fatal war."

The Assistant Secretary of State not only commended Wilson's 14 points as a "historic peace program" with "overpowering psychological effect" that shortened the war. He commended also Wilson's vision in proposing the League of Nations and in insisting that it be part of the World War I peace treaty. Then Mr. Robertson made this remarkable statement:

"President Wilson's defeat came not in Paris but at home. It is not my purpose to explore the causes of that rejection. No one can question the earnest patriotism of the opposition. No one can question that the blame must be shared.

"It is enough for us to recall that on August 8, 1945, the United States Senate voted in favor of American membership in the league's successor, the United Nations, vindicating Woodrow Wilson's ideals by the startling vote of 89 to 2.

"We had by then paid in copious measure for our failure to joint the League of Nations that Woodrow Wilson had founded."

What relevance does the Wilson example have for us today? Mr. Robertson made it very clear when he recalled how Wilson's idealism was "derided" in the 1920's and then said: "We have had to learn once more that when Wilson said 'the world must be made safe for democracy' he was expressing the necessary and transcendent objective of our Nation's foreign policy, the end we still must achieve if we mean to survive."

At the start of 1956 the hope was expressed on this page that the centennials of those two great men of ideas, Woodrow Wilson and his Supreme Court appointee, Louis Dembitz Brandeis, would somehow raise the level of campaigning in the presidential election year.

Certainly Assistant Secretary of State Walter S. Robertson has done his part to set partisanship aside and to give credit where due. His address at the historic and lovely town of Staunton, Va., ought to be required reading for Republican and Democratic speakers in the months ahead. It has the stamp of statesmanship.

The Jungle of Tax Confusion

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, July 9, 1956

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a speech on the subject of "the Jungle of Tax Confusion," which I delivered at the Glen Burnie Rotary Club on July 5, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Yesterday, we celebrated Independence Day—the Fourth of July. One hundred and eighty years ago, the Continental Congress meeting in nearby Philadelphia, set forth its bill of complaint against the English Crown. King George, the declaration said, was imposing taxes upon the colonists without their consent. I wonder today how many of us will admit to having given consent to that mass of largely unintelligible laws which we call the Internal Revenue Code. I am sure that most of us, in any case, would like the opportunity to withdraw whatever consent, directly or indirectly, we have given. I am not quite prepared to urge each of you to adopt your own declaration of independence, or even to follow the lead of the Governor of Utah in refusing to pay the Federal income tax. But you can do something to help yourself and the Nation to overcome this millwheel which hangs around the neck of each of us. I believe that we can have tax revision that will make sense. So firm am I in that belief that I have introduced a joint resolution in the Senate for setting up the machinery to make such a revision; for that I shall ask your support.

Two years ago under the able chairmanship of Representative DANIEL A. REED, the House Ways and Means Committee did a monumental job of revising the antiquated internal revenue code. This hoary document had not undergone revision for 75 years. DAN REED and the Republican 83d Congress are to be complimented on this achievement. A valuable service was rendered all taxpayers and many improvements were made in simplifying the tax laws and closing some loopholes. But the job of making taxes fair, simple and understandable still lies ahead.

I say to you in all frankness—and I do not meant to belittle anybody or any Member of Congress—the Congress was then unaware of what it did; it still does not know; the administering officers are still trying to find out; millions of taxpayers, their lawyers and accountants are still struggling, and the courts for years to come will be studying the law to learn what actually happened so that they can tell the administration and the taxpayers their rights and liabilities.

Instead of the clearness and simplicity which should characterize a law which affects so many, we have a jungle of confusion. Rare indeed is the man who can read the tax law, or even the tax forms, and know where he is headed or how to extricate himself from the jargon which conceals the inequities and discriminations which the law inflicts.

It ought to be possible for a taxpayer to settle his case simply, but so long as we have complication, confusion and uncertainty, there will be long drawn-out litigation. And what is worse, courts are more and more changing their collective minds, so that what may appear settled today will be unsettled tomorrow.

The year 1176, which witnessed the birth of the Declaration of Independence, also saw first another famous document. I refer of course to Adam Smith's "Wealth of Nations," first published in that year, and which contained his famous canons of taxation. However, as one student of public finance recently wrote, Smith's canons of taxation resemble the Ten Commandments in the frequency of their repetition and the degree to which they are sinned against. One of these canons was that taxes should be certain and not arbitrary. They should be clear and plain to the contributor and every other person. How far short our tax laws fall in that respect, I leave to the personal experience of each of you.

Smith also contended that taxes should be equal or equitable. Justice in taxation can be achieved only if taxpayers are assured of impartiality of treatment. I have largely drawn the theme of my proposed joint resolution from the lack of equality or equity and justice in the law. I have called on the Congress to establish a commission to study and report on those inequalities and inequities and injustices.

DISINCENTIVE IN THE TAX LAW

We can deplore inequity and inequality and even uncertainty and perhaps struggle along with both, but if a law obstructs incentives, discourages job and wealth-creating investment in enterprise, operates against small business while promoting monopoly, then the law may justly be condemned. Let me illustrate how the law operates against small business and promotes monopoly.

I am reminded of the remark someone made not long ago to the effect that whenever Congress spoke of small business, it spoke of the fair-haired boy, but whenever Congress enacted tax laws, the needs of small business were forgotten.

Perhaps the greatest difference between small business and large business—aside from size—is the different sources of capital. Big corporations turn to public subscriptions of new stock or bond issues. Small business must rely almost exclusively on retained earnings. As applicable to small business, the corporate income tax strikes not only at the product of past success, but more important, at the only significant source of funds for further growth. In imposing heavy taxes on small business, the law effectively prevents small business from using profits to expand and compete on equal terms with big business.

Big business has another important advantage, because of its multiple lines of activity. When one of its lines has a bad year and suffers losses, these losses reduce other earnings, income taxes are reduced, and the big business continues. However, one bad year for a small business with a single line and the creditors move in and the owner out.

The death tax, or the threat of death taxes, also causes the disappearance of small business. The impact of the tax on a privately held small business frequently stimulates sales to competing firms. Often the only way to raise the money to pay the tax is to sell the business itself. Or the threat of the tax provides a strong inducement for the owner to prefer liquidity to having all assets tied up in the plant and equipment of a going business. Many a husband realizing that on his death, his wife will never be able to raise the funds to finance the heavy estate tax, has decided to sell out to a large competitor, taking in exchange either cash or stock in a larger business which has a ready market.

You may say, and truthfully, that the same tax law applies to big business as to small business. And I will of course agree. But the fact is that in operation, the small business is the one that most feels the burdensome impact. Often, big business can hire expensive legal and accounting talent that will find loopholes of which the small enterprise cannot avail itself. I don't mean to suggest by what I have said that I have joined the ranks of those who condemn business just because it is big. Quite the contrary. But what I do condemn mostly is the high rates written into the law, and the resulting overwhelming burden. Because of the huge burden, it becomes extremely profitable for taxpayers to find devices for evasion and avoidance. The next step is for the Congress to protect the revenue. New technical and often incomprehensible language is added to the law and inevitably new hardship cases are created. Then we strive to provide relief here and there for some of the worst hardship cases—or those with the best lobby—and the result is complication heaped upon complication, and frequently a new inequity.

FORMER COMMISSIONER ANDREWS

The problems which I have set forth have been brought into sharp focus recently by the writings and press interviews of former Commissioner of Internal Revenue, T. Coleman Andrews. Our tax structure needs a complete overhaul, he said. To paraphrase—we need to bring that structure under control, before we become slaves of our own creation. We need a system that is generally understandable, fair, and compatible with our ideals of freedom.

Mr. Andrews is a man who, as head of the tax-collecting activities of the Federal Government for 33 months, took in more than $180 billion in taxes. You would hardly expect a man in his position to protest against the law he had been administering. But it is my thought that perhaps no one is in a better position than he is, to know how bad the law really is, how uncertain it is, how inequitably it operates, how it discourages or makes impossible new investment.

I have not overlooked, just as Mr. Andrews did not overlook, the terrific burden which the income tax imposes on the person with low income. As Mr. Andrews said: "The minimum rate of 20 percent takes a whale of a slug—$400—out of a taxable income of $2,000. I sure wouldn't want to pay that much if my income were that low. But it hits the people in the middle brackets even harder, and is slowly but surely destroying the middle class."

One of the most unhappy features of the tax laws is that those who frame them have not been content to view the revenue-raising functions of taxes as the sole purpose for levying them. For most of the years 1932 to 1952, the tax law was used to "soak the rich," to redistribute the wealth, to promote and enforce so-called social reforms.

We must move away from the thought of reducing everybody to the lowest common denominator. We must cease to penalize success. I do want to get across the idea and emphasize the thought that we need private business and industry, and we need people who will invest their savings to make jobs for others, add to the national income and wealth, and of course make a profit for themselves. We must recognize that businessmen are entitled to a return after taxes commensurate with the risk they take. Otherwise it does not make sense for them to invest. But there is a segment of this country, and an important segment, that denies this. Much though they will not admit it, they are following closely on the heels of Marx and the doctrines of the Communist manifesto which lays down, as one of the spearheads of communism, a high graduated income tax.

As Mr. Andrews has said: "There are only two ways in the world that business activities can be financed. One is through savings. The other is through Government handouts. May the Lord deliver us from the latter."

What has all this to do with confusion in the jungle of tax laws? To answer my own question, it has much to do with it. When tax rates are reasonable, there is relatively little to be gained by evasion and avoidance. Quite the reverse when rates are steep.

When rates soar to their current highs, numerous cases of hardship develop. We must admit that over the years Congress has bowed to the seemingly inexorable demand to soak the rich. High rates have so stifled incentive and opportunities to invest that relief has had to be given sometimes in very devious ways. Complicated language has been used to conceal simple actions. More complicated language has been added to prevent abuse of concessions and to restrict opportunities for evasion and avoidance. Exceptions to general rules have been followed by exceptions to exceptions. In the language of coiners of phrases, "Erosion of the tax base" has set in. As the erosion progresses, and it is bound to progress, we shall have to raise rates to preserve the revenue, and this in itself will lead to further erosion. Competent authority argues that if we could have a simple tax law, and eliminate the concessions and reliefs, the exceptions and limitations, we could cut rates by one-third or one-fourth and still produce the same amount of revenue. We need an investigatory commission such as I propose to study this. Before I discuss that, let me set forth for you one more entanglement that adds confusion in the tax jungle.

OVERLAPPING FEDERAL, STATE, AND LOCAL TAXES

I refer to the uncoordinated overlapping Federal-State-local tax structure with which the entire Nation is cursed. There is hardly a tax which the mind of man has so far been able to conceive that is not exacted by two or more levels of government. Income taxes are levied by the Federal Government and most of the States, and many local units of government. Excise or sales taxes are levied by all of the States in one form or another.

In addition to the lack of economy in operation and efficiency in administration of these laws, there are baffling compliance problems for the taxpayers. The problem of overlapping is multiplied by the lack of uniformity.

What is income or a deductible expense under one law is something else under the other. Exemptions vary. Commodity excise taxes are levied on the manufacturer by one jurisdiction and on the retailers by another. Or both jurisdictions may exact their burden at the same level, but the scope of application of the laws, or the exemptions, may vary. All this adds confusion, increases compliance costs, and encourages a disrespect of government. What is needed, perhaps more than anything else, is for the Federal Government to get out of certain revenue fields and leave them for exclusive State and local cultivation. For too many years, the Federal Government, through its economic position, has preempted all the really fruitful taxes and left to the States and local units the choice of duplicating Federal levies or confining themselves to numerous minor exactions principally of a nuisance character.

It is one thing to realize that we have a confused tax situation which lacks coordination—a tax system which has substituted complication for simplicity, inequity for equity, discrimination for equality, depressing burdens for incentive; it is quite a different proposition to introduce coordination and restore simplicity, equity, equality, and incentive. We can do it if we have the will for it. What worries me, however, is that the Congress and the States may lack the spirit and drive to set revision wheels in motion. Through inertia, we may just stand still. But as I said, I am convinced that something can be done if we go about it in the right way. Of one thing I am certain, and that is that the groundwork for the type of revision I contemplate can never be laid in the Halls of the Congress or even in the meeting rooms of the committees. A wholly new and fresh look is needed. The right way to approach a solution of this problem is through the creation of a commission modeled on that type of investigation which has operated so successfully under our greatest elder statesman, former President Herbert Hoover.

NEED FOR A HOOVER-TYPE COMMISSION

I have given expression to my thinking on this matter by introducing into the Senate, Senate Joint Resolution 167, to establish a study commission to report to Congress. I contempate a commission of 12 men representing the best tax brains in the country. It will certainly need all the imagination and ingenuity at its disposal. I would have 4 members appointed by the President, 4 by the President of the Senate, and 4 by the Speaker of the House. In general, the Commission should strive to bring order out of chaos and remove the inequalities and inequities that so characterize the tax law today. I am confident that a properly constituted commission can bring in recommendations for a more just, more equitable, less complicated tax system than we now have. In particular, I think the Commission should study the effect of the Federal tax laws on low- and middle-income tax payers, and on small business.

It should examine the effect of taxes on stimulating the growth of monopolies, because—strange though it may seem—our Federal tax laws are fostering mergers and consolidations. The Commission should thoroughly examine the charge that our tax system is dissipating the incentive for productivity, both of individuals and business.

I don't think it makes sense to expect any commission to come up within a few weeks with the answers to problems which have grown and expanded for half a century. My thought then is for a long-range study rather than a quickie that can do little more than bring together the random suggestions which we already know about. Rather we need new answers with an overall scope in their coverage. I think 2 years of hard continuous concerted effort is needed to formulate the kind of tax system we should have. It is no simple task to bring order and system out of the chaos in which we now live.

We must protect the power of the Federal Government to raise revenues needed to support itself in peace and war. We must protect our States and cities as well. The system should be so devised as also to make it possible—or at least not make it impossible—for States and cities and towns to finance themselves properly under all emergencies. They cannot do that today. The system must also be so devised as to keep alive and flourishing private businesses and the men who own them as well as those who work in them. We must have a system which is equitable and void of the discrimination which so pervades our present law.

Raising Postal Rates

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 9, 1956

Mr. CANFIELD. Mr. Speaker, the Passaic, N. J., Herald-News is one of the many newspapers in our country insisting on the Congress voting realistic rates to erase the yearly deficit of our Post Office Department now approximating $500 million and soon to approach $1 billion without remedial action. Last Saturday this New Jersey newspaper in my congressional district editorialized as follows:

RAISING POSTAL RATES

Whether the Senate will act on, or pigeonhole, the House measure for boosting postal rates is a moot question. Nevertheless passage of the bill by a healthy margin is overdue recognition that it is high time the mounting postal deficit be cut back. The administration has sought this for 3 years.

Raising ordinary postage from 3 to 4 cents, air mail stamps from 6 to 7 cents and hiking second-class rates on newspapers, magazines, and periodicals won't put the Post Office Department on a cash basis. But it will drastically cut down on the anual postal debt

that now runs close to a billion dollars a year.

Making the user pay is always sound and fair economics.

Returning to Capitol Hill today, I am glad to note that the Washington Evening Star in its Sunday edition had a lead editorial capitioned "Sound Vote on Mail Rates." This editorial reads in part:

The House has taken proper and courageous election-year action in voting to raise postal rates enough to bring in an estimated $430 million annually. We hope the Senate, which thus far has shown little interest in the matter, will concur.

Operations of the Post Office Department consistently have been run at a loss—in recent times approaching a half billion dollars a year. The explanation has been simply that those using the mails the most have not been paying a fair price for the service received. The net effect, of course, is that the taxpayers as a whole have been subsidizing a Government venture that benefits some groups far more than others. The formula contained in the bill just passed would correct this inequity by putting the service on approximately a fair pay-as-you-mail basis. Ordinary first-class mail rates would be raised from 3 cents to 4 cents—bringing in an estimated additional $296 million. Domestic airmail rates would be raised from 6 cents to 7 cents an ounce—calculated to bring in another $16 million. Small increases in several other categories would yield about $120 million more.

Opening of the "World's Greatest Airbase" at Portsmouth, N. H.

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, July 9, 1956

Mr. COTTON. Mr. President, on June 30 it was my pleasure to be present at the dedication of the world's greatest airbase, a new Air Force Base at Newington, near Portsmouth, N. H.

I ask unanimous consent to have printed in the Appendix of the RECORD an account of the development of the airbase and its dedication, published in the Army, Navy, Air Force Journal of July 7, 1956.

In addition to outlining the details of the ceremony and the key importance of the new base to the defense of the Nation, the articles gives just recognition to the senior Senator from New Hampshire [Mr. BRIDGES], who contributed so much to the locating and the building of this great base in southeastern New Hampshire.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Army, Navy, Air Force Journal of July 7, 1956]

SECRETARY QUARLES FORMALLY OPENS "WORLD'S GREATEST AIR BASE" AT PORTSMOUTH, N. H.

PORTSMOUTH AIR FORCE BASE, N. H.—The Air Force formally opened its newest and most modern base here June 30 with Secretary Donald A. Quarles, leading Air Force generals, Senator STYLES BRIDGES, Republican, of New Hampshire, and New Hampshire Gov. Lane Dwinell participating.

New Hampshire citizens, in numbers variously estimated as between 100,000 and 120,000 came from near and far to attend the ceremonies, and see the air show which included the first public performance of the Thunderbirds, the Air Force's precision formation acrobatic team, since they switched to North American supersonic F–100 Super Sabres.

The new base is the home of the 817th Air Division commanded by Brig. Gen. Walter E. Arnold, USAF. It is to be a 2 wing base, but so far only 1 wing, the 100th Bombardment Wing, to be commanded by atomic expert Col. Ariel W. Nielsen, USAF, has been activated. It is equipped with Boeing B–47 medium bombers. Lt. Col. Andreas A. Andreae, USAF, is commander of the 817th Air Base group.

The new division is part of the Eighth Air Force, commanded by Maj Gen. Walter C. Sweeney, Jr., USAF, who came from his headquarters at Westover Air Force Base, Mass., to take part in the opening.

To the visiting civilians it was an opportunity to inspect what had come to be called the "off-again-on-again" base—for so great was the opposition to the Air Force's decision to build here that there were many switches in plans over the past 5 years before construction finally was started.

To the visiting Air Force personnel, the new base was a marvel of what can be done when a base is built from scratch instead of just growing as the older ones have done.

General Arnold likes to refer to it as the world's greatest Air Force base and it is generally agreed that it comes close to meriting that accolade—as close as careful planning based on worldwide experience and the availability of $70 million construction money can make it.

The only drawback, and it is a serious one, is the utter lack of family housing. This forces the married personnel to rent quarters in an area that is largely a summer resort where housing is scarce and costly. Some live as far as 50 miles from the base.

Secretary Quarles told the Journal following the ceremony that formal approval had just been granted for 1,100 family units under title 8. Construction will begin promptly, he said, and it is expected that first occupancy will be in early 1957. Estimated cost will be nearly $13 million. A total of 1,700 family units has been programed under title 8 and eventually will be built. This Capehart housing is privately constructed but the Government assumes the mortgage. Service families occupying the units merely forfeit their quarters allowances instead of paying rent to the private builders as under Wherry housing, which usually cost them more than their allowances.

Study also is being given to the construction of a school for service children on the base, he said.

The official ceremonies were opened with a welcoming address by General Arnold and the invocation by base Chaplain Ronald C. Reny. At the conclusion of a short address, Governor Dwinell presented an official New Hampshire State flag to General Arnold as a symbol of cordial relations between the people of New Hampshire and the Air Force personnel at the base.

Senator BRIDGES, whose strong personal support of the base project in the face of vigorous and vocal local opposition was largely instrumental in seeing it through to conclusion, reminded the vast audience that "Portsmouth Air Force Base provides this Nation with an unequaled facility from which a portion of the retaliatory capabilities of the Strategic Air Command can be launched in the event the Kremlin should be so rash as to attack us."

Also introduced was General Sweeney, 8th Air Force commander; Maj. Gen. Francis H. Griswold, USAF, SAC vice commander in chief, who represented Gen. Curtis E. LeMay, USAF, who was unable to attend.

Lt. Gen. Emmett O'Donnell, USAF, Deputy Chief of Staff for Personnel, representing Gen. Nathan F. Twining, spoke of the Air Force's pride in having a base in New Hampshire.

Another speaker was Mr. John E. Holden, chairman of the Air Force base liaison committee, who for the past 2 years has been a leader in the movement to have the base built.

Secretary Quarles told the visitors that by sometime next year there will be more than 150 big strategic aircraft operating from the new runway. "The base will have," he said, "some 90 B–47 stratojet bombers, 40 KC–97 tankers, and a dozen Douglas C–124 Globemaster transports, along with support and liaison planes. This will give this base," he declared, "more airplanes than you might find in the entire fleet of one of our major commercial airlines."

"The men who are to be stationed here," Secretary Quarles stated, "need housing and schools and churches for their families. There should be educational facilities for their self-improvement and recreational facilities where they can find wholesome relaxation when they are off duty.

"We are here in southeastern New Hampshire because this location meets these standards to a high degree. We do have a problem about housing for our married officers and airmen, particularly during your busy summer season. But by the time another summer rolls around, we expect to be well along with construction of new housing on the base which will help to relieve this shortage."

Brig. Gen. Robert J. Fleming, Jr., United States Army, now heads the Army Corps of Engineers' New England District, which has charge of the construction of the base, was among the honored guests. Under direction of Resident Engineer Robert Johnson construction is nearing completion, with nose hangars for the B–47's and some other items still going forward.

Also present was Capt. Eliot Olsen, United States Navy, Chief of Staff and aide to Rear Adm. John A. Snackenbury, United States Navy, commander of the nearby Portsmouth Naval Base.

Following the ceremony the crowd was thrilled by the biggest air show ever put on in this section of the country. It included a flyover by B–47 Stratojets and an inflight refueling demonstration with a KC–97 tanker and a B–47 jet bomber. There also was a flyover of Convair B–36 bombers.

Highlights of the show was the acrobatics of the famed Thunderbirds who came from Nellis Air Force Base, Nevada with their brand new North American F–100's.

Status-of-Forces Agreements

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. BOW. Mr. Speaker, some of my colleagues in discussing the status-of-forces agreements seek to infer that those who desire a modification of the agreements are trying to save our servicemen from all punishment for any wrong they may commit.

At the same time we have comparisons of sentences being offered to show that servicemen are not punished as severely in foreign courts as they are by courts-martial. Apparently those who fear our men might escape punishment are also torn by the fear they may be punished too much.

The men who are presently serving sentences in prisons abroad as a result of this easy justice of foreign courts know what they would have preferred. They almost unanimously told our colleagues who visited them that they would have preferred to have been tried by court-martial, by their compatriots. Whatever the sentence, they felt they would have received the advantages of our system of justice and the protection of our Constitution. They would have had a fair trial by American standards, not measured by the deceptive standards set up in article VII of the NATO Status of Forces Agreement, or by the vagaries of foreign justice.

This claim that penalties are easy in a foreign court is not supported by the case of one of our servicemen in Italy which has just been revealed. He was found guilty of robbery without intent to steal and sentenced to 2 years' imprisonment with a fine of 30,000 lire. It is scarcely necessary to point out that a crime defined with such contradiction on its face does not exist in our jurisprudence. This conviction is difficult to justify even in Italy since there was testimony indicating that the soldier had only recovered from a young woman money which he had previously given to her.

The defenders of the status agreements who point to sentences in foreign courts as justification for the abandonment of our servicemen's rights belong to that cult which presumes all of the accused are guilty. A mitigated sentence is little solace to the victim of questionable justice.

Independence Day

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the Belleville (Ill.) Daily Advocate on July 3, 1956. The editorial, entitled "Independence Day," follows:

INDEPENDENCE DAY

The Declaration of Independence, 180 years old tomorrow, is unique among documents setting forth the claims of mankind to political liberty.

It does not assert the superiority of one class over another, it does not seek to validate a contract with any sovereign.

It asserts the unalienable natural rights of all men.

Prior to that time this philosophy had been discussed. Here it found pragmatic expression backed by the will of a people ready to fight for it.

Among people whose Government and laws largely are traced to English law and tradition, Magna Carta is regarded as the greatest and perhaps first succinct assertion of political rights. But Magna Carta lacks the scope of the Declaration of Independence in that it was a class document; the barons were irate with a king who had deceived them and trampled on what they conceived to be their rights.

Moreover Magna Carta's reference to free men has little affinity with the universal meaning of free men in the Declaration of Independence.

The Declaration of Independence is the work of men whose courage it is not easy to estimate at this point in time. They were not strong like the barons at Runnymede but weak and almost without organized sinews of war.

The whole philosophy of free government is contained in these words of that immortal document:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness. That to secure these rights, governments are instituted among men deriving their just powers from the consent of the governed. That wherever any form of government becomes destructive of these ends it is the right of the governed to alter or abolish it, and to institute new government, laying its foundation on such principles and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness."

People today appeal often to the Constitution as to a first cause when in fact they should appeal to the Declaration of Independence which is the common law upon which our basic political structure is reared.

President Eisenhower on the Job for Peace and Prosperity

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 9, 1956

Mr. REED of New York. Mr. Speaker, the citizens of the United States are not being deceived by the partisan political claptrap of the Democrats that President Eisenhower is a part-time President. No President has put in more effort and time and with greater success to keep this Nation out of war than has our President.

Under leave to extend, heretofore granted, I am inserting an editorial which appeared in the Jamestown, N. Y., Post-Journal, July 6, 1956:

We have read so much about President Eisenhower being a part-time President; of the dangers of having a man in the office who is not 100 percent sound of wind and limb that it seems time that some stress be placed on the fact that Mr. Eisenhower has performed a service to this country which is being almost overlooked. He has surrounded himself with a staff type of government which has proven under fire that it works efficiently.

Even before the President's first illness there was much to do about the man-killing qualities of the office and learned discussions about how authority should be delegated to preserve the President's health.

It is an interesting and intriguing experience in retrospect to remember how the then General Eisenhower prepared for the D-day invasion of France as Allied commander in chief. How he organized and inspired and made possible the military stroke that brought an end to World War II is history. At that time analysts agreed that it was the general's ability to assert leadership by surrounding himself with the right aides, representing several nationas, and then coordinate and inspire them to a spectacular performance that brought success. Every man, woman, and child in America, regardless of politics, lauded these attributes to the skies. How times change.

When General Eisenhower became President Eisenhower, he did the same thing in the White House. What was the result? On September 24, 1955, the President was the victim of a heart attack. On June 8, 1956, he suffered an attack of ileitis. Thus in the year ended June 30, 1956, Mr. Eisenhower was ill or convalescing 115 days and Sherman Adams, capable chief of staff to the President, and his many aids were in charge of the White House for nearly one-third of the year. Was this organizational ability recognized? The Democrats, lacking any other issue, have made much of the President's state of health, but they have very carefully skirted the big issue—that, despite this illness to the President of the United States, the setup he perfected has carried on without a hitch. Such sniping was not confined to the period after the President's illness. For 3 years before that there were sly references to the fact the President was spending too much time on the golf course.

We feel that in this presidential election year the voters should do some individual thinking about the President and his office. What is wrong with the staff type of government Mr. Eisenhower has created? Why shouldn't he have time to play golf or conserve his health? Why shouldn't any man elected to the office? Surely no President, as head of the greatest business machine and the greatest government, can hope to make every decision. The test of his ability then is to be able to surround himself with a staff that he and the Nation can trust.

Actually, except for very brief periods during the acute phases of his two attacks of illness, President Eisenhower has been fully able to decide questions of high policy. If an attack upon the United States had come while the President was under anesthetics, Mr. Adams would have turned to Vice President NIXON for his orders. As for routine matters, it makes no difference whether the President is in bed or at his desk. His capable staff, headed by Mr. Adams, handles them anyhow.

We think it is good for the country, this efficient staff type of government. Certainly few if any Presidents before him have made such an attempt to delegate functions of the office, certainly not in 25 years. We think the voters, whether they be Republicans or Democrats, should realize that a "part-time" President, in the sense that no man can carry the load alone, must become a permanent fixture. We feel that one of Mr. Eisenhower's greatest achievements in office is to establish a staff that proved it could function smoothly in such an emergency as two serious illnesses of the President.

Economy of World Requires Expansion of Export Trade

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. DODD. Mr. Speaker, a healthy world economy is perhaps one of our best

offensive weapons against the menace of international communism. The export of quality products, made in America, serve as our good-will ambassadors to foreign lands, and demonstrate the high quality of American workmanship.

There is a great deal of vigorous competition among the manufacturing countries of the world for this export trade, and I am happy to say that American-made products are more than holding their own in this competition. About 10 percent of all our industrial production is shipped abroad, and the expanding world economy will doubtless absorb an even greater percentage.

Under leave granted, I insert an article by Mr. Gerald M. Coholan, export manager of the Stanley Works of New Britain, Conn.:

[From the Daily Freight Record World Trade Week Issue]

ECONOMY OF WORLD REQUIRES EXPANSION OF EXPORT TRADE—MECHANICS OF TRADE HAVE BEEN IMPROVED

(By Gerald M. Coholan)

As long as man lives above the level of the cave and below the level of the treetop, he will be obliged to provide means of shelter for himself and his family. As long as he finds a fascination in taking materials in hand and fashioning them for his own immediate use, and for the use of others, we will have industry, however great or small. And as long as these conditions prevail, we will need hardware and tools.

This is basic reasoning. From the standpoint of national economy it is also basic that these human habits have created and will continue to create, for all means of transportation—ships, train, truck and plane—cargo by the thousands of tons, to meet the broadening needs of our economy and the needs of the peoples of all the continents of the world.

Roughly, 10 percent of American industrial production goes to export. It would be difficult to estimate the proportion of our output of hardware and tool production that goes abroad, but we know that the American manufacturer supplies a substantial volume in many of the world markets. We also know, however, that recovery from the effects of the last war is well under way in nations that were knocked out of the competition for several years, and that Americans are now fighting to hold markets which 5 years ago they considered secure.

COMPETITION FROM EUROPE AND JAPAN

In the field of hardware and tools, a very strong competition is encountered from Germany, Japan and Sweden, as well as other Western European countries. In addition, there is the competition of local manufacturers, and, in many countries, local competition becomes extremely serious because their governments immediately raise the import duties on the items of local manufacture or in some instances, absolutely prohibit the import of such items.

HIGH QUALITY MARKS AMERICAN PRODUCTS

The strongest point for American hardware and tools in the foreign markets is the traditional high quality that identifies American craftsmanship. Because of America's high standard of living, with our attendant higher production costs, we face a price disadvantage with all of our foreign competitors. But the reputation which the Americans have built up through the years stands us in good stead when competition warms up, and most users of hardware and tools abroad want to see first what the Americans are offering before they decide to buy.

Today, the whole world is a market for American industry. In Europe the competition of the Western European manufacturers is extremely strong, and in the Far Eastern countries, competition of local manufacturers and Japanese is becoming more serious. The Latin American market may be described as wide open, there you find the products of all nations. There is a growing interest in industry among the Latin Americans themselves, as a facet of the more intense nationalism that has marked the postwar period. Latin America will continue to be an attractive market for American manufactured products for some time to come.

Iraq and Iran constitute a good market for hardware and tools and India, Burma and Thailand have developed. In each of these the German, Japanese, and Swedish manufacturers are active and constitute the principal competition to American goods.

In the years since the war, the volume of building construction underway in this Nation and in every other nation of the world has reached fantastic volume which is reflected in sales of hardware and tools. A dozen circumstances combined to make this so.

In the first place, nations hit directly have had to rebuild. And in the second, nations have to take up a slack—particularly in private homes—that had been created by reason of the concentration on special war plants during the years of the fighting.

In the United States, we have seen this condition in the form of suburban developments that have sprung up on the fringe of every city in the land, in vast apartment developments both by Government and by private interests, and in public's reaction to the attractions of modern home plans. To this add the thousands of manufacturing plants and other commercial buildings.

EXPORT SURGE IS ON IN OTHER COUNTRIES

But we are not alone in our activity. The surge is on abroad, too, nor is the damage effect of the recent war the only spur. I spent many years in South America, and whenever I return there, I am amazed at the tremendous new building. I think particularly of Venezuela which is riding one of the greatest booms ever to hit any South American country. I think also of cities like Sao Paulo, Brazil, the fastest growing city in the world, which is caught up in a tremendous industrial expansion, the type that always demands factories and vast new housing projects to take care of the workers and their families. It is unfortunate that this market is temporarily closed to us because of lack of exchange.

UNITED STATES MANUFACTURERS SEEK EXPORT SHARE

Now, all this means tools and hardware, and it would be pleasant to consider it a field waiting for the plucking by our American manufacturers. But that is not true. I think the American manufacturer is doing well in the fight for his share. Probably it is good, in the long run, that the competition is strong, because it will spur us to maintain that quality or workmanship which is our greatest strength and which, without competition, might soften up.

The mechanics of the export trade have improved in some ways, but remain disconcerting in others. For example, the movement of cargoes from piers in foreign ports has been speeded up. There was a period after the war when foreign ports were jammed, and ships had to lie waiting offshore sometimes for weeks, for a berth. That condition is now much improved. However, the bugaboo of dollar payments still prevails in some countries. Exporters are not paid as fast as they should be. In some countries even this has been solved and we can hope for improvement elsewhere.

On the whole, the export trade looks good.

New England and Latin America

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. PATTERSON. Mr. Speaker, the people of New England are intensely interested in the forthcoming decision of the Civil Aeronautics Board to allow expanded and improved air passenger service between our region, Florida and Latin America.

We of New England, Mr. Speaker, really need such expanded service. The airway between the Northeast and Florida is officially deemed to be the heaviest traveled in the world. Between Boston and Miami, however, it is served by only one carrier; between New York and Miami by two. On the Washington-Chicago line the public has a choice of five carriers—all of them prosperous.

The people of Southern New England have been particularly hurt by the inadequacy of air carrier schedules from there to Miami and Latin America. Furthermore, restrictions on operations within the area and in other areas on the east coast have hampered them.

To meet these needs, two airlines are now seeking to provide direct service from Boston to Miami. They are Northeast and Pan American Airlines, both of which enjoy the support of many distinguished men here from both sides of the aisle.

I am particularly interested in Pan American's application. It proposes to link its European and Latin American operations with the Northeast by providing one-plane, one-carrier service along our east coast to and from cities in Florida and Latin America.

Such a service by Pan Amreican offers tremendous advantages to our people. In the first place, Pan American is acknowledged to be the only applicant which could begin frequent schedules immediately upon authorization by the Civil Aeronautics. Furthermore, the most modern passenger aircraft should be used. Also, Pan American proposes a unique all-cargo service. Under their plan Boston and New York would serve as our gateways for passenger and cargo service to Miami and all Latin America.

This would benefit New England enterprise tremendously. As the Nation's oldest industrial region, New England has closer historical and economic ties with Latin America than does any other region. Our industries, particularly the great number serving the national defense, urgently need Latin American raw materials to manufacture their products. Furthermore, our neighbors to the South provide us with tremendous and rapidly growing markets for our finished goods.

This applies particularly to the people of my district, whose well-being deeply concerns me. A great many people in the Naugatuck Valley are employed in industries which rely almost completely upon Latin American materials. Many of these people make products for defense. As the economies of New Eng-

land, especially of my district, and Latin America become more and more closely interrelated, such service as Pan American Airlines offers becomes tremendously important.

Such an expanded service would also facilitate vacation travel between the two areas. Many people from Florida and foreign cities beyond like to spend some of the summer in New England. We look forward to seeing them, just as we look forward to visiting them in the winter months. Many of us know from firsthand experience the difficulty of getting a plane reservation at the peak of the vacation season.

If Pan American is authorized to start passenger and cargo service to and from Latin America and Florida and New England, all these problems will be solved. It would mark the beginning of a new era for United States airline transportation within the Western Hemisphere. Not only would it supply one-carrier, one-plane flights from New England to Latin America, but it would provide through service from both areas to European ports of call. There would be no more long and irksome delays and transfers.

So in closing, Mr. Speaker, I hope that Pan American Airlines will get the chance to provide their excellent services. They would be a boon to the whole to eastern and South America, and to New England in particular.

Address by Hon. Theodore Francis Green, of Rhode Island, at Commissioning of Research Vessel "Crawford"

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Monday, July 9, 1956

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an address delivered by me on the occasion of the commissioning of the research vessel *Crawford*, of the Woods Hole Oceanographic Institution, at Woods Hole, Mass., on June 30, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF UNITED STATES SENATOR THEODORE FRANCIS GREEN, OF RHODE ISLAND, ON THE OCCASION OF THE COMMISSIONING OF THE RESEARCH VESSEL "CRAWFORD" OF THE WOODS HOLE OCEANOGRAPHIC INSTITUTION AT WOODS HOLE, MASS., ON JUNE 30, 1956

Ladies and gentlemen, it is a great privilege for me to take part in the commissioning ceremonies of the research vessel *Crawford* in these home waters of the Woods Hole Oceanographic Institution. It is a pleasure to be here amongst many friends and scientists of the institution who have done much to advance the sciences of oceanography and meteorology in the service of our country. It also, incidentally, gives me the opportunity to present my views on the hurricane-research program.

As many of you know, I have taken a great interest in furthering legislation in Washington which will provide funds to assist in reducing the present yearly losses of lives and property from destructive hurricanes. Since the great 1938 hurricane, which brought death and disaster throughout much of New England, I have taken a special interest in hurricanes, and in the activities of the several Government agencies responsible for providing the public with the protective measures needed to lessen the fear and damage of these awe-inspiring seaborne storms.

It was not until 1954, however, that there arose any great public interest in the adequacy of our coastal storm-warning systems, Hurricanes Carol, Edna, and Hazel not only brought unprecedented damage to many of our Middle and North Atlantic States—they also brought a quickened realization that more effective hurricane-warning services were urgently needed for the entire coastal area from Texas to Maine.

At almost the same time, it became apparent from inquiries among scientists that much of the desired improvements in storm-warning services could not be realized without a broad supporting hurricane-research program.

In the spring of 1955, at the annual meeting in Washington of the American Geophysical Union, it was my privilege to speak to many illustrious scientists on some of these problems. At about this same time I learned that the Weather Bureau did not have sufficient funds to maintain the type of storm-warning service the public rightfully expected, and had practically no funds whatsoever for hurricane-research studies.

As many of you know, the congressional drive for funds in June of 1955 resulted in the first appreciable increase in appropriations for the Weather Bureau since the end of World War II. Even more important, perhaps, was the fact that this increase made possible the formation of the National Hurricane Research project, and the starting of broad long-range research programs on hurricanes, tornadoes, and severe storms of all types.

Leading investigators have emphasized that solutions to many of the remaining hurricane problems can come only through patient accumulation of new facts through a widened research by dedicated scientists.

It is with great satisfaction to me, therefore, to note that the Woods Hole Oceanographic Institution is embarking on a carefully planned, long-range research program devoted to the scientific study of the causes of hurricanes.

It seems most fitting that this nonprofit research marine institution should be located in New England, a section of our American coastline so rich in maritime tradition, and so experienced in both the blessings and the furies of our coastal waters. These shores have been visited and ravaged by hurricanes since the days of our earliest colonies, and hardy sailors have launched their sturdy craft from these neighboring bays on journeys through all the seas of the world.

It thus seems most appropriate that here amidst the historic maritime traditions of New England should arise one of this country's outstanding institutions devoted to the scientific study of the sea.

So, I gladly take this opportunity to pay tribute here to the Marine Biological Laboratory, and to the United States Fish and Wildlife Station, and to the nearby Goast Guard base, all of which have joined with the Woods Hole Oceanographic Institution to make this spot a world center of marine sciences. Cape Cod and the old Bay State are to be congratulated on the achievements of this group of men and their work.

Descendants of those early New Englanders who hunted the whale from small boats, and fearlessly sailed their square riggers through uncharted seas to the Orient, have been proud of their maritime heritage through many changes in New England history. They may now point with additional pride to the contributions made to the knowledge of the seas by these scientific laboratories at Woods Hole.

I understand that many research projects are carried out here under contract with the military services, Government agencies, private industry, scientific organizations, and universities. The future of this work seems bright indeed, for, in spite of the excellent results already achieved here, the study of the seas is still relatively in its infancy. A concentrated research attack on the ocean—often called the last frontier available to modern explorers—is bound to bring vast new storehouses of knowledge for the endless benefit of mankind. The rollcall of industries who already have directly benefited from knowledge recently taken from the oceans is growing daily—for example, the list of interests already include aviation, oil, chemical, marine, fishing, communications, and construction.

The importance of increasing our knowledge of the formation and behavior of hurricanes can hardly be overemphasized. In each of the past 2 years hurricanes have cost the lives of hundreds of people and caused property losses of almost a billion dollars.

Simultaneously with securing greatly strengthened hurricane operations and warning services it is essential, I feel, to enlarge our hurricane research efforts far beyond the modest beginnings which the Congress has made possible this year.

We need to know, for our own protection, much more than we now do about many important problems on the origin and behavior of hurricanes. Many of these problems might best be solved by teams of oceanographers and meteorologists. For example, in my own State of Rhode Island, and along Narragansett Bay, we would like to have more accurate and timely forecasts of changing water levels caused by coastal storms.

This improved forecast service, I am told, can come about only after considerable research in the integrated relationships between tidal action, sea surges, salt water levels, rainfall amounts, river stages, coastal geography, and the speeds and tracks of advancing hurricanes.

Similar interrelationships of scientific disciplines most likely are applicable in the search for needed solutions to air flow and moisture mechanisms which cause tropical storms to grow, and to speed up, and to change direction, and to increase or decrease in intensity.

I need not mention to the many experts assembled here any more examples of the hurricane problems meriting early attention by research workers. I only wish to endorse their efforts and to hope that effective support to carry out these services to our coastal citizens will be forthcoming when needed.

The United States, large as it is, cannot afford to permit a loss from hurricanes every few years of a billion dollars of wealth, especially when for a small fraction of that amount much of the loss in property and lives can be prevented.

I believe there is a widely held opinion in New England and along the coastal areas farther south that this country now should make certain that we have provided an entirely adequate warning system against the hazard of hurricanes. I am hoping that in the next few years, with your support, we will be able to reach that goal.

One year ago, and again this year, I urged the Congress to vote large increases in the amount of appropriations which the Budget Bureau had initially allotted to the Weather Bureau. I am of the firm belief that the Weather Bureau does not yet have the resources to give the hurricane protection services actually needed by the people of the United States. There is little doubt that much of the staggering storm losses of 1954

and 1955 could have been avoided if the Weather Bureau had the proper radar equipment and other observation facilities along the coast.

Similar devastating occasions may arise in the coming hurricane seasons, so I see no reason for further delay in providing the needed staff and facilities which can mean the difference between life and death along our entire coast line.

As many of you here know, I have also strongly advocated additional appropriations for research activity on storms. I have long felt that much greater emphasis should be given to a basic and intensified search for more profound knowledge of the origin and behavior of storms. The future welfare of our coastal communities may well depend on a better understanding of interacting processes of the atmosphere and the oceans.

It is perhaps too much to expect that sudden outstanding achievements can result from the modest hurricane research programs for the next year, but it is encouraging to note the great enthusiasm of the research scientists who are now able at least to embark on their projects after so many years of denial. For example, some workers have even suggested the intriguing possibilities that we may be able to modify the conditions in which hurricanes form, thereby preventing their full growth into devastating storms.

All leaders in the weather sciences are now agreed that increased hurricane research activities will be amply repaid in the greater knowledge and confidence that can be given weather forecasters, who now are compelled to predict the precise future path of hurricanes in the next 24 hours without sufficient knowledge of all factors affecting storm movements.

It needs to be emphasized—yes, frequently emphasized—that desired progress in hurricane research programs cannot and will not be made in the coming years if only token sums are to be made available by the Budget Bureau for important and fundamental areas of hurricane research activity. Unless more substantial sums are made available for long overdue storm-research programs, I fear we must expect more disasters in the years ahead when future Hurricane Carols come roaring across our coasts without adequate warning.

I understand that the research hurricane forecaster today has become increasingly interested in furthering his knowledge of oceanography and the interchanges between the ocean and the atmosphere. The recent studies of storm surges by scientists of the Woods Hole Oceanographic Institution, I am told, will be of great value to Weather Bureau forecasters this year when they make their predictions of expected high-water levels accompanying costal storms.

I understand also that the surface temperatures of the sea may be an important factor in the formation of the tropical storms that develop into hurricanes. Knowledge of the wandering currents of the seas may provide clues to more accurate long-range forecasting. The extent of salt particles in clouds may also be a critical factor in the cause of rain over certain areas.

Such developments, it seems to me, emphasize the importance of contributions which can be made by the science of oceanography to the advancement of meteorology, and the eventual improvement of weather forecasting.

Our weather forecasters no doubt are pleased to have on their team such a vigorous group of oceanographers interested in tackling research problems of mutual interest.

Weathermen also will be pleased to note that the first journey of the *Crawford* as a research vessel of the Woods Hole Oceanographic Institution will be on a primarily meteorological mission. In fact, the *Crawford* is unique, I am informed, in being the first ship ever to have been specifically fitted with scientific equipment for the definite objective of investigating areas which hurricanes are generated.

Among other tasks, the scientific crew of the *Crawford* will evaluate the conditions of heat and water vapor which rise from the sea surfaces into the atmosphere east of the West Indies, and sometimes there produce the energizing forces that finally sytematize into hurricanes which slowly move toward our shores.

The *Crawford* thus has a new and historic role to fill. I am proud to be here at the commissioning of this ship, and wish it well on its long journeys to far-off seas in the days ahead.

Perhaps the data soon to be collected by the scientists aboard the *Crawford* will help unravel the secrets of hurricane formation. If such good fortune prevails, we may today be witnesses of the beginning of an epoch which will record the end of the hurricane menace.

In the meantime, however, it seems prudent for all of us to continue our efforts to secure the resources needed by the Weather Bureau to provide adequate storm warning protective services to all of our citizens.

I note with pleasure that one of the purposes of the associates of the Woods Hole Oceanographic Institution is to give added strength and support to basic research studies in oceanography.

In closing, I must tell you I am deeply impressed with the high-minded spirit which prompts your support of scientific studies of the seas. This form of American philanthropy advances the progress of science toward a better world for all people everywhere.

Funds for Connecting Channels

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 9, 1956

Mr. WILEY. Mr. President, last Friday night it was my pleasure to deliver a talk in Menomonee Falls in my State on the subject of the Great Lakes-St. Lawrence seaway—its past, present, future.

I referred in the course of this talk to the importance of prompt completion of the work on the deepening and improving of the Great Lakes Connecting Channels, so as to assure that we in the upper lake States get the full benefit of this mighty project.

I was pleased to receive from Mrs. Carl Romanik, State legislative chairman of the Wisconsin Federation of Business and Professional Women's Clubs a resolution which had been adopted at the 36th annual convention of the federation held at Green Lake last month. The resolution commended Congress' role in connection with the seaway and the channels, and paralleled my own views for the prompt allocation of funds for the channel work.

I send to the desk the text of the Menomonee Falls talk and of the Wisconsin federation resolution. I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the speech and resolution were ordered to be printed in the RECORD, as follows:

HON. ALEXANDER WILEY, OF WISCONSIN, PRESENTS GREAT LAKES PROGRAM FOR MIDWEST, UNITED STATES PROSPERITY; URGES TEAMWORK BY LAKE STATES

(Excerpts of address by Hon. ALEXANDER WILEY, Republican, Chippewa Falls, at the summer festival in Menomonie Falls, Wis., July 6, 1956)

It is a real pleasure to join with you at this outstanding summer festival. It is both a time of rejoicing and a promise of still more pleasure to come in this beautiful summer season.

I should like to talk to you tonight about another great promise on the horizon—the Great Lakes-St. Lawrence seaway. I would like to take a brief look at its past, but most important of all, to concentrate on the future of this marvelous new frontier.

My basic message is this:

A PEACEFUL REVOLUTION FOR GREATER PROSPERITY

The Great Lakes-St. Lawrence seaway is going to revolutionize the economy of our own and of other Lake States. It will do so to a greater degree than any other single development in this century.

The seaway will offer a tremendous shot in the arm for all Wisconsin—not just for our port cities, but for all our cities and towns in the interior.

Just how much of a lift it will provide for us will depend basically on our own initiative, imagination, and drive.

To realize the fullest benefits from the seaway, we must take action on a several-point program which I should like to suggest a little later on.

VAST ECONOMIC OPPORTUNITIES UNDER SEAWAY

The economic outlook under the seaway is literally breathtaking. On completion of the work at the International Rapids section, in the 1959 shipping season, 37 million new tons of shipping will be added to the annual enormous shipping of the Great Lakes.

We, of Wisconsin, will—through the deepened upper lake channels—enjoy thereafter direct contact with 75 major ports through 3 great oceans of the world.

The farmers of Wisconsin will be able to ship their excellent products more inexpensively throughout the world, and to fulfill their purchasing needs more inexpensively, by virtue of lower transportation costs.

Midwest business, likewise, will thrive, selling and buying to and from the world. We of the Midwest will likewise get the benefit of low-cost Labrador iron ore to fuel our Midwest furnaces.

The seaway navigation construction is, of course, a mammoth engineering undertaking. It includes the construction of 7 great locks, for 27-foot channels, replacing the 25 obsolete 14-foot locks. Five of the new locks are to be built in and controlled by Canada; two are United States enterprises.

So sound was this overall seaway project that the bonds to cover the costs of the construction were sold within half an hour, and were, in fact, completely oversubscribed.

NO STATE FOUGHT HARDER THAN WISCONSIN

I say to you factually, my friends, that no single State worked as hard for the seaway as did we. No single State had as firm and unyielding a faith as did we—faith that despite the repeated setbacks in the long 30-years battle, despite all these disappointments—faith that right would eventually triumph.

Now it is for us to capitalize on the seaway, because no single State is more entitled to enjoy the benefits of it than we of Wisconsin, who led in the fight for its enactment.

A PROGRAM FOR THE LAKE STATES

Let me suggest, now, therefore, a several-point program—for Wisconsin and for its Great Lakes neighbors, to achieve the fullest benefits from the seaway.

First, we must accelerate the improvement not only of our Great Lakes harbors but of

all the transportation feeder arrangements—rail, truck, auto—by which our port cities are served.

What we need is a modern transportation network throughout our State—a network which will assure prompt, efficient moving of goods to and from our Badger ports.

Right now, I am working in Washington for a broad survey by the United States Corps of Engineers of the adequacy of our Great Lakes port facilities all along the line.

FIGHTING THE WATER-STEAL BILL

Secondly, we must prevent arbitrary lowering of Great Lakes water levels. The loss of a single inch of lake levels can mean the loss of as much as 2 million tons of lake shipping.

The biggest single threat of the lowering of levels, arises right now from the notorious Chicago water-steal bill, which is once more before a Senate committee, having been passed, unfortunately, by the House of Representatives.

If this bill were to pass the Senate, and if it were to be signed by the President (which is very doubtful), it would cost a fortune to lake shippers. It would cost Wisconsin harbors huge additional sums for harbor-dredging purposes. Remember, if a ship gets stuck because the water in the harbor simply is not deep enough for its particular draft, that can cause the shipping firm a small fortune. And it can cause terrific overall delays all along the line.

The Chicago water steal is utterly contrary to the best interests of all the Lake States. It is contrary to our interest with our good neighbor, Canada; it is contrary to a decision in 1930 of the United States Supreme Court. (In that decision, the Court retained jurisdiction over future lowering of lake levels. All this is why I will continue to battle against the Chicago water steal—with all the power at my command.

We want lake levels to be worked out carefully—in the interest of shipping, of property owners, and of others.

IMPROVING WISCONSIN ROADS

A third point in our lake program is the constant improvement of our highway network, feeding our port system.

Fortunately, Wisconsin will benefit considerably from the new superhighway program under the $33 billion Federal highway law, which was signed by the President last week.

Already, our State has an enormous highway-improvement program of its own. Roads are, of course, part and parcel of the strengthened transportation network, about which I spoke earlier.

I want, as I know you want for our State of Wisconsin, to enjoy the reputation of having the best transportation system in our country—and the best feeder system.

PREVENTING DISCRIMINATION AGAINST MIDWEST

I have mentioned thus far three points in my program for Wisconsin, and for the Lake States.

I want to mention now that it is absolutely essential that we, of the upper Midwest, receive the proper recognition which is our due, from the executive agencies in Washington. We must not be treated as an orphan child. Our needs must not be ignored.

Too often, we have been discriminated against. Too often, we have gotten the short end of the stick. I should like to cite to you, for example, the recent order of the Interstate Commerce Commission, as a case in point, illustrating our problem of being discriminated against.

This recent ICC order provided for only 2 days free time for rail care serving Great Lakes ports, as against 6 days free time for ships serving ocean ports.

As soon as word came to me regarding this outrageous discrimination, I protested to the ICC and demanded prompt reversal of its order.

Thus we see, for the present time, an example of the lack of recognition of our lake needs.

It is an example, too, of apparent sabotage efforts which are still being attempted by some eastern railroads—"diehard sources," committed against us of the Midwest. They don't, apparently, want to reconcile themselves to the fact that we are now on a great ocean artery.

Well, if they persist in wanting to battle us, then we will certainly take them on. And we will beat them as completely as we did in the main seaway fight. Only this time, it is not going to take us 30 years to do so. We are going to lick them promptly and decisively.

We, of the upper Midwest, however, would prefer to work constructively and not to have to combat other regions. We have always felt that American prosperity is so huge, its future opportunities so vast, that there is more than enough room for all regions to prosper simultaneously.

Some of the eastern railroads, however, still seem to have the misguided philosophy that "there are just so many slices to the limited economic pie," and that the East has to hog most of the slices. We would prefer—and we believe in a bigger pie for all, so that there will be ample slices for every area. I refer to bigger slices of income, of purchasing power, of wealth, of production, of distribution—in an ever expanding, not a stagnant America.

PROMISING ECONOMIC DEVELOPMENT OF TACONITE ORE

As still another point in our program, we must and will accelerate other economic development in our State.

I cite as an example, the promising taconite ore development, which holds great promise for our north country.

But this is just a sample of varied, new economic horizons which await us, if we apply ourselves diligently, as I know we will.

A BRIEF LOOK-SEE AT THE PAST

Thus, we have seen my friends, a few of our future vistas.

It might be well now to turn briefly back to the past, so as to see our present in proper perspective.

I will not take time tonight to review in detail the long battle which we conducted on behalf of the Great Lakes seaway.

Just hitting the high spots, however, you will remember that for three decades, we had to oppose an "unholy alliance" of forces which were determined that we would never have direct access to the deep water ocean ports of the world.

We faced the combination, therefore, of Eastern port influences (in New York, Philadelphia, and Baltimore, for example), influences in southern and gulf coasts ports, as well as perhaps some Pacific interests which feared Midwest competition.

For a time, some private utilities mistakenly opposed the water power phases of the project, even through the greatest single untapped source of power on the North American continent was going unused, and even though there was a terrific power shortage in that area.

We faced in particular, the skillful opposition of powerful railroad interests, spearheaded by a few eastern railroads, to which I have already referred.

By contrast, many of our midwestern railroad people realized full well that they themselves would actually not be hurt by the seaway—indeed that they would benefit from it. But they tended to be pulled along into opposition by the powerful eastern railroads.

We faced the opposition, too, of the coal interests which tended to identify their future with the coal-using railroads.

Year after year, the battle went on. Time after time, the seaway bill was defeated, either in the Foreign Relations Committee or in the House Public Works Committee or on the floor of the Senate.

OUR SUCCESS IN 83D CONGRESS

I will not recall each of those skirmishes. But I will recall how, in 1953 and 1954, a golden opportunity arose on which we capitalized.

At that time, it was my personal privilege to serve as chairman of the Senate Foreign Relations Committee.

In that post, I was fortunately in the most strategic spot to advance the seaway's cause.

Of course, if I had wanted to, I had had a choice of becoming—instead—the chairman of the Senate Judiciary Committee, and thus abandoning my Foreign Relations post.

There were some people at that time who advised my taking the Judiciary chairmanship. They felt that the people of our State were more interested in my work on the Judiciary Committee than they would be in my work on the Foreign Relations Committee.

WHY I CHOSE FOREIGN RELATIONS POST

But for two basic reasons, I choose the Foreign Relations post:

In the first place, it would enable me to render service on behalf of the greatest single goal of all—the goal of world peace, preventing a dreadful atomic-hydrogen bomb conflict.

And in the second place, if I did not choose the Foreign Relations assignment, the next ranking Republican on it—who would become chairman—had either been lukewarm or hostile to the seaway.

With a seaway supporter at the helm, however, of the full committee, I could arrange for a favorable seaway membership on the subcommittee. This I promptly did.

And it was not too long before we secured not only a favorable report in the seaway subcommittee, but a favorable report in the full committee, and then favorable action in the full Senate.

THE DEBATE OVER A 1-STEP OR 2-STEP BILL

Let us recall too, that for a time, there was some concern over our strategy in the pro-seaway camp itself.

There were friends among our seaway supporters who said that we had to adopt a combined 1-step bill, so to speak. They wanted it to include the upper channels (affecting the States beyond Lake Erie) as well as the main navigation works on the lower seaway—in the International Rapids section.

I personally opposed that strategy for a number of reasons:

1. In the first place, for years and years, we had been defeated in our effort to try to combine both phases.

We felt, therefore, that our chances would be infinitely improved, if we secured approval of the seaway in two separate stages—first, the main navigation works, and secondly, the upper channel work beyond Lake Erie—for oursleves and other Upper Lakes States.

I pointed out, for exemple, that the main navigation works would be paid for by self-liquidating bonds (retired by toll payments), whereas the channels would be paid for by Treasury appropriations.

To combine the two financial phases in one bill would tend to confuse the issue somewhat, and our opponents would quickly exploit the mixed nature of the bill.

2. Secondly, I knew that, if once we won the major battle, we would get quick approval of the upper channels.

OUR QUICK VICTORY ON THE CHANNELS

I am delighted to say that my plans and strategy worked out exactly as they were intended.

We did secure the passage of the main seaway law. It was signed by the President at

the White House in an historic ceremony on May 13, 1954.

And then, the channel bill—which others and I promptly introduced—was approved in the 84th Congress. As a matter of fact, contrary to the unfounded fears which had been expressed by some of our seaway supporters, the channel bill went through—with absolutely no opposition whatsoever. There was not a single voice lifted against it either in the House of Representatives or in the Senate. It passed the Senate on the Unanimous Consent Calendar, meaning that, just as I had predicted, no one whatsoever opposed it, (once the main seaway fight had been won).

Now, fortunately, we are making good progress in the actual engineering work. I am in close touch with the Seaway Development Corporation and with the Corps of Engineers as work proceeds. All possible speed is, of course, essential.

Just a few weeks ago, it was my privilege to deliver the main address at the impressive dedication—near Masena, N. Y.—of Eisenhower lock on the St. Lawrence seaway.

I was pleased at that time to receive a glowing tribute from an official spokesman for the administration, Assistant Secretary of the Army, George H. Roderick. He kindly referred to me as the "Father of the St. Lawrence seaway law."

But the battle for the seaway was a combined effort—throughout.

It was not any single man's accomplishment. It represented the successful teamwork by our Great Lakes States, and, in particular, by united forces in the State of Wisconsin.

CONCLUSION

Teamwork, cooperation, those will be the keynotes for Wisconsin and Great Lakes prosperity in the years to come.

And in the time up ahead, as summer festivals roll around again, we will have ever more to be thankful for, ever more over which to rejoice.

Present Status of Slovakia and the Situation of the Catholic Church and Its Bishops Under Communist Rule in Slovakia

---

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 9, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum on the present status of Slovakia and the current situation of the Catholic Church and its bisphops under Communist rule in Slovakia, issued by the 38th convention of the Slovak Catholic Federation of America, May 16, 1956, Chicago:

MEMORANDUM ON THE PRESENT STATUS OF SOLVAKIA AND THE SITUATION OF THE CATHOLIC CHURCH AND ITS BISHOPS UNDER COMMUNIST RULE IN SLOVAKIA

RÉSUMÉ

The Slovak Catholic Federation of America is an organization of Americans of the Catholic faith and of Slovak descent. The Federation is primarily dedicated to the dissemination of religious education among its members, and has always manifested a lively interest in the life and development of Slovakia, that ancient Central European country whose population now verges on 4 million persons, of whom 86 percent are Catholic.

For many generations the Slovak people were held in subjection and forced to suffer cultural, social, and political discrimination at the hands of changing foreign regimes and national governments. Now, after a brief period of independence, the Slovak Republic is once more suffering under foreign oppression. Since 1945, its national institutions have been slowly abolished and its religious life, which stems from spiritual traditions dating back a full millenium, are being throttled by international communism, to which Slovakia fell victim through no fault of her own. Politically dependent on Prague, economically exploited by the Soviet Union, Slovakia was locked into the Soviet orbit and transformed into a dark corner of the present Prague regime, thus remaining deprived of a healthy feeling of soldarity with the community of Christian nations and of the comfort and security attendant thereto. With its political leadership liquidated, imprisoned, or exiled; its bishops jailed or otherwise prevented from exercising their spirtual mission, Slovakia, in silent agony, turns hopeful eyes to the Western world, pleading for some consideration of its tragic fate, even if immediate help seems impossible.

The problem of Slovakia must surely be a particularly sore spot on the conscience of the great powers, which, ignoring the aspirations and rights of the smaller nations, continue to pursue their traditional game of rivalries and struggles for zones of influence in various parts of the world.

The Slovak Catholic Federation of America wishes to take advantage of this opportunity to draw the attention of the civilized world to the problem of Slovakia and to her religious situation.

MEMORANDUM

A. Origins of Slovakia as a nation

Slovakia is an ancient country which lies in the very heart of Europe. Christianity was introduced and began to spread there as early as the beginning of the ninth century. Within the central European region, the principality of Nitra was the first political unit of the Christian era. Prince Pribina is noted for having built the oldest Catholic church in that area. This chapel, which bore the name of St. Emmeram, was consecrated in 833 by Archbishop Adalram of Salzburg, and still stands today, a tangible symbol of the ancient roots of Christianity in Slovakia.

During the second half of the ninth century, Slovakia's political and religious life was marked by a promising development: It became the core of what under Prince Mojmir and his successor, Rastislav, was to be known as the Moravian Empire. Rastislav, a wise ruler, invited two preachers, St. Cyril and Methodius, to come from Constantinople in 863, with a view to strengthening Slovakia through the force of living Christianity. By their work they were to become not only apostles for Slovakia, but for other Slavic peoples as well. Since that time, Christianity has constituted a precious heritage to all succeeding Slovak generations.

B. Slovakia within Hungary

In 907, the Moravian Empire collapsed and fell prey to a German-Magyar coalition and invasion. After a century of power struggles involving Germans, Magyars, and Slavs, Slovakia became, at the beginning of the 11th century, a principality within the framework of the multinational Kingdom of Hungary. And even though it remained a part of that kingdom for centuries, Slovakia still preserved intact its ethnographical individuality and its religious traditions. It withstood the Tartar invasion of the Danubian region during the 13th century, and was able, where the greater part of its territory was concerned, to escape direct Turkish domination during the 16th and 17th centuries, when the Turks established themselves in south and central Hungary.

During and after the reformation, Slovakia also became the theater of extensive struggles for power in Upper Hungary, in which the opposing interests of Austria, France, Russia, and the Ottoman Empire played a preponderant role. In those conflicts, religion was promoted and defended by ruling houses and by monarchs, as an important factor in international peace and military relations. The population of Slovakia, however, thanks to the salutary activities of the Jesuit University of Trnava (1635–1777)—the only institution of higher education then existing in Hungary—remained in its great majority loyal to Catholicism. And even after that university was transferred to Buda, Slovakia still retained her high spiritual life and education, to such an extent that historians often referred to it as the "pars nobilior Hungariae."

Toward the end of the 18th and the early 19th centuries, when the ideas of the American and French revolutions had begun to influence the current of European thought, the Austrian empire passed through an important transformation. Latin was ultimately abandoned there as the language of administration and education, and replaced in the crownlands of Austria by German, in Hungary by Magyar. Consequently, the non-German and non-Magyar nationalities of that heterogeneous empire began to defend their own national language and rights. In these circumstances, Anton Bernolák, a Catholic priest (1762–1813), carried out the first codification of the Slovak language. Later the Slovaks, compelled to struggle against pervading centralism from Vienna on the one hand, and from Budapest on the other, put forth a remarkable effort to obtain the assurance of their national rights within a special self-governing unit or crownland which would have included the ethnographic territory of Slovakia. The March 28, 1848, Petition of Liptovský Sv. Mikuláš, and the June 7, 1861, Memorandum of Turčiansky Sv. Martin, attest eloquently to this effort of the Slovak people to bring about a federative reform of the Hapsburg monarchy. That era produced one of the outstanding figures of Slovakia's religious and national life: Stefan Moyses, ordinary bishop of Banská Bystrica, founder and first chairman of the Slovak Institute of Arts and Sciences, Matica Slovenská (1863). This great patriot and spiritual leader left the imprint of his powerful personality on the national and spiritual life of his generation. In 1870, the Association of St. Adalbert was founded by Rev. Andrej Radlinský. Its subsequent activities as a Catholic publishing company operating on a cooperative basis were successful in keeping alive the spark of national and religious life among the Slovaks during the most difficult period of their national existence. Indeed, after the Austro-Hungarian Compromise of 1867 which left the Slovak nation outlawed culturally and politically by Budapest and forgotten by the Western World, Slovakia faced the classic dilemma of Hamlet: "To be or not to be."

C. Slovakia as a part of the Czecho-Slovak State

The First World War was an opportunity for the Slovaks to withdraw from the feudal kingdom of Hungary under which they had sought in vain to assure their national existence and culture through a federal constitution. During that war two Czechs, T. G. Masaryk and E. Benes, and a Slovak, M. R. Stefanik, founded a Czecho-Slovak National Committee in Paris, for the purpose of obtaining the consent of the Allied and Associated Powers to the establishment of a Czecho-Slovak State. On May 30, 1918, representatives of the Americans of Czech descent signed an agreement in Pittsburgh with officials of the Slovak League of America, adopting the program of liberation of

the two countries of their origin, and emphasizing that the future Czechoslovakia should be a federative republic. Equality between the Slovaks and the Czechs on a nation-to-nation basis was, therefore, a fundamental principle in the creation of that state. T. G. Masaryk, to become the first President of the new country, subscribed to this principle by affixing his signature to the Pittsburgh agreement.

It was unfortunate, therefore, when the Czechs later decided to develop Czechoslavakia on the principle of a fictitious Czechoslovak nation, bypassing the provisions of the Pittsburgh agreement and actually reserving for themselves, in the name of the apparently democratic majoritarian principle, the right of decision even in matters which were properly in Slovakia's domain. In 1920, a constitution was adopted in the name of that Czechoslovak nation, by a parliament appointed by the revolutionary Government. This step provoked a strong reaction among the Slovak population—a reaction which found its proper expression in a movement for autonomy and, later, for a free Slovak state.

Now did the new Czechoslovakian state look favorably upon the development of the church in Slovakia. Mararyk's concept of natural religion, together with his anthopocentric ethical humanism, was strongly opposed to the faith in a revealed god, and was adopted and promoted as an official political philosophy. A spirit or secularist relativism pervaded the whole educational system of Czechoslovakia. The church was forced, therefore, to fight for its schools, for its share in education, for the rights inherent in its mission.

Of exceptional importance in Slovakia's further spiritual evolution was the fact that, since 1921, the newly appointed bishops were sons of the Slovak people. In this way the national and religious aspirations of the nation, the clergy and the hierarchy, were converging into a single spearhead which formed a solid, cohesive political and spiritual force. While Monsignor Hlinka's people's party, the strongest political faction in the country, defended the interest of the church in parliament, the hierarchy supported the party's platform in its fight for Slovakian autonomy.

D. The Slovak Republic

During the crises of international alliances of Czechoslovakia which followed Munich, the Slovak People's Party, weary of Prague's empty promises, finally managed, on October 6, 1938, together with 4 smaller political parties, to establish a regional government for Slovakia. The Czechs were thus forced to accept a structural reform of the whole State and its transformation into a federation, with Czechia, Slovakia, and the Carpathian Ukraine as members. It was at that time that Msgr. J. Tiso became chief of the Slovak Government.

However, since 1937 Hitler had cherished plans to dismember Czechoslovakia. The Sudeten German problem was to serve him as a pretext. For a period, he was undecided as to how to handle the question of Slovakia. The alternatives were: occupation by Hungary, division between Germany and Hungary, or independence. When Monsignor Tiso was summoned by the German Chancellor to Berlin on March 13, 1939, and made aware of these alternatives, he returned to Bratislava where, after his report to the Slovak Diet on March 14, the free Slovak State was unanimously proclaimed. In so doing the Diet not only saved Slovakia from partition or foreign occupation, but also carried out the centuries-old aspiration of the Slovak people for self-determination.

During World War II, Germany exercised pressure upon Slovakia, as it did upon other Central European countries, at the international level. Msgr. Joseph Tiso, who had become President of the Slovak Republic on October 26, 1939, preserved Slovakia's essential rights and kept his country free from the ideological influences of Nazism. In spite of the burdens of the general conditions of war in Europe, Slovakia, under a free Slovak Government, experienced a period of great cultural revival, industrial development, and economic prosperity. By rapid administrative reorganization in all fields and at all levels, by increasing production of consumer goods, and by intensifying international trade, the Slovak Republic emerged as a new factor in Central European politics. Realizing the difficult circumstances under which the Slovak Republic had made its debut on the international scene, the Slovak people threw itself with enthusiasm into the building up of the new nation. By their spontaneous support of the Bratislava Government, they demonstrated that the concept of a free Slovak State had become a powerful motivating force in their political thinking.

The Slovak Republic, as recorded in the special report No. 8 of the Select Committee on Communist Aggression of the United States House of Representatives in 1955, was not "a perfect democracy in the traditional sense"—Western sense—but, "in general, it was an expression of the self-preservation instinct of the Slovak Nation." The fact is that the Slovaks enjoyed more freedom and democracy during the war than even most neutral countries.

E. Czechoslovakia between 1945 and 1950

Owing largely to the alliance signed in Moscow by E. Beneš and Generalissimo Stalin on December 12, 1943, the reestablishment of Czechoslovakia became an objective of the official Allied postwar program. In the spring of 1945 Soviet units, pursuing the retreat of the German Army, entered the territory of Slovakia. The Czechoslovak Government of E. Beneš, which had been formed and appointed in Moscow, followed on their heels, Slovakia, occupied by the Red army, was thus once more united with the Czech lands to form the so-called Czechoslovak People's Republic.

What was thereafter euphemistically referred to as the liberation of Slovakia was in fact nothing but a complete violation of the right of political and cultural self-determination of the Slovak people. Not only did the reunification with the Czech lands take place without any consultation of the Slovak people, but a regime of terror was immediately introduced in the country against the patriots who had preferred the Slovak Republic to foreign domination, as well as against the religious leaders who had not ceased warning the people of the danger of communism.

The record of the National Front Government of E. Beneš and K. Gottwald, which at first operated under the supervision of the Soviet Army, is in broad terms as follows: 33 prominent persons executed in accordance with sentences imposed by a Draconian political justice; hundreds of persons killed as an act of personal or political revenge; tens of thousands of patriots arrested and then sentenced to long years of imprisonment, including the loss of property and social position; 20,000 Slovaks deported to the Soviet Union as a consequence of political denunciation.

The tactics used by the Communist in Czechoslovakia against Catholicism are indicative of Lenin's theory of nationalities: while adopting a policy of good-will toward the Czech Catholics, it was decided to crush the church in Slovakia. Thus the National Front Government in Prague, of which Msgr. Ján Srámek and Msgr. František hala happened to be members for the Czech Christian Democratic Party, ordered the imprisonment of Msgr. Ján Vojtaššák, Bishop of Spiš; Msgr. Michael Buzalka, Auxiliary Bishop of Trnava; Msgr. Ján Pöstényi-Kyusucky, Director of the Association of St. Adalbert; 170 priests and several thousands of Catholic laymen.

Various legislative and administrative measures were then introduced with a view to limiting the Church's prerogatives. The school system was nationalized, after the buildings and the equipment of the Catholic schools had been confiscated. Laws were passed limiting church ownership of property. Religious instruction became merely optional. Crucifixes were removed from schools, and teachers known for their religious convictions were dismissed. The Catholic youth and men's and women's groups, and the institutions of Catholic charity, were dissolved and their property confiscated. The Catholic press was completely suppressed.

When Msgr. Karol Kmet'ko, Archbishop of Nitra, launched a campaign in July 1945, in favor of private schools, and soon obtained over 260,000 signatures, his action was declared illegal and many religious persons and laymen who had been active in the campaign were imprisoned.

Toward the end of 1946 and early 1947 Monsignor Tiso, former President of the Slovak Republic, was brought to trial. The basic defendant, however, was the Slovak people, with their aspirations for national independence and religious freedom. This was confirmed by the former archbishop of Nitra, Karol Kemt'ko, who was the true leader of Slovakia at that time of confusion. Summoned by the public prosecutor as a witness against Tiso, the archbishop firmly defended him and his policies. When Justice Sujan asked him whether he supported Czechoslovakia or a free Slovak state, the archbishop replied: "If Slovakia had any real possibility of becoming free, all of us would be for independence."

Tiso, however, was made to expiate for the entire Slovak nation. His fate was, in fact, predetermined by the composition of the jury of the National Tribunal in Bratislava. Strangely enough, in a Catholic country, such as Slovakia predominantly is, 5 out of 7 members of the People's Tribunal were Communists, 1 was a Democrat, and 1 was neutral. Though the feelings of the Slovak population were overwhelmingly on Tiso's side, he was condemned to death for two reasons: as a victim of Czech politics, which were aimed at keeping Slovakia under political control, and as a victim of Bolshevism, as he himself expressed it in a last message to the Slovak people entrusted to his confessor. All efforts at intercession with President Benes on the part of the Holy See, of Archbishop Kmet'ko representing the Slovak Episcopal Conference, and of various organizations of Americans of Slovak descent begging that mercy be granted to Monsignor Tiso, were bypassed. He was executed on April 18, 1947.

In February 1948, the Marxist majority of the Czechoslovak Parliament, holding 153 out of 300 seats, decided in favor of a dictatorship, thus abandoning the principles of a National Front Government. After that, the political and religious situation in Slovakia was to become still worse. Although the Communist Party in Slovakia formed a minority of 30 percent of the electors, it managed, with the help of Prague, to impose its exclusive power on the regional Government in Bratislava, at the same time extending the persecution of non-Communists. The Central Government's pressure upon the church also became more acute, in spite of a tactical Te Deum which Monsignor Beran, archbishop of Prague, had agreed to sign on June 14, 1948, the day of President Gottwald's inauguration. The regime adopted as its goal a separation of the bishops from Rome, of the priests from the bishops, and of the believers from the priests, in an all-out effort to found a schismatic National Catholic Church. On June 10,

1949, with the help of some pro-Communist patriotic priests, the government began to organize a false Catholic Action movement—i. e., a movement in favor of National Catholicism. On June 20, this movement was declared schismatic and its leaders and followers were excommunicated by Rome.

In order to weaken the power of the bishops over their clergy, the Government passed a law through Parliament in October 1949, confiscating the remnants of any property that might have been retained by the Church, and converting priests into public officials under the control of a new Ministry: the State Office for Denominational Affairs. This department has the right both to appoint priests to, or replace and dismiss them from their offices. An oath of office was decreed, obliging all holders of an ecclesiastical office to proclaim their loyalty to the new regime. Through these legislative and administrative measures, the freedom of the Church's action was restricted in a way never heard of before.

In April 1950, the religious orders of Slovakia were practically disbanded and their members sent to labor camps or put under direct police supervision in concentration monasteries. The Greek-Catholic diocese of Presov was forced to undergo a special evolution. As is known, the Greek-Catholics, though united with Rome, have retained their Slav liturgy. This was evidently the reason why the Czechoslovak Government, with the help of local Communist agents, decided to eliminate that diocese. On April 18, 1950, the population of Presov was mobilized to a "peace rally," where 820 "delegates of the Committees for a Return to Orthodoxy," together with 100 priests, adopted a resolution breaking off with Rome. The reluctant bishop, Msgr. Paul Gojdic, was imprisoned.

F. Trial of the three Slovak bishops

The struggle of the Communist government against the Church was to reach its climax in a spectacular trial brought against the three Slovak bishops: Msgr. Ján Vojtassák, Ordinary of Spis; Msgr. Michael Buzalka, auxiliary bishop of Trnava; and Msgr. Paul Gojdic, bishop of the Greek-Catholic diocese of Presov. The first two of these were jailed in 1945 and released some months later. In 1945, the situation was not considered propitious for a direct attack against the hierarchy.

Five years later conditions had changed considerably: the Communist government had attained totalitarian power in the nation, and accordingly ordered the imprisonment of the three aforementioned dignitaries. The public prosecutor was instructed to bring them to trial.

The act of indictment which the public prosecutor, Ján Fejes, read against the three bishops on January 10, 1951, before the state court in Bratislava, will ever remain a historical document. In it the criminality of the defendants is built up from the viewpoint of Marxist-Leninist justice. As a matter of fact, the entire social system of Europe before World War I and after it was condemned. In addition to the bishops themselves, various moral and physical persons, as well as social classes and institutions, were judged in absentia: the Holy See, the Pope, the Austro-Hungarian Empire, the feudal system in Hungary prior to 1918, the traitorous Slovak People's Party of Monsignor Hlinka, the Slovak bourgeoisie, the Fascist Slovak state, Monsignor Tiso, the Slovak Democratic Party, the exiled Slovak leaders, Karol Sidor and Ferdinand Durčanský, etc. The bishops were presented as aiders and abettors of those reactionary and anti-Communist forces. They were also accused of assorted personal crimes. They were said to have supported Hitler's war against the Soviet Union; after the liberation of Slovakia, it was alleged that they took an unfriendly attitude toward the restored Czechoslovak State; they were accused of sowing discontent among the Slovak people against the infusion of socialism in the Republic; of excommunicating people who were members of the Communist Party, the Communist trade unions, or the Catholic Action, which sought an agreement with the government; of cooperating in the creation of an illegal, disruptive espionage network, the center of the espionage activities of the church being the apostolic nunciature in Prague; it was alleged that, by their frequent protests and inciting pastoral letters, they were hindering the Government's policy of creating a united, State-controlled system of schools and education in the Republic; finally, they were accused of having set up a secret hierarchy, and consequently founded an underground organization of the church.

At the close of this pages-long act of indictment, the public prosecutor summarized the crimes of the defendants as follows:

"1. The accused, Jan Vojtaššák and Dr. Michael Buzalka, especially in 1938 and up to the middle of March 1939, in Bratislava and elsewhere, attempted to change the constitution of the Republic by force, especially as concerns the independence, unity, or democratic form of the State, this being done under particularly aggravating circumstances;

"2. During the war, in the years 1939–44, in Slovakia and elsewhere, all of the accused worked for the enemy's advantage and under particularly invidious circumstances;

"3. During the years 1945–50, all of the accused in Spišské Podhradie, in Bratislava, in Prešov, and elsewhere, associated constantly with other criminals in the attempt to undermine the People's Democratic regime, and the economic and social structure of the Republic which is guaranteed by the Constitution; and for this purpose they worked in direct contact with a foreign power; and in this latter crime, Dr. Michael Buzalka and Paul Gojdič gave particularly serious offense;

"4. During the period mentioned under point 3, all of the accused associated constantly in Spišské Podhradie, in Bratislava, in Prešov, in Prague, and elsewhere, with other criminals, in the espionage of State secrets, with the intention of betraying them to a foreign power; and with this intention they entered into direct contact with a foreign power, and did actually spy on and betray state secrets. Dr. Buzalka and Paul Gojdič continued this activity over an extended period and an extensive and dangerous area; and the espionage of Th. Dr. Michael Buzalka involved a particularly important state secret."

As is evident from the nature of these accusations, they are of so general a nature that every Catholic bishop, merely by fulfilling his legitimate function, must inevitably fall into the trap of distorted interpretation of Communist criminal justice. According to the latter, the greatest crime consist, of course, in being a bishop.

Taking into consideration that during their preventive custody the defendants were under tremendous moral and physical pressure; that they were not permitted to bring witnesses and hire attorneys for their own defense; that they were at various times silenced when attempting to explain their attitude; one can easily foresee the results of this trial. On January 15, 1951, Monsignori Buzalka and Gojdič were sentenced to life imprisonment and Monsignor Vojtaššák, an old man of 73 years, to 24 years.

By its whole nature, this trial was to exert great pressure upon those bishops who up to that time had refused to submit to the Government. Msgr. Joseph Carsky, Apostolic Administrator of Košice, and Msgr. Ambrose Lazik, Apostolic Administrator of Trnava, took their oath of allegiance to the regime on March 12, 1951; while Msgr. Edward Nécsey, Apostolic Administrator of Nitra, followed them on April 11, 1951. In so doing, they stressed, however, that this act should not be interpreted as contrary to their canonical obedience to the Pope, as the head of the Catholic Church.

Later on, two more dignitaries were imprisoned: Msgr. Štefan Barnás and Vasil Hopko, respectively auxiliary bishops of Spiš and Prešov. Placed on trial under similar conditions, they were sentenced in 1952 to 15 years' imprisonment.

G. Balance sheet of religious persecution

The balance sheet of religious persecution in Slovakia is of unprecedented enormity: of 7 dioceses, the Greek-Catholic diocese of Prešov has passed, with the active help of the regime, into the hands of an orthodox, Moscow-controlled Eparch; of 9 bishops, 5 are in prison; Msgr. Robert Pobožný, bishop of Rožnava, held for a long time under house arrest, was removed by the police to an unknown place. Only the three aforementioned bishops, who took their oath of allegiance to the regime, still remain in office. Their activity and correspondence is, however, supervised by an official of the Office for Denominational Affairs, sitting in the episcopal chancery.

The four dioceses whose bishops died (Banská Bystrica), were imprisoned (Spiš and Prešov), or removed (Rožnava), are now under the administration of capitular vicars, i. e., patriotic priests loyal to the regime and practically appointed by the Office for Denominational Affairs. Having been elevated to their functions in a manner contrary to canon law, the capitular vicars were excommunicated by the Holy See. Thus, there are priests and believers who follow them, and those who refuse to do so. Consequently, the regime managed to bring about a split in the church from top to bottom, creating confusion and suspicion among both clergy and congregation.

According to the latest reliable statistics, there were 1,345 Catholic parishes in Slovakia. Now 241 of them are administered by the schismatic priests, and 130 are without any priests at all. Of 2,018 secular priests, 340 are in prison. Of 564 seminarians, 450 are in labor camps, while 46 entered a State-controlled seminary. There were formerly 331 monasteries, and all of them were confiscated. Of 400 priests of religious orders, 350 are in concentration convents. Of 744 lay brothers, 490 are in prison or in labor camps. There were formerly 3,971 female religious persons; 2,000 are now in labor camps, and others are in hospitals working under lay direction.

There were, in 1945, 1,800 Catholic grade schools in Slovakia, some tens of junior high schools, about 10 senior high schools, 9 seminaries, and a faculty of theology. Now, there is but one state-controlled faculty of theology in Bratislava. As to the Catholic press, there used to be 30 monthlies, 4 weeklies, and 1 daily newspaper. Now, patriotic priests are publishing, under Communist supervision, 1 weekly and 2 monthlies. Of nine Catholic publishing houses, there remained after the confiscation only that of the Association of St. Adalbert, in Trnava. But even this old cooperative publishing house must operate under a board of directors composed of Communists and pro-Communists.

CONCLUSION

Communism has destroyed Catholic institutions in every country of the Soviet orbit, and seeks to demolish the very church itself. It brought about a colossal spiritual devastation of all the Christian nations by exerting physical and moral pressure upon the masses as well as on their spiritual leaders. By this trend toward an intellectual proletarianization of men, it seeks to create the conditions for a universal proletarian state. During the last 11 years in which international communism has considerably advanced the frontiers of the Soviet orbit, it

now manifests interest in having its ignoble conquests recognized by the Western world. Therefore, it incessantly promotes the formula of "peaceful coexistence."

In their tactics toward the Western democracies, the present rulers of Moscow are so shrewd that they did not even hesitate to downgrade Stalin and to wash their own hands of the crimes committed by Bolshevism since its inception. They have restored to their class honor many of those dead Communists, who had fallen victim to the tremendous struggle for power which constantly goes on within the party. They have also recently released many of their own deviationists from prison.

But the fact that they did not express any regret for their injustices toward the church; that, of all those unjustly imprisoned, they have not released a single bishop or priest, makes it quite evident that international communism has no intention of abandoning its final goal.

In consideration of the aforementioned facts, the Slovak Catholic Federation of America hereby adopts, together with the present memorandum, the following resolution:

1. The United States of America Government is requested to put the imprisonment of Slovak and other bishops and priests behind the Iron Curtain on the agenda of the next session of the U. N. General Assembly, and to ask their immediate release.

2. The thousand-year history of Slovakia proves that there is no spiritual freedom in a country which must live under foreign domination. The Government of the United States is hereby requested to take steps to have Slovakia's rights of self-determination granted by the United Nations Organization.

3. In using information media toward Slovakia, the American Government is respectfully requested to employ people who not only speak the Slovak language, but who are also able to approach the Slovak people in terms and in the spirit of their national history and culture.

Rt. Rev. Msgr. M. K. MLYNAROVICH,
Chairman.

Rt. Rev. THEODORE KOJIŠ, O. S. B.,
Chairman of the Cultural Committee.

CHICAGO, May 16, 1956.

ANNEX

To the Central Office of the Slovak Catholic Action, Rome:

The central office of the Slovak Catholic Action is indeed right to call attention to an event of paramount importance which occurred in its beloved fatherland 35 years ago, and in which I had the honor to participate in execution of an important mission: The consecration, after World War I, of the first three Slovak bishops, on February 13, 1921.

That day was a Slovak national holiday, a day of great joy. Among all the participants it created not only a warm atmosphere and a deep impression, but it left in their hearts a recollection that would never vanish from the memory of those present.

This recollection is to me all the more thrilling in that the Slovaks who still enjoy freedom are obliged to celebrate it in foreign countries, as escapees from their beloved fatherland. Others in Slovakia may well think of it, but this at a time when their country is suffering, under the yoke imposed by the enemy of their homeland and of Christ, by that enemy who seeks to destroy forever both the religion of Christ and their native land.

The Slovaks will be able to endure this hard trial with the traditional loyalty which is befitting to them, with that reliance on religious faith, on the Church, and on Christ, which so distinguished them. They will do it in the hopeful expectation that God in His divine mercy will put an end to their suffering on a day which, as we firmly believe, is inevitably approaching.

Such is the wish close to the heart of all those who love and admire this gifted, noble, industrious, spiritual-minded and gallant nation. Such is the wish that we all express and subscribe to, above all for the venerable Msgr. Vojtaššák, the last of the three bishops we had the pleasure to consecrate. We pray that this bishop and confessor may once more enjoy liberty; that he may return to his Episcopal mission, to the people who love and venerate him; that Slovakia may once more have her place in the community of free nations and serve God in sincere freedom.

C. CARDINAL MICARA,
Vicar General to His Holiness.

ROME, *February 2, 1956.*

Unanimity by Dissent

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

Mr. MULTER. Mr. Speaker, the following item from the June 1, 1956, edition of Israel Speaks makes very interesting reading, particularly in the light of what is happening in the Middle East since the publication of the item:

BIG POWER POLICY: UNANIMITY BY DISSENT

(By Robert Stone)

JERUSALEM.—No peace for the Middle East. A cease-fire is more expedient and therefore highly desirable, from the political viewpoint of the Big Powers.

This decision, unanimously reached by the United Kingdom, the United States, France, and the Soviet Union, did not come suddenly. Neither did its unanimity derive from one common purpose. Quite the contrary. It was born of dissent.

The new—or, perhaps, not so new—policy resulted from a sharp conflict of views which the laborious international discussions of the last few weeks failed to resolve. Once the smoke had lifted after the Anglo-Soviet talks at London, the NATO Council sessions and behind-closed-doors palavers at the U. N., it was found that the Big Four—each for different reasons, of course—desired the continuation of the truce arrangement.

What actually happened at these talks in London, Paris, and New York, did not make the headlines. According to well-informed sources, Eden agreed, during his talks with B. and K., to put the Baghdad Pact into cold storage and halt British arms deliveries to its members in return for Russia's promise to stop shipments to Egypt and her allies. Secretary Dulles hit the ceiling when this report reached him, and brought tremendous pressure to bear on the British Government, insisting that even a temporary arms embargo to Baghdad countries was unacceptable to Washington. The outspoken British magazine, The New Statesman and Nation, commenting on this editorially, says that "the British Government, which now places Anglo-American unity above all other considerations in the Middle East, climbed down and agreed to continue arms deliveries."

The French, however, stood firm, and even after a heated private session, reiterated their intention of supporting the Russian embargo when—or, rather, if—it comes up before the Security Council.

U. N. RESOLUTION

In other words, the Big Three Western Powers were headed for a major internal clash. The issue of a Middle East arms embargo had to be shelved.

This, then, is the background of the decision that gave birth to the British resolution now before the Security Council, which requests the U. N. Secretary General to make himself available once more for the consolidation of the present Arab-Israel cease-fire agreement. The Security Council sessions on the Middle East have just begun as this is written, but it can safely be predicted that the British resolution will be passed by the permanent members of the Council after only perfunctory debates.

Any other course is unthinkable in the light of the separate motives that animate the British, American, French, and Russian Governments. These believe that by evading the inflammable Middle Eastern issues surrounding the Israel-Arab crisis they can prevent—or at least postpone—the fateful day when they will have to make a final decision on the Baghdad Pact, the Cyprian powder keg and the Algerian nightmare. Besides, Washington still hopes to sweep the Israel question under a thick and silent rug, so as to avoid disturbing the presidential election campaign.

To express it another way: The big powers believe, each from the standpoint of its own interests, that by refusing to touch the complex power aspects of the Middle Eastern crisis they can clamp down the lid over that area until East-West tensions have relaxed still further. And the only policy, or lack thereof, which can attain this end, so the big statesmen think, is to exaggerate the permanency of Mr. Hammarskjold's cease-fire success, leaving it to the Secretary General, and to him alone, to deal with the Arabs and Israel as he sees fit.

OUT OF SIGHT

Mr. Hammarskjold may some day discover that all the praise heaped upon him has buried him. Nothing, not the slightest tremor of international power politics, will be permitted to rock Dag Hammarskjold's fragile diplomatic skiff. Only this strategy will keep conflicting British, French, American, and Russian Mid-Eastern interests, even if they continue to smolder, out of sight for at least the time being.

During this period of suspension, as it were, the United States and British are expected to keep up arms shipments to the Baghdad Pact countries, the Soviet Union would supply nonmembers of that pact and France may sell Israel a few more jet planes. In this way everybody will be happy. No peace and yet no war, say the political masterminds. Politicians do not as a rule think of issues in terms of historical eras; their time calculation rarely goes beyond the conjectural length of their tenure of office.

Yet the whole thesis of a peaceless Middle East and a continuous arms race kept from exloding by the prestige of the United Nations is foredoomed to failure. For Premier Nasser is developing a great talent for the powerpolitical game. As a matter of fact, he believes, and perhaps he is right, that he can play it with the Big Four. He has already circumvented the United Nations by dealing Communist China into the game. An Egyptian military mission is now on its way to Peking. Al Kahira, Cairo's powerful daily, exultantly greeted Nasser's "masterstrike." "What about Chin, you (Western) idiots," it wrote, "which through your ignorance is not even a member of the U. N.? * * * As though Russia were the only place in the world to obtain arms apart from the Western capitals!"

NASSER'S AMBITIONS

No matter what the United Nations decides regarding the arms race in the Middle East, and even if Russia should agree to cancel the balance of the arms deliveries from Czechoslovakia to Egypt and other Arab countries (which she will not do), the Cairo bloc of Arab nations can laugh off any embargo threats from the U. N. They could,

conceivably, vote for it and rely on supplies from Peking.

Nasser's Pan-Arabian ambition is more than a dream. Its tentacles reach into French North Africa, the Sudan and the entire southern tier of the Middle East. Egypt can no longer be contained as a small and separate local entity of the Middle Eastern map.

Since the Hammarskjold mission, the Prague-Cairo "commercial arms deal" has been transformed into a Cairo-Peking-Moscow political axis. The Arab armies will receive their marching orders whenever they are ready to strike. If they have not moved as yet, it is not because of the 22 additional U. N. truce observers on the Gaza strip. The manpower needed for the avalanche of MIG-15 fighters, IL-28 twin jet bombers, heavy tanks, submarines and torpedo boats that have already been unloaded at Alexandria and Port Said—this manpower is not yet sufficiently trained.

There was a time, not so long ago, when Washington and London could prevent the Middle East from sitting down at the Big Power card table. But that does not apply any more.

Today only a strong Israel can check Col. Nasser's expansionist plans. Washington and London know it, but, for a variety of reasons, refuse to draw the inescapable conclusions.

Is the State Department hoping for a sudden reversal of Egypt's foreign policy? Does it still believe that Premier Nasser is really only bluffing? How many political poker hands must one win to be taken seriously at the Big Power table? Passing has never won the jackpot in any game.

2014739—A License Number With Meaning

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include the following article from the Chicago Sun-Times:

TO UREY, 2014739 HAS MEANING FOR WORLD'S FUTURE

It is, appropriately, the atomic weight of heavy hydrogen and the symbol of the hydrogen age.

On a scientific whim this year, Dr. Urey requested the unusual number for his license plates.

The scientist's office in the Institute for Nuclear Studies, 5640 South Ellis, is directly across the street from the stadium and his car frequently is parked near the plaque that reads:

"On December 2, 1942, Man Achieved Here the First Self-Sustaining Chain Reaction and Thereby Initiated the Controlled Release of Nuclear Energy."

Urey's discovery of heavy hydrogen has already made possible the hydrogen bomb. And if the right combination is ever found, the release of its energy could turn the water of the oceans into a fuel that would have 30 times the energy of an equal volume of gasoline. Other possibilities in the use of heavy hydrogen have scarcely been glimpsed.

Urey began his work with heavy hydrogen in the early 1930's, and won the Nobel prize for his discovery in 1934.

Heavy hydrogen, he demonstrated, has an atomic weight of 2.015, or 2.014739 if it is carried out for additional decimal places. The atomic weight of ordinary hydrogen is 1.008, and of hydrogen-3 or tritium, 3.012.

Thus two atoms of heavy hydrogen, or deuterium as it is also called, weigh 4.030.

But one atom of ordinary hydrogen and one of tritium weigh only 4.020.

4.030 and 4.020.

In these 10 points of difference lie the energy that may determine the course, if not the fate, of this world. It is the release of this energy that in one way or another has produced the bomb and that may in the future create unlimited new sources of power.

The plaque and the license number may influence the future of the earth.

The President's Health

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. MULTER. Mr. Speaker, the following two items from the New Republic of July 2, 1956, make interesting reading:

WHILE WE WAIT

If Franklin D. Roosevelt had suffered a coronary thrombosis in the fall of 1943; if, within 9 months, he had had to undergo intestinal surgery for a serious ailment which often recurs after surgery; and if the country had not been at war, would the American voter have decided that the President's best interests and those of the country required his retirement at the end of his third term? That, Mr. Roosevelt would have said, is an "iffy" question.

It is not an "iffy" question now. At this writing President Eisenhower will remain in the hospital a week longer than first predicted. He will not be back on the golf course in the near future. He will not be back at work in the White House for at least the next several weeks. Meanwhile, we wait in suspense for the patient's answer to the question: Do you feel well enough to undertake the burdens of the Presidency for another 4 years?

Ordinarily, one does not accept a patient's opinion about his own future capabilities as final. But Eisenhower is not ordinary. His hold on the sympathy and respect of the American public is so great that many otherwise rational people say frankly: the President is an honest and patriotic man; if he says that he can, he can.

And, if we turn from the somewhat limited opinion of the patient to the more detached and informed opinion of the physician, what do we find? Some have cautiously observed that all may not be as rosy as Press Secretary Hagerty would like us to believe. But others have made astonishingly confident claims which commonsense must reject. On whose judgment can we rely?

Who shall decide, when doctors disagree,
And soundest casuists doubt, like you and me?

(Pope, Moral Essays, Epistle III)

THE PRESIDENT'S HEALTH

We can't remember a time when Washington was so completely flooded with cynical jokes as it is now over Eisenhower's health and the GOP's dilemma. Stories have these main points, all brutal—the assumption that the President has no will of his own but is just putty in the hands of Leonard Hall; Hagerty's buildup of the theory that the President is carrying on his duties as usual; the motives of the White House doctors (who previously enthusiastically cleared Ike's health after a head-to-toe examination—that didn't find, or concealed, ileitis) who now say his life expectancy is "increased" at 65, after a heart attack and major surgery. The sad thing is that nearly everybody who laughs likes Eisenhower personally. The jokes aren't really funny; they are inherently degrading. But they seem to fit the time and are universal. They are the escape mechanism for people who can't do much else about the refusal of the communications media and the Nation to face facts. All right, here is one, to give the merry mood of Washington at the end of June, in the year 1956: Ike and Dick are standing at the traditional spot on Inaugural Day, half way down the Capitol stairs. They have just taken the oaths; everything is fixed now; the election is riveted down. NIXON turns to Ike and says boyishly, "Race you up the steps." * * * Funny, eh?

Civil Defense

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. MULTER. Mr. Speaker, the following item from the New Republic of February 27, 1956, is important reading at that time when the House Government Operations Committee is considering its report on civil-defense legislation:

IF THE ENEMY DID ATTACK

(By Haldore Hanson)

In the first full investigation of the Nation's civil defenses in 6 years, leading scientists have recently come before Congress to spread on the public record some jolting facts about expectable American casualties from a general enemy attack under the present state of civil defense (more than 60 million killed and wounded).

But so great is the public apathy and so cynical are press correspondents on the subject of civil defense that only flippant feature stories about the hearings have appeared in most newspapers. Apathy grows partly from relaxation in the cold war, partly from a mistaken belief that the Air Force and the distant early warning system have our national defenses under control, or soon will.

It isn't so, these leading scientists warned Congress. They made severe charges against the Federal Civil Defense Administration and its administrator, Republican ex-Governor Val Peterson of Nebraska. They suggested constructive remedies. One witness estimated that an adequate civil defense program could be had for a Federal cost of $4 to $7 billion spread over a 10-year period, plus an equal amount in tax incentives for private construction. This year's appropriation is only $69 million.

The House Committee on Government Operations called as witnesses Dr. James Killian, president of Massachusetts Institute of Technology; Dr. Willard Libby, member of the Atomic Energy Commission; Dr. Lloyd Berkner, head of Associated Universites, Inc.; Dr. A. G. Hill, Director of the Weapons Evaluations Group of the Joint Chiefs of Staff; and Dr. Merle Tuve, pioneer nuclear psysicist connected with the Carngegie Institution. Few experts are so well informed. In quality of talent the hearings resembled a televison spectacular.

Severest criticism of United States civil defense was advanced by Dr. Tuve, who testi-

fied as chairman of the Advisory Committee on Civil Defense, National Academy of Sciences. In that capacity Dr. Tuve has access to all plans of the Civil Defense Administration and to related information in the Air Force and Atomic Energy Commission. Both he and his assistant, Mr. Willard Bascom, were subpenaed by Congress to divulge for the first time the findings of their 2-year study of civil defense.

When comments of all these scientists are combined into one indictment, the following are the major charges:

Count 1: The United States today has no national warning system to announce an enemy attack Siren and horn warnings of local communities will reach only 15 to 25 percent of the population. We are spending billions on our distant warning system, which will transmit a signal to the Air Force, but to relay this warning to the poor taxpayer, who paid for it, all civil defense organizations put together are spending only $16 million.

Count 2: We have known publicly since March 1954, the enormous civilian casualties which radioactive fallout following an atomic explosion could cause, but our civil defense authorities have not distributed instruments for measuring fallout, and no such instruments are now available in most American communities. There is no plan for the rapid measuring of the intensity of fallout after an attack, and without this information there can be no adequate disaster plan. Nor is there any plan for postattack communications to serve the time when most existing communication systems would be knocked out.

Count 3: Recent civil defense evacuation exercises in large cities on the east and west coasts were based on the assumption that the enemy will strike with manned aircraft, and will drop only single bombs in the center of target cities which have had 1 to 3 hours warning. This assumption is obsolete, since the Russians already have submarines capable of launching nuclear projectiles, with no warning, into any city within 300 miles of our coasts. And the intercontinental ballistic missile, which is considered to be only a few years away, could strike with not more than 10 to 20 minutes warning. Our civil defense plans should therefore be based on shelters which could be reached in a few moments.

Count 4: The Federal law on civil defense, delegating most responsibilities to the States, is also obsolete. A single bomb will spread havoc over many States, perhaps a score. But the Federal Civil Defense Administrator has at no time suggested a change in the law to permit more centralized disaster operations. This is the basic flaw.

Count 5: The present administrators of civil defense have failed to contract for realistic technical studies which would serve as the basis for civil defense policy. FCDA needs studies on warning systems, bomb shelters, fallout surveys, among others. The Army, Navy, and Air Force all use outside contractors to conduct such research.

Count 6: Val Peterson, present Administrator, is a devoted public servant and a personally likeable man, but he and his top lieutenants seem to have no conception of what should constitute an acceptable performance by their organization. (A Republican member of the congressional committee defended Mr. Peterson, pointing out it was Congress which had cut the civil-defense appropriation every year. But Dr. Tuve replied, "I am convinced they would have had a much larger fraction of these requests appropriated if technical studies had been adequately carried out.")

Count 7: In sum, civil defense is our only defense activity based on the proposition that war is not coming. Even Washington, D. C., concededly one of the principal enemy targets, spends on civil defense only one-sixth as much as it does on its zoo.

This is the indictment. But the testimony was not wholly negative. Each witness suggested some remedies, in the testimony which filled more than 1,000 pages in the first 2 weeks and is expected to continue for a month or more.

Here are some of the premises on which the expert witnesses told Congress we should act in building an adequate civil-defense plan.

We will live with the threat of nuclear war for at least 100 years, perhaps 500 years. There is not the slightest hope that civilized nations, by common consent, will destroy their ability to carry out nuclear war.

If nuclear attack comes by manned aircraft, our Air Force expects to destroy no more than half of a massive enemy assault wave, despite all radar lines, fighter aircraft, Nike, and other missiles. If the attack is launched by submarine, there is no defense against the short-range missile. If the attack is by intercontinental missile, there is no known way to shoot the missile down after it approaches its target.

Fifty to seventy nuclear explosions would make a very large part of the United States temporarily uninhabitable.

But the scientists offered this hope. Most casualties outside the bomb crater area can be avoided, and a workable society can soon rise again, if reasonable civil defense precautions are taken. Dr. Tuve estimated 80 percent of all casualties could be avoided if the Federal Government were to present a sound technical plan to the Nation, and expend $4 billion to $7 billion of Federal funds over a 10-year period. In none of those years would the cost exceed 5 percent of our military budget.

A sound technical plan would include a national warning system which could reach the entire population in a few minutes. It would involve bomb shelters of moderate strength, mass produced, low in cost.

(Witnesses described at length a national warning system, combining outdoor devices such as sirens, horns, and explosions, and indoor devices attached to gas lines, electric lines, telephone circuits, or radios. The scientists favored a system as nearly automatic as possible, operating from a central point.)

A sound defense plan would arrange for a national survey of radioactive fallout immediately after an attack. If attack came today, this survey would be based on wind charts prepared by the Weather Bureau every 12 hours. This would give the approximate direction of fallout, but would not measure the intensity of radioactivity, nor would the survey cover the entire country, and some of the guesses would be based on wind measurements 12 hours old, hence very unreliable. Only a wide distribution of radioactive measuring devices and a system of post-attack communications can fill this gap.

The new defense plan must make cities less vulnerable to attack by bringing about new patterns of growth over the next 50 years. Streets must be wider to serve as fire breaks. New buildings would have shelters. Deep underground garages should be designed as public shelters. And new industries would be dispersed, together with the needed power facilities and roads. European nations have already put these growth patterns into use. So have some United States industries. It is the United States Government which lags.

One witness insisted the Federal Government itself has fumbled the dispersal plans. The only Government agency that has been moved out of Washington is the Civil Defense Administration (Grand Rapids, Mich.) and the highest defense authorities of the Nation recently approved the construction of half a billion dollars worth of new buildings in the general vicinity of the White House and the Pentagon in Washington.

Dr. Tuve urged two steps to start the wheels rolling on a new defense program. First, the President should appoint a commission to formulate a new division of responsibility between Federal and State governments, assigning to national authorities a great part in dealing with the nationwide aspects of disaster. Second, the President should instruct the Civil Defense Administrator to place contracts immediately with suitable private research organizations for studies on the technical factors in civil defense. These studies, Dr. Tuve estimated, would cost no more than $4 million, and the money is already available.

A new defense plan, based on sound technical studies, Dr. Tuve concluded, could save up to 60 million casualties, and "convert an otherwise obliterating catastrophe into a situation in which there remains an intact, workable, and purposeful society."

Some people, he observed, say if nuclear war comes, they want to die in the first assault. "There is not the slightest doubt in my mind that I want to be one of the survivors. Our being prepared for survival * * * may well be the final deterrent to any war."

Brooklyn College

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. MULTER. Mr. Speaker, all New Yorkers have a right to be very proud of their colleges, and particularly Brooklyn College which is located in my congressional district.

I am pleased to call the attention of our colleagues to the following item which appeared in the National Review of May 2, 1956:

FROM THE ACADEMY

(By Russell Kirk)

QUANTITY WITH QUALITY

Brooklyn College is one of the largest, and one of the best, among American educational institutions. With some 25,000 students (counting the night school), four-fifths of whom are first-generation Americans, and a great many of whom work to keep body and soul together, this college (a part of the City College of New York) has a truly impressive record of intellectual attainment. Eighty percent of its graduates recommended for admission to medical schools succeed in entering, a remarkable proportion; Brooklyn ranks 12th in 1 list of the Natiton's 50 leading educational institutions; the average entering student ranks far above the average American college student in intellectual ability; and Brooklyn's graduates win a great many graduate fellowships. All this is achieved despite a limited budget and the lowest costs, to the student, in New York City.

The lively history of Brooklyn's 25 years, written by Dean T. E. Coulton, was published late last year by Harper: A City College in Action. I have myself written the history of a university, and know this to be no easy undertaking; but Dean Coulton has succeeded in turning out a vigorous and sometimes witty book, valuable to anyone who needs to understand the problems of educational administration in this winter of our discontent. For the most part, A City College in Action has to do with the administration of President Harry D. Gideonse, a man of mark.

Dr. Gideonse, a distinguished social scientist, came to Brooklyn from the University of Chicago in 1939. His courage and ingenuity have done much to elevate the whole tone of learning at Brooklyn and to bring peace and order to a campus often

seriously menaced by Demon Ideology. By and large, American college presidents are not an outspoken breed; but President Gideonse has been fearless in speech and action. Never giving ground before the impudence of politicians or the malign intrigues of Communists, he has won through to conspicuous success. No college president's reputation stands higher; and, far from being an artful dodger, Dr. Gideonse always has been contemptuous of equivocation. He has not hesitated to take up unpopular causes; he contended against the Communists when they were at the height of their influence in New York, and exposed the shallowness of Nehru's policies in India when Nehru was a little tin god, and had some good words to say for European colonies when anticolonialism was all the rage, and spoke out against fanaticism in Israel although—or perhaps because 85 percent of his students were Jewish. Most arduous of all, his educational end was the establishment of a sound liberal-arts education in a time given over to vocationalism; and in this, too, he won. He has succeeded in giving primacy to the ancient intellectual and moral disciplines of humanitas among a polyglot student body and within the least tradition-governed of all cities.

For an apprehension of the complexity of the problem of academic freedom—a subject commonly treated as if it were a simple absolute—one could hardly do better than to read Dr. Coulton's chapters on "Stalinism" and on "Everybody's Business." President Gideonse has been one of the most vigorous of college presidents in freeing faculty and students from the bullying of leftist cliques; it is heartening and amusing to review his rebuffs of the inquisitorial American Civil Liberties Union, New York Civil Liberties Union, Americans for Democratic Action, and Students for Democratic Action. At the same time, he has successfully defended his faculty against vague charges of subversive activity, and has dealt the radical right as hard blows as he has dealt the radical left. Only his mordant sense of humor, I think, could have sustained him through all the petty tribulations and backbitings of the forties. All the plagues which afflict college presidents were visited upon him: the scurrilous student newspaper dominated by Communists, the hubris of city politicians, the threat of rackets in athletics, ideological and popular pressures of every description.

Higer education, President Gideonse knows, is an aristocratic undertaking in our mass-age. He believes that an end of a good college is the pursuit of "individuality in the achievement of diversity and excellence"; and he has endeavored always to "overcome the equalitarian and conformist tendences of a democratic framework." He is not of the number of those who would have learning sacrificed to doctrinaire equalitarianism; and he does not talk the empty language of abstract rights without concrete duties. In his foreword to A City College in Action, Dr. Gideonse describes the success of Brooklyn in reconciling student participation in the academic community with the claims of order and moderation; voluntary programs conducted by both faculty and students have replaced demogoguery and indifference, in considerable part:

"Democracy in student activity once meant hectic participation once a year in an empty battle of slogans and leaflets. Today no one is accorded the right to share in the government of student life unless there is a record of participation in the student community itself. The exaltation of rights and the minimizing of responsibilities, which together have undermined the vitality of our student society as well as of the larger community of which it is a part, have now encountered a new insistence in our student constitution that rights are priviliges which must be earned in the shared discharge of common responsibilities."

I think that I discern in President Gideonse's firm and moderate policies of administration some influence of his youth in the Netherlands: the principles of just and balanced authority, of family rights and duties, of religious understanding, of prudent polity, which have marked Dutch character and society. It is fitting that a native of Rotterdam should preside over a great college in a city founded by men of his breed, and should reconcile the claims of tradition with the necessities of megalopolis.

A Real Ambassador of Good Will

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. MULTER. Mr. Speaker, the following item from the July 2, 1956, issue of the New Republic again demonstrates how our State Department is continually missing the boat:

TRUMAN IN ENGLAND

The Eisenhower team is still suspicious of Truman. An amusing example of this just occurred. The administration thinks Truman is the kind of a bounder who would use the occasion of a speech in London to attack his own country's foreign policy. The British like Truman; they had wanted to give him a mass rally in London last week, with Churchill presiding. But hints came to the Foreign Office from Washington that this wouldn't do. As the London Sunday Times put the views, as they were passed on to Whitehall, Truman's "remarks might well inflame political passions in his own country."

Well, Truman spoke—and what did he say? He made a powerful speech urging Britain and America to keep their guard up. And he said some courteous things about Ike's recovery.

Eisenhower will never understand Truman. They are different types. Truman couldn't have remained silent about McCarthyism; he couldn't have omitted a tribute to an old friend like Gen. George Marshall, as Ike did in Wisconsin; he couldn't have refrained from endorsing Senator ALEXANDER WILEY in 1956 if political conditions were reversed and his chief Senate foreign-affairs supporter were endangered in a primary. Truman is closer to the earth.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Anderson, Douglas, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Laird, Scott, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Lehman, Kennedy, McNamara, ———, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Wofford, ———, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.

Daily Digest

HIGHLIGHTS

Both Houses cleared bills on mutual security, military construction, and narcotics control for President.

Senate heard memorial addresses in tribute to the late Senators Kilgore and Barkley, and passed by 53 yeas to 22 nays bill on airline capital gains.

House debated foreign aid appropriations.

Senate Finance Committee approved customs simplification bill.

Senate

Chamber Action

Routine Proceedings, pages 10930–10961

Bills Introduced: 6 bills and 4 resolutions were introduced, as follows: S. 4184–S. 4189; S. J. Res. 190; and S. Res. 307–S. Res. 309. **Pages 10933–10934**

Bills Reported: Reports were made as follows:

Four bills and 12 resolutions, as follows, were reported during adjournment on July 7 under prior authorization:

H. R. 9774, to convey certain lands of the U. S. to Volusia County, Fla. (S. Rept. 2429);

H. R. 8817, providing for conveyance of certain U. S. land in city of Corbin, Ky., with amendment (S. Rept. 2430);

H. R. 10204, a private bill (S. Rept. 2431);

S. 3779, to amend act of August 27, 1954, with respect to Uintah and Ouray Reservation in Utah (S. Rept. 2432);

S. Res. 306, providing an additional $100,000 for the operation of the Subcommittee on Privileges and Elections of Committee on Rules and Administration (S. Rept. 2433);

S. Res. 285, arranging for studies to be made regarding foreign assistance by U. S. Government, with amendments (S. Rept. 2434);

S. Res. 286, providing for additional time for filing a report by Subcommittee on Disarmament of Committee on Foreign Relations (no written report);

S. Res. 293, to print additional copies of H. Doc. 210, How Our Laws Are Made (no written report);

S. Res. 294, extending time for study of the Government employees' security program (no written report);

S. Res. 297, extending time for making a report and providing additional funds for the Special Committee on the Senate Reception Room (no written report);

S. Res. 299, to print additional copies of Senate Judiciary Subcommittee hearings on juvenile delinquency in the U. S. (no written report);

H. Con. Res. 242, providing for 10,000 additional copies of the report entitled "Special Study Mission to the Middle East, South and Southeast Asia, and the Western Pacific" (no written report);

H. Con. Res. 243, authorizing the printing as a House document of the Constitution of the U. S. together with the Declaration of Independence (no written report);

H. Con. Res. 245, authorizing the printing of additional copies of H. Rept. 2189, 84th Congress, on the subject of communism (no written report);

H. Con. Res. 248, authorizing the Joint Committee on Atomic Energy to print 30,000 additional copies of the hearings of the Research and Development Subcommittee on Shortage of Scientific and Engineering Manpower (no written report); and

H. Con. Res. 251, authorizing the reprinting of H. Doc. 210, 83d Congress, How Our Laws Are Made (for use of the House) (no written report).

The following bills were reported today, July 9:

H. R. 10269, to amend the Tariff Act of 1930 to place metallurgical alumina on the free list (S. Rept. 2435);

H. R. 11995, to provide that the 1955 formula for taxing income of life-insurance companies shall also apply to taxable years beginning in 1956 (S. Rept. 2436);

H. R. 6595, to amend certain provisions of law relating to the estate tax, with amendments (S. Rept. 2437);

H. R. 9083, to amend the Internal Revenue Code to extend the period for amortization of grain-storage facilities, with amendments (S. Rept. 2438);

H. Con. Res. 244, providing for a joint committee of Congress to represent Congress at unveiling of the Commodore John Barry Memorial at Wexford, Ireland, on Sept. 16, 1956 (S. Rept. 2439);

H. J. Res. 621, 626, 627, 638, 639, 637, 620; H. Con. Res. 246; H. J. Res. 617, 618, 636; S. 579, 1407, 1626, 3068, 3103, 3127, 3155, 3179, 3182, 3188, 3193, 3257, 3258, 3354, 3358, 3370, 3440, 3487, 3521, 3657, 3813, 3814, 4015, 3191, 3306, 3364, 3537, 3557, 3360, 3713; H. R. 5808; S. 3285, private bills (S. Repts. 2440–2482, respectively);

S. Res. 287, requesting that reports of results of tests of samples of opium seized in illicit traffic be communicated to Commission on Narcotic Drugs of the U. N. (S. Rept. 2483);

S. Res. 289, to commence negotiations with the Mexican Government in order to secure a more effective control over illicit narcotic drugs (S. Rept. 2483);

S. Res. 290, urging certain countries to ratify or accede to protocol of 1953 limiting cultivation of the poppy plant and use of opium, with amendment (S. Rept. 2483);

S. Res. 288, urging certain countries to proscribe heroin, with amendments (S. Rept. 2483);

H. R. 7049, to revise and codify titles 10 and 32 of U. S. Code relating to Armed Forces and National Guard, with amendments (S. Rept. 2484);

H. R. 9137, waiver of requirements of section 142, title 28, U. S. Code, for the holding of court at Bryson City, N. C. (S. Rept. 2485); and

S. Res. 309, increasing by $10,000 limit of expenditures by Committee on the Judiciary (no written report)—referred to Committee on Rules and Administration.

Pages 10929, 10932–10933

Bills Referred: Four House-passed bills were referred to appropriate committees. Pages 10930, 11020

CCC Borrowing Power: Senate disagreed to House amendment to S. 3820, to increase borrowing power of Commodity Credit Corporation, asked for conference with House, and appointed as conferees Senators Ellender, Johnston (South Carolina), Holland, Aiken, and Young. Page 10956

Late Senator Kilgore: Senate adopted S. Res. 307, providing for suspension of legislative business for delivery of memorial addresses on life, character, and public service of the late Senator Kilgore. Page 10961

Late Senator Barkley: Senate adopted S. Res. 308, providing for suspension of legislative business for delivery of memorial addresses on life, character, and public service of the late Senator and former Vice President Barkley. Page 10981

Memorial Addresses: Pursuant to the terms of S. Res. 307 and 308, numerous addresses were delivered in tribute to the memory of the late Senators Kilgore and Barkley. Pages 10961–10990

Theodore Roosevelt Centennial: Senate disagreed to House amendments to S. 3386, authorizing appropriations for Celebration of 100th Anniversary of Birth of Theodore Roosevelt, asked for a conference, and appointed Senators O'Mahoney, Daniel, and Watkins as conferees. Pages 10990–10991

Indian Claims Commission: Senate insisted on its amendments to H. R. 5566, to continue the Indian Claims Commission to April 10, 1962, agreed to conference requested by House thereon, and appointed as conferees Senators O'Mahoney, Anderson, Neuberger, Watkins, and Goldwater. Page 10991

Narcotics Control: Senate adopted conference report on H. R. 11619, Narcotics Control Act of 1956, clearing bill for the President. Page 10991

Mutual Security: Senate adopted conference report on H. R. 11356, mutual security program for fiscal year 1957, clearing bill for the President. Pages 10991–10994

Government Mail: Senate concurred in House amendment to S. 1871, to amend the act to reimburse the Post Office Department for the transmission of official Government mail matter, clearing bill for the President. Pages 10994–10995

Platte River: Letter from Secretary of Army transmitting report dated April 26, 1955, from Chief of Engineers, together with accompanying papers and illustrations, on review of report on the Platte River, Colo., Wyo., and Nebr., was referred to Committee on Public Works and ordered to be printed as S. Doc. 136. Page 10935

Kanawha River: Letter from Secretary of Army transmitting report dated May 17, 1956, from Chief of Engineers, together with accompanying papers and illustrations, on review of report on the Kanawha River, W. Va., Va., and N. C., was referred to Committee on Public Works and ordered to be printed as S. Doc. 137. Page 10935

Airline Capital Gains: By 53 yeas to 22 nays, Senate passed S. 3449, reinvestment by air carriers of proceeds from sale of operating property and equipment, after rejecting by 22 yeas to 62 nays Williams motion to recommit the bill to the Committee on Interstate and Foreign Commerce. Committee amendments to the bill had been adopted on June 14, 1956, when the bill previously was under consideration. Today two amendments offered from the floor to the bill were rejected, as follows:

By 37 yeas to 46 nays, Williams amendment to prevent "windfall" benefits to any airline by subtracting amount of capital gain from amount invested in new equipment; and by 32 yeas to 43 nays, Humphrey amendment denying benefits under the bill to any airline receiving annual gross income of more than $50 million. Pages 10990, 10995–11010

Military Construction: Senate adopted conference report on and cleared for President H. R. 9893, to authorize certain construction at military installations. Pages 11010–11012, 11015

Coastwise Trade: Senate made its unfinished business S. 3877, to promote development and rehabilitation of coastwise trade and to encourage construction of new vessels. Page 11010

Armed Forces Osteopaths: Senate insisted on its amendment to H. R. 483, appointment of osteopaths in

Medical Corps of Army and Navy, asked for conference with House, and appointed as conferees Senators Russell, Stennis, Symington, Saltonstall, and Smith (Maine). Page 11015

Treaties Received: Senate received 3 treaties, as follows, which were referred to Committee on Foreign Relations:

Treaty of amity, economic relations, and consular rights with Iran, signed at Teheran on August 15, 1955 (Exec. E, 84th Cong., 2d sess.);

Treaty of friendship, commerce, and navigation between U. S. and Nicaragua with protocol relating thereto, signed at Managua January 21, 1956 (Exec. G, 84th Cong., 2d sess.); and

Treaty of friendship, commerce, and navigation between U. S. and Kingdom of Netherlands, together with protocol and exchange of notes relating thereto, signed at The Hague March 27, 1956 (Exec. H, 84th Cong., 2d sess.). Page 10933

Nominations: Three Army nominations in the rank of general were received. Page 11020

Program for Wednesday: Senate adjourned at 7:51 p. m. until noon Wednesday, July 11, when it will continue on S. 3877, coastwise trade, to be followed by S. 3410, annuities for widows and dependents of judges, ratification of International Wheat Agreement (Exec. I, 84th Cong., 2d sess.), S. 147, transmission of international agreements, S. Res. 285, foreign aid study, S. 3784 and H. J. Res. 569, commemorative medals, H. R. 10075, 10479, 9578, 11520, 9774, 8817, and 10204, land transfer bills, S. 3779, Utah Indians, S. Res. 306, additional funds for Committee on Rules, and S. Res. 286, 293, 294, 297, 299, H. Con. Res. 242, 243, 245, 248, and 251, miscellaneous printing and reporting resolutions. The bills on this list that are not considered on July 11 probably will be taken up during balance of week.

Committee Meetings

(*Committees not listed did not meet*)

APPROPRIATIONS—SUPPLEMENTAL

Committee on Appropriations: Committee continued its hearings on supplemental appropriations for fiscal year 1957, with testimony, as follows:

On judiciary items in the bill—with testimony from Harold H. Burton, Associate Justice of the Supreme Court; Henry P. Chandler, Director, and John C. Brown, Budget and Accounting Officer, both of the Administrative Office of the U. S. Courts; L. A. Ziernicki, Chief of Real Estate Division, Region 3, GSA; and T. Perry Lippitt, Marshal of the U. S. Supreme Court;

On sundry State Department items in the bill—with testimony from William C. Herrington, Special Assistant for Fisheries and Wildlife to the Under Secretary, Loy W. Henderson, Deputy Under Secretary for Administration, Robert Murphy, Deputy Under Secretary, and C. Burke Elbrick, Deputy Assistant Secretary, all of the State Department; and Fred S. Poorman, Deputy Commissioner, Public Buildings Service, GSA;

On funds for the D. C. Auditorium Commission—with testimony from Robert V. Fleming and Mrs. Eugene Meyer, both members;

On funds for USIA—with testimony from Theodore Streibert, Director, who was accompanied by his associates; and
